Answer. Yes. The pressure of business has increased, the issues are more important, the number and scope of bills introduced have risen greatly, and the importance of committees has grown.

For all practical purposes, we've developed into committee government. Theoretically, Congress acts as a whole in enacting legislation. But the committees have become more and more prominent because of the pressures upon members and the legislative branch. That was inevitable, and it is a good thing.

Members of the Congress who are assigned to a committee become deeply interested and dedicated to the business of that committee. And the staff of any committee is very, very important to its success. Good staff members are invaluable.

Question. Does a Congressman have time today to serve the needs of his home district when he has to devote so much time to national and international affairs?

Answer. Well, that comes down to each individual. Some of us devote more time to study, some devote more time to their committees, some to the needs of their home districts.

The great majority of the members of Congress meet the challenges and the tasks that confront them. They give untiringly of their time in committee work, on the floor, in conferences, studying legislation—at night as well as during the day—studying in other areas—all in order to develop their thoughts on the important matters coming before the Congress.

Question. Should there be more members of Congress?

Answer. I wouldn't recommend more members of the House. As far as the Senate is concerned, the Constitution determines its size; we're wedded to two members from each of the States.

Question. Do you think the caliber of Congressmen has improved during your service in the House?

Answer. I don't want to say that the caliber of members has improved over the past. I'm very proud of the men I serve with and I respect them very much. It's not that they are of higher quality than members in the past. Rather, it's that they rise to and meet the greater demands and pressures of the present.

THE WAY SENIORITY REALLY WORKS

Question. Mr. Speaker, the seniority system is often criticized.

Answer. The seniority system, to begin with, is misunderstood. First, it is not a formal rule. It is a practice and a custom. It applies to both parties and in both the House and the Senate. Now, most people don't realize that. When the chairmanship of a committee becomes vacant, the Committee on Committees recommends to the Democratic caucus that custom be followed and the next man in line—in terms of length of service—is designated as chairman. The full caucus has the power to overturn that recommendation. So the caucus is the master. The Committee on Committees is the servant.

Question. Does the caucus often overrule the Committee on Committees, Mr. Speaker?

Answer. No.

Question. Has it ever?

Answer. It has. It did in the case of a chairman and two or three members not long ago. It's unnecessary to mention their names. But it has been done—and in recent years, too—when a couple of men did not support the Democratic nominee for President, but openly supported the Republican nominee. Another case involved the chairman of an important committee.

Question. So the seniority system is sometimes suspended—

Answer. Yes. Very rarely, but the power exists. The fact that it hasn't been done often doesn't take away the power of the caucus to do it.

Question. What is your view of suggestions made recently that the seniority system be abolished, or at least modified?

Answer. I've always taken the position that, if anyone could show me a better method or practice or custom, I would support it. But I haven't seen one yet.

Under the seniority system, you know what your rights are—even those who want a change. Every member of a committee wants seniority up to the chairmanship. If you tried to take all seniority away, you'd have a revolution in Congress.

It really comes down to a question of chairmen. All the opposition to seniority revolves around one or two chairmen who have caused dissatisfaction among some members.

One of the methods suggested is that chairmen be selected from the first two or three men in seniority on a particular committee. If that practice were adopted, you'd have the worst kind of lobbying possible.

You can imagine what the bankers of the country and the big industrialists of the country would do if the present chairman of the Committee on Banking and Currency—Wright Patman, of Texas—had to be elected. They'd do everything they could to defeat him.

You can imagine what the intense lobbying would be like on the election of a chairman of the Education and Labor Committee.

You can pick out any number of other committees—Ways and Means, Judiciary, Post Office and Civil Service, Federal employes are very much interested in the latter Committee. They would want to get their man in there. If they didn't think the one who's next in line was their man, there would be a tremendous pressure job.

But to go even deeper than that:

Back not so many years ago, the first Negro chairman in Congress—Bill Dawson, of Illinois—became chairman of the Committee on Government Operations. It happened I was senior to him on that Commitee at the time. However, I returned as Majority Leader.

Now, I could have been Majority Leader and still stayed on as chairman of the Committee under the custom followed in those days. But I wouldn't do it. I stepped aside, and Congressman Dawson became chairman.

But I didn't resign from that Committee, as I did from the Ways and Means Committee some time before. I stayed on the Government Operations Committee to show how proud I was to step aside for Congressman Dawson, a great American of the Negro race, and how proud I was to serve under him as chairman.

Suppose we had elected a chairman, and Bill Dawson wasn't chosen. Do you think there is any American of the Negro race or any other decent American who would not feel strongly that he was defeated because of the color of his skin?

Suppose a vacancy had occurred in a chairmanship in the days when the Klan was very strong. What if the man in line for the chair in seniority happened to be religiously a Catholic, and was defeated. You couldn't satisfy any decent American but that he was defeated because of his religion. Or suppose one was of Jewish blood—the same thing.

Events like that could cause very acute divisions among our people.

Any kind of rule we have—no matter how perfect it is in theory—is not going to be perfect in actual operation, because we're not perfect ourselves. The question is: Which system most nearly approximates perfection and fairness? As I see it—with complete respect for those who disagree with me—the seniority system is the best I've seen to date.

Question. Do many in Congress question the seniority rule seriously?

Answer. I don't think there are so many in Congress as there are among the public, because the other side of the case is not widely publicized: that a Democratic caucus is not bound by what the Democratic Committee on Committees recommends. I'll agree it's difficult to overrule, but the caucus has the power—always has.

Look at the high type of men you get under the seniority system: George Mahon, chairman of the Appropriations Committee; Bob Poage, Agriculture Committee; Mendel Rivers, Armed Services; Wright Patman, Banking and Currency; Carl Perkins, Education and Labor; Wayne Aspinall, Interior and Insular Affairs—no man knows interior and insular affairs better than Wayne Aspinall—these are all dedicated men—Harley Staggers, Interstate and Foreign Commerce, tremendous job; Melvin Price of Standards of Official Conduct; Olin Teague of the Veterans' Affairs Committee—those and all the other chairmen are top-rate men. And there is Wilbur Mills, Ways and Means Committee—everybody respects him as one of the most able men in Congress.

Thomas Morgan, Foreign Affairs; John McMillan, District of Columbia; Sam Friedel, House Administration; Emanuel Celler; Judiciary; Edward Garmatz, Merchant Marine and Fisheries; Thaddeus Dulski, Post Office and Civil Service; George Fallon, Public Works; William Colmer, Rules; Richard Ichord, Internal Security; Chet Holifield, Joint Committee on Atomic Energy—are all great chairmen, chairmen who do outstanding jobs.

Question. Mr. McCormack, how long have you served as Speaker of the House?

Answer. When I step down at the end of this Congress, I will have served nine years, starting in January, 1962.

Question. How does that compare with length of service by previous Speakers?

Answer. I have the longest continuous service of any Speaker in the history of the country. I rank second to Sam Rayburn in total years in the Speaker's chair. He became Speaker in September, 1940, but his service was interrupted by the 80th (1947-48) and the 83rd (1953-54) Congresses, when Republicans were in control.

All told, as Majority Leader and as majority whip—positions I held before becoming Speaker—I have had 30 years of continuous leadership in the House. That is the longest such service in the entire history of the United States.

WHAT THE SPEAKER DOES

Question. Just what are the duties and responsibilities of the Speaker?

Answer. The office of the Speaker of the House is one of four established by the Constitution of the United States. The other three are President, Vice President and Chief Justice. No other offices are specifically provided by the Constitution.

The Speaker is also an active member of the House. Unlike similar positions in many parliamentary governments, the Speaker can take the floor of the House and enter into debate, as I often do.

One of the Speaker's principal duties is as parliamentarian, to make sure that the rights of all members, regardless of party, are scrupulously protected. If I ever lean over backward, it is in protecting the rights of the minority.

The Speaker, by virtue of being the only legislative office established by the Constitution, occupies the No. 1 legislative position. It is his duty always to protect the prerogatives and responsibilities of the House of Representatives—and the entire Congress for that matter—under our form of government, calling for division of powers among the executive, legislative and judicial branches.

I think it is correct to say that the Speaker of the House does occupy the second most powerful position in our Government. In theory, the Vice President is second to the President, but in actual terms of power and influence in our Government, the Speaker ranks second. I don't say that to downgrade in any way the office of the Vice President. That is just the way it is.

Question. President Nixon the other day referred to you as the "first man in the first office in the land." What did he mean by that?

Answer. What he meant was that when our Government first met after the Constitution had been ratified, the first official to be sworn in was the Speaker of the House. The President was sworn in later.

Question. As Speaker, how do you exert your influence?

Answer. Through respect and friendship.

Question. The personal touch with members?

Answer. Yes, that's involved, of course. A very important part of this job is communication.

Question. Do you handle the exercise of power differently than, say, Sam Rayburn did when he was Speaker?

Answer. Speaker Rayburn followed pretty much the same course as I do. I believe in the appeal to reason, in being firm in the performance of my duties, but not in being arbitrary or dictatorial. I believe in the affirmative approach—talking to the need for the legislation. If it is a party matter, I stress the importance of party loyalty. I have never had any difficulty in using this approach.

Question. How much control do you have over the legislation that comes before the House?

Answer. The programing of bills is very simple. When a bill is introduced, it goes to the appropriate committee. Hearings are held and the committee votes on the bill. If it is approved, the bill is reported out of committee. Then it goes to the Rules Committee, and finally is brought out on the floor of the House.

We—the Majority Leader and I—don't program a bill without consulting the chairman of the committee from which the bill came. If he prefers to have a bill come up a week later, we co-operate with him. It may be that you haven't got enough votes to pass the bill right away, but if you wait you probably could round up the necessary votes.

It is very, very seldom that there is any difficulty in the programing of legislation.

Question. Suppose some members challenge the leadership on an issue. How do you force them to back down? Is withholding favors one way?

Answer. No, that's not involved. If a man honestly entertains his views, I respect him even when we are in sharp disagreement. I do not believe in the punitive system.

When Joe Cannon was Speaker of the House (1903-11) things were different. In those days, the Speaker appointed members of committees and that led to an abuse of power that brought about a revolution in the House. The members stood the abuse of power as long as they could; then a coalition of Republicans and Democrats came together and brought about reform. The lesson is that the Speaker should always be careful not to put himself in a position, even unintentionally, where he will misuse the power given to him as a trust.

COOPERATING WITH REPUBLICANS

Question. Do you co-operate at all with Republican leaders in the House?

Answer. Yes. Our relationship is friendly in every sense of the word. On a close vote. I'll often go to the Leader or the whip on the other side and say: "How many of your votes are we going to get on this bill?" If they know, they will tell me. And if it isn't enough—say, the Republican Leader says he thinks there will be 15 votes from his side of the aisle for the bill, and I know that we need 25—then I'll be hollering that we need 40 Republican votes to win. But I'll cash in for 30. That's all part of the game, and the relationship across the aisle is very cordial.

Question. Are the Republican estimates usually accurate?

Answer. Not always. As a matter of fact, I have one or two friends on the Republican side who are not in a position of leadership but whose estimates have been awfully good throughout the years. That is understandable, because it's difficult sometimes for leadership to get a good idea of just where all members stand.

Question. Do you tell the Republican leaders how you think Democrats are going to vote on a given issue?

Answer. Yes, certainly.

Question. By what process is the Speaker elected?

A. The Democrats pick a candidate in what we call our caucus and the Republicans pick one in their conference. If there is more than one candidate in either party's voting, the ballot is taken in secret so that members can vote their judgment and their conscience without hesistancy.

Of course, it is a foregone conclusion that the party in power will elect the Speaker when the two candidates come before the full House. That is one vote where all Democrats can agree. And the same goes for Republicans.

Question. So the Speaker is not chosen on the basis of seniority—

Answer. Oh, no.

Question. Were you opposed in the Democratic caucus for the Speaker's job?

Answer. Nobody ran against me until the last time, when we organized the new Congress in January, 1969. I figured that I would get about 180 or 181 votes in that contest. The final vote was 178 for me and 58 for my opponent.

WHY RETIREMENT WAS POSTPONED

Question. Mr. McCormack, why did you decide to retire from Congress?

Answer. Actually, I made that decision nearly two years ago at the time of the 1968 election. I very nearly decided not to run at that time for re-election. I have always thought there is no such thing as the indispensable man. There are a lot of fine public servants in my district who would render trustworthy service here. If we have to rely on the principle of indispensability, then we are in trouble.

Question. But you did decide to run in 1968—

Answer. Yes, and I made that decision because 1968 was a presidential-election year. Whether right or wrong, I felt that if the Speaker of the House, a Democrat, did not announce for re-election, it would look as though he was fearful of a Democratic defeat. To put it in plain language, I would have been walking out on my party. So I ran and was re-elected to the House, and I stood again for Speaker and was elected by the Democrats in the House. But I made up my mind in 1968 that I would retire in 1970.

Question. Until you announced your retirement, though, you had given every indication that you planned to run in 1970—

Answer. You see, if I had announced my retirement too early, I wouldn't have been able to maintain a position of influence necessary to secure passage of legislation. That's why I waited as long as I did. I probably would have waited a little longer, except for the law in Massachusetts which requires candidates to take out nomination papers and get the necessary signatures by a certain date if they are going to run for office.

I felt in justice to those who might have the ambition to succeed me that I should announce when I did so that they could make their plans.

Question. Mr. Speaker, during your 42 years in the House, how many Presidents of the U.S. have come and gone?

Answer. When I came to Washington in December, 1928, Calvin Coolidge was in the White House and served three more months until Herbert Hoover was inaugurated in March, 1929. After that came Franklin D. Roosevelt, Harry Truman, Dwight Eisenhower, John F. Kennedy, Lyndon B. Johnson, and now Richard Nixon.

So I have been in this House during all or part of the Administrations of eight Presidents.

Question. Which of those Presidents has made the greatest impression on you?

Answer. That would be a hard question to answer, because they all impressed me. Any man elected President of the United States is the choice of the people of our country. To merit that choice, he has to have impressive credentials.

Franklin D. Roosevelt was elected when the country was faced with its worst depression. We needed strong leadership, and he provided it. During his Presidency, Hitler rose to power and started World War II, and had to be put down—and Franklin Roosevelt met that test.

Question. How do you size up the other Presidents under whom you served?

Answer. Harry S. Truman, during his years as President, showed he was a man of strong and decisive mind, and he had the capacity to make any decision, no matter how tough, that confronted him.

The success of President Eisenhower as a great military leader carried that atmosphere and respect for him into the White House. He enjoyed my friendship and respect, as well as the other Democratic leaders of the House and Senate. We saved his recommendations on quite a few occasions.

The tragic death of President John F. Kennedy shortened his period of service as President. He was a man of decisive mind with courage, as evidenced by his confrontation with Khrushchev in the Berlin crisis and the Cuban missile matter. I strongly supported him in his decision.

President Johnson carried through extraordinarily the Kennedy-Johnson programs in civil rights, education, conservation—showing vision and leadership in co-operation with the Congress. In the field of foreign affairs, he indicated great courage and leadership, which place him as one of our outstanding Presidents.

President Nixon has been in office for 18 months—too early to make an appraisal. However, whether one agrees or disagrees with the Cambodian decision, he showed his courage in making it.

HIGHLIGHTS OF A LONG CAREER

Question. Looking back over your congressional career, what are your most vivid memories?

Answer. Standing out in my memory, of course, is the part that I was able to play in securing passage of important legislation

that involved the hopes and dreams of the average person. I'm proud, too, of standing up and voting for the defense of our country, because I think this is essential to assure America's preservation.

The greatest pleasure I get out of life is in serving people. That means not only in helping to pass legislation involving such things as Social Security, minimum wage, low-cost housing, but being in a position to serve the needs, in a personal way, of the tens of thousands of human beings in my district and elsewhere.

I'm very thankful that the good Lord put me in a position where I could serve two constituencies—my people back home and the people of the United States.

A NEED FOR MORE EFFECTIVE CONTROL OF DISRUPTIVE ELEMENTS IN OUR SOCIETY

HON. MANUEL LUJAN, JR.

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1970

Mr. LUJAN. Mr. Speaker, in times of extreme chaos and change such as today, it is more necessary than ever for established authority to render itself effective in controlling disruptive elements. As the forces of anarchy grow ever shriller, as disruptions and confrontations take an increasingly larger toll of both property and life, it is imperative for Government to assert its authority and control.

From September 1969 to February 1970, according to FBI Director J. Edgar Hoover, there were over 375 demonstrations on 76 college campuses. Damage approached $1,400,000. During a similar period, according to the same report, "incidents of violence throughout the country involving fire bombings, sniping, and unprovoked or ambush attacks on police officers" as a result of racial disturbances "markedly increased."

Numerous social and political commentators have pointed out the necessity for maintaining authority in the face of increasing vandalism. For this reason, therefore, I am especially concerned with the necessity for legislation making individuals who participate in civil disorders civilly liable for damages to persons who suffer loss. To this end I am introducing a bill to amend chapter 12 of title 18 of the United States Code by adding the following new section:

Whoever, as a result of his participating in a civil disorder, is convicted of a crime against the United States, shall be liable in a civil action for the full amount of damages sustained by any person who receives damage or injury to his person or property as a result of such civil disorder. Any person who receives such damage or injury to his person or property may bring such civil action in any district court of the United States in which the defendant resides or is found, without respect to the amount in controversy, and shall recover, in addition to the damages by him sustained, the cost of the suit, including a reasonable attorney's fee.

It is only a matter of justice that those individuals who suffer property loss by the destructive and disruptive actions of others be compensated for their loss by the offender. It is necessary to the survival of Government by law that those responsible for public disorder be held responsible for their actions.

I strongly suggest, therefore, that this legislation be given the most urgent and immediate consideration.

AGAINST SECRECY IN CONGRESS

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1970

Mr. PUCINSKI. Mr. Speaker, in an editorial written on July 13, the Chicago Sun-Times placed into proper perspective the reasons why we should abolish secrecy in Congress.

The editorial appropriately points out the dilemmas facing many Members of Congress and the obstacles placed in their way in carrying out their duties. It points out also the need to abolish secrecy so that the public may be better informed on how their Representatives voted and why.

I believe that votes should be recorded and shall support passage of the Legislative Reorganization Act.

Many Americans have often said that they have taxation without representation. It is my hope that if we can pass the Legislative Reorganization Act and abolish secrecy, that our citizens will say that they have taxation with representation, and a better government in the process.

Mr. Speaker, the excellent Sun-Times editorial follows:

AGAINST SECRECY IN CONGRESS

For many years this newspaper has argued long and often for the public's right to see and hear the deliberations of its elected officials. Illinois now has on its statute book a law requiring all public meetings to be public, including committee meetings, with certain reasonable exceptions.

We therefore are particularly pleased that the anti-secrecy movement is taking hold in Congress where members have notoriously ignored the people's right to know.

This week action is scheduled in the House on H.R. 17654, the Legislative Reorganization Act of 1970. A group of Congressmen, including Illinois Republicans John N. Erlenborn and Thomas F. Railsback, are sponsoring amendments which would require a public recording of how members vote on major issues both in committee and the House floor. They would open committee hearings and meetings to the press and public, and require publication of committee reports and hearings a reasonable length of time before final House action is taken.

House members now can avoid putting themselves on record on a final vote on an issue by permitting passage by a voice vote (all in favor say "Aye") or by a standing vote in which members are counted but not recorded individually.

The public is entitled to know how its individual members vote on major issues and it is entitled to even more than that. It is entitled to know the reasons behind their votes and this means that the voters are entitled to hear the arguments made in committee meetings.

Unless there is such a free flow of information to the public, the democratic process is handicapped.

One of the most secret of the House committees is the one labelled Ways and Means, in which all government spending originates. (In the Senate, virtually all appropriations hearings are open.)

It has been argued that secrecy is needed in such House committees so that members may not be inhibited about speaking up and asking questions, thereby, perhaps, exposing ignorance of the subject.

Secrecy is argued for appropriations subcommittees on the grounds that it is necessary to prevent "raids on the treasury." We don't follow that argument. It seems to us that raids on the treasury might better be prevented by letting the public see what's going on.

In a special report, the Democratic Study Group, which has been working to modernize government and the political parties, noted that what the secrecy process does is concentrate the "power of the purse" in the hands of a few men. It denies the taxpaying public an opportunity effectively to influence national priorities and makes a farce of the principle of representative government. Even congressmen who are not members of the particular subcommittees are barred from them.

The Democratic Study Group says:

"The only real opportunity afforded other members of the House to influence an appropriations measure is during floor consideration. However, after months of closed-door committee consideration, this stage of the appropriations process is telescoped into a few days with the predictable result that members can do little more than rubberstamp the committee decisions."

Surely the public expenditure of billions of dollars should not be the private business of a few influential congressmen. Nor should the public be held at arms length as the House debates life and death and dollar issues and then votes them up or down in virtual anonymity.

We salute the courageous band of innovating congressmen who are trying to let some light into the capitol.

KEEP GAS TAXES FOR ROADS

HON. JOHN M. ZWACH

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1970

Mr. ZWACH. Mr. Speaker, there has been a proposal offered by one of our colleagues to divert from the highway building program some of the funds collected from gasoline taxes on highway users.

I oppose such a proposal. I trust the committee will never move it to the floor of the House for consideration.

Our Federal system of highways still is far from complete. Let us keep the user funds for the purpose for which they are presently dedicated.

Mr. Speaker, with your permission, I would like to insert in the CONGRESSIONAL RECORD an editorial on this subject which appeared in publisher Ed Morrison's Morris Tribune.

This editorial, I believe, is indicative of the feelings of our people in the Minnesota Sixth Congressional District:

KEEP GAS TAXES FOR ROADS

There is a move in Congress at the present time to divert from the highway building program some of the funds collected from gasoline taxes on highway users. The Minnesota Good Roads Association opposed the effort, as well they might.

Highway needs are such that taxes collected on gasoline should be spent for better roads, at least for the time being. Good highways are the solution to movement of traffic in and about the rural areas. Unfortunately, however, the same thing can not be said about highways in the metropolitan areas.

So while there is need to establish some expressways in and about and around metro areas, the experience of Los Angeles would indicate that simply building one freeway after another does not solve the problem. The congestion on the freeways when they get overloaded almost defies description. Traffic can grind to a virtual standstill for hours.

Nor can there be much doubt that exhausts from highway vehicles contribute substantially to the smog problem large cities are experiencing. On the basis that simply building freeways does not solve the traffic problems of metro areas and does contribute to the smog problem, there might be some justification for taking a portion of highway user taxes from those areas for work on abatement of automotive pollution as well as supporting alternate means of transportation.

What this all boils down to is that the original concept of an interstate system of super highways, by-passing all the congestion of major and minor communities, still makes as much sense as ever. The idea of super highways criss-crossing metro areas in order to provide commuter service in those areas appears to be of questionable merit. Seeking a better solution to this problem seems reasonable.

MOUNT VERNON: A LIVING MONUMENT

HON. GLENN M. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1970

Mr. ANDERSON of California. Mr. Speaker, one of the highlights of Prince Charles and Princess Anne's recent visit to Washington was their visit to Mount Vernon.

Mount Vernon, home of our first President, serves as both a monument to that great man and a living reminder of our country's beginnings. With its stately columns and majestic grounds, it gives us a glimpse of the quiet splendor which George Washington loved so much. Anyone who visits Mount Vernon is struck by its beauty, and at the same time, feels a closeness with the past—a harmony with history—which remains with him long after he has left the picturesque plantation.

Mount Vernon is more than an example of an age gone by, it is an inspiration to all Americans and, indeed, to all men who cherish freedom. It is inspiring because it reminds us that George Washington, despite all the fame and adulation he gained in his lifetime, remained a man who cherished peace and dignity—who treasured home and family. It is inspiring because, in its majestic simplicity, it symbolizes the Government, and the country, that its owner helped to build and lead.

Today, there is still another reason to praise Mount Vernon. The staff has proven to be both courteous and efficient. Many of my guests who have visited Mount Vernon have remarked about the excellence of the personnel. I would like to single out for special praise Mr. Charles C. Wall, the resident director, and Mr. Frank H. Hammond, the administrative assistant, both of whom have been especially helpful.

A PERCEPTIVE GADFLY

HON. DONALD M. FRASER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1970

Mr. FRASER. Mr. Speaker, for the past 18 years, Mr. I. F. Stone has been observing and reporting on our Government. Through his newsletter, I. F. Stone's Biweekly, he has diligently and effectively pointed out contradictions, inconsistencies, and misstatements on the part of elected and appointed officials, to the benefit of us all.

The Wall Street Journal on Tuesday, July 19, 1970, traced Mr. Stone's career in journalism in an article titled "Gadfly on the Left."

I congratulate Mr. Stone for his effectiveness and success and commend the article to all of my colleagues:

I. F. STONE ACHIEVES SUCCESS, RESPECTABILITY BUT KEEPS RAKING MUCK

(By A. Kent MacDougall)

WASHINGTON.—I. F. Stone, tireless pamphleteer and senior leftist, is at age 62 coming into success and respectability. He has sought neither and is uncomfortable with both.

"It's a little embarrassing," he says.

After toiling for 17 years on his newsletter, I. F. Stone's Bi-Weekly, he is now being discovered by young and old alike. The liberal-to-radical young are looking to him as one of their few respected elders. Their moderate elders are saying perhaps he has been right all along in his ceaseless criticism of U.S. war and armaments policies.

The circulation of Mr. Stone's $5-a-year newsletter has nearly tripled, to 60,000, in the past five years. He now is being read in all the best places. Forty subscriptions are sent to Capitol Hill offices, and the White House is among the recent subscribers.

Mr. Stone is no longer ignored by the people he attacks. Vice President Agnew, in criticizing the press, has lumped the newsletter with the New York Times and the Washington Post. The Bi-weekly, the Vice-President has said, is "another strident voice of illiberalism." David Eisenhower, the President's son-in-law, stayed away from his own graduation ceremonies at Amherst College last month because Mr. Stone was the commencement speaker.

Who's Who in America has recently reinstated Mr. Stone, after dropping him during the McCarthy era; a spokesman for the book says he doesn't know why Mr. Stone had been dropped. The New Yorker magazine recently quoted extensively from a speech he made last March at a Madison Square Garden peace rally. He now is a frequent guest on television talk shows. And a Canadian film-maker is producing a 25-minute documentary on him.

NO LUNCHES WITH VIPS

But success and respectability don't seem to be spoiling Isidor Feinstein Stone. The maverick muckraker continues to rake muck. Nearly every issue of the four-page Bi-Weekly punches a hole in some policy statement or decision that much of the Washington press corps has taken at face value.

He still avoids friendships with Government officials. "They're all nice guys—even Nixon—but that's irrelevant," he says. He sees a danger in getting too cozy with news sources. "You've really got to wear a chastity belt in Washington to preserve your journalistic virginity. Once the Secretary of State invites you to lunch and asks your opinion, you're sunk."

Mr. Stone, who also writes frequently for the New York Review of Books, has two part-time editorial assistants now, but he puts out the Bi-Weekly almost singlehanded. Izzy Stone's forte has always been research, and he still spends much of every day reading periodicals and looking up facts. Each day he reads 10 newspapers, ranging from Le Monde to The Wall Street Journal, and he regularly culls dozens of magazines, including Air Force & Space Digest, the Economist and Peking Review. His home, a comfortable house in an upper-middle-class neighborhood in Washington's northwest side, is jammed with periodicals, Government documents and some 7,000 books. He works at home.

I. F. Stone remembers most of what he reads. Thus, when Defense Secretary Melvin Laird tells a Senate committee that Russia is "the only country in the world that has actually fired an ABM at a missile," Mr. Stone digs out an old hearing transcript that quotes Mr. Laird's predecessor, Clark Clifford, as telling the same committee that "as long as seven years ago we demonstrated we could with confidence destroy single incoming missiles." Mr. Stone also finds old newspaper clips disclosing an Army announcement of shooting down a missile with an ABM.

When he isn't pointing out contradictions, he is criticizing. He doesn't mince words. "Laird is Washington's biggest liar since John Foster Dulles," he wrote in May. And he is often eloquent. ". . . (President) Hoover like Nixon evaded decisions by appointing fact-finding commissions and then in turn evaded the facts when found," he wrote last month.

THE DEAF REPORTER

Mr. Stone attributes his habit of close reading and attention to detail to years of almost total deafness. "I went deaf in 1938, and it improved my reporting. I couldn't hear what was said at briefings and hearings, so I'd go around the next day to study the transcript. I'd catch things the guys who had listened and written on deadline had missed," he says. "Governments lie, but they don't like to lie literally. They use corkscrew sentences and disingenuous statements, and you have to read these documents as though they were mortgage contracts drawn by a shyster lawyer."

Operations in 1964 and 1965 restored Mr. Stone's hearing, and he doesn't even need a hearing aid today. He wears thick glasses—the steel-rimmed spectacles give the plump and rumpled Mr. Stone almost an owlish resemblance to Benjamin Franklin—and had to have a serious eye operation in 1967. He also suffered a heart attack in that year, but his health has been generally good since then and he vows to continue the Bi-Weekly for eight more years, until he is 70.

The world doesn't breathlessly await each new issue of the Bi-Weekly. Decision makers don't postpone decisions until reading Izzy Stone. Some respected people in Washington—liberals and conservatives—claim his words carry no weight.

Some other respected people here say that Mr. Stone is simply wrong on most counts. William S. White, syndicated political columnist and Pulitzer Prize-winning author, says: "I like and respect him. He's a man of complete sincerity and integrity. I just think he's terribly wrong. He has a manic obsession against the use of power, particularly military power."

Yet there is evidence that I. F. Stone's is an influential voice, and is becoming ever more so. Tom Wicker, political columnist and associate editor of the New York Times, says the Bi-Weekly and the underground press have influenced the daily commercial press "to be less officially oriented than we once were." Mr. Wicker says Mr. Stone is "one of the best writers and most courageous and perceptive journalists in town. Before any of us had the courage to think for ourselves, rather than take what the President said (at face value), he was doing it."

Mr. Stone says many Washington reporters still swallow Government pronouncements whole. He isn't invited to background briefings, and he says, "I have a hell of a lot of time by not going." Briefings are usually brainwashings, he claims, "attempts to sell the Government line and to shape the news." And he adds: "Establishment reporters undoubtedly know a lot of things I don't. But a lot of what they know isn't true."

Mr. Wicker, a reader of the Bi-Weekly since the early 1960s, is clearly a fan of the publication and its editor. Mr. Wicker says that Mr. Stone "has shown, more than most, the profound influence that personal journalism, divorced from big organizations and expense accounts, can have." Mr. Wicker says he used to think that Mr. Stone "was fairly far out, but not anymore."

Mr. Stone admits that he is not as "far out" as he was as a youth. In his adolescent days, he read Jack London, Peter Kropotkin, Karl Marx and other revolutionary writers and considered himself "a communist-anarchist." Today he calls himself, "half a liberal, half a radical."

I. F. Stone has been involved in personal journalism ever since his adolescence. As a 14-year-old in Haddonfield, N.J., Izzy Feinstein (he added the "Stone" later) and a schoolmate published a five-cent monthly, The Progress. The paper was complete with ads, poetry and editorials attacking William Randolph Hearst and defending the League of Nations, and young Izzy peddled it around town on his bicycle. But his father, a Russian Jewish immigrant who owned a dry goods store in Haddonfield, ordered a halt after the third issue because it was hurting his son's school work.

Young Izzy was not a very good student. "I wanted to go to Harvard, but I finished 49th in my high school graduating glass of 52," he says. "The University of Pennsylvania had open enrollment and had to take me." He was a philosophy major at Penn but dropped out in his junior year and never finished college.

"I was a New Lefty before there was a New Left," he says. "I didn't cut my hair, tie my ties or believe in college degrees. I believed you shouldn't do anything unless it was spontaneous and genuine."

Mr. Stone worked for Camden, N.J., and Philadelphia dailies in the late 1920s and early 1930s. After a stint on the New York Post, he went to Washington in 1940 as correspondent for the Nation magazine and subsequently for three ill-fated New York dailies—PM, the Star and the Compass.

When the Compass folded in 1952, Mr. Stone tried unsuccessfully to get his old job on the Nation back. Newspapers also seemed uninterested in hiring him. Inspired by the earlier success of crusading journalist George Seldes' newsletter In Fact, he launched the Weekly (changed to Bi-Weekly in 1967) with 5,300 customers obtained from his old newspapers' subscription lists.

A CHECK FROM EINSTEIN

Early subscribers included Eleanor Roosevelt, Bertrand Russell and Albert Einstein. Mr. Einstein's $5 check for a one-year subscription is framed and on display in Mr. Stone's home.

Though the Cold War climate wasn't hospitable to Mr. Stone's new venture, he experienced no McCarthyite-style harrassment. "I was fortunate enough to be born in a country with a tradition of a free press," he says. "There are very few countries in which you can spit in the eye of the Government and get away with it. It's not possible in Moscow."

Mr. Stone is as harsh on the Communists as he is on the capitalists. "I used to think that abolition of private property was the answer," he says. "I lost that faith when I saw what has happened in the Soviet bloc. The worker is more exploited there than in Western welfare states." A recent Bi-Weekly charged that "the liberation of 1917 has become a new enslavement." Mr. Stone said: "The Soviet Union today is like a huge company town with company unions and a company press." After Mr. Stone's only trip to Russia in 1956, he wrote: "This is not a good society and it is not led by honest men." That verdict caused 400 readers to cancel their subscriptions.

He has infuriated other readers with his defense of the Warren Commission Report on the assassination of President Kennedy. "I don't believe in the conspiracy theory of history," he explains. "I rejected the rightist theory of a Communist conspiracy, and I couldn't accept the leftist theory of a plot to kill Kennedy."

But the worst shock Mr. Stone has given his readers was his criticism of Israel. He has visited Israel eight times and has written two books favorable to Zionism and Israel's fight for independence. But since the Arab-Israeli War of 1967, he has warned that the new nation is in danger of losing its soul. "A besieged and militaristic Israel, if not overwhelmed from without, will be destroyed spiritually from within," he wrote recently. His solution is compensation and resettlement of Arab refugees in an Arab Palestine that would be federated with Israel, with Jerusalem the joint capital.

NO SELF-HATE

Several American Jewish magazines have attacked Mr. Stone's stand on Israel, and some subscribers have accused him of feeling self-hate as a Jew. "That's not true," he says. "I feel quite comfortable about being a Jew."

Readers also found surprising his attack on Ralph Ginzburg after the Supreme Court upheld his conviction as a publisher of pornography. Mr. Stone, long a champion of civil rights and First Amendment freedoms, now concedes, "I feel kind of bad about that." He says that what Mr. Ginzburg did "was so mild" compared with the sex publications flooding the country today. "We are getting more civilized about sex; on the other hand, so much of the stuff today is vile and horrible that I hate to have children see it. It's good for kids to learn something behind the barn," Mr. Stone says.

Mr. Stone admits to a generation gap between him and his three children, but it's not the usual kind of parent-child chasm. In this case Mr. Stone is the liberal. His children are political moderates, he says. (But a niece, Kathy Boudin, is a radical. Authorities have been seeking her since an explosion last March that destroyed a suspected bomb factory operated by radicals in Greenwich Village. The explosion killed three persons. Miss Boudin was said to have been seen leaving the site.)

If his own children don't embrace his every thought, some college youths do. His talk at Temple University last April had to be moved to bigger quarters because of an overflow crowd. The Amherst students picked him as commencement speaker (and the college gave him an honorary degree) and Penn's prestigious Philomatean Society chose him to give its annual oration this year, at which time he delighted in pointing out that the same group had turned down his bid for membership when he was a freshman at Penn.

AN I. F. STONE SAMPLER

WASHINGTON.—I. F. Stone is a master of the pithy putdown. A sampler:

Lyndon B. Johnson—"He was a New Dealer when that was the road to power, he became a conservative when that was the way to stay in."

Richard M. Nixon—"Indecisive, weak and tricky, with neither the statesman's vision nor the politician's finesse."

Eugene McCarthy—"A dilettante in politics as in poetry."

Attorney General John Mitchell and other Washington hardliners—"Nothing is more dangerous than weak men who think they are tough guys."

THE RADICALS' HERO HITS BOMB-THROWING TACTICS

WASHINGTON.—I. F. Stone is a favorite among college radicals—"a major hero in the radical pantheon," according to Life magazine—but he is critical of some radicals' bomb-throwing tactics.

"Burning America down is no way to Utopia," he says.

What is the solution? He seems less sure than ever. "Lifelong dissent has more than acclimated me cheerfully to defeat," he wrote not so long ago. "It has made me suspicious of victory. I feel uneasy at the very idea of a Movement. I see every insight degenerating into a dogma, and fresh thoughts freezing into lifeless party line. Those who set out nobly to be their brother's keeper sometimes end up by becoming his jailer.

"Every emancipation has in it the seeds of a new slavery, and every truth easily becomes a lie."

MRS. PETER DORN NAMED OUTSTANDING CITIZEN

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1970

Mr. RODINO. Mr. Speaker, I am proud to join the townsmen of Bloomfield in saluting Mrs. Peter Dorn for her selfless and able efforts in behalf of the entire community for which she was so deservedly named "Outstanding Citizen of the Year." And, I am pleased to bring to the attention of my colleagues a recent editorial from the Independent Press citing her achievement:

OUTSTANDING CITIZEN OF THE YEAR

As we looked at Mrs. Peter Dorn standing in the rain under an umbrella as she received the Outstanding Citizen of the Year Award from Carmine DiIorio, Commander of the Miles A. Saurez Post 711, V.F.W., our mind swept back over the years and recalled how faithfully this indefatigable woman of our town has handled the various projects she has been associated with.

Mrs. Dorn received the award at the Fourth of July celebration on Foley Field.

She has served as president of the Junior Woman's Club. She was vice-chairman of Bloomfield's 150th anniversary celebration. She was the designer and compiler of the Scrap Book which brought national awards to Bloomfield in 1967 and 1969. She was trustee of the United Fund and the Bloomfield Federation of Music, president of the Friends of the Library, president of the Bloomfield Historical Society, and organizer of the Sacred Heart Library Guild and the Bloomfield Historical Museum.

Mrs. Dorn was a wise choice of the committee selecting the Outstanding Citizen of the Year.

A UNIVERSAL OBSERVANCE: OFFICIAL SQUARE DANCE WEEK, SEPTEMBER 7–13, 1970

HON. JOSEPH M. GAYDOS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1970

Mr. GAYDOS. Mr. Speaker, for generations now many of this Nation's ethnic groups have dedicated themselves to perpetuating the customs and traditions of their native lands. They have handed down from father to son, mother to daughter, the traditional dress and music of many lands. They schedule festivals or observances to commemorate their lineage and keep alive their heritage.

The United States, while still a relatively young nation in the history of the world, nonetheless has compiled its own special customs and traditions. In the world of music, for instance, we are credited with giving birth to the blues, New Orleans style. The square dance, historically linked with the opening of our western frontiers, is enjoyed by hundreds of thousands of Americans today and its popularity increases each year.

This year, for the first time, the American Square Dance Society, working in cooperation with member associations, is seeking formal recognition on the local, State, and national level. They have asked the week of September 7–13, be set aside and observed as "American Square Dance Week."

A constituent in my 20th Congressional District of Pennsylvania, Ronald Meisl of 1910 Ola Avenue, Glassport, has asked me to support the society's request for a national salute. Mr. Speaker, I do so with the greatest of pleasure and I urge my colleagues to do likewise.

The article follows:

A UNIVERSAL OBSERVANCE: OFFICIAL SQUARE DANCE WEEK, SEPTEMBER 7–13, 1970

For many years, groups of square dancers in different parts of the United States have acted independently in requesting heads of local, city and state governments to proclaim an Official Square Dance Week. Some have met with success and square dance weeks and months have been declared in different areas and at various times throughout the year, ranging from several in February to quite a few in the late Summer and early Fall.

In an effort to consolidate energies and increase the effectiveness of this idea, The Sets in Order American Square Dance Society would like to suggest a combined effort for 1970. Just imagine the impact that would be felt if a majority of cities and states across the land all set aside the same time as a period in which to salute the national pastime, American Square Dancing.

Before settling on a plan, considerable study has been made of past efforts. While in some areas an entire month has been recognized, the majority of cases would indicate a weeklong observance. The question then: just which week might be most appropriate?

SELECTING A TIME

Over the past twenty years square dancers have come to realize that generally speaking the square dance year begins in the early Fall. Clubs in many areas, dormant over the warm summer months, open their doors with the end of the vacation season, coinciding perhaps with the beginning of school in the various areas. This, too, appears to be the prime time for starting new dancer classes. To be sure, some classes start at other times during the year, however almost without exception when the warm weather begins to subside, callers and clubs start putting out the promotional material necessary to bring in new dancers.

SECOND WEEK IN SEPTEMBER

For this reason we would suggest that an ideal time would be the second week in September. This would mean an observance starting with Monday, September 7th and ending with Sunday, September 13th, 1970.

During this time the energies of square dancers through their clubs and associations could be directed by focusing the attention of non-dancers, of civic groups in the area, of church, recreational and educational bodies, to the purpose, fun and philosophies of the Great American Dance.

It is suggested that each area, working independently, solicit the mayor and city council and obtain proclamations on a local basis. Perhaps your mayor is already a square dancer. If not, make opportunities during the coming months to approach him, to invite him to a club dance and to drop the hint that his official proclamation for that second week in September will be most appreciated.

Quite frequently official declarations by local government heads receive prompt and impressive attention in the local newspapers, on radio and on television. So start your thinking in this direction.

Not stopping here, clubs and individuals working through their area associations would do well to start a similar drive aimed at their state's highest executive—the Governor. We are fortunate that several of our Governors are aware of American Square Dancing and in the past have indicated their interest by proclaiming a state-wide Official Square Dance Week. In other areas you may want to start your promotional build-up now. Invite the head of your State Government as well as members of your state's legislature to be guests of honor at your Spring festivals and other big dance events. In this way you will be setting a favorable impression that may lead to an official proclamation later on.

By working a minimum of six months ahead on a project of this magnitude you will be treating this promotion in a business-like manner. An official proclamation carries much weight with it. If you are ready to start new beginners classes during the week of September 13th or soon thereafter, you will find that the official proclamation, together with combined efforts of all square dancers, will indeed attract the attention of the press, radio and television in alerting the area's citizens.

A most effective procedure would be for various associations to plan an entire "square dance package" and then coordinate callers groups, clubs and individual dancers so that everyone may play a part in this all-out drive to stimulate the activity. A publicity program of this type is of little advantage if it is not followed up with action. What is the sense of a good sales talk on any product if we are not ready to make the product available?

There are many ways to set up a week's celebration. Perhaps your dancers groups may decide to start the week out with exhibitions to which the public is invited. One-night-stand type of dances, sponsored by various clubs in cooperation with area churches, local P.T.A.'s, or Service Groups, will bring all of these units into the official observance and will drum up enthusiasm that can lead to many new dancers enrolling in the classes.

Be sure that you are prepared with promotional material telling the non-dancers what this activity holds in store for them. Make certain that posters project the idea of *friendly* square dancing. Hand out fliers and cards showing the newcomers *where, when* and *how* to sign up. Perhaps an open-house night at your regular club with a program built around a display of square dancing fun will do much to "sell" the idea. This affords you a great opportunity to explain that the club is the center and hub of this activity.

There are so many ways that a saturation program of this type can be effective. With groups everywhere participating wholeheartedly they can focus the general attention to this activity in a way that no independent project could hope to achieve.

Over the coming months we will publish additional "ammunition" designed to help build toward your official Square Dance Week. A committee from each area association could easily find itself occupied on almost a full-time basis between now and September in preparing for such a program.

Undoubtedly, in each square dance group are some who have special talents in the line of writing letters to local and State government officials. As a guide to them and to those who may lack confidence in writing this type of letter we have prepared samples which you'll find on these pages. You may use all or part of any of these as you wish, adapting them to fit your own area situations.

WHY STOP NOW?

As long as we're about it, let's at the same time consider tying this all together on a national basis with a direct request to President Nixon to proclaim this same period as American Square Dance Week.

The serious approach being given today by our government to the fields of recreation, physical fitness and national pride would indicate a ready-made acceptance for the idea of an observance for American Square Dancing. It's worth a try. So here is what we suggest.

On the official letterhead of your club, caller's group or dancer's association start your campaign now in requesting official recognition during that second week in September. Letters to your representatives in Congress and your Senators, telling them that you have written the President and perhaps enclosing a copy of the letter and asking that they get behind this project should bring positive results.

Never before have square dancers attempted such a comprehensive saturation program. By working together in this way we certainly have a far greater chance of success than we might enjoy by working independently.

We know what benefits square dancing has brought to all of us and to our friends. We know that there are many more like us who need and would enjoy this pastime. So, with this in mind and with the knowledge that a campaign of this type will bring square dancing into the lives of many not yet dancing let's act on this one and see if by working together we can't bring about miracles.

AN EXCHANGE IDEA

We would like to know if your club, group of clubs or association plans to take part in doing what it can toward recognition of this second week in September. Plans for posters and other promotional material are now in the works and will be sent to groups and publicized in this magazine in coming months. Your ideas and suggestions that will help to make this campaign a success are welcome.

PREPARE YOUR OWN CAMPAIGN

There are many ways to write to local and state and national leaders. This sample is but one hypothetical suggestion. The best results of course will occur when many varied and more personalized types of letters are utilized. Start now to collect the names

of your city and state officials to whom special letters may be directed. Do you know your representatives in Congress? Now is a good time to start your preplanning and prepare your own campaign in this direction:

YOUR TOWN SQUARE DANCE ASSOCIATION.

YOUR GOVERNOR,
Capitol City,
Your State.

DEAR SIR: American Square Dancing with its very special appeal for young and old alike is fast becoming the great, true, American participation activity. Here in (your State) more than (number) groups, large and small, representing (number) thousand dancers, enjoy this traditional American pastime in a spirit of friendliness and good will. In addition, unknown thousands of school children in this State enjoy Square Dancing as not only a great American pastime, but a recreation that is second to none.

In recognition of the growth of this activity, we are throughout the State observing American Square Dance Week, September 7 to 13, 1970. Because of the important part American Square Dancing plays in the lives of so many, we respectfully request that you, as the Chief Executive of (this State), proclaim this week, September 7 through 13, 1970 as "Official Square Dance Week".

Square Dancers everywhere will thank you for this recognition and, with open hearts, welcome you at any time to any of our activities, so that you may see first-hand the part it plays in the lives of so many.

Sincerely,

_____.

PUERTO RICAN CONSTITUTION DAY

HON. EMILIO Q. DADDARIO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1970

Mr. DADDARIO. Mr. Speaker, tomorrow marks the 18th anniversary of the island of Puerto Rico's incorporation as a Commonwealth within the United States. On July 25, 1952, the Congress ratified a constitution, drawn up by representatives elected by the Puerto Rican people, which created the Commonwealth of Puerto Rico, granting her a unique status in the American system of government.

In commemorating this holiday, we should all remember the ingenuity and determination of the Puerto Rican people in their centuries-old struggle to develop the resources of their island, the freedoms of their people and the growth of their economy.

Discovered by Columbus during his second voyage on November 19, 1493, Puerto Rico remained under the rule of Spain until ceded to the United States in 1898. Since that time, the island has made significant progress toward the eradication of the poverty and disease that has plagued the people for centuries. Let us also remember that much more is left to be done, and let us dedicate ourselves to the completion of that task.

Since the inception of "Operation Bootstrap," a program for industrial development put into effect in 1947, Puerto Rico has made impressive gains in her efforts to adjust to an industrialized world. Her factories are expanding and multiplying at an extremely rapid rate and the careful planning that goes into their construction is keeping Puerto Rico largely free of the environmental problems that confront the mainland.

And so, I know that all Americans join me in saluting the people of Puerto Rico on this, their native holiday. I am sure that with the continued attention of American Government and business, Puerto Rico will continue to grow and prosper.

THE MILITARY DRAWS A BEAD ON DRUGS

HON. HOWARD W. ROBISON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1970

Mr. ROBISON. Mr. Speaker, I am pleased to insert in the RECORD a collection of three articles found in the July 22, 1970, edition of the Christian Science Monitor dealing with the problem of drug abuse in the military. This problem is of particular meaning and concern to me since it was one of the problems uncovered by the House Select Committee, of which I was a member, during our recent trip to Southeast Asia. As the report of that committee pointed out, although efforts are being made to control the availability of drugs, "a stick" of marihuana can be purchased for pennies on almost every Saigon street corner."

No doubt there are different reasons explaining the use of marihuana by combat soldiers as opposed to its use by young people at home; but whatever the reason, we must take appropriate measures to protect these young men from the dangers of drug abuse.

The articles follow:

AMERICA'S DRUG STRUGGLE: III—THE MILITARY DRAWS A BEAD ON DRUGS

(By Michel H. Mathis)

(NOTE.—Admission by the United States military services that they have a drug problem on their hands is an important step toward its solution. This page offers eyewitness looks at the problem in Vietnam and stateside, plus a report on what the services are doing about it.)

VIETNAM

BOSTON.—It was only my second night in Vietnam. An Army pickup truck had just delivered me and another private to the top of a sandy slope overlooking Cam Ranh Bay.

Halfway down the slope, a cluster of orange specks huddled beside a trail leading to the bay shore and our guard post.

Starlight soon revealed the vague outlines of United States soldiers and defined the orange specks as the glowing tips of cigarettes. A breeze brought the pungent smell of "pot."

Unsure how to handle the situation, I reported the pot party to our "officer of the guard" over the guard post telephone. He soon roared up to the crest of the slope in his jeep, shooed the off-duty soldiers away, and quickly disappeared in pursuit of other errands.

That was my first lesson on drug use in Vietnam: The Army didn't enforce its threats of fines, disciplinary action, and even courts-martial for drug use—at least, not if it could avoid doing so.

The following day I learned that the participants in that evening "pot party" had disregarded orders to stand by for a jet flight scheduled to return them to the United States. As a result, they had missed it. That was a quick second lesson: To some GIs, a drug experience becomes even more attractive than catching the "freedom bird" home.

Three weeks later I got my first infantry assignment. "Watch out," the veterans of even a few weeks' field experience warned. "Don't let anyone catch you fooling around with 'pot' out here."

They knew how quickly a "pot-caused" lapse of alertness could bring tragedy for both the careless soldier and his nearby companions. So a kind of "common law" among the foot soldiers in my unit banned marijuana from combat or field operations. Lesson No. 3.

But behavior in the more secure base camps was a different story. Despite the efforts of military police, local Vietnamese workers made "pot" readily available to anyone who wanted it.

Our commanding officers apparently felt they had little choice but to turn their backs on marijuana use. Soldiers knew their cooperation was essential to their commander in combat. Often they exacted a price for it—freedom to disregard authority when not in combat. Some translated that into freedom to smoke "pot."

This leniency pervaded even military courts. Only rarely did a commander press charges against a man accused only of using marijuana. Occasionally, in flagrant cases, our battalion's legal officer tried. But the courts repeatedly turned him away.

To discourage "pot" use, the Army issued a mild measure of propaganda—slogans, posters, occasional newspaper editorials, and briefings by officers. But in my unit marijuana was accepted as an inevitable part of noncombat life in Vietnam.

Many Vietnam veterans thus have returned with a radical new degree of tolerance—if not actual affection—for drugs.

STATESIDE

(By Curtis J. Sitomer)

MONTEREY, CALIF.—Private H.—an Army recruit here at Fort Ord—has been "shooting horse" since the ninth grade.

His heroin habit and a history of petty crime brought him in frequent conflict with the law before entering military service. In fact it was a juvenile judge who finally gave him a choice between detention and the Army.

Now Private H. is in the Fort Ord stockade. He was court-martialed for selling and using narcotics on base. At the end of his sentence, he will receive a bad-conduct discharge.

Cases like Private H., while not uncommon here, are atypical. The majority of drug abusers on the base, who tend toward the "softer" drugs like marijuana, don't get caught. GI users here say they experience little difficulty obtaining these drugs. The post is near Monterey, Big Sur, and San Francisco, all key drug markets on the West Coast.

Selective prosecution

According to Army regulations, possessors of marijuana are subject to general or special court-martial and could be sentenced to a maximum of five years' imprisonment. The penalties are more severe for peddling and possessing the "hard" stuff—heroin, opium, morphine.

But the Army is selective in its prosecution of drug users and employs maximum discretion in meting out punishment.

"A relatively small number are actually tried," reports Lt. Col. Orrin R. Strabley, staff judge advocate at Fort Ord.

"There's a lot of difference between a man who experiments with drugs and one who sells to another," Colonel Strabley points out. "We consider an offense involving sale more serious than possession," he adds. "And we also want to know if this is a first offense or a repeat."

Francis Heisler, a civilian attorney who de-

fends many drug cases at Fort Ord, says: "For simple possession of marijuana now, a soldier would probably get a summary rather than a general court-martial." While the latter carries a maximum jail sentence of three to five years, conviction in the summary court-martial results in 30 days in the stockade, at most.

Nonpunitive approaches

Military officials at Fort Ord are beginning to develop some nonpunitive approaches to the drug problem.

The installation maintains psychiatric and medical facilities to aid drug abusers. "We have the equivalent of a general hospital—with social workers, psychiatrists, as well as MDs," says Col. John L. Bradley, post surgeon. "And if a man is motivated toward overcoming, we'll give him every chance."

But Fort Ord does not screen the trainees for those in need of help. And the post surgeon admits that there is little time during the 12–16 week basic training operation to effect an extensive rehabilitation program. On occasion the Army has referred drug users seeking help to veterans hospitals in other areas after they have left Fort Ord.

The base also has a drug-information program. But Army officials and soldiers here seem equally unenthusiastic about it.

Film's worth questioned

"We show a 30-minute film to all units when they arrive," says a Fort Ord information officer. "It's scary—and only incidentally informational," he confides. "I'm against these things. They only tend to stir things up."

Lectures and panel discussions on drug abuse also are held from time to time—at the discretion of company commanders.

Mr. Heisler and some of his associates believe that known habitual drug users shouldn't be accepted into the military service in the first place.

Military brass here—although they hedge on this point—appear to lean to this view.

"Let's put it this way," says Provost Marshal E. W. Corcoran. "How would you like to be riding in an airplane with a pilot who was subject to LSD flashbacks?"

WHAT IS BEING DONE ABOUT IT?

(By George W. Ashworth)

WASHINGTON.—For years, the American military services have maintained that drug abusers were an insignificant portion of the service community. Now, with more reliable statistics filtering in, the services are becoming aware that this is just not true.

Defense Department officials estimate that between 25 and 30 percent of all United States servicemen worldwide have at least experimented with drugs. In Vietnam, estimates run up to 70 percent.

Certain the Vietnam war has aggravated the situation:

Many men enter the service already on drugs. Then they are sent to Vietnam, where "opium dens" abound and where some of the world's most potent marijuana is grown abundantly.

Last year, U.S. military investigations of marijuana use worldwide totaled 19,139. More than a third of these—6,490—were in Vietnam.

The figures for dangerous drugs (like amphetamines and barbiturates) were 3,357 worldwide and 833 in Vietnam—nearly one-quarter of the total.

The problem of hard narcotics (like heroin and other opiates) was less Vietnam-focused: Worldwide there were 1,871 investigations. Of those only 243 were in Vietnam.

Defense officials admit that, with many cases undetected, these figures disclose only a portion of users.

In any case, the number of investigations has been soaring annually.

In the case of marijuana, for example, there were only 522 investigations in calendar year 1965; 3,096 in 1966; 5,536 in 1967; 11,507 in 1968, and 19,139 in 1969.

RATE CONTINUES TO RISE

The rate is still going up, although the rise doubtless results to a certain degree from growing service awareness of the drug problem and increased endeavors to find its extent.

Dr. Joel Kaplan, the former commander of the 98th Medical Detachment Neuropsychiatric Team at Nha Trang in Vietnam, estimated to a congressional subcommittee:

"Toward the end of my tour in Vietnam we were becoming aware that some of the younger officers were beginning to use marijuana. I was informed by a number of patients, who were warrant officers and helicopter pilots, that there were quite a number of warrant officer pilots who were using marijuana and other drugs."

Dr. Kaplan estimated that between 50 and 80 percent of all Army personnel in Vietnam had used marijuana at least once:

"The hard figures show that approximately 3,500 of the soldiers that were seen during my year's tour in Vietnam were using marijuana and other drugs heavily. The other drugs that I refer to include barbiturates, opium, amphetamines such as "speed," LSD on occasion, sniffing glue, and using the pellet of the darvon capsule."

A total of 1,064 soldiers in the 173rd Airborne Brigade were surveyed by Maj. John J. Treanor, the brigade surgeon and chief medical officer. He found that 32 percent reported they had never used marijuana, and 37 percent said they had tried it once or twice but not since. Fifteen percent said they had used it once or more a week, and 16 percent said they had used it "about every day" or more often.

Major Treanor said, "What we have seen clinically is a majority of rather incapable, frustrated, poorly educated, passive-aggressive personalities complicating the many problems they already have by becoming involved with the use of marijuana."

Education programs

The services say they are engaged in troop education programs on the problems marijuana and other hard drugs can cause. Some of the harmful effects of marijuana are already apparent. But defense sources say the education programs are hampered somewhat because there is little solid research into the effects of marijuana on human beings. The National Institute of Mental Health is conducting research, but until the findings are available, officials say, the education program cannot be as concrete as desired.

According to defense sources, the drug-abuse problem may be handled in the future along these lines:

Education and refresher training programs for those vulnerable, as well as for commanders, leaders, and military families.

The disciplinary system will be revised to place much greater emphasis upon correction and reclamation of servicemen with drug problems, particularly casual users and experimenters.

If money can be made available, the services may do much more rehabilitation of hard users before dismissing them from service. For casual users and experimenters, the hope is to develop coordinated counseling programs that will allow them to remain in the service. Defense authorities hope for federal and state cooperation in rehabilitation.

So far, the Air Force has taken the lead in rehabilitation efforts. That service has one program to return to duty users who have been sentenced to confinement through court-martial action. Another program has been developed to rehabilitate drug offenders subject to administrative discharge.

More and more, the Air Force is treating experimenters in their own units or in other nearby units.

Punishment in the service has not been uniform. The Navy, which views shipboard drug use as use on duty, has taken the hardest line on drugs. Last year that service gave 3,800 honorable, general, and undesirable discharges to drug abusers. An additional 2,000 were kept in service if it appeared that they were experimenters, who generally were only involved with marijuana or amphetamines. Navy sources optimistically say that about 95 percent of the 2,000 stopped using drugs.

Rear Adm. J. W. Albrittain, the Navy deputy surgeon general, told a drug-abuse symposium that if early indications for 1970 remained constant, "we will have something over 11,000 cases, and approximately 4,500 people discharged from the Navy or Marine Corps for drug abuse in 1970."

"Privilege" talks prohibited

The services are telling their commanding officers that they have a moral obligation to educate the servicemen about drugs. Officials believe that as the knowledge and experience are gained, the depth and scope of the training now given will be improved. Aware that drug use is often an outgrowth of other personal problems, emphasis is being placed on what is called total person improvement. The idea is that if personal problems are relieved, much of the inclination to experiment with drugs will vanish.

At least at the highest levels, the emphasis now is upon counseling and rehabilitation. But many drug users in the service still face punishment and dishonorable discharge if they are found out.

Defense officials believe the crucial step in coming to grips with the drug-abuse problem will be to change the rules so that servicemen can feel free to seek help. At present, the drug user is assured a "privileged" discussion only with his chaplain. If a man goes to a doctor, the physician is obligated to make a report to the man's commanding officer.

The commanding general of Fort Bragg, Lt. Gen. John J. Polson, has taken a step that may be a harbinger of new approaches to come. In a unique experiment, the general has set aside two wards of the base hospital for the treatment of drug addicts. Ten drug users are currently being treated. The general is also considering opening a house on post where soldiers may meet to discuss their drug problems.

The services generally realize that punitive measures alone will not solve the drug problem. But just as military officials now are moving toward rehabilitation, they also are moving to cut off drug supplies.

In Vietnam, for instance, the services are working with other federal agencies to detect drugs being mailed to the U.S. So far the programs have yielded drugs as well as hand grenades and dangerous weapons.

Pictures taken

On some days, every package sent through military post offices in Vietnam is checked, and better records are being made of senders and their packages. The Air Force, for example, is taking pictures. According to defense officials, interception of contraband from GIs overseas has been reduced to a trickle. While 132 items were seized in a typical week in mid-March, that figure had been reduced to 18 in a recent week.

But while the general direction of defense efforts to cope with the drug problem are clear, the specifics remain to be determined. A special task group now is looking into the overall drug problem in the services and methods of prevention and rehabilitation. The report of that group will be finished in about a month.

MANY GIs EXPERIMENTED

(NOTE.—The following dispatch is not bylined in order to protect the identity of the soldier involved.)

BOSTON.—Ex-Private M. J. began smoking marijuana a few months after he was drafted. Midway through his Army tour of duty—which ended with an honorable discharge—he began selling "pot," too.

As a clerk at Fort Ord in California, he smoked marijuana first thing in the morning, on his way to and from the mess hall, during work breaks, and after supper until bedtime in his barracks. He says he was "perpetually stoned" for three months—and never got caught.

At another post one of his pot-smoking companions was a military policeman.

After M. J. bought his first kilogram (2.2 pounds) of marijuana in San Francisco, he was in business. He bought kilos in brick form for $90 or $100 from a middleman in the city, then broke it down into lids at Fort Ord and sold enough to cover his own costs.

"I wouldn't have sold at all if I hadn't been smoking so much," M. J. says. "I was an amateur. I smoked up most of my profits. I guess you could say I was addicted."

He stressed that there was no organized drug business at Fort Ord—just individual GIs selling, as he did, to support their habits. He said LSD was used by soldiers at Fort Ord and some opium was used at Camp Roberts on nearby Hunter Liggett Military Reservation.

According to M. J., many GIs experimented with pseudo drugs and with pills passed out surreptitiously by medics in the hospital dispensary.

"We'd try any pill we could get," he says, "even if we knew nothing about its effects. They were free, so we thought 'why not?' Some people were looking for 'better' means of escape from personal problems or Army hassles. People who are upset will do irrational things sometimes."

The availability of drugs and the desire to be sociable do more to encourage drug use among servicemen than loose discipline does, M. J. says. But he adds that the latter is an important factor.

"Fort Ord was an open post, and discipline was loose. Every guy in my barracks either smoked marijuana or could be trusted not to tell, and most of the smoking was done in the squad leaders' rooms."

MANHASSET, N.Y., MAIL CELEBRATES ANNIVERSARY

HON. LESTER L. WOLFF

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1970

Mr. WOLFF. Mr. Speaker, I know my colleagues recognize, as I do, the important role that weekly newspapers play in the lives of thousands of communities across this Nation.

One such paper that is well read and appreciated by its neighbors is the Manhasset, N.Y., Mail which is ably edited and published by Mrs. Florence Luther. The Mail is celebrating its 44th anniversary this month and Mrs. Luther has written a timely editorial for the anniversary.

Because the Manhasset Mail is a fine example of a vital and popular weekly newspaper and so much a part of its community, I would like to extend my remarks and include Mrs. Luther's editorial in the RECORD at this point:

YEAR NO. 44

The Manhasset Mail this month began its 44th year of publication. The first issue appeared on July 8, 1927, under Editor and Publisher Donald Cooper. In the fall of 1930, Mitchell Luther purchased the Mail and was editor and publisher until his death in February 1957, at which time his wife Florence M. Luther, present editor and publisher, assumed ownership. In 1960 the sister paper, The Port Mail, was started and in 1961, the two papers changed to offset publication.

A weekly newspaper is an integral part of a community. A weekly newspaper takes pride in its faithful coverage of local events and the residents it serves. The Mail also takes pride in never having missed an issue in 44 years—although an occasional issue caused a red face here and there.

A much talked-about incident concerned Mitchell Luther, highly respected editor who campaigned often for the betterment of the community, and who, after a successful battle for a stop sign, at a busy intersection, was forced to report that he was given a ticket for failing to stop at said sign.

Another incident the staff would rather forget was an announcement of a wedding, complete with description of the bride's dress, which appeared a week early.

Last year the Board of Education "Loosed" retiring member Mrs. William G. Story—and did so in a three column banner headline.

There were good times, too. For instance, in 1957 when the Miracle Mile by-pass was cancelled, the Mail put out an extra edition and rushed it down to the station for the convenience of evening commuters (the Luther children helped) only to find that the news had been announced on commuter radios and had traveled from car to car.

However, considering everything, it's been a good 44 years and we hope subscribers enjoy the weekly editions as much as the Mail enjoys serving the public.

We look forward to many more years—with pride.

SANDOVAL STANDS SEIGE AT THE SBA

HON. THOMAS P. O'NEILL, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1970

Mr. O'NEILL of Massachusetts. Mr. Speaker, today in my office, I received the annual report for 1969 of the Small Business Administration. The report, like most Government reports, describes with a great deal of praise the work of the Small Business Administration and their accomplishments in 1969. It seems ironic to me that this came into my office today, for very recently an administrative farce came to my attention, a situation in the Boston Regional Small Business Administration Office that has the markings of high comedy, except that it is not in the least bit funny.

On April 21, 1970, Anthony Chase, General Counsel of SBA, indicated that there was a surplus of attorney positions in the Boston region of SBA. He also noted that region 4, with headquarters in Atlanta, Ga., was understaffed. The recommendation was made that four of the attorney positions in Boston be reassigned to the Atlanta region. The foregoing sounds like a very reasonable administrative decision. Perhaps a bit callous in transferring four people from one end of the country to another. However, it is much more than callous, it is hypocritical and stupid.

We all know the great deal of criticism of the SBA, of its funding and backing of some useless ventures and of businesses that could in no way be classified as small. We know equally well that the needs of small businesses in this country are great, and that a truly efficienct SBA could accomplish a great deal of good.

The Boston Regional Office of SBA is acknowledged to be a very fine organization. The attorneys and the entire staff are very able and knowledgeable people and are very much concerned about the problems of small business and the small businessman. However, if people were needed in the Atlanta region and not in Boston, and the latter part I doubt, perhaps an argument could be made for transferring some of these extremely able people to region 4 if they were willing to be reassigned. However, I would like to draw the attention of my colleagues to some developments of this reassignment. One lawyer in Boston was terminated and four were reassigned. Of those that were reassigned, one man, 67 years old, had served 12 years with SBA, has been a grade 14 for the past 4 years and is considered the finest lawyer in or out of Government. He has had more than 24 years of Government service and at one time was the head of the legal staff of the Reconstruction Finance Corporation. He left Government in 1950 to go into private practice and returned to the SBA in 1958 at the request of that Administration.

Another lawyer, a woman, age 63, has had more than 35 years in Government service, 22 of them with the Reconstruction Finance Corporation and 13 years with the SBA. She has handled all types of legal cases for the SBA and everyone in the region is backing her complaint against reassignment because she is acknowledged to be an experienced, skilled and able attorney and extremely knowledgeable in real estate law. The other two attorneys are equally qualified and experienced.

I mentioned that one lawyer has complained about reassignment. Because of this complaint, reports had to be given explaining the reason for reassignment and the choice of personnel. This is the material I would like to bring to the attention of my colleagues. It is farcical and an insult to all civil service employees and contrary to every rule of fair treatment in Government service. The four people chosen for reassignment had all had long experience in the Boston region and had roots in the Boston area. The youngest of these men is 62. As the report states, "This was by design, not coincidence." "We never expected that any of the individuals would accept reassignment to region IV. However, we thought that offering them reassignment would be a good face-saving device to allow them to retire gracefully without the onus of having been kicked out."

I find this insulting and the actions of the SBA arrogant. There is duplicity in this action and cowardice, and I find this extremely offensive. A statement of Winifred Jeffers, personnel specialist, reorganization task force, supports the action taken by SBA and tries to justify

the decision to reassign these four lawyers. Miss Jeffers tries to make a good case for this action, but unfortunately the last paragraph of her statement ruins her entire argument and grants that the entire action was useless. Her report ends "Subsequent to the reorganization of region IV, we discover that they were not prepared to accept the transfer of the four lawyers from Boston. It was necessary, therefore, to grant extensions on the reassignment dates of all the lawyers affected. The reassignment date of all four lawyers has been extended to September 1, 1970."

It has further come to my attention that the SBA in Washington is attempting to avoid complaints to the Civil Service Commission by the Boston lawyers by offering positions in SBA regional offices around the country. The SBA knows that the Boston attorneys have a very strong and valid case against reassignment and it is using lucrative offers in an attempt to prevent this case from being appealed any further.

I am going to discuss this action with members of appropriate committees in the Congress, but I would like to call the attention of all my colleagues at this time to this ridiculous action.

I think my colleagues would also find an article from Business Week very interesting. I enclose the article from the July 18 issue of Business Week describing the very serious difficulties in the SBA:

SANDOVAL STANDS SIEGE AT THE SBA

At a recent public gathering, Senator Strom Thurmond (R–S.C.) hailed Hilary Sandoval, Jr., as "the greatest administrator in the history of the Small Business Administration." Few others have expressed such enthusiasm, however, since Sandoval took over more than a year ago.

The agency's traditional constituents, the white small businessmen, complain to Congress that "you can't get a loan if you aren't black" (though two-thirds of the loans still go to whites). Blacks, however, complain the Administration programs for black capitalism is "peanuts," despite a definite increase in loans.

Democrats on the House Select Committee on Small Business are holding hearings next week to size up Sandoval's record, and they are loaded for bear. Among other things the committee will probe, says Chairman Joe L. Evins (D–Tenn.), is "whether the SBA's energies and resources are being frittered away, as recent reports to the committee indicate, on inefficient fringe programs." The group is disturbed that Sandoval has gone through four deputy administrators in little more than a year.

And the signs are unmistakable that the White House has not been much happier with Sandoval, a former newspaper distributor from El Paso, Tex.

UNDER WRAPS

Sandoval got off to a bad start when his hand-picked special assistant, Albert M. Fuentes, was sentenced to five years on a charge of trying to take a $50,000 kickback on a loan. (The case is still on appeal.) And Philip Pruitt, a Negro whom Sandoval picked to head the minority lending program, resigned with a blast that the Administration was not really interested in black capitalism.

Since then, the White House has kept Sandoval more or less under wraps. When a package of three new proposals to aid small business was unveiled, it was Commerce Secretary Maurice Stans, not Sandoval, who held the press conference. The proposals had actually been drafted at Commerce; SBA was not even told about its own legislative program until the day before the announcement. And Commerce, rather than the SBA, has gotten much of the credit for the two programs that the Administration cites as its showpieces for black capitalism, even though the SBA has all the authority to make the actual loans.

The new Minority Enterprise Small Business Investment Company program (MESBIC), designed to attract big corporate investment in minority companies, is run by Stans while the SBA puts up the money. (Even so, only 11 of the 100 MESBICS that Stans expected to have in business by June 30 have materialized.) The program to get franchises for minorities is split between Commerce and the SBA, with both agencies trying to persuade big franchisers to take on black businessmen. Public announcements about the program usually come from the Commerce Dept., though, again, it is the SBA that actually makes the loans, and the rivalry between the two agencies appears to be hurting the black capitalism effort. Only a couple of hundred franchises went to minority businessmen in the fiscal year just ended.

"Something has to be done about it," says a source in Congress familiar with the situation.

POWDER KEG

The White House's effort to keep a check on the SBA led to a real blowup earlier this year. The Administration assigned a Stans lieutenant, W. Donald Brewer, to be deputy administrator of the SBA and for months nobody could figure who was in charge. One junior official caught between conflicting orders from Sandoval and Brewer got it point-blank from Brewer. "Are you working for Sandoval or for me?"

Finally, according to reports, Sandoval decided to have it out with the White House. Either he or Brewer would have to go, he said. About that time, a full-page ad appeared in the *Los Angeles Times* from a group of Mexican-Americans thanking President Nixon for appointing one of them, Sandoval, to a top Administration job. And Senator John G. Tower (R-Tex.) warned the White House that his dismissal would seriously hurt Republicans with the large Spanish-American electorate in Texas. Brewer was promptly appointed to the Interstate Commerce Commission.

"Sandoval would have been in a lot of trouble right from the beginning if it hadn't been for Tower," says Representative Silvio Conte of Massachusetts, top Republican on the House Small Business Committee. "Tower is chairman of the Senate GOP Campaign Committee and nobody's going to touch his boy." He adds, however, that "over-all," he thinks Sandoval has done "a pretty good job."

LIQUIDATION

A prime cause of the internal turmoil in the SBA has stemmed from Sandoval's almost Gilbert-and-Sullivan efforts to get rid of entrenched career appointees, many of whom are protected by civil service.

Wilfred J. Garvin, the agency's chief economist, arrived one morning to find all his pictures of previous administrators stacked on his desk. On top of the stack was an application for retirement. Garvin is still there and Sandoval is now trying to abolish the whole economic research office. Congress is fighting it.

Directors of regional offices have been offered lower-level jobs or transfers to distant cities. The director of the Columbus (Ohio) office, son of the city's Democratic mayor, was transferred to Salt Lake City. He quit. The Salt Lake City chief, who had once run against a Republican congressman, was shipped to Cleveland. Altogether, about half the 60 regional directors have departed one way or another. Moving expenses have amounted to $250,000, and the House committee wants to ask Sandoval about this.

"Morale around this place is really lousy," says Joseph Foster, who heads the agency's local of the government employees union. Membership in the union has doubled since Sandoval became administrator.

Sandoval's distrust of career employees has sometimes seemed a bit excessive. Employees not in his inner circle, for instance, were ordered to turn in the magnetic cards that enable them to get into the building after hours. When one top Democratic holdover was removed, the lock on his office was changed before nightfall.

GOOFS

Nor have relations with Congress been very smooth. When the SBA's citizens advisory committee met in Washington, Sandoval invited Representative George Bush, a Texas Republican who is not on any small business committees, to address the group and neglected to invite the top committee Republican, Conte, until later. When Conte learned he was second choice, he declined. And Sandoval bitterly attacked Democratic Senator Ralph Yarborough, chairman of the Senate Labor Committee, in a speech to a Texas GOP county convention. That was all right, except that a release about the strictly political speech was distributed on government stationery, which is illegal. "Somebody goofed," a spokesman acknowledged.

Stories of other peculiar goings-on circulate in the agency. Sandoval brought his personal priest with him from Texas for a few months and installed him in an office next to his own, in full clerical garb, as an unpaid consultant. A Sandoval aide who briefed the staff on how to set up regional meetings emphasized that one job was to arrange a complimentary hotel suite for the administrator; General Accounting Office agents have been investigating those arrangements. And armed Pinkerton guards were hired to cover a meeting hall (to guard the movie projectors, a spokesman said); now the bills cannot be paid because hiring private guards is forbidden.

"Actually, it's too bad about all the Mickey Mouse stuff going on," says one defender of the Sandoval regime, "because Sandoval really is working terribly hard." He has stumped the country, driving home to directors of local offices the point that their futures depend on how well they perform on minority lending. And he is credited with speeding up aid to businesses wiped out by Hurricane Camille.

HIGH MARKS

The banking community has found some satisfaction, too, in Sandoval's efforts to give local offices more authority to approve loans. The delays in loan processing have been a perennial gripe with bankers. Sandoval is trying out a pilot program in several cities to speed delivery; if the SBA does not veto loan applications within three days, they are considered approved.

Much of the SBA's success depends on persuading banks to make loans with SBA guarantees, since the agency has little money of its own to lend. But bankers have not been overly impressed with Sandoval personally. "He's terribly bland," says one top representative. The House committee feels that Sandoval's lack of rapport with bankers is a serious problem.

Just how good the agency's loan record is will be disputed in the committee. The total amount of loans going to small business has averaged about $61-million a month in 1970, about the same rate as when Sandoval took office in March, 1969. Critics charge that since the agency has moved from lending its own money to simply guaranteeing bank loans, it should be possible to increase the flow. Agency spokesmen counter that in a period of tight money, keeping the loan rate from falling constitutes a good performance.

And Sandoval can point to a one-third increase in the rate of loans going to mi-

norities, up from about $10-million a month to an average of $13-million for the first five months of 1970. Loans to Spanish-Americans have doubled; loans to blacks are up 18%. About one-third of all loans are now going to minorities.

Sandoval can expect to face some questioning from the committee on the agency's program of procuring government contracts for minority companies. He has succeeded in getting a larger number of contracts set aside for minority businesses. But the Defense Dept. is complaining that of $32-million assigned to the SBA for letting, only $15-million has been placed. "With 60 staff people working on the program there haven't been many results," says a Congressional source.

"The basic trouble," says a Republican in Congress who declines to be identified, "is that the black capitalism program has yet to get much priority attention from the White House."

CONSERVATIONIST SAYS EROSION IS NATIONAL MENACE

HON. ROBERT H. MOLLOHAN

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1970

Mr. MOLLOHAN. Mr. Speaker, the Federal Government has many unsung heroes whose day-to-day work is done with dedication and concern and goes largely unrecognized by the rest of us.

Such a man is Mr. Law Helmick who is a district conservationist with the U.S. Soil Conservation Service in Fairmont, W. Va.

Mr. Helmick handles all types of problems in Marion County and is well respected and thought highly of by the people he serves.

The following article appeared in the West Virginian and was written by Frannie Hoffman.

It is a fine column, honoring distinguished persons from the Fairmont area, and Miss Hoffman could not have chosen a finer subject for this column than Mr. Helmick.

My congratulations and sincere thanks to both Mr. Helmick for his dedicated service and to Miss Hoffman for telling the public about this distinguished conservationist:

CONSERVATIONIST SAYS EROSION IS NATIONAL MENACE

Question. In the matter of conservation, what would you say is the most important problem in this country?

Answer. In my estimation, it's the stabilization and conservation of our top soil. This has been our prime purpose since the SCS was started in 1935. It actually was started in 1933 with the old soil erosion program.

Question. Please explain.

Answer. Soil erosion is a menace to our national welfare, and the SCS was set up to provide permanently for the control and prevention of soil erosion and thereby preserve our national resources.

Question. What's being done about it?

Answer. This is being handled by flood control measures, reforestration and revegetation of all areas subject to erosion by any cause, as well as a conservation education program.

Question. Who handles this in Marion County?

Answer. Our staff is responsible for the work here.

Question. Does your program involve water pollution and air pollution, as well?

Answer. Water pollution, yes. Air pollution, no.

Question. With what type of water pollution is the SCS concerned?

Answer. The pollution that's caused by siltation. This involves silt washed into the streams from such bare areas as strip mines, road construction, eroded farmlands, and residential building developments.

Question. What's done to prevent this?

Answer. Working through the Monongahela Soil Conservation District, we developed plans for stabilization of these areas, usually through tree planting and-or

Question. Who actually carries out these plans?

Answer. The landowner, or the land developer or operator.

Question. About how large an acreage would you say has been covered in this program in Marion County?

Answer. At lease half the Marion County acreage.

* * *

Question. What about your watershed program?

Answer. We are presently working on a flood control program for the Upper Buffalo Creek watershed establishment of a good vegetative cover.

This involves 12 earth-fill dams. We have one completed, are working on the second, and making plans for starting the third in the near future.

Question. When will the entire project be finished?

Answer. It's scheduled for completion in 1975.

Question. What benefits will be derived from this project?

Answer. It will prevent the annual flooding of Mannington, Rachel, Farmington and other areas along Buffalo Creek extending into Fairmont.

Question. Are any other watershed projects planned for this area?

Answer. Yes, the Prickett's Creek watershed program. In about two months we should have the work plan for this project completed.

Question. What do the plans call for?

Answer. Construction of an earth-fill dam at a location which will prevent flooding of communities along the creek which includes Winfield, Meadowdale and Viola.

Question. What are the estimated costs for both these projects?

Answer. The Upper Buffalo Creek project will cost about $3.5 million. We won't have an estimate of the total cost for Prickett's Creek until the work plan is completed.

Question. Are federal and state funds involved in these projects?

Answer. Both federal and state funds are being expended in the Upper Buffalo Creek project and will be involved in the Prickett's Creek project, as well. In addition, the Marion County Court and the City of Mannington, as well as various individuals, are contributing toward the Buffalo Creek project.

Question. Do you work in cooperation with other agencies in regard to conservation?

Answer. Yes. We work closely with the Agricultural Stabilization and Conservation Service, the cooperative extension service of West Virginia University, and the Farmers Home Administration.

Question. How does the conservation picture in Marion County appear now?

Answer. In my estimation, it is very bright. This type of service has increased over the years since we first started working with farmers. It now includes all land users, urban as well as rural, and recreation areas as well as farms. I think most Marion County residents are conservation-conscious and, fortunately, have the financial ability to carry out good conservation practices. There are other counties in the state which are not as fortunate in this respect.

Question. Are SCS services available to everyone in the county?

Answer. Yes. We are willing and able to offer assistance in the way of soil information and assistance in soil conservation to groups and individuals.

Question. How large a staff does the Marion County office have?

Answer. In addition to myself, we have another soil conservationist, a conservation technician, part-time student helpers in the summer, and an engineer and two assistants in a project office devoted to the Upper Buffalo Creek Watershed and Prickett's Creek Watershed projects.

Question. How long have you been with the SCS?

Answer. Since 1953. I was assigned to the office in Braxton County when I joined the service. From there I was sent to Clay County in 1954, then to Marion County in 1957.

Question. What did you do before you joined the SCS?

Answer. I was with the cooperative extension service in Roane County for about three years.

Question. What sort of training have you had for this work?

Answer. To start with, I grew up on a farm. Then I attended West Virginia University where I took courses pertaining to agronomy and soils, and was graduated from there in 1950 with a bachelor's degree in agriculture. I have also taken graduate courses in agriculture at WVU.

PUBLIC LAND LAW REVIEW REPORT STRESSES NEED FOR EXPLORATION BY PRIVATE FIRMS

HON. LAURENCE J. BURTON

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1970

Mr. BURTON of Utah. Mr. Speaker, I commend to the attention of my colleagues an article in the July 1970 issue of the Independent Petroleum Monthly, and an article from the American Mining Congress' news bulletin dated June 26, 1970, both of which comment on the public land law review commission report. The articles follow:

PUBLIC LAND LAW REVIEW REPORT STRESSES NEED FOR EXPLORATION BY PRIVATE FIRMS

(Historic study says U.S. should encourage mineral search on domain in preference "over some or all other uses," and rely on private sector. Federal control of Shelf production rates urged)

The Public Land Law Review Commission last month submitted its monumental report to the President and the Congress. In the area of Mineral Resources, it recommended that:

1. Public land mineral policy should encourage exploration, development, and production of minerals on the public lands.

2. Mineral exploration and development should have a preference over some or all other uses on much of public lands.

3. The Federal Government generally should rely on the private sector for mineral exploration, development, and production by maintaining a continuing invitation to explore for and develop minerals on the public lands.

In the case of national parks and national monuments, the Commission recommended continued exclusion, with development of

mineral reserves there to come only in future emergencies.

Slap at noncompetitive bidding. The report recommended changes that would broaden the range of competitive bidding for mineral leases on public lands. At present, public lands outside of known geologic structures are leased noncompetitively.

The Commission would extend competitive bidding to land on which there have been relinquished or forfeited leases or permits, or where there is a reasonable indication of "good prospects for success."

In the so-called "upland" federal areas, as distinct from the Outer Continental Shelf, the Commission said leases should be awarded on a "competitive" basis "whenever competitive interest can reasonably be expected."

Thus, the Commission proposes eliminating known geologic structures as the lone standard for competitive bidding.

WOULD ASSERT SHELF PRORATION

In the Outer Continental Shelf area, the Commission called for federal prorationing. It urged the Secretary of Interior to follow through with federal prorationing procedures first suggested in the late 1960's by Stewart L. Udall, at that time Secretary of Interior.

Limitation of the rate of production is "an integral part of mineral production management," the Commission said. While prorationing has been frequently attacked on charges that it is a "system of price fixing by states," the Commission said, "the courts have sustained the systems on the grounds that they serve a legitimate conservation purpose, even though they have had an incidental effect on prices."

HISTORIC STUDY

The Commission, since July 1965, has been studying laws and policies, as well as practices and procedures in their administration, concerning public lands in the United States.

Representative Wayne N. Aspinall (D.-Colo.) has served from the inception of the Commission as chairman. H. Byron Mock, a presidential appointee from Salt Lake City, Utah, has been vice chairman, and Milton A. Pearl has been director of the Commission's day-to-day activities.

The Independent Petroleum Association of America has cooperated with the Commission. H. A. (Dave) True, Jr., former IPAA president, and an independent operator in Casper, Wyo., has been a member of the advisory committee to the Commission during its 5 years of deliberation.

IPAA's Public Lands Committee at its midyear meeting in Denver authorized a 5-man subcommittee to review and consider the Commission report, and make pertinent recommendations to the full committee covering the issues raised concerning the oil and gas industry and the public domain.

David Schaenen, Billings, Mont., is chairman of the subcommittee. Other members are: Bruce Anderson, Houston, Tex.; W. T. Blackburn, Denver; John M. Kelley, Washington, D.C.; and Edward N. Litman, Casper, Wyo. Warren A. Morton, also of Casper, is chairman of the Public Lands Committee, and is an ex officio member of the subcommittee. Dave True is an adviser. William I. Powell, IPAA administrative vice-president, is committee secretary.

VITAL ROLE OF DOMAIN

The Commission said the American people today are "feeling the pressures of an enlarging population, burgeoning growth, and expanding demand for land and natural resources." They "have an almost desperate need to determine the best purposes to which their public lands and the wealth and opportunities of those lands should be dedicated.

"Through the timely action of Congress, and through the work of this Commission, a rare opportunity is offered to answer that need."

Federally owned land amounts to 755,368,055 acres, or 33.3 percent of the total U.S. land area of 2,271,343,360 acres. Oil production on Federal land (other than the Outer Continental Shelf) in 1968 amounted to between 6 percent and 7 percent of the national total and was valued at over $570 million. This figure does not include recent discoveries in Alaska which are not on Federal lands.

"Perhaps of even more importance," said the Commission, "is the fact that large areas of the public lands not yet drilled are deemed favorable to the occurrence of oil and gas. Over 64 million acres of Federal land were under lease for oil and gas in 1968, of which over 90 percent was in the Western contiguous states and Alaska."

COMPETITIVE LEASING

The Commission said that where certain mineral conditions are known to exist, the present leasing system requires competitive sale of exploration and development rights.

"We have concluded that these competitive sale requirements are too narrow in scope," the report said, "particularly in the case of oil and gas. It appears to the Commission that competitive leasing would be appropriate:

"1. In the general area of producing wells.

"2. For land covered by relinquished or forfeited leases or permits.

"3. Where past activities and general knowledge suggest reasonably good prospects for success."

And the Commission added: "To achieve the objective of this recommendation, the administrator should have the authority to segregate public land from mineral exploration for a short period of time. At the end of the prescribed period exploration rights should be available noncompetitively in the same manner that we have recommended with regard to other minerals.

"Adoption of this recommendation would eliminate the need for the simultaneous filing system currently in effect. Similarly, this would eliminate the known geologic structure as a standard for competitive allocation of oil and gas leasing rights."

(Leasing recommendations—in Chapter Seven, "Mineral Resources"—will be one of the many areas of the report to be analyzed thoroughly by the IPAA subcommittee.)

DEPEND ON PRIVATE INDUSTRY

The Commission said it is "satisfied that private enterprise has succeeded well in meeting our national mineral needs, and we see no reason to change this traditional policy. Existing Federal programs to develop nationwide geological information should be continued and strengthened."

These Federal programs should serve, the report added, to identify general areas favorable to mineral occurrence with detailed exploration and development left to private enterprise.

"The efforts of private enterprise will be effective only if Federal policy, law, and administrative practices provide a continuing invitation to explore and develop minerals on public lands."

And the report added: "We recognize that mineral exploration and development, and production will, in most cases, have an impact on the environment or be incompatible with some other uses. By its very nature, mineral activity alters the natural environment to some degree, and if no such impact were to be tolerated, it would be necessary to prohibit the activity. Mineral exploration, development, and production are essential to our national economic and strategic well-being, however, and such activities cannot be barred completely.

"We believe that the environment must be given consideration, but regulations must not be arbitrarily applied if the national importance of the minerals is properly weighed."

WANTS FEDERAL CONTROL OF OIL, GAS PRODUCTION IN SHELF AREAS

In discussing the Outer Continental Shelf, the report recommends "that in the interest of conservation the Federal Government promulgate and administer its own rules for controlling the rate of production from Outer Continental Shelf oil and gas fields."

It noted that in January 1967 the Secretary of Interior announced his intention to promulgate rules for the regulation of oil and gas production from the Shelf, including independent prorationing. The announcement has never been implemented, "and the Commission urges that it be done."

Outer Continental Shelf crude oil production now exceeds 8 percent of the U.S. total. Proved reserves are 2.9 billion barrels of oil and natural gas liquids and 30.3 trillion cubic feet of gas. Estimates suggest that undiscovered recoverable reserves are in a range of 34 to 220 billion barrels of liquids and 170 to 1,100 trillion cubic feet of natural gas. And in dollar value, the Shelf has already contributed substantially to the U.S. Treasury. Receipts as of June 30, 1968, from the sale of leases on the Shelf and from rentals and royalties totaled over $2.7 billion.

And the Commission recommended: "Complete authority over all activities on the Outer Continental Shelf should continue to be vested by statute in the Federal Government. Moreover, all Federal functions pertaining to that authority, including navigational safety, safety on or about structures and islands used for mineral activities, pollution control and supervision, mapping and charting, oceanographic and other scientific research, preservation and protection of the living resources of the sea, and occupancy uses of the Outer Continental Shelf, should be consolidated within the Government to the greatest possible degree."

COORDINATION WITH STATES

The Commission noted that in its deliberations there was a strong sense of need for coordination between the Federal Government and the affected states. This concern is reiterated in many parts of the report.

"While asserting the need for Federal conservation control of the Outer Continental Shelf, we recognize that there must be close coordination between the Federal Government and the adjacent states."

"Any limitations proposed by adjacent states should be taken into consideration by the Federal Government in determining the amount of production allowable from wells on federal leases.

"But, state production regulations have been developed from data related to dry land and shallow tidewater regulation. As Outer Continental Shelf production moves into deeper waters, economic and technical comparability between state production, which is in shallow waters or on dry land, and deep water production becomes more remote.

"At some point, it becomes doubtful that it will be in the interest of the Federal Government or the lessee to require compliance with state allowables. Therefore, the Federal Government should have an independent, flexible system of allowances to meet the variety of conditions which may be experienced."

OVERALL RECOMMENDATIONS MADE BY THE COMMISSION ON PUBLIC LANDS

The Commission report, entitled "One Third of the Nation's Land," lays down 17 recommendations of basic underlying principles to guide future policy concerning public lands. They are:

1. The policy of large-scale disposal of public lands reflected by the majority of statutes in force today be revised and that future disposal should be of only those lands that will achieve maximum benefit for the general public in non-Federal ownership, while retaining in Federal ownership those whose values must be preserved so that they may be used and enjoyed by all Americans.

2. An immediate review should be undertaken of all lands not previously designated for any specific use, and of all existing withdrawals, set asides, and classifications of public domain lands that were effected by Executive action to determine the type of use that would provide the maximum benefit for the general public in accordance with standards set forth in this report.

3. Congress should establish national policy in all public land laws by prescribing the controlling standards, guidelines, and criteria for the exercise of authority delegated to executive agencies.

4. Congress assert its constitutional authority by enacting legislation reserving unto itself exclusive authority to withdraw or otherwise set aside public lands for specified limited-purpose uses and delineating specific delegation of authority to the Executive as to the types of withdrawals and set asides that may be effected without legislative action.

5. Public land management agencies should be required by statute to promulgate comprehensive rules and regulations after full consideration of all points of view, including protests, with provisions for a simplified administrative appeals procedure in a manner that will restore public confidence in the impartiality and fairness of administrative decisions. Judicial review should generally be available.

6. Statutory goals and objectives should be established as guidelines for land-use planning under the general principle that within a specific unit, consideration should be given to all possible uses and the maximum number of compatible uses permitted. This should be subject to the qualification that where a unit, within an area managed for many uses, can contribute maximum benefit through one particular use, that use should be recognized as the dominant use, and the land should be managed to avoid interference with full fulfillment of such dominant use.

7. Federal statutory guidelines should be established to assure that Federal public lands are managed in a manner that not only will not endanger the quality of the environment, but will, where feasible, enhance the quality of the environment, both on and off public lands, and that federal control of the lands should never be used as a shield to permit lower standards than those required by the laws of the state in which the lands are located. The Federal licensing power should be used, under statutory guidelines, to assure these results.

8. Statutory guidelines be established providing generally that the United States receive full value for the use of the public lands and their resources retained in federal ownership, except that monetary payment need not represent full value, or so-called market value, in instances where there is no consumptive use of the land or its resources.

9. Statutory provision be made to assure that when public lands or their resources are made available for use, firm tenure and security of investment be provided so that if the use must be interrupted because of a Federal Government need before the end of the lease, permit, or other contractual arrangement, the user will be equitably compensated for the resulting losses.

10. The United States make payments in lieu of taxes for the burdens imposed upon state and local governments by reason of the Federal ownership of public lands without regard to the revenues generated therefrom. Such payments should not represent full tax equivalency and the state and local tax effort should be a factor in determining the exact amount to be paid.

11. Statutory authority be provided for the sale at full value of public domain lands required for certain mining activities or where suitable only for dryland farming, grazing, domestic livestock, or residential, commercial, or industrial uses, where such sale is in the public interest and important public values will not thereby be lost.

12. Legislation be enacted to provide a framework within which large units of land may be made available for the expansion of existing communities or the development of new cities.

Until some experience has been gained in the various mechanisms that might be utilized and a national policy adopted concerning the establishment of new cities generally, Congress should consider proposals for the sale of land for new cities on a case-by-case basis.

13. Statutory authority be granted for the limited disposition of lands administered by the Forest Service where such lands are needed to meet a non-Federal but public purpose, or where disposition would result in the lands being placed in a higher use than if continued in Federal ownership.

14. Legislation be enacted to provide flexible mechanisms, including transfer of title at less than full value, to make any federally owned lands available to state and local governments when not required for a Federal purpose if the lands will be utilized for a public purpose.

15. Generally, in both legislation and administration, the artificial distinctions public domain and acquired lands of the Federal Government should be eliminated.

16. Responsibility for public land policy and programs within the Federal Government in both the legislative and executive branches should be consolidated to the maximum practicable extent in order to eliminate, or at least reduce, differences in policies concerning the administration of similar public land programs.

17. In making public land decisions, the Federal Government should take into consideration the interests of the national public, the regional public, the Federal Government as the sovereign, the Federal proprietor, the users of public lands and resources, and the state and local governmental entities within which the lands are located in order to assure, to the extent possible, that the maximum benefit for the general public of the United States is achieved.

BROAD APPROACH URGED

The Commission is composed of six persons having no connection with the Federal Government, appointed by President Johnson; six members appointed by the Senate; and six appointed by the Speaker of the House of Representatives. The 18 members appointed Representative Aspinall as their chairman.

In a joint statement, Chairman Aspinall, Vice-Chairman Mock, and Director Pearl said that they are "satisfied" with the Commission's report and recommendations because "we can now move forward to modernize and simplify the public land laws while at the same time assuring equity both to all those directly interested in the public lands and to the Nation as a whole."

[From American Mining Congress' News Bulletin, June 26, 1970]

UTAH MINING ASSOCIATION: PUBLIC LAND LAW REVIEW COMMISSION SUBMITS ITS REPORT

After almost six years and the expenditure of over $7 million, the Public Land Law Review Commission on June 23 submitted its Report to the President and to Congress. The report, which is some 342 pages in length, is available from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402, at $4.50 per copy. It contains 18 statements that the commission lists as "basic concepts and recommendations for long-range goals," 137 specific recommendations that are numbered and over 200 unnumbered, supplemental recommendations that appear in italics.

The commission recommends that the policy of large-scale disposal of public lands be revised and that, in the future, disposals be made only to achieve maximum benefit for the general public. As another basic principle, the commission states that the United States shall receive full value for the use of the public lands.

In its recommendations regarding mineral resources, the commission states that federal policy "should encourage exploration, development and production of minerals on the public lands. . . . Minerals exploration and development should have a preference over some or all other uses on much of our public lands." However, Congress should continue to exclude some classes of public lands, such as national parks, from future mineral development, but federal agencies should make mineral examinations which will provide reliable information on lands recommended for exclusion as well as those where mineral activity is already excluded.

The commission recommends that the Mining Law of 1872 be modified to establish a system which incorporates the desirable features of this Act as well as the leasing laws. "Unless a public land area is closed to all mineral activity, we believe that all public lands should be open without charge for nonexclusive exploration. . . . However . . . different conditions should prevail if the prospector desires an exclusive right," or if significant surface damage may result.

In this regard, the commission recommends the following:

"Whether a prospector has done preliminary exploration work or not, he should, by giving written notice to the appropriate federal land management agency, obtain an exclusive right to explore a claim of sufficient size to permit the use of advanced methods of exploration. As a means of assuring exploration, reasonable rentals should be charged for such claims, but actual expenditures for exploration and development work should be credited against the rentals.

"Upon receipt of the notice of location, a permit should be issued to the claimholder, including measures specifically authorized by statute necessary to maintain the quality of the environment, together with the type of rehabilitation that is required.

"When the claimholder is satisfied that he has discovered a commercially minable deposit, he should obtain firm development and production rights by entering into a contract with the United States to satisfy specified work or investment requirements over a reasonable period of time.

"When a claimholder begins to produce and market minerals, he should have the right to obtain a patent only to the mineral deposit, along with the right to utilize surface for production. He should have the option of acquiring title or lease to surface upon payment of market value.

"Patent fees should be increased and equitable royalties should be paid to the United States on all minerals produced and marketed whether before or after patent."

Additional and clarifying commission recommendations—

In regard to legal requirements for the discovery of valuable minerals: "Federal land agencies are poorly equipped to judge what is a prudent mining investment, and this issue should be closed when the mineral explorer is prepared to commit himself by contract to expend substantial effort and funds in the development of a mineral property."

State claims: "Congress should establish a fair notice procedure to clear the public lands of long-dormant mining claims."

Uniform federal requirements: Discovery work required by state law often serves no useful purpose. "Federal statutes should fully prescribe uniform methods."

Common varieties: "Congress should define or list those minerals to which the location-claim and leasing systems apply and provide that all other minerals be subject to sale under an act similar to the Materials Act."

In regard to the mineral leasing system, the commission recommends that:

Competitive sale of exploration permits or leases should be held whenever competitive interests can reasonably be expected.

Prospecting permits and leases should apply to all leasable minerals unless expressly excluded by the administrator in accordance with legislative guidelines.

All rights and obligations, including those related to maintenance of the environment, of mineral explorers and developers be clearly defined at the outset of their undertakings.

Provisions of existing law prohibiting the apportionment of royalties and imposing minimum production requirements on each lease should be modified to permit unitization of public land coal leases.

Restrictions upon the leasing of public land coal deposits to railroad companies should be removed.

The commission also recommended that legislation be enacted to authorize legal actions by the government to acquire outstanding claims or interests in public land oil shale subject to judicial determination of value. It also urged that some oil shale public lands be made available now for experimental commercial development by private industry.

In regard to geothermal steam resources, the report states that "Congress should provide a specific policy of leasing geothermal resources in which fair and reasonable consideration is given to the equities of holders of asserted prior rights who expended money and effort."

The report urges that "restrictions on public land mineral activity that are no longer relevant to existing conditions should be eliminated so as to encourage mineral exploration and development and long-standing claims should be disposed of expeditiously."

The commission recommends that the Forest Service be merged with the Department of the Interior into a new Department of Natural Resources.

As a parallel to the consolidation of public lands programs in the executive branch, the report recommends a consolidation of congressional committee jurisdiction over public land programs into a single committee in each house of Congress.

A major chapter of the report is devoted to "Public Land Policy and the Environment." The report states that "those who use the public lands and resources should be required by statute to conduct their activities in a manner that avoids or minimizes adverse environmental impacts, and should be responsible for restoring areas to an acceptable standard."

As to withdrawals, the commission recommends that "large scale limited or single-use withdrawals of a permanent or indefinite term should be accomplished only by act of Congress. All other withdrawal authority should be expressly delegated with statutory guidelines to insure proper justification for proposed withdrawals, provide for public participation in their consideration, and establish criteria for Executive action."

Rep. Wayne N. Aspinall (D-Colo.) is chairman of the commission and chairman of the House Interior Committee. He has indicated that his committee intends to hold hearings in 1971 on legislation designed to implement the commission's report.

THE LONG BINH BOONDOGGLE

HON. KEN HECHLER

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 30, 1970

Mr. HECHLER of West Virginia. Mr. Speaker, CBS radio and television carried a very informative report by Morley Safer from Vietnam on July 17, 1970. These reports concerned the swollen number of support troops at Long Binh base and the "lovely war" which these support troops are fighting. As Mr. Safer quite correctly points out, the two field hospitals at Long Binh have saved the lives of thousands of men evacuated to Long Binh from the field. Yet, there is an amazing story of the useless activities and plain Army waste of taxpayers' money which is going on at Long Binh.

It seems incredible that it takes 22,000 native Vietnamese employees, trucked and driven to the base every day, to take care of the many needs of the 27,000 American support troops "to help out with kitchen duties, act as chambermaids, telephone operators and even as prostitutes in Long Binh's two on-base brothels." Mr. Safer somewhat more delicately referred to the massage establishments in his television broadcast covering the same subject.

The story of Long Binh underlines the fact that there are many support troops there or elsewhere in Vietnam who really ought to be sent home, even though the comforts of Long Binh with its air-conditioned bowling alleys, swimming pools, and many facilities no doubt are far superior to what the average GI will return to when he is rotated back. There are hardships, of course, such as the shortage of football referees which prompted the advertised appeal for referees aired by the Armed Forces Radio Network. No doubt the broadcast of these details will result in some changes, hopefully, when the Army discovers that the searchlight is being directed at some of this surplus manpower and the high fashion in which tax money is being expended to keep them happy. The following is the text of Morley Safer's July 17 radio report:

CBS REPORT

I am Morley Safer, CBS News, Long Binh. As the U.S. withdrawal continues on schedule, they are building bowling alleys in the combat zone of Long Binh. I'll be back with more details of just what a lovely war a fighting man can have in Vietnam . . .

Bowling alleys are the least of their problems here. The more serious one is the problem of finding qualified football referees. That's so acute they have taken to the Armed Forces Radio network to appeal for referees and are now offering a course in refereeing to anyone interested. Football is just one of the activities offered to the 27,000 who live the air conditioned combat life at Long Binh. The men at Long Binh are part of the huge support system that the U.S. Army feels is necessary to keep a modern military machine functioning.

But support soon ceases to be support and becomes an almost absurd Parkinsonian nightmare. For example: A platoon will need, let's say, x number of men to support it, give it bullets, rations, the vitals of warfare. But x times two support troops are needed to support the support troops. By the time you have support for the support for the support troops you have, roughly speaking, Long Binh Base. Twenty-seven thousand men live in Long Binh. They are supported by 22,000 Vietnamese who come on the base each day to help out with kitchen duties, act as chamber maids, telephone operators and even as prostitutes in Long Binh's two on base brothels. In turn, the Vietnamese need a support system to keep their support system functioning. Many people of Long Binh do jobs that are vital. They do them courageously, efficiently and quietly. The two field hospitals have saved the lives of thousands of men "med-evaced" from the field into Long Binh, but many more are boondoggling. For examples, the information officer here, a colonel, has a staff of 45, two of whom put out Long Binh's magazine called "Up Tight". The good colonel admits that the other 43 have very little to do. But somewhere there's a paper that says Long Binh must have a staff of 45 in the I–O shop.

Webster's International Dictionary defines a boondoggle as a trivial, useless or wasteful activity. It would be a mistake to condemn Long Binh as a gigantic boondoggle, but if someone wanted to compile a big glossary of small boondoggles, he need search no further than the air conditioned jungles of Long Binh.

I'm Morley Safer and this has been Correspondents' Report on CBS radio.

MAN'S INHUMANITY TO MAN—HOW LONG?

HON. WILLIAM J. SCHERLE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1970

Mr. SCHERLE. Mr. Speaker, a child asks: "Where is daddy?" A mother asks: "How is my son?" A wife asks: "Is my husband alive or dead?"

Communist North Vietnam is sadistically practicing spiritual and mental genocide on over 1,500 American prisoners of war and their families.

How long?

HOUSE OF REPRESENTATIVES—*Monday, July 27, 1970*

The House met at 12 o'clock noon.

The Chaplain, Rev. Edward G. Latch, D.D., offered the following prayer:

Let the beauty of the Lord our God be upon us.—Psalms 90: 17.

God of grace and God of goodness, in the glory of another day, throbbing with the loveliness of summer, we pause in Thy presence with hearts aflame with the beauty about us—the blue skies, the green fields, and the flowers in bloom. May this beauty be a sacrament in which we become more aware of the greatness of Thy spirit.

Bless these Representatives of our Nation. Give them wisdom and guidance in all their deliberations. Endow them with pure motives, patriotic endeavors, and unselfish service. Lead them in leading our people in the ways of righteousness and peace. So shall we, looking up to Thee, learn to laugh and love and live, to the glory of Thy holy name.

We pause in sorrow as we think of the passing of our beloved colleague, MIKE KIRWAN. We thank Thee for the great contribution he made to our country serving so well and so faithfully in Congress. May the memory of his grand spirit linger forever in our hearts. Comfort his family with Thy presence and strengthen us to carry on the work which now must be done without him.

In Thy holy name we pray. Amen.

THE JOURNAL

The Journal of the proceedings of Thursday, July 23, 1970, was read and approved.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. Arrington, one of its clerks, announced that the Senate agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendment of the Senate to amendments of the House to the bill (S. 2601) entitled "An act to reorganize the courts of the District of Columbia, and for other purposes."

The message also announced that the Senate had passed a bill and a concurrent resolution of the following titles, in which the concurrence of the House is requested:

S. 3547. An act to authorize the Secretary of the Interior to construct, operate, and maintain the Narrows unit, Missouri River Basin project, Colorado, and for other purposes; and

S. Con. Res. 75. Concurrent resolution directing the Secretary of the Senate to make corrections in the enrollment of S. 2601.

THE LATE HONORABLE MICHAEL J. KIRWAN

Mr. FEIGHAN. Mr. Speaker, I have the sad duty of announcing to the House the death of our beloved friend and colleague, the gentleman from Ohio (Mr. KIRWAN). MIKE KIRWAN died early this morning at Bethesda Naval Hospital after a long illness.

Funeral arrangements have not been completed and will be announced when finalized.

Mr. Speaker, in order that all Members may have an opportunity to participate in eulogies to our late colleague, I ask unanimous consent that on next Tuesday, August 4, 1970, at the conclusion of the legislative business and special orders previously entered into, I may be permitted to address the House for 1 hour.

The SPEAKER. Is there objection to the request of the gentleman from Ohio?

There was no objection.

THE LATE HONORABLE JOHN KUNKEL

(Mr. SCHNEEBELI asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. SCHNEEBELI. Mr. Speaker, it is my sad duty to inform the House of the death early this morning of our former colleague, John Kunkel, of Harrisburg, Pa.

John served nine terms in the Congress, beginning with the 76th Congress in 1939, and then, after a break between 1951 and 1960, he returned with the 87th Congress in 1961 and served through the 89th Congress until January 1967, when he retired. John Crain Kunkel was the grandson of a Member of the 34th and 35th Congresses, great-grandson of two other Members who served early in the 19th century, and was a great-great-grandson of Jonathan Dickinson Sergeant, a Member of the Continental Congress. There are few Members of Congress who have had such a rich tradition of service to their country in the Halls of Congress.

John attended the Phillips Academy at Andover, Yale University, and Harvard Law School. In his native Harrisburg, he served in almost all the positions of civic responsibility, and has been for many years, one of its outstanding and leading citizens. The name John Kunkel inspires tremendous confidence and great respect in Harrisburg, where he was active to the end.

John was one of the leading life masters in contract bridge and he maintained an active interest and participation in this game. He was recognized nationally as one of the country's top experts.

John Kunkel was a kind man who was totally committed to being a benefactor to his community. His "open door" policy was well known to all his constituents, whether they were visiting in the Washington area during congressional sessions, or at home in Harrisburg over weekends. He was most sympathetic to the needs and complaints of those whom he served and, especially, he was an enthusiastic champion of civil service employees and put forth much effort toward improving salaries, working conditions, and other benefits for the many employees working and living in his congressional district. His legion of friends is proper testimony to his concern for the welfare of his fellow man, and he lived a good and full life. His community, the State of Pennsylvania, and the Nation have all suffered from his passing, and his thousands of friends mourn his death.

To his wife, Kitty, and to his family, Mrs. Schneebeli and I express our deep sympathy in this tragic loss.

Mr. RHODES. Mr. Speaker, will the gentleman yield?

Mr. SCHNEEBELI. I yield to the gentleman from Arizona.

Mr. RHODES. I wish to join my colleague and friend from Pennsylvania in the sympathy which has been expressed for the Kunkel family over the death of John Kunkel.

As a distinguished Representative in this House, John Kunkel earned an enviable reputation for integrity and industry in the service of his people.

He earned the friendship and the esteem of his colleagues. The memory of our association with John Kunkel will be cherished by those who enjoyed that privilege.

The life and service of John Kunkel was a tribute to all who invested him with their confidence.

So, while we share in genuine sorrow at his passing, and in sincere sympathies to his loved ones, we would also acknowledge the worthy works of this noble public servant, and rejoice that we were permitted to walk a brief way with him.

(Mr. RHODES asked and was given permission to revise and extend his remarks.)

Mr. ALBERT. Mr. Speaker, will the gentleman yield?

Mr. SCHNEEBELI. I yield to the distinguished majority leader.

Mr. ALBERT. Mr. Speaker, I was saddened to learn of the death of John Kunkel, who was a very good friend of mine. I knew him as a very intelligent and distinguished colleague, one of the brightest men in the House. His keen intellect was further evidenced by the fact that he was probably the best bridge player ever to serve in Congress. He was my friend, and I join the gentleman from Pennsylvania in extending sympathy to his loved ones.

Mr. SCHNEEBELI. I thank the gentleman.

GENERAL LEAVE TO EXTEND

Mr. SCHNEEBELI. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days within which to extend their remarks on the life, character, and service of our late former colleague, John Kunkel.

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

DIRECTING SECRETARY OF THE SENATE TO MAKE CORRECTIONS IN THE ENROLLMENT OF S. 2601

Mr. McMILLAN. Mr. Speaker, I ask unanimous consent for the immediate consideration of the Senate concurrent resolution (S. Con. Res. 75).

The SPEAKER. Is there objection to the request of the gentleman from South Carolina?

There was no objection.

The Clerk read the Senate concurrent resolution as follows:

S. CON. RES. 75

Resolved by the Senate (the House of Representatives concurring), That in the enrollment of the bill (S. 2601), to reorganize the courts of the District of Columbia, to revise the procedures for handling juveniles in the District of Columbia, to codify title 23 of the District of Columbia Code, and for other purposes, the Secretary of the Senate shall make the following corrections:

(1) In the third sentence of the proposed section 11-1527(a)(3) of the District of Columbia Code (as contained in section 111 of the bill), strike out "subsections (a) and (b)" and insert in lieu thereof "subsection (a) or (b)".

(2) In section 144 of the bill, renumber the paragraphs which follow the first paragraph (12) of such section as paragraphs (13), (14), (15), (16), and (17), respectively.

(3) In section 145(f) of the bill, renumber the paragraph which follows paragraph (13) of such section as paragraph (14).

(4) In section 156 of the bill, reletter the subsections of such section which follow subsection (f) of such section as subsections (g) and (h), respectively.

(5) In section 157(c) of the bill, designate the undesignated paragraph that follows paragraph (1)(B) of such section as paragraph (2).

(6) In section 163 of the bill, reletter subsections (j) and (k) as subsections (i) and (j), respectively.

(7) In the proposed section 23-561(b)(1) of the District of Columbia Code (as contained in section 210(a) of the bill), strike out "subsection (a) of" in the last sentence.

(8) In the proposed section 23-563(b) of the District of Columbia Code (as contained in section 210(a) of the bill), strike out "No" at the beginning of such section and insert in lieu thereof "A".

Mr. HARSHA. Mr. Speaker, will the gentleman yield

Mr. McMILLAN. I yield to the gentleman from Ohio.

Mr. HARSHA. Mr. Speaker, I thank the gentleman from South Carolina for yielding.

Mr. Speaker, I have asked the gentleman to yield in order that I may inquire about a point of information. As I understand it, this resolution only provides for technical changes that are necessary to make the conference report adopted by the House and the other body conform to the law. Is that correct?

Mr. McMILLAN. The gentleman is correct. These are technical amendments necessary to the enrollment of the bill.

Mr. HARSHA. Mr. Speaker, if the gentleman will yield further, there are no substantive changes in the legislation as passed the House on the adoption of the conference report?

Mr. McMILLAN. No changes whatsoever.

Mr. HARSHA. I thank the gentleman.

The Senate concurrent resolution was concurred in.

A motion to reconsider was laid on the table.

CARLISLE SENIOR HIGH SCHOOL BAND WINS NETHERLANDS WORLD MUSIC FESTIVAL

(Mr. GOODLING asked and was given permission to address the House for 1 minute.)

Mr. GOODLING. Mr. Speaker, we hear too much about the deadend kids in America today and not enough about the good guys. I would like to read a telegram that came to my office just a few minutes ago.

Honored to inform you that Carlisle Senior High Band, Carlisle, Pennsylvania, representing the United States at the World Music Festival in Kerkrade, The Netherlands, has won first place in all three divisions entered.

Eighty-four youngsters from Carlisle raised $70,000 to make this trip, which to my way of thinking is a remarkable achievement. By some strange coincidence, the Boeing 707 on which they departed was the Carlisle Clipper.

They appeared in three different divisions. The first was a concert division, then the parade division, and then the show competition. In the show competition, out of a possible 180 points, this Carlisle band scored 175½ points, the highest ever made in this festival.

I will be having more to say on this particular achievement when I get more details, but as I said at the beginning, I think it is time we start playing up some of the good things rather than the bad things that are happening in America today.

PERMISSION TO FILE CONFERENCE REPORT ON H.R. 17548, INDEPENDENT OFFICES AND HUD APPROPRIATIONS, 1971

Mr. EVINS of Tennessee. Mr. Speaker, I ask unanimous consent that the managers on the part of the House may have until midnight tonight to file a conference report on H.R. 17548, the Independent Offices and Department of Housing and Urban Development Appropriation Act, 1971.

The SPEAKER. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

THE LATE HONORABLE MICHAEL J. KIRWAN

(Mr. MAHON asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. MAHON. Mr. Speaker, America has lost a great and good man in the passing early today of the Honorable MICHAEL J. KIRWAN, of Ohio.

The Committee on Appropriations, of which he was a distinguished member for almost 28 of his nearly 34 years as a Member of the House of Representatives, has lost a valued and great friend.

The committee met at noon today and adopted a resolution on the life, service, and character of our late and beloved friend, MIKE KIRWAN.

I include a copy of the resolutions for printing in the RECORD:

RESOLUTION OF THE COMMITTEE ON APPROPRIATIONS OF THE HOUSE OF REPRESENTATIVES ON THE LATE HONORABLE MICHAEL J. KIRWAN, OF OHIO

Whereas on July 27, 1970, the Honorable MICHAEL J. KIRWAN, full of years and full of honors and in his 34th consecutive year as a Member of the United States House of Representatives, answered the last roll call and joined the Congress of the Hereafter; and

Whereas Mr. KIRWAN was one of the most devoted, respected, and beloved Members ever to serve in the Halls of the House of Representatives; and

Whereas Mr. KIRWAN, through his nearly 28 years as a Member of the Committee on Appropriations, recognizing the serious neglect of the precious and priceless natural resources of our Nation, became America's legislative champion of conservation with an unexcelled dedication to the protection, preservation, and development of these resources, thereby lifting up a standard for others to follow; and

Whereas throughout his 27 years of service on the Subcommittee on Appropriations for the Department of Interior and Related Agencies, including 13 years as its Chairman, Mr. Kirwan vigorously and successfully supported more adequate provision for the education, welfare, health, and resource development of the American Indian, for the preservation and development of our national park system, our national forests, our fish and wildlife and mineral resources, and management of the great public lands of the West; and

Whereas during his 15 years as a member of the Subcommittee on Appropriations for Public Works for Water, Pollution Control and Power Development, and Atomic Energy Commission, including the last 6 years as its chairman, Mr. KIRWAN provided outstanding leadership in expanding the essential water resource development of the country, including flood control, pollution control, water supply, power generation, navigation, irrigation, and recreation; and

Whereas the thousands of completed public projects and facilities, yielding innumerable benefits to this and coming generations, are living testimony to the foresight, perserverance, and persuasion of Mr. KIRWAN; and

Whereas Mr. KIRWAN, a deeply religious man, prideful of his humble beginnings and epitomizing what Emerson had in mind when he said that America was but another name for opportunity, was possessed of those qualities of honesty, simplicity, candor, and genuine goodness of character which gained him the respect and love of his colleagues and a national circle of friends; and

Whereas Mr. KIRWAN, over his long years of ceaseless effort and dedication, contributed mightily and lastingly to the building of a better America; and

Whereas surely time will surround the work of his hands with a lasting veneration; Now, therefore, be it

Resolved, That we, the members of the Committee on Appropriations, sharing the universal feeling of grief at the loss of this truly great American and legislative champion who has crossed the river to rest in the shade, extend our deepest sympathy to Mrs. Kirwan and others of the family, to his relatives, and others of that wide circle of admiration and universal respect; and, be it further

Resolved, That these resolutions be entered in the journal of the committee, a copy sent

to Mrs. Kirwan, and that arrangements be made to include a copy in the appropriate ceremonial proceedings of the House of Representatives.

CALL OF THE HOUSE

Mr. HAYS. Mr. Speaker, I make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

Mr. ALBERT. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 234]

Adair	Dickinson	Meskill
Alexander	Diggs	Minish
Anderson, Calif.	Donohue	Monagan
Annunzio	Edwards, Ala.	Nelsen
Arends	Edwards, La.	Ottinger
Ashbrook	Esch	Pelly
Ashley	Farbstein	Pickle
Baring	Fish	Podell
Belcher	Ford, Gerald R.	Pollock
Biaggi	Ford, William D.	Powell
Blatnik	Fulton, Tenn.	Price, Tex.
Brasco	Galifianakis	Purcell
Brock	Gallagher	Randall
Brooks	Gilbert	Rarick
Brown, Calif.	Grover	Reid, N.Y.
Brown, Mich.	Hagan	Robison
Brown, Ohio	Halpern	Rodino
Buchanan	Hanna	Roe
Burlison, Mo.	Harvey	Rooney, Pa
Burton, Utah	Hastings	Rostenkowski
Bush	Helstoski	Roudebush
Byrne, Pa.	Hull	Rousselot
Caffery	Ichord	Ryan
Carey	Jonas	Sandman
Celler	Kee	Scheuer
Clark	King	Snyder
Clay	Kleppe	Staggers
Conyers	Landgrebe	Stokes
Corman	Landrum	Stratton
Coughlin	Lloyd	Symington
Cramer	Long, La.	Taft
Crane	Lowenstein	Teague, Calif.
Cunningham	Lukens	Tunney
Daddario	McCloskey	Vanik
Davis, Ga.	McEwen	Watkins
Dawson	Macdonald, Mass.	Watson
de la Garza	MacGregor	Weicker
Delaney	Mailliard	Whalley
Denney	Mann	Wiggins
Dent	Meeds	Wright
Derwinski		Wydler
		Zwach

The SPEAKER. On this rollcall 307 Members have answered to their names, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

PERSONAL EXPLANATION

Mr. BEALL of Maryland. Mr. Speaker, I was unavoidably absent during rollcall No. 233 on the bill H.R. 18515, the Labor-HEW appropriations bill. I would like the RECORD to show that if I had been present I would have voted "aye."

THE DELICATE SITUATION IN THE MIDDLE EAST

(Mr. PEPPER asked and was given permission to address the House for 1 minute, and to revise and extend his remarks.)

Mr. PEPPER. Mr. Speaker, I am sure that all of have noted the efforts of our Government to find a way to bring an end, and a peaceful end, to the dangerous situation in the Middle East.

There are encouraging prospects that our efforts may be successful. We all hope and pray that they will be.

On the other hand, I am sure we all sympathize with the delicacy and the difficulty of the problem that the people of Israel face, and have to contend with in view of the fact that the Russians are now in the area helping the Egyptians not only with their own materiel but with their own personnel, and there is always the possibility that the Egyptians with the assistance of the Russians will take advantage of a cease-fire to prepare for, or to bring further aggression against, the Israelis in the future.

So while our Government is carrying on these efforts I am sure we are aware of the responsibilities we must face if, having induced the Israelis to give up their present policies they should suffer some gross danger or disaster. We would be wise, I believe, while hoping and working for the best to be prepared for the worst in case there is duplicity or deceit on the part of the Egyptians and the Russians.

PRESIDENT NIXON VISITS NORTH DAKOTA

(Mr. KLEPPE asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. KLEPPE. Mr. Speaker, North Dakotans are proud that President Nixon and four members of his Cabinet including Secretaries Hardin, Hickel, Romney, and Stans plus several top members of his White House staff came to North Dakota last Friday. The President came to visit and hear from area leaders about rural problems and rural development. The candidness of the discussion was exemplified by those who attended. Good seed has been sown for planning methods to stabilize and strengthen the economy in rural America.

We are proud to have had you in North Dakota, Mr. President.

Thank you for coming.

LEGISLATIVE REORGANIZATION ACT OF 1970

Mr. SISK. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the further consideration of the bill (H.R. 17654) to improve the operation of the legislative branch of the Federal Government, and for other purposes.

The motion was agreed to.

IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the further consideration of the bill H.R. 17654, with Mr. NATCHER in the chair.

The Clerk read the title of the bill.

The CHAIRMAN. When the Committee rose on Monday, July 20, 1970, the Clerk had read through section 116 ending on page 35, line 20 of the bill.

If there are no further amendments to this section, the Clerk will read.

The Clerk read as follows:

COMMITTEE MEETINGS DURING SESSIONS OF THE HOUSES OF CONGRESS

SEC. 117. (a) Section 134(c) of the Legislative Reorganization Act of 1946 (2 U.S.C. 190 (b)) is amended to read as follows:

"(c) Except as otherwise provided in this subsection, no standing committee of the Senate shall sit, without special leave, while the Senate is in session. The prohibition contained in the preceding sentence shall not apply to the Committee on Appropriations of the Senate. Any other standing committee of the Senate may sit for any purpose while the Senate is in session if consent therefor has been obtained from the majority leader and the minority leader of the Senate. In the event of the absence of either of such leaders, the consent of the absent leader may be given by a Senator designated by such leader for that purpose. Notwithstanding the provisions of this subsection, any standing committee of the Senate may sit without special leave for any purpose as authorized by paragraph 5 of rule XXV of the Standing Rules of the Senate.".

Mr. SISK (during the reading). Mr. Chairman, I ask unanimous consent that the reading of the first portion of section 117 dealing with the other body be dispensed with and that it be printed in the RECORD and open to amendment at any point.

The CHAIRMAN. Without objection, it is so ordered.

There was no objection.

The CHAIRMAN. The Clerk will read the remainder of this section.

The Clerk read as follows:

(b) Clause 31 of rule XI of the Rules of the House of Representatives is amended to read as follows:

"31. No committee of the House (except the Committee on Appropriations, the Committee on Government Operations, the Committee on Internal Security, the Committee on Rules, and the Committee on Standards of Official Conduct) may sit, without special leave, while the House is reading a measure for amendment under the five-minute rule.".

COMMITTEE AMENDMENT

The CHAIRMAN. The Clerk will report the committee amendment.

The Clerk read as follows:

Committee amendment: Page 35, line 24, strike out "(2 U.S.C. 190(b)" and insert in lieu thereof "(2 U.S.C. 190(b))".

The committee amendment was agreed to.

Mr. SISK. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I will not take 5 minutes, but I would like to call to the attention of the Committee and concerned Members that this does represent some change in procedure. Heretofore, for a committee to sit during general debate, unanimous consent had to be obtained on the floor of the House at the time that they sought to sit.

This language, of course, in a change in rule XI, does make it possible for any committee to sit during general debate without the permission of the House.

It does make it impossible, of course, without special leave, for any committee to sit when the House is operating under the 5-minute rule; that is, during the time we are in the amending stage of a bill, such as we are at the present time.

Mr. HALL. Mr. Chairman, will the gentleman yield?

Mr. SISK. I am glad to yield to the gentleman from Missouri.

Mr. HALL. Did I correctly understand the distinguished gentleman from California to say that the amendment would also make it possible for any committee to sit without unanimous consent during the amendatory process; that is, under the 5-minute rule?

Mr. SISK. No. If I left that impression, I want to correct it. They could not sit while the House is operating under the 5-minute rule or during the time the bill was under amendment, but the amendment would provide for that opportunity when the House was in general debate only.

Mr. HALL. I thank the gentleman for clarifying his statement.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

LEGISLATIVE REVIEW BY STANDING COMMITTEES

SEC. 118. (a) (1) Section 136 of the Legislative Reorganization Act of 1946 (2 U.S.C. 190d) is amended to read as follows:

"LEGISLATIVE REVIEW BY SENATE STANDING COMMITTEES

"SEC. 136. (a) In order to assist the Senate in—

"(1) its analysis, appraisal, and evaluation of the application, administration, and execution of the laws enacted by the Congress, and

"(2) its formulation, consideration, and enacement of such modifications of or changes in those laws, and of such additional legislation, as may be necessary or appropriate,

each standing committee of the Senate shall review and study, on a continuing basis, the application, administration, and execution of those laws, or parts of laws, the subject matter of which is within the jurisdiction of that committee.

"(b) Each standing committee of the Senate shall submit, not later than January 2 of each odd-numbered year beginning on or after January 1, 1973, to the Senate a report on the activities of that committee under this section during the Congress ending at noon on January 3 of such year.

"(c) The preceding provisions of this section do not apply to the Committee on Appropriations of the Senate.".

(2) Title I of the table of contents of the Legislative Reorganization Act of 1946 (60 Stat. 813) is amended by striking out—

"Sec. 136. Legislative oversight by standing committees."

and inserting in lieu thereof—

"Sec. 136. Legislative review by Senate standing committees."

Mr. SISK (during the reading). Mr. Chairman, I ask unanimous consent that reading of the first portion of section 118, which pertains to the other body, be dispensed with and that it be printed in the RECORD and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from California?

There was no objection.

The CHAIRMAN. Are there any amendments? If not, the Clerk will read.

The Clerk read as follows:

(b) Clause 28 of rule XI of the Rules of the House of Representatives is amended to read as follows:

"28. (a) In order to assist the House in—

"(1) its analysis, appraisal, and evaluation of the application, administration, and execution of the laws enacted by the Congress, and

"(2) its formulation, consideration, and enactment of such modifications of or changes in those laws, and of such additional legislation, as may be necessary or appropriate,

each standing committee shall review and study, on a continuing basis, the application, administration, and execution of those laws, or parts of laws, the subject matter of which is within the jurisdiction of that committee.

"(b) Each standing committee shall submit to the House, not later than January 2 of each odd-numbered year beginning on or after January 1, 1973, a report on the activities of that committee under this clause during the Congress ending at noon on January 3 of such year.

"(c) The preceding provisions of this clause do not apply to the Committee on Appropriations, the Committee on House Administration, the Committee on Rules, and the Committee on Standards of Official Conduct.".

AMENDMENT OFFERED BY MR. ERLENBORN

Mr. ERLENBORN. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. ERLENBORN: On page 39, immediately below line 4, insert the following:

"DEBATE TIME FIVE-MINUTE RULE FOR AMENDMENTS

"SEC. 119. Amend clause 6 of Rule XXIII of the Rules of the House of Representatives to read as follows:

"6. The committee may, by the vote of a majority of the members present, at any time after the five minutes' debate has begun upon proposed amendments to any section or paragraph of a bill, close all debate only upon the pending amendments, or upon pending amendments thereto (which motion shall be decided without debate); but this shall not preclude further amendments, to be decided without debate.'"

And ask unanimous consent that appropriate technical and conforming changes be made in the table of contents and other provisions of H.R. 17654.

Mr. ERLENBORN. Mr. Chairman, my amendment would amend the present rules of the House relating to limiting debate on amendments. I believe that we have all had experience during deliberations of the Committee of the Whole when a motion was made to limit to a particular period of time—20 minutes, 30 minutes, whatever might be included in the motion—the amount of time that could be spent on entire sections or titles of bills, and then often we would find that there are many amendments offered to that section or title. As a result the ridiculous situation would occur where a Member had an amendment that he had worked on, that he was serious about, and did not even have an opportunity to explain the amendment. I know; it has happened to me, and it has happened to many Members where your amendment would then only be read and you did not have an opportunity to explain it or have any debate.

The pending amendment would provide that the motion to limit debate would not apply to an entire section or an entire title but only to the pending amendment. By unanimous consent we could limit debate as to an entire section or title, but by motion we could limit it only to the pending amendments.

In this way any Member who had an amendment to offer would have an opportunity to explain his amendment. If there were not sufficient interest in it to continue with the debate, the time could be limited, but at least the Member offering the amendment would have 5 minutes and would have an opportunity to explain his amendment.

Mr. PUCINSKI. Mr. Chairman, will the gentleman yield?

Mr. ERLENBORN. I yield to the gentleman from Illinois.

Mr. PUCINSKI. I rise in support of the gentleman.

I remind the Members that a number of years ago we were caught in a situation like this in debate on a minimum wage bill. An amendment was offered by the gentleman from Missouri, Mr. Smith, to make technical changes. He never had an opportunity even to discuss the amendment, nor was there an opportunity even to ask about the amendment. We adopted the amendment. Then we found that we had excluded 14 million workers who previously were covered by the minimum wage law from the law by the amendment, and we had to cure that action in the other body.

The gentleman has a good point. We have seen this happen time and time again on the floor. I congratulate the gentleman on his amendment.

Mr. ERLENBORN. I thank the gentleman for his support.

I conclude merely by saying that we often refer to the House of Representatives and to the Congress as the greatest deliberative body in the world. I believe we make a travesty of that when we follow a procedure which requires Members to vote on an amendment without it being explained or debated.

Mr. CONTE. Mr. Chairman, will the gentleman yield?

Mr. ERLENBORN. I yield to the gentleman from Massachusetts.

Mr. CONTE. I certainly want to join the gentleman from Illinois. Later on I will offer an amendment, when we come to the section which deals with Members offering motions to table. This is a nondebatable issue. Recently I was clobbered in the press because, on the civil rights Whitten amendments, when the gentleman from California (Mr. COHELAN) offered the amendment I wanted to speak on the amendment, and some Member moved to table. There is no way in the world one can establish any legislative history in that manner.

I believe this is a very good amendment. I will support it. I will offer an amendment later on, in respect to the motion to table.

Mr. SISK. Mr. Chairman, will the gentleman yield?

Mr. ERLENBORN. I yield to the gentleman from California.

Mr. SISK. I should like to ask the gentleman, with reference to the statement made by the gentleman from Massachusetts, whether there is anything in this amendment that has to do with a motion to table.

Mr. CONTE. This is an amendment offered by the gentleman with respect to an amendment offered by some Member of the House when the Member cannot speak on his amendment. How can he explain the amendment? At that

point he may have to submit something under a unanimous consent agreement, which some interpret as an abuse of the rules of the House.

Mr. ERLENBORN. In explanation, the gentleman from Massachusetts explained that he intended later to offer an amendment concerning the motion to table. This is not included in my amendment.

Mr. FRASER. Mr. Chairman, will the gentleman yield?

Mr. ERLENBORN. I yield to the gentleman from Minnesota.

Mr. FRASER. After reading the amendment, I am not certain how it is intended to operate. The gentleman suggests that a motion would be in order to close all debate only upon the pending amendments; that is, those amendments which had already been offered, is that right?

Mr. ERLENBORN. Yes; and it goes on to say, "or pending amendments thereto".

Mr. FRASER. When the word "or" is used, does the gentleman mean to say that is an alternative possibility?

In other words, one could close debate only on the pending amendments to the amendment? I am not clear as to how the language will work.

Mr. ERLENBORN. It is my intention, as is the practice now, in respect to an amendment which is pending, to which there may be offered a substitute amendment, or amendments to the pending amendment, which are also pending and under debate, that debate as to all of them could be limited by the motion in respect to the pending amendment and amendments thereto.

Mr. FRASER. But this would not enable the House by a majority vote to cut off debate on a paragraph or upon a section.

Mr. ERLENBORN. That is the intent, to prohibit a limitation of debate by motion as to a paragraph, a section, or a title, so that each amendment would have an opportunity to be explained and debated.

Mr. FRASER. In effect, this would permit at least 5 minutes of debate on every amendment, since it would not be in order to cut off debate until after debate started on the amendment; is that right?

Mr. ERLENBORN. That is correct.

Mr. SISK. Mr. Chairman, I rise in opposition to the amendment.

I am not altogether sure that I fully understand the intent of the gentleman on the amendment. I should like to have the attention of the gentleman from Illinois (Mr. ERLENBORN) in connection with this.

I think we are all interested in being given proper time to discuss subjects that are of importance in debate on any legislation. However, in our attempts to make certain of that, we certainly do not wish to bring about a situation where dilatory tactics could be carried on and make it impossible to proceed expeditiously with legislation.

As I understand it—and I will be glad to yield to the gentleman to answer this question—once an amendment has been offered, after a section has been read, then no motion would be in order to set a time certain to close off debate on that section or paragraph. Is that what this language means to say?

Mr. ERLENBORN. Mr. Chairman, will the gentleman yield?

Mr. SISK. Yes. I am glad to yield to the gentleman.

Mr. ERLENBORN. Yes. That is exactly what this language is intended to say. The motion to limit debate would be effective only as to an amendment and not to an entire section, paragraph, or title. So that every amendment would have, as the gentleman from Minnesota properly stated, at least 5 minutes of debate.

Mr. SISK. I recognize that we sometimes have occasions where a series of amendments may be desired to be offered or be on the Clerk's desk regarding a section, a paragraph, or a title. If the majority votes to close debate, we do not have the opportunity to debate each amendment individually. Again we must keep in mind, it seems to me, that the important matter here is to give the majority the right to work its will at all times. I believe, in view of that, we are taking what I believe to be a rather dangerous step. I recognize and sympathize with what the gentleman is trying to do. However, let me say that I could visualize all kinds of dilatory tactics by the offering of a whole series of amendments where, for example, it would become almost impossible to close off debate simply by providing for amendments at the Clerk's desk in great numbers.

Of course, as the gentleman well knows, he remembers that not too long ago we had a bill where there were 30 or 40 amendments at the Clerk's desk. That is the only reason why I oppose it at this time. It is not a matter that has been brought to the subcommittee's attention. I saw the amendment for the first time a couple of minutes ago. I will say, with no criticism intended of the gentleman, that most of the amendments, or many of them, have been submitted to us and we have had an opportunity to make some study of them.

Unfortunately, we have had no opportunity to study this amendment, and it involves a change in the rules of the House, which are very delicately balanced, and brings into focus some of the real questions and concerns that the subcommittee has. On that basis, without further study, I would oppose the amendment and hope that the committee will vote down the amendment.

Mr. ERLENBORN. Will the gentleman yield further?

Mr. SISK. Yes. I yield to the gentleman.

Mr. ERLENBORN. Let me say that I would be less than honest if I did not agree with the gentleman that there could be an abuse where dilatory tactics could be used, but I think this has to be offset by the fact that under the present rules there is also an abuse where we are not a deliberative body but are voting on things without having an opportunity to know what they are. Five minutes of debate, on an amendment, I do not think is too much.

Mr. SISK. Let me say that I recognize that there are abuses both ways. That is why it seems to me this subject is worthy of study. I hope that the committee will not be overly hasty in adopting this kind of an amendment, because it is not an amendment that we have had an opportunity to study heretofore. I am very fearful that we could get into real dilatory tactics. Though I sympathize with the gentleman and would be happy to look at it again, I do not agree with it.

Mr. PUCINSKI. Mr. Chairman, I rise in support of the amendment.

Mr. Chairman, I respect the argument made by the distinguished gentleman from California, the chairman of the subcommittee, and surely there is merit to it, but I believe that the other side of the coin deserves as much discussion. As we have said earlier here, this may be one of the most important amendments to this bill, because we have seen time and time again when Members who have made an extensive study of a subject and have an amendment offered in good faith that is not dilatory or designed to obstruct the operations of the House have been prevented from debating it.

In other words, it is an amendment that the Member has carefully worked out and he attempts to get recognized, but under our procedure here he cannot get recognized very often until the members of the committee handling the bill are recognized because they have priority.

So as a result, the work which a Member has put into an amendment and one which he believes will improve the legislation goes down the drain and is lost.

Mr. Chairman, I would think every Member of this House who respects his own rights as a Member of this House to make whatever contribution or contributions he wishes to make to this legislation, should indeed support this amendment. I say this because as I stated earlier I recall very well here during the debate on the minimum wage bill the gentleman from Missouri, Mr. Smith, who is now a member of the TVA, offered an amendment. There was no opportunity whatsoever to discuss this amendment under the present rules of the House and in haste the House adopted the amendment. However, I also recall the next day very vividly the red-faced gentleman standing in the well and denying it was his intention to take from coverage or to exclude 14 million workers who had been covered for many years under the minimum wage law.

This is the kind of thing that happens around here more often than we want it to happen.

Mr. Chairman, I believe this amendment would cure that type of situation. With reference to the question of dilatory tactics, the House has many ways in dealing with those who want to be dilatory and obstruct the House in working its will. I think there are other tools available to the Members of the House with which to deal with that problem.

Mr. STEIGER of Wisconsin. Mr. Chairman, will the gentleman yield?

Mr. PUCINSKI. I yield to the gentleman from Wisconsin.

Mr. STEIGER of Wisconsin. I am

sympathetic with the gentleman with reference to the offering of this amendment, but I would hope that the amendment would be defeated.

Mr. Chairman, there is an amendment which will be offered later on which will go in the direction of the Erlenborn amendment. But I think the chairman of the subcommittee, the gentleman from California (Mr. SISK), has made a very valid point about the abuse that could come about as a result of dilatory tactics if the pending amendment is adopted. Therefore, I would hope that the concept embodied in the amendment which will be offered at a later time and on which a great deal of thought has been given, to the effect that an amendment which has been printed in the RECORD in advance would be granted time would be a better method of attempting to achieve the goal which I am sure the gentleman from Illinois (Mr. ERLENBORN) is attempting to achieve and will also permit the House to work its will on legislation.

Mr. FRASER. Mr. Chairman, will the gentleman yield?

Mr. PUCINSKI. I yield to the gentleman from Minnesota.

Mr. FRASER. Mr. Chairman, I want to echo the sentiments which have been expressed by our colleague from Wisconsin. There are two problems with reference to this proposed amendment. It seems to me that it would not enable the House to move effectively when it needs to and it opens the way to dilatory tactics.

There is a more carefully drawn amendment which will seek to protect Members on amendments when they are placed in the RECORD at least 1 day before which would deal with this problem more effectively.

Moreover, I think this is probably going too far too fast without enough consideration having been given to the pending amendment.

I think the problem is clear. However, I do not think this is the wisest solution.

Mr. REES. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I rise to echo the thoughts which have been expressed by the gentleman from Wisconsin (Mr. STEIGER) and the gentleman from Minnesota (Mr. FRASER) to the effect that there is an amendment that will be coming up under a different section of this bill which states if a Member does have an amendment in which he is interested, he can have that amendment printed in the RECORD the day before the bill is to be taken up, and if that amendment has been printed in the RECORD at the direction of the Clerk, that amendment is then guaranteed a minimum of 10 minutes debate. In this way only those amendments that are well thought out the day before would qualify to be allotted time during debate.

I hope, therefore, we will defer this amendment and take up the other amendment which would guarantee limited debate time on any given amendment.

Mr. PUCINSKI. Mr. Chairman, will the gentleman yield?

Mr. REES. I yield to the gentleman.

Mr. PUCINSKI. What would the gentleman do in the case of an amendment which develops as a result of an amendment that has been adopted?

In other words, very often we have here on the floor of the House a very fluid situation where a piece of legislation takes a sudden turn in a different direction because an amendment has been adopted.

Then a Member of the Congress wants to offer another amendment to that amendment, but under this procedure he would be foreclosed and precluded because he would not have anticipated the amendment being needed and, therefore, was unable to have the amendment printed in the CONGRESSIONAL RECORD in sufficient time.

Mr. REES. But they could do so with a little thought to have it prepared ahead of time and printed in the RECORD and, therefore, they could have sufficient debate on it. But I think the gentleman will agree that in every parliamentary body you have to have some kind of a motion to cut off debate, and if we do away with it in the Congress we will be on this floor morning until midnight all the way through the year.

I think the amendment to be proposed is a reasonable compromise.

SUBSTITUTE AMENDMENT OFFERED BY MR. RAILSBACK TO THE AMENDMENT OFFERED BY MR. ERLENBORN

Mr. RAILSBACK. Mr. Chairman, I offer a substitute amendment for the amendment offered by the gentleman from Illinois (Mr. ERLENBORN).

The Clerk read as follows:

Amendment offered by Mr. RAILSBACK as a substitute for the amendment offered by Mr. ERLENBORN: On page 39 of the bill, at the end of line 4 add the following:

"Clause 6 of Rule XXIII of the rules of the House of Representatives is amended by adding at the end thereof the following new sentence:

" 'However, if debate is closed on any section or paragraph under this clause before there has been debate on any amendment which any Member shall have caused to be printed in the CONGRESSIONAL RECORD after the reporting of the bill by the Committee but at least one day prior to floor consideration of such amendment, the Member who caused such amendment to be printed in the RECORD shall be given five minutes in which to explain such amendment, after which the first person to obtain the floor shall be given five minutes in opposition to it, and there shall be no further debate thereon; provided, that such time for debate shall not be allowed when the offering of such amendment is dilatory.' "

And make the appropriate and necessary technical changes in the bill.

Mr. RAILSBACK. Mr. Chairman, this is the amendment that was referred to by my colleague, the gentleman from California (Mr. REES), to the amendment, and that was referred to by my colleague, the gentleman from Wisconsin (Mr. STEIGER). It directs itself to the same problem that I believe my friend and colleague from Illinois was addressing himself to; namely, that there should be an opportunity when a person serves advance notice, and then offers an amendment, to at least have the assurance of a minimum of time to explain the amendment. He should have 5 minutes to explain it, and then there would be 5 minutes guaranted to an opponent to debate the amendment.

Mr. SISK. Mr. Chairman, will the gentleman yield?

Mr. RAILSBACK. Let me just finish my statement, and then I will be glad to yield to the gentleman.

I think the difference between our amendment and that offered by my colleague, the gentleman from Illinois (Mr. ERLENBORN), is that we provide some assurance against any kind of an unnecessary delay of any kind, delaying tactics, and we do this in a twofold way. No. 1, we require that in order to be given this privilege and this assurance of 5 minutes debate that it shall be printed in the RECORD at least 1 day in advance of action by the Committee of the Whole House on the State of the Union. In addition to that, there is now further language that would permit the Speaker or the Chairman of the Committee of the Whole House on the State of the Union in his discretion to rule that an amendment of this type is dilatory.

So that with that in mind I believe we have provided some assurances that a meaningful, constructive amendment will at least be assured of 5 minutes of explanation by the sponsor of that amendment, and at the same time we recognize that the opposition should also have 5 minutes to debate its merits.

Mr. SISK. Mr. Chairman, will the gentleman yield?

Mr. RAILSBACK. I am glad to yield to the distinguished gentleman.

Mr. SISK. Mr. Chairman, I thank the gentleman for yielding.

I am trying to get a copy of the amendment, which I have not seen. I want to ask the gentleman about the language of the amendment that has to do with being dilatory.

As I understand the language, this procedure would be followed unless the amendments were found to be dilatory. Am I generally paraphrasing that correctly?

Mr. RAILSBACK. There is a double requirement here. I think personally the first requirement is very useful which requires that the Member offering the amendment must have it printed in the RECORD also at least on the day before. Then if he complies with that requirement he will have available this procedure so long as it is not dilatory. It would be up to the Speaker to determine if it is dilatory.

Mr. SISK. As I said, I understood the amendment was to be proposed granting this privilege for amendments that have been placed in the CONGRESSIONAL RECORD, which means at least that there was 24 hours notice given.

But the thing that concerns me really is that last phrase—provided that such time for debate shall not be allowed when the offering of such an amendment is dilatory.

Would the gentleman cite—and I recognize again that this places a responsibility upon the Speaker or upon the Chairman of the Committee of the Whole House on the State of the Union, what he would assume to be dilatory in connection with this?

Would the gentleman assume, if some

Member had inserted, say 20 amendments in the RECORD, that that might be considered dilatory? I am trying to get just exactly what the gentleman has in mind in connection with that.

Mr. RAILSBACK. I appreciate that and I think the chairman's questions are legitimate.

Let me say, first of all that this language was added at the request of some Members who thought perhaps there ought to be some language of this kind. This last phrase was not in the original amendment that we intended to offer.

But I would assume just as you have mentioned, where somebody sticks in a rather substantial number of amendments which, say, may be repetitive or many not be substantially different, I would think under those circumstances that maybe the Speaker would say that they were dilatory or at least that some of them would be held to be dilatory in nature.

The CHAIRMAN. The time of the gentleman has expired.

Mr. PUCINSKI. Mr. Chairman, I rise in strong opposition to this amendment.

Mr. Chairman, soon we will see the logic of the gentleman from Illinois (Mr. ERLENBORN).

I cannot think of anything worse that we can do in this Chamber than to give the Speaker or the Chairman of the Committee of the Whole House—with all due respect to the Speaker or the Chairman—that kind of broad power to make a decision on a Member's bona fide and serious action with reference to amendments that they are dilatory and to knock them out.

We have a rule of germaneness and we have ample precedents to rely on whenever the Parliamentarian rules on amendments being nongermane.

But for us to adopt a rule here where the Chairman could knock an amendment out of the box because in his judgment your action is dilatory—it seems to me is contrary to the very purpose of a legislative body.

I think each of us as Members of this Congress has a responsibility to his constituents and to our fellow colleagues in Congress to conduct himself in a manner that is meaningful and not dilatory.

There are many ways to deal with a Member who would engage in that kind of dilatory tactic. But I do not think you would want to write this into the law to say that a well meaning amendment and serious amendments are going to be knocked out because they are considered dilatory by the Chairman.

Futhermore, it occurs to me that the gentleman offering the substitute has not addressed himself to what we have seen here time and time and time again—and that is as to amendments that develop in the course of writing a bill on the floor.

This happens very often. Amendments are offered. Very often legislation takes an entirely different direction as a result of a single amendment that the House has adopted in good faith. So any Member should have an opportunity if, in his judgment, he can improve legislation to offer an amendment at that point, and at least be given a minute or 5 minutes to explain the amendment. All the gentleman from Illinois is offering in his amendment is an opportunity for this House to hear the author of a meritorious amendment state his case. We have seen this time and time again affect legislation passed by the House simply because we did not have an opportunity to state the case for the amendment.

I would hope that the substitute would be defeated and that the Erlenborn amendment will be adopted.

Mr. FRASER. Mr. Chairman, will the gentleman yield?

Mr. PUCINSKI. I yield to the gentleman from Minnesota.

Mr. FRASER. I was interested in the gentleman's remarks about the power conferred on the Speaker to find that the author of an amendment is dilatory. I wonder if the gentleman is familiar with rule XVI, paragraph 10, of the current rules of the House which provides that "No dilatory motion shall be entertained by the Speaker." The power conferred in the rules goes to the making of the motion itself, and this substitute provides for the finding that the offer of a series of amendments is dilatory. It would not cut off the amendment, but would only cut off the debate time, which is currently cut off altogether. It seems to me that you might rather consider the broad power now given to the Speaker under the current rule before you worry too much about cutting off debate time on such an amendment.

Mr. PUCINSKI. Rule 16 does not apply to proceedings when the House is setting as a Committee of the Whole House and a member other than the Speaker as presiding. I had hoped that the legislation before us now, and upon which we have spent so many days, was designed to improve the operations of the House. I do not see that the substitute amendment would make any significant contribution. If anything, it would tighten the noose more tightly. I was hopeful that when we get through with this process, the legislation that would finally emerge would be such as to make the House more responsive, more effective, and more democratic. That was our hope. I do not agree with my friend from Minnesota.

Mr. RAILSBACK. Mr. Chairman, will the gentleman yield?

Mr. PUCINSKI. I yield to the gentleman from Illinois.

Mr. RAILSBACK. I would like to ask the gentleman what he proposes we do if some Member, for one reason or another, should decide to delay the progress of legislation.

Mr. PUCINSKI. We have often heard on the floor, when a Member through amendments tries to move in a dilatory manner, the cry of "Vote, vote, vote, vote!" and the House works its will.

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mr. GIBBONS. Mr. Chairman, I rise in support of the Railsback amendment, and move to strike the requisite number of words.

The CHAIRMAN. The gentleman from Florida is recognized.

Mr. GIBBONS. Mr. Chairman, the Railsback amendment is a good substitute to the amendment offered by the gentleman from Illinois (Mr. ERLENBORN). Mr. ERLENBORN's amendment would subject the House, if someone wanted to be dilatory—and I doubt that it would ever happen here—to a less dilatory tactic, particularly by submitting amendment after amendment. But Mr. RAILSBACK's amendment is carefully drawn, I believe, to protect the House from dilatory tactics. It would be in the decision of the Chair, but it would allow a Member who had conscientiously offered an amendment, who had presented the amendment for printing in the CONGRESSIONAL RECORD in advance of the debate, to have at least 5 minutes to explain his amendment, and if there is opposition to that amendment, then the opposition could have 5 minutes to say their piece against that amendment, and then all time would cease, as far as that amendment was concerned. The Chair would be granted the same latitude, as the gentleman from Minnesota has pointed out, that the Chair already has under existing rules to cut off dilatory tactics. That is all that the Railsback amendment would do. It is a good, sound amendment, and I think it ought to be adopted.

Mr. BOLLING. Mr. Chairman, I move to strike the necessary number of words.

The CHAIRMAN. The gentleman from Missouri is recognized.

Mr. BOLLING. Mr. Chairman, the members of the subcommittee which dealt with this matter are going to have to make a decision at some point as to whether to be very blunt or not. I think all of us are prepared to favor amendments that have not been considered by the subcommittee, and I think we have some kind of choice as to whether to be extraordinarily kind about all the offerings that come along in the process. I am not sure that this will be of any particular value to the House. So I propose to be fairly blunt. Clearly, the substitute is a great improvement over the original proposal.

The maker of that original proposal conceded in the debate of his own free will that it did lend itself to dilatory tactics. It does not "lend itself"; it makes them inevitable. It could very well be called the conversation versus action amendment. It would visit upon this particular parliamentary body the inability to act.

I know of no effective parliamentary body in the free world—not just in the free world, but anywhere—which does not reserve to itself, to its majority, the right to act.

The amendment as proposed by the gentleman from Illinois (Mr. ERLENBORN) would prevent this institution from acting. It would not charge the Speaker under the present rules with any duties. It would charge the various Chairmen of the Committee of the Whole under most circumstances with very difficult duties.

I do not know how many times the various gentlemen on the floor have seen a Speaker declare a tactic to be dilatory, but they take a very long time to do it, because to say that a Member is being dilatory is to say a good deal, and Speakers are very careful. I have seen one wait a dozen hours before he did it.

I believe it is very clear that it is important to preserve to the majority the right to act. The proposal of the gentleman from Illinois (Mr. RAILSBACK) only puts that burden on a series of chairmen; but that is a great burden.

I submit that it is very important in a country that believes in government of law by majority that we retain the fundamental principle.

The truth of the matter is that if a majority feels that an individual should have the right to be heard, that majority can always withhold its vote. It is very clear that in this institution we have the right of a majority to hear anybody we please.

I believe we make a great mistake when we start adopting amendments which were not considered by the committee and found satisfactory, when we adopt them in the process of writing a bill when there are very grave doubts as to their end result.

I personally feel we would be well advised not to burden this bill either with the substitute or with the original version. Clearly this is an attempt in good faith, I know, by both gentlemen to improve the bill, to improve the process. But there are those in the institution who desire to see this bill so loaded that it cannot possibly pass. I fear that this is the kind of amendment which will lend itself to the argument that the bill is too loaded to justify its passing.

I hope that the amendment and the substitute will be defeated.

Mr. FRASER. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I will not take 5 minutes. I want to say, first of all, I agree with much of what the gentleman from Missouri says. I believe before we change the procedures of the House on a matter of this kind, we ought to look fairly carefully at what we are proposing to do.

But I want to make the point again that there are two safeguards in the substitute which are not in the original proposals. One is that the amendment must have been printed in the RECORD at least the day before. If there is to be a dilatory tactic pursued, it means that someone who is proposing to pursue a dilatory tactic must spread a series of amendments in the RECORD where they can be examined. I believe, on their face, one can ordinarily tell if they are going to be dilatory. If they are, the Chairman of the Committee of the Whole can rule out of order, not the amendment, but the debate.

Now, Mr. Chairman, the other point I want to make is that in our effort to loosen slightly some of the restraints that fall on Members who work very hard and conscientiously to prepare amendments and suddenly find themselves cut off without a single word or a single minute to explain their amendments—in our efforts to try to deal with that problem we ought not to be so hesitant that we do not move forward at all. If it should turn out that even this very limited enlargement of the right of a conscientious Member at least to explain an amendment on which he worked hard and diligently, if it turns out that problems arise, then I for one would support an action by the Committee on Rules which would put further restraints on that right. In other words, this is not the end of the story but is a limited encouragement to protect the right of that Member where it turns out that even with safeguards there is an abuse that develops. I do not think this will happen, but if it should, the Committee on Rules can come back and say that we tried it and we found that a problem exists and therefore we propose to go back to the original procedure or to put other restraints on it. But let us not hold the line too tightly here where it is clear that there is a failure in the procedure to protect the right of a Member to explain an amendment which he has worked very hard on for a long time.

Mr. SISK. Mr. Chairman, I rise in opposition to the Railsback substitute amendment. I will not take the 5 minutes. I think the House is ready to vote on it.

I recognize the fact of what is being sought to be done here. I rise only to say this: I recognize that we are trying what I understand is an experiment in working on the rules of the House. There was a good deal of discussion many months ago about bringing Title I of this bill to the floor under a closed rule on the basis that the rules of the House were delicately balanced and there was real concern about how good a job we might do on it in attempting to write House rules, as delicately balanced as they are, on the floor of the House. It was decided by the Committee on Rules to bring this here under an open rule somewhat as an experiment. Again I wish to say, as I have said before, your subcommittee, as well as the Committee on Rules, certainly does not possess all wisdom. I am sure that there are many improvements that could be made that we did not consider or did not suggest, but I do raise the question here that this is in an area that affects the operations and procedures of the House on the floor of the House and could tend to cause a substantial delay in the procedures of the House in considering legislation. I think the very fact that the matter has been brought here under an open rule, would lead us in this case to vote down both the substitute and the original amendment offered by the gentleman from Illinois (Mr. ERLENBORN). Then we can proceed to look at these problems at some later date and see what might be done in a way which I think would not bring as great concern to the House. Therefore, Mr. Chairman, I ask for a no vote on both amendments.

Mr. DENNIS. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I would like to point out just very briefly that the vice of the present situation, which these amendments attempt to correct, is that right now we can close the debate on an amendment which has not ever been offered so that really when we vote, we have no idea what the author of the amendment has in mind or even wants to do. It does not seem to me that it is very drastic to correct that.

I see the problems with the amendment which has been offered by the gentleman from Illinois (Mr. ERLENBORN) and the substitute here merely says that if a Member thinks enough of his amendment to print it ahead of time that at least he will get 5 minutes to tell us what it is and after he has done that and there has been one 5-minute reply thereto, that is the end of that debate. But at least when we vote, we will know what is contained in the amendment.

So I suggest that the substitute is a rather limited and mild attempt to correct the situation which is really pretty bad as matters now stand.

Mr. BOLLING. Mr. Chairman, will the gentleman yield?

Mr. DENNIS. I yield to the gentleman from Missouri.

Mr. BOLLING. If the gentleman listens to the amendment as it is being read, presumably, the gentleman will be able to tell what is sought to be accomplished through the adoption of the amendment.

Mr. DENNIS. The gentleman from Missouri is undoubtedly much more capable than the gentleman from Indiana, but I will confess to the fact that I have listened to many lengthy amendments being read and still have had only the foggiest notion as to what they were about.

Mr. BOLLING. Mr. Chairman, if the gentleman will yield further, the amendments are reported by the reading clerks in a very clear manner.

Mr. JACOBS. Mr. Chairman, will the gentleman yield?

Mr. DENNIS. I yield to the gentleman from Indiana.

Mr. JACOBS. If what the gentleman from Missouri says is true, then we do not need to have any debate on any amendment. I might add that the arguments which have been made against the substitute and the amendment say, in effect, that the minority should be seen but not heard. That is contrary to my understanding of what the Constitution says and to the rules of the House. This is supposed to be a country where it is safe to be unpopular and where the minority can be heard even if the majority does not want it to speak with reference to an amendment. I thought that this is what this country was all about.

Mr. DENNIS. I will say that it is most agreeable to me to hear my colleague from Indiana say that, because it is on rather rare occasions that we agree. I will say further to the Committee that when you have a situation where the gentleman from Indiana and I agree, then it almost has to be right.

The CHAIRMAN. The question is on the substitute amendment offered by the gentleman from Illinois (Mr. RAILSBACK) for the amendment offered by the gentleman from Illinois (Mr. ERLENBORN).

The substitute amendment was agreed to.

The CHAIRMAN. The question now recurs on the amendment offered by the gentleman from Illinois (Mr. ERLENBORN), as amended.

The amendment, as amended, was agreed to.

AMENDMENT OFFERED BY MR. ROGERS OF FLORIDA

Mr. ROGERS of Florida. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. ROGERS of Florida: Beginning on page 39, after line 4, insert the following:

"SEC. 119. That Rule XXI of the Rules of the House of Representatives is amended by adding a new subparagraph as follows: No bill or joint resolution of a public character making an appropriation shall be finally passed, and no amendment of the Senate to, or report of a Committee of Conference on, such a bill or resolution shall be agreed to, unless the vote of the House is determined by yeas and nays."

Mr. ROGERS of Florida. Mr. Chairman, I shall not have to take 5 minutes to explain this amendment. It is a very simple amendment.

This amendment will provide that every appropriation bill voted on in the House will be by a record vote so that the people at home will know how every Member in this House votes on every appropriation bill. I think this will assure that great study and thought and thorough examination will be made of every appropriation bill by each Member.

Mr. Chairman, when one looks at the record one will find that billions of dollars have been passed by this House and the Congress without a record vote. I think that emphasizes the necessity for this amendment.

I remember when I introduced this back in the 90th Congress, I checked into it and in the last session some $50 billion had been appropriated without a single record vote. And I daresay this session will not be much better because of the five bills already passed that I checked on, amounting to $23 billion, they were all passed without a record vote.

So, Mr. Chairman, I would hope that those who are interested in modernizing our rules and making it possible for the people at home to have a record of what we do, will vote in favor of this amendment.

Mr. CONABLE. Mr. Chairman, will the gentleman yield?

Mr. ROGERS of Florida. I yield to the gentleman from New York (Mr. CONABLE).

Mr. CONABLE. Mr. Chairman, I have done a little research into this matter, and it is a very interesting study indeed to see what we have done with respect to nonrecord votes on appropriation bills.

For instance, in the second session of the 91st Congress, we passed with nonrecord votes appropriations for the legislative branch, the Office of Education, independent offices, and HUD, Interior, Transportation, District of Columbia, Agriculture, Public Works, continuing 1970 and continuing 1971. As I say, all of these were passed with nonrecord votes.

As a matter of fact, in the past four years the House of Representatives has taken action on 72 appropriation bills. Of these, 30 were passed by nonrecord votes for a total of approximately $59.4 billion.

Mr. ROGERS of Florida. Mr. Chairman, I thank the gentleman for his contribution, and again I would urge a favorable vote on this amendment so that we can have a simple rollcall vote on all appropriation bills.

Mr. HAYS. Mr. Chairman, I move to strike the requisite number of words.

(By unanimous consent, Mr. HAYS was allowed to speak out of order.)

FUNERAL ARRANGEMENTS FOR THE LATE HONORABLE MICHAEL J. KIRWAN

Mr. HAYS. Mr. Chairman, in regard to the funeral arrangements for our late colleague, the Honorable MICHAEL J. KIRWAN, I have been asked to announce that the funeral will be held at 10:30 a.m. on Thursday morning at St. Brendan's Church in Youngstown, Ohio.

The body will be taken to Youngstown and calling hours will be from tomorrow evening at 7 p.m. continuing on Wednesday afternoon and evening at the Fox Funeral Home located at 4700 Market Street in Youngstown, Ohio.

Mr. SISK. Mr. Chairman, I move to strike the requisite number of words, and I rise in opposition to the amendment.

Mr. Chairman, again I would assume that I am probably not considered as on the side of the angels on this question, at least in the minds of certain people, but again this goes back to the right of the majority to work its will.

As far as I am personally concerned I have no objection to being on record on any issue, whether it be appropriations, or any other issues that are before us. There are many policy issues in which people are very much concerned about where their Representatives stand.

As far as a rollcall vote on any particular type of legislation, as I understand this amendment calls for it only in connection with appropriation bills. Again it seems to me that this would or could produce a slowdown in the procedures of the House.

It is entirely possible that all major bills should have rollcall votes—and let me say that I believe in most cases most bills do have a rollcall vote. I have found that in connection with the Committee on Appropriations, the chairman of that committee, and the subcommittee chairmen, generally do request rollcall votes on final passage, and it seems to me that in most cases they are allowed.

As far as this particular amendment is concerned, I recognize that it is not going to wreck this bill. It seems to me it simply encumbers us and produces a further loss in time, and slows down activities, and it precludes the rights of the majority of the Members on the floor to make a determination on a matter that is pending at that time.

On that basis, Mr. Chairman, I oppose the amendment offered by the gentleman from Florida (Mr. ROGERS).

Mr. HUNGATE. Mr. Chairman, will the gentleman yield?

Mr. SISK. I am very glad to yield to the gentleman from Missouri.

Mr. HUNGATE. Mr. Chairman, I would like to say that it seems to me the present procedure we follow is consistent.

If we are not to be permitted to attend appropriation hearings, perhaps no one should know how we voted on the bill.

Mr. SISK. I appreciate the comments of my good friend, the gentleman from Missouri. Let me say, I am not altogether sure that his comments are apropos. The theory being, of course, possibly that if we have not been at the hearing that we do not know what is in the bill. I doubt that because I think most of the Members do read the report and they know what is in a bill.

As I say, any time a majority wants a rollcall vote, in most cases, and at any time some single Member wants a rollcall vote in cases where there are not 218 Members on the floor at the time, then any one Member can make the point of order against the vote on the ground that a quorum is not present and get a vote. Of course, we find this situation quite regularly and I think under the present procedure of the House, it is the most appropriate way to act.

Mr. DELLENBACK. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I listened with great care and respect to the words of the gentleman from California (Mr. SISK) as he said what he had to say about this particular proposal.

I recognize that the thrust of his argument is essentially one of saving time. I respect that which he is seeking to accomplish. Some of the proposals which will be made in the way of amendments to the present bill are aimed at that very same point so far as a quorum call is concerned. But when it comes to this vital question of dealing with appropriation measures, I commend the gentleman from Florida (Mr. ROGERS) for this proposal. I listened with very real interest and approval to the argument made by the gentleman from New York (Mr. CONABLE).

Let us understand that it is strictly a matter of appropriation bills that we deal with. We do not vote frequently on appropriation bills.

In the first session of the 91st Congress, as the gentleman from New York (Mr. CONABLE) pointed out, there were only seven votes which were nonrecord on final passage of an appropriation measure. At 30 minutes of time for each recorded vote, it would have been only 3½ additional hours at the most.

In the second session there have been 10 appropriation bills which we have passed without a rollcall vote and at the most this would have been only 5 hours of additional time.

When it comes to this critically important portion of our function, namely, to speak out on the spending of literally billions of dollars, there is nothing which we do and in which our respective constituents should be more interested and more entitled to know exactly where everyone of us stands than on this point.

Mr. Chairman, I commend the gentleman from Florida (Mr. ROGERS) for this particular proposal, and I urge the adoption of this amendment.

Mr. SMITH of Iowa. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I think before the Members vote on this amendment, we should perhaps have an example of what we are voting on.

The gentlewoman from Washington came back with an appropriation con-

ference report just last week. There was a vote to adopt the conference report. Following that there were 19 amendments, and then there was a motion to recommit and then final passage. Under the provision of this pending amendment, that would have been 22 rollcall votes that would have been required that afternoon on that conference report and on those amendments. Needless to say, we would have been here until midnight.

Mr. HAYS. Mr. Chairman, will the gentleman yield?

Mr. SMITH of Iowa. I yield to the gentleman.

Mr. HAYS. I would just like to point out further, and I do not know where the gentleman from Oregon (Mr. DELLENBACK) has gone—but he made a point that there were 10 votes on appropriation bills which were not rollcall votes.

I do not recall each one of them, but I recall three or four in which no Member, including the gentleman who spoke so eloquently for the amendment, asked for a rollcall. So obviously if nobody asked for it, there is apparently no one who is really making a pitch for a rollcall, for they are not even interested enough to be here and ask for the rollcall. It seems to me if they really wanted one, they should have been here and have at least said so. Then if the House had turned them down, they would have had something to complain about.

But not having asked for the rollcall, they really have nothing to complain about.

Mr. SMITH of Iowa. The gentleman is quite right. If on any one of the amendments there was not a single Member who wanted a rollcall and who would attempt to get 20 percent to agree, he must not think it had great national interest.

Mr. FRASER. Mr. Chairman, will the gentleman yield?

Mr. SMITH of Iowa. I yield to the gentleman from Minnesota.

Mr. FRASER. I concur in what the gentleman has said. It seems to me that when we are concerned about the public's right to know, what we are trying to do is to determine whether enough Members have enough interest in the matter to ask for a rollcall. In that event, there should be access to a record of how Members voted. If there is not that much concern about the matter, then to propose that this House spend an additional half hour on a rollcall in which nobody has any concern is simply to burden the legislative process.

I would hope that the amendment would not be adopted, because it seems to me it would not add anything.

Mr. SMITH of Iowa. It would mean a half hour for each rollcall. If there were 20 rollcalls that would be 10 hours.

Mr. FRASER. I agree with the gentleman.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Florida (Mr. ROGERS).

The amendment was rejected.

AMENDMENT OFFERED BY MR. O'NEILL OF MASSACHUSETTS

Mr. O'NEILL of Massachusetts. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. O'NEILL of Massachusetts: On page 39, immediately below line 4, insert the following:

"RECORDING TELLER VOTES

"Clause 5 of Rule I of the Rules of the House of Representatives is amended to read as follows:

" 'He shall rise to put a question, but may state it sitting, and shall put questions in this form, to wit: "As many as are in favor (as the question may be), say Aye;" and after the affirmative voice is expressed, "As many as are opposed, say No;" if he doubts, or a division is called for, the House shall divide those in the affirmative of the question shall first rise from their seats, and then those in the negative; if he still doubts, or a count is required by at least one-fifth of a quorum, he shall name one or more from each side of the question to tell the Members in the affirmative and negative; which being reported, he shall rise and state the decision. If before tellers are named any Member requests tellers with clerks and that request is supported by at least one-fifth of a quorum, the names of those voting on each side of the question shall be entered in the Journal. Members shall have not less than twelve minutes from the naming of tellers with clerks to be counted.' "

And make the appropriate technical changes in section numbers and references.

(By unanimous consent, Mr. O'NEILL of Massachusetts was allowed to proceed for 5 additional minutes.)

Mr. O'NEILL of Massachusetts. Mr. Chairman, the amendment I am offering today in behalf of myself and Mr. GUBSER of California and also 180 other sponsoring Members of this Congress provides for a record teller vote in the Committee of the Whole.

Mr. Chairman, I offered this amendment when we were having the markup of the bill and it did not prevail. We lost by a vote of 6 to 6. At that time I served notice that when the legislation came to the floor of the House I intended to offer it again. I am happy that CHARLIE GUBSER has joined with me and that we have had such a tremendous response from our colleagues. At this point I would like to list all the cosponsors of my amendment:

SPONSORS OF THE O'NEILL-GUBSER AMENDMENT TO PERMIT RECORDING OF TELLER VOTES

Mr. Adams, Mr. Addabbo, Mr. Anderson of California, Mr. Anderson of Illinois, Mr. Anderson of Tennessee, Mr. Andrews of North Dakota, Mr. Ashley, Mr. Beall, Mr. Bell, Mr. Bennett.

Mr. Biester, Mr. Bingham, Mr. Blatnik, Mr. Boggs, Mr. Boland, Mr. Brademas, Mr. Brasco, Mr. Broomfield, Mr. Brotzman.

Mr. Brown of California, Mr. Burke of Florida, Mr. Burke of Massachusetts, Mr. Burton of California, Mr. Button, Mr. Chappell, Mrs. Chisholm, Mr. Clay, Mr. Cleveland, Mr. Don Clausen, Mr. Cohelan, Mr. Conable, Mr. Conte.

Mr. Conyers, Mr. Corman, Mr. Coughlin, Mr. Cramer, Mr. Crane, Mr. Culver, Mr. Daddario, Mr. Daniels, Mr. Dellenback, Mr. Denny, Mr. Dennis, Mr. Diggs, Mr. Donohue, Mr. Dwyer, Mr. Eckhardt.

Mr. Edwards of California, Mr. Edwards of Louisiana, Mr. Eilberg, Mr. Erlenborn, Mr. Esch, Mr. Evans of Colorado, Mr. Evins of Tennessee, Mr. Farbstein, Mr. Fascell, Mr. Findley, Mr. Flowers, Mr. Foley, Mr. William Ford, Mr. Fraser, Mr. Friedel, Mr. Fulton of Tennessee, Mr. Fulton of Pennsylvania.

Mr. Gibbons, Mr. Green of Pennsylvania, Mr. Gubser, Mr. Gude, Mr. Halpern, Mr. Hamilton, Mr. Hanley, Mr. Hansen of Idaho, Mr. Harrington, Mr. Hathaway.

Mr. Hawkins, Mr. Hechler, Mr. Helstoski, Mr. Hicks, Mr. Hogan, Mr. Howard, Mr. Jacobs, Mr. Johnson of California, Mr. Jones of Tennessee, Mr. Karth, Mr. Kastenmeier, Mr. Keith, Mr. Koch, Mr. Kuykendall.

Mr. Leggett, Mr. Long of Maryland, Mr. Lowenstein, Mr. Lujan, Mr. McCarthy, Mr. McCloskey, Mr. McClure, Mr. McDade, Mr. McFall, Mr. MacGregor, Mr. Madden, Mr. Mailliard, Mr. Matsunaga, Mr. May, Mr. Mayne, Mr. Meeds, Mr. Melcher, Mr. Meskill, Mr. Mikva, Mr. Miller of Ohio, Mr. Minish, Mr. Mize, Mr. Mollohan, Mr. Moorhead, Mr. Morse, Mr. Mosher, Mr. Moss, Mr. Nedzi, Mr. Obey, Mr. O'Hara, Mr. O'Konski, Mr. O'Neill, Mr. Olsen, Mr. Ottinger.

Mr. Patten, Mr. Pepper, Mr. Pettis, Mr. Philbin, Mr. Pike, Mr. Pirnie, Mr. Podell, Mr. Preyer, Mr. Pryor, Mr. Quie, Mr. Railsback, Mr. Rees, Mr. Reid of New York, Mr. Reuss, Mr. Riegle, Mr. Robison, Mr. Rodino, Mr. Rogers of Florida, Mr. Roe.

Mr. Rooney of Pennsylvania, Mr. Rosenthal, Mr Roth, Mr. Roybal, Mr. Ryan, Mr. Saylor, Mr. Schadeberg, Mr. Schneebeli, Mr. Scheuer, Mr. Schmitz, Mr. Schwengel, Mr. Shriver, Mr. Stafford, Mr. Steiger of Arizona.

Mr. Steiger of Wisconsin, Mr. St Germain, Mr. Stokes, Mr. Symington, Mr. Talcott, Mr. Teague of California, Mr. Thompson of New Jersey, Mr. Tiernan, Mr. Tunney, Mr. Udall, Mr. Van Deerlin.

Mr. Vander Jagt, Mr. Vanik, Mr. Waggonner, Mr. Waldie, Mr. Weicker, Mr. Whalen, Mr. White, Mr. Widnall, Mr. Winn, Mr. Charles Wilson, Mr. Bob Wilson, Mr. Wold, Mr. Wolff, Mr. Wydler, Mr. Yatron, Mr. Zwach.

The record teller vote is a simple thing, conducted much like regular teller votes, only with a record printed of how each Member voted.

When I proposed this in the Rules Committee, I said it was a controversial measure. It is. But it is a very necessary and very fair measure.

Every Member knows of the important work done in the Committee of the Whole.

Often the most important parts of a bill—and usually the most controversial sections—are decided upon in amendment form. And there is no record of how Members vote.

The ABM, the SST, the invasion of Cambodia, were all dealt with in the Committee of the Whole, in nonrecorded teller votes.

This is not a good system. It is not fair, and it subverts the integrity and reputation of the House and its Members.

This is a public body a representative body. But because of habits and customs—many of them outdated—through the years, the decisions of this body have been hidden from the very people we represent.

The secrecy of the Committee of the Whole has allowed too many Members to duck issues, to avoid the perils of controversial votes. But that is not in the spirit of this Nation, nor of this Congress.

Our duties to the Nation and to the people we represent make this amendment necessary. We are primarily and most importantly legislators. And if the work of legislation can be done shrouded in secrecy and hidden from the public, then we are eroding the confidence of the public in ourselves and in our institutions.

For instance, on May 6 during debate on the military procurement authorization, three amendments were offered that gave the House its only opportunity to address itself to the Cambodian invasion. These amendments—on a subject that was tearing at the seams of the Nation—were disposed of in teller votes, with no record for the scrutiny of the public.

The ABM, the SST, preventive detention, funds for waste disposal—all of these issues have been decided on teller votes. There is no record for posterity, and we cannot be held accountable by the voters.

This is simply and clearly not right.

There should be no one among us who is not willing to go on record on the vital issues of the day. There should be no one among us who is unwilling to go to his constituency on his record—his true record, based on the important votes in the Committee of the Whole.

Votes on final passage, on previous questions, on recommital, are only part of the record.

In courts of law, witnesses are asked to tell the truth, the whole truth. This amendment will helps us do that.

The whole truth means that we must have a record on amendment votes. This amendment will do that. I believe it is fair, it is necessary, and it is in keeping with democratic principle and representative government.

It is interesting because Members of Congress have known for about a month that the amendment was going to be offered, and I have had so many of you come up to me and say, "What are you doing? Are you becoming a reformer? Are you going to change the whole system around?"

I have been in politics or in public life for more than 35 years. I never considered myself a reformer. I do not know exactly what a reformer is. To me if one has a private opinion that the rules and regulations of the Congress should be changed, he should act upon that belief.

I am one who believes in speaking out. I have done so through the years. I believe the public is entitled to know how I vote on the issues and I constantly report to them and tell them how I vote.

I believe every Member should report to his or her constituency as to how he or she votes, and the complete record should be available for public scrutiny.

All I am asking for is a simple change in the rules. One may have the teller votes, but if one so desires, one may ask for tellers with clerks.

Last year, for example, during the period from July 1, 1969, to July 1, 1970, there were 113 division votes and 73 teller votes taken on amendments offered in the Committee of the Whole. Fifty of the teller votes were not preceded by division votes. Thus, the number of amendments voted on by division and teller votes totaled 163.

Actually, going over the list of the 73 teller votes that took place I find about 18 or 20 on which I believe the people of America, the people at home, want to know and are entitled to know how we stand. These were major, vital issues.

As examples, there are Cambodia, Vietnam, the SST, the MIRV, the ABM, and things of that nature. In my particular area they would like to know how we stood on the Dickey-Lincoln project. That is only a local matter, but to the people of the New England area, it is important. I have announced how I voted on it, despite the fact that we had teller votes, and there was no record on it.

In this day and age I believe the people are entitled to know how we vote on legislation, not just on the entire bill, but on the all-important amendments.

During the year 1968 there were 63 teller votes. If one had been able to ask for teller votes with clerks during the year 1968, I say they would have only been asked for about 15 times. There were 15 really national, earth-shaking decisions on which the people at home should have known how you felt about them and how I voted and how you voted. But there is no record, for these issues were disposed of in amendments.

During the last year, on the division votes that we took, 28 amendments were approved and 85 were rejected. On the teller votes we took last year, 53 were rejected and 20 were approved. That is out of the 73 teller votes we took last year.

If we were recording these votes, if the people at home knew how we actually voted, I believe we probably would have had some different results. Probably we would have passed more pieces of legislation.

We have a habit here, through our rules and regulations and our habits, of protecting each other. But this can be to the detriment of the Nation. This amendment seeks to avoid that.

One of the great problems confronting the Nation today is the student turmoil. It is not only because of the war; it is because of dissatisfaction, alienation and mistrust. They talk about all the priorities. Yes, we are reeking with priorities; there is no question about it. But they do not know how you vote and how I vote and how we stand on the issues. No one knows who is on what side, because there is no record. We must go on record, have a public accounting of where each of us stands on each issue.

Here we are, Mr. Chairman. We bind the people of America. We say whether they are going to war. We regulate taxes. We set up crime bills. All the power is in this Congress, yet we are not willing to tell the people at home how we vote.

Actually, what do you vote on? A motion to recommit or final passage. How many times in history has the statement of Wilson been repeated that the Congress in committee is the Congress at work. The work is done in committee, where it is done under committee rule, and under those rules the public doesn't know where we stand. It is not fair to the people of America. There is no question in my mind about that. It is just not fair to the people of America.

Mr. CONABLE. Mr. Chairman, will the gentleman yield?

Mr. O'NEILL of Massachusetts. I yield to the gentleman.

Mr. CONABLE. I would like to commend the gentleman for his amendment and say that I intend to support it.

I would like to ask him if he does not think one of the very important side effects of his amendment would be to encourage participation in the amendment process beyond that which we have under our present system. Does he not think that the Members would be much more likely to be on the floor if there is a chance of their being recorded with respect to the amendment?

Mr. O'NEILL of Massachusetts. I certainly agree with the gentleman. There is no question in my mind. If the Members know that the people at home will know how each of us is recorded on an issue that is of real importance, then there will be more dialog and more Members on the floor.

Mr. BURKE of Massachusetts. Mr. Chairman, will the gentleman yield?

Mr. O'NEILL of Massachusetts. I yield to my distinguished colleague from Massachusetts.

Mr. BURKE of Massachusetts. In line with what the gentleman from New York just said on his amendment, I notice that your amendment calls for each Member on each side of the question to be introduced in the Journal. I was wondering if you do not believe it is important that we also list the names of the absentees.

Mr. O'NEILL of Massachusetts. That is all right with me, as far as that procedure is concerned. It is just a simple matter of deduction. If you are not recorded as voting, then you were obviously absent.

Mr. BURKE of Massachusetts. If the gentleman will yield futher, I know it is a matter of deduction, and of course I am going to support my good colleague from Massachusetts.

Mr. O'NEILL of Massachusetts. I want to thank the gentleman.

Mr. BURKE of Massachusetts. But I would be reluctant to support it unless we list the names of the absentees, because they are usually the cause of the outcome of the teller vote by failing to be present on the floor of the House. There are so many reformers around here, and I am not referring to my good friend from Massachusetts now but those who are writing their great position papers, who are never on the floor of the House. If we list the names of the absentees, it might be possible to get some of them over here once in a while to vote on some of these matters.

I want to say it is my intention when the proper time comes to offer an amendment to the amendment offered by the gentleman from Massachusetts which will also list the names of the absentees.

Mr. O'NEILL of Massachusetts. I want to thank the gentleman.

Mr. HAYS. Mr. Chairman, will the gentleman yield?

Mr. O'NEILL of Massachusetts. I am happy to yield to the gentleman.

Mr. HAYS. I agree with the gentleman's position that there ought to be recorded votes. I am not in complete agreement with how you go about it, but one thing that really troubles me in view of the eloquent statements that

you made about secrecy is, does not the gentleman have any amendment or can we get an amendment that will enable us to get tax bills up here where we can vote on the amendments and have some record votes? The way it is now they come out of the Committee on Ways and Means with record votes and come here under a gag rule and you cannot get an amendment up let alone get a record vote on it. I think they are the most important pieces of legislation of all. I do not know how the gentleman votes in the Committee on Rules because, again, that is a secret vote and whether he votes to send them here under a gag rule I do not know, but it seems to me that is the basic place to start if we are really out to abolish secrecy in this body.

Mr. O'NEILL of Massachusetts. To answer the gentleman, I have voted through the years, excepting on the last bill, I have voted through the years for a closed rule on taxes, based on that argument that 435 Members could not write a tax bill because there would be so much lack of germaneness, and each Member would have his particular interest.

The CHAIRMAN. The time of the gentleman has expired.

(By unanimous consent, Mr. O'NEILL of Massachusetts was allowed to proceed for 5 additional minutes.)

Mr. O'NEILL of Massachusetts. In the last bill I did vote for an open rule in view of the fact that it came out as a reform package and I did not think it was a reform package at all. You may recall I said that the ocean labored and brought forth a periwinkle. I did not think much of that bill and I did vote for an open rule at that time.

However, if the gentleman is interested in having a matter of that type brought up here, why not offer an amendment to that effect?

Mr. HAYS. You are talking about writing the tax bill on the floor. You are now engaged in changing the rules of the House on the floor. I do not know anything that is more delicately balanced than the rules here to protect minorities and majorities alike. I do not see why a tax bill could not be written this way. I take it from what the gentleman says about the last tax bill that he has had a change of heart. In view of the delicate exposition against secrecy here, I hope we can count on him that we will not get any more gag rules.

Mr. O'NEILL of Massachusetts. Well, I want to thank the gentleman from Ohio and the gentleman can be assured that I will have his thoughts in mind when the next tax legislation comes up.

Mr. Chairman, it has always been interesting to me to see the history which has been written in the Congress of the United States. We are witnessing history now. But it is an incomplete record, and an unreliable one.

Mr. Chairman, the last three Presidents of the United States all served in this body, Mr. Nixon, Mr. Johnson, and Mr. Kennedy. And, if someone were writing the memoirs of any one of them on the important issues of the time in which they served in the Congress of the United States, one would have to surmise or guess how they stood on the vital questions of the day, because there would be no record, unless they put something in the RECORD themselves as to how they stood.

The history that we make here, believe me, is just a shallow portrayal of what is being done because all you can do is vote on motions to recommit or on final passage.

Mr. Chairman, the real crux of the matter, to be honest with your constituency and to yourself, is to vote on the issues. And that is done in the Committee of the Whole.

Mr. Chairman, we are talking about unrest in this country today and in my opinion a great deal of that unrest is caused by the fact that the people feel this Congress is not living up to the expectations which they have of the Congress and they feel that the Congress constantly protects itself.

How do you deal with a young fellow, for example, when he says that when we argued the question of Cambodia we were given 43 seconds to address the House. Or there may have been a teller vote and we all walk through the middle aisle, but he says, "I do not know how you voted because there was no record vote."

It is hard for the people of America to understand that on the great problems of this Nation they do not know how their Congressmen vote. It is not right.

Mr. CLEVELAND. Mr. Chairman, will the gentleman yield?

Mr. O'NEILL of Massachusetts. Yes, I am glad to yield to the gentleman from New Hampshire.

Mr. CLEVELAND. As one of the cosponsors of this amendment, I certainly support it. I have heard one criticism which I think has some validity and that is that there might be some Members who would not be apprised as to precisely what the amendment contained which would be subject to a teller vote.

So, I propose later to offer an amendment to your amendment to simply require that it would be printed at least 1 day in the RECORD prior to a vote thereon. The big ticket vote, the big issues such as the ABM and the SST amendments on which we all feel we should be recorded could certainly be covered by amendments published at least 1 day prior to the expected day of the vote. I think this would protect the Members so they would be sure of knowing more precisely what they were going to be recorded on.

Therefore, I would very much hope that the gentleman from Massachusetts and other sponsors of this amendment would accept such an amendment. Just as the public has a right to know how we vote, I think we have a right to be apprised in writing as to what we are being recorded on.

Mr. O'NEILL of Massachusetts. As I have watched the development of this legislation in the last 2 or 3 weeks and seeing amendment after amendment being adopted, I am wondering if there is not more than one way to skin a cat. I am wondering if we are going to weight it down so that it will sink.

The CHAIRMAN. The time of the gentleman from Massachusetts has again expired.

(By unanimous consent, Mr. O'NEILL of Massachusetts was allowed to proceed for 5 additional minutes.)

Mr. O'NEILL of Massachusetts. Mr. Chairman, I would hate to think that that will happen to this legislation. I would hate for it to happen to this particular amendment.

Mr. Chairman, I do not know how many Members have come up to me and said, "I have a perfecting amendment to your amendment." If we are going to have so many perfecting amendments offered to this amendment, then I am beginning to wonder about it. I hope my amendment goes through without any amendments whatsoever, for amendments can also dilute, distort, and change, as well as improve.

Through the years, as I said, we have protected ourselves. Too often that protection has been a disservice to the public. I do not think we need perfecting amendments to protect ourselves.

Mr. BURKE of Massachusetts. Mr. Chairman, will the gentleman yield at that point?

Mr. O'NEILL of Massachusetts. I am delighted to yield to my colleague, the gentleman from Massachusetts.

Mr. BURKE of Massachusetts. Now, my good friend, the gentleman from Massachusetts, is not going to tell me that he is not going to support my amendment?

My amendment is helping his amendment.

Mr. O'NEILL of Massachusetts. Mr. Chairman, let us examine our consciences and let us look at ourselves. We have gone along here, I think, with a smug complacency throughout the years, at least that, and probably with a colossal ugliness, because we have been able to do what we wanted to do and protect ourselves.

You know, the more I think of this legislation and of this amendment, the more I wonder how the Congress of the United States got away with it all the years that they did without being forced to report back to their people on the major issues that befall the Nation. I just cannot understand how they have done it throughout the years.

Also may I say this: that I think it is true that these reforms run in cycles. We had a reform after World War II. We had another reform, I believe it was in the early 20's, and then we had reform back in 1911 or 1912, about that time.

Government runs in a pattern like that, whether it is the National Government, the State government, or whether it is in your local townships. And the people rise up about every 20 or 30 years and demand change. I think that they have risen this year, and I think that this is the main thrust; they want a report from their Representatives.

Mr. ANDERSON of Illinois. Mr. Chairman, will the gentleman yield?

Mr. O'NEILL of Massachusetts. I yield to the gentleman from Illinois.

Mr. ANDERSON of Illinois. Mr. Chairman, I thank the gentleman in the well for yielding.

I am sure the gentleman in the well knows that I supported him when he offered his motion in the Committee on

Rules, and I join him today in supporting the proposition that he now advances.

In fact, I think the gentleman in the well is being far too modest when he disclaims the title of a reformer. I think that the gentleman in the well and the gentleman from California (Mr. GUBSER) both thoroughly deserve the title of reformers when they espouse what is basically very fundamentally a far-reaching change in our present rules of procedures.

I just have one interesting observation to make, and that is that in talking with various members of the Fouth Estate in passing about this particular amendment offered by the gentleman in the well, that I think it is very interesting in that they said that it is going to be pretty hard to dramatize or to make much of an impression upon the minds of the public—and it seems to me that very comment says something about our present procedures in the House, and that we, therefore, ought to be willing to do the things that will make the things we do in the House of Representatives more understandable and more meaningful to the people of this country.

I think that will be the net effect of what the gentleman proposes, and that is why I support it.

Mr. O'NEILL of Massachusetts. I thank the gentleman.

Mr. THOMPSON of New Jersey. Mr. Chairman, will the gentleman yield?

Mr. O'NEILL of Massachusetts. I yield to the gentleman from New Jersey.

Mr. THOMPSON of New Jersey. Mr. Chairman, I would like to associate myself with the remarks of the distinguished gentleman from Massachusetts (Mr. O'NEILL). I do not see, really, the analogy between a closed rule on a bill out of the Committee on Ways and Means, and this legislation, although I would advocate, as does the gentleman from Ohio, open rules on all legislation. I think if, as the gentleman from Ohio suggests, it is possible to write tax legislation on the floor of the House out in the open, then certainly it is possible even more so for us to reform our rules out here in the open, and to cause record votes on substantive matters which would be the result of the amendment of my distinguished friend, the gentleman from Massachusetts (Mr. O'NEILL).

Mr. O'NEILL of Massachusetts. Mr. Chairman, I thank the gentleman.

Mr. GUBSER. Mr. Chairman, I move to strike the requisite number of words, and I rise in support of the amendment.

(By unanimous consent, Mr. GUBSER was allowed to proceed for 5 additional minutes.)

Mr. GUBSER. This is an historic amendment to an historic bill.

I hope the bill does not get smothered or suffocated by an overabundance of kindly amendments because it is very necessary to the future of our parliamentary system of government.

I am proud to have originally sponsored an amendment which attracted a number of cosponsors. For this reason, I was asked to cosponsor this amendment with the gentleman from Massachusetts (Mr. O'NEILL).

This has been referred to as the antisecrecy amendment. The word "secret" carries with it a sinister connotation—an intent to deceive—an intent to mislead.

In defense of this House of Representatives and its very long and proud history, I would like to say that nonrecorded teller votes have not been for the purpose of deceit. Rather, they have been a carryover from the days when sessions of the Congress lasted a few short months and it was necessary to expedite proceedings. It is a relic of a passing era where the Federal Government was limited, and did not entwine itself so intricately with each individual citizen and his welfare.

Those days are gone and they will never return. Today we deal in a highly complex relationship between the people and their government. The responsibility of serving in the Congress is now a full-time, year-round job—and we are not limited by a shortage of time. We should and we can take the time to let the public know how we vote on each and every issue.

So I prefer to designate this not as an antisecrecy amendment but as the truth amendment. The truth, I would remind you, is the full truth and the whole truth.

You all know the biblical saying, "And the truth shall make you free." I cite it now because of the connection between the word "truth" and the word "free." Truth is the essence of free government and of freedom itself.

As truth disappears, the vacuum that is left is filled with varying degrees of despotism. Can anyone point out a free nation which lost its liberty under circumstances where the truth prevailed under the absolute sense?

Right at this moment the basic institutions of this Nation itself, and especially the Congress, face a crisis which, in my opinion, is more serious than any foreign or domestic enemy ever presented.

It is not just American youth that has lost faith in the Congress. Our press corps, both privately and in print, show disdain for this great parliamentary body. The executive branch often considers the Congress as an albatross. The taxpayers are up in arms. The poor, the rich, men of all races, and almost everyone view the Congress with a minimum of high regard—to borrow a phrase from one of our departed colleagues.

Now good arguments can be found to rebut the opinion and the views of each group. But one point they all make, and one for which there is no rebuttal is the absence of the full truth in teller votes.

If truth is the voice of freedom, it falls silent when the House votes by tellers.

The body politic today needs some strong medicine. I am here urging you not to adopt the substitute which will be offered and not to dilute that medicine to the point where it would be ineffective in bringing about a cure.

I am one of those who originally offered practically the same proposal as the substitute motion.

I have now studied it carefully, and believe there are certain defects in my original proposal. Therefore, for the remainder of my remarks I shall address myself to the shortcomings of the substitute.

Some say that by requiring that a greater number of Members request a recorded vote we would be protected against frivolity and the use of deliberate delaying tactics. The O'Neill amendment requires the same number of people to ask for a teller vote with clerks as is required for a teller vote. If that number is proper for a teller vote, why is it improper for a teller vote with clerks?

Some people say we ought to have an electronic device to speed up the teller voting process which the O'Neill amendment proposes. I do not think we ought to waste our time in determining how we shall take the record vote. The question before the House is, Should we take a record vote? We can do that under the O'Neill amendment with an electronic device if we wish to. The committees involved can concern themselves with this question at a later date and we can determine how we are going to record after we have determined that we will record.

The substitute would be terribly time consuming. It would involve two rollcalls in almost every instance, as well as one teller vote. Instead of a recorded teller vote taking a period of 12 minutes, the substitute would give us a possibility of three votes, the probability of two, and a certainty of one recorded rollcall vote.

Mr. SMITH of California. Mr. Chairman, will the gentleman yield?

Mr. GUBSER. I yield to the gentleman from California.

Mr. SMITH of California. I think the gentleman may be under a little misapprehension that the substitute which the distinguished gentleman is talking about will be offered. It is not germane, that is, the one which would require defeated amendments to be voted on in the House. That will not be offered at this point because it is not germane.

Another substitute will be offered on electronic voting. I want to be certain that you are not talking about my substitute when you are talking about that particular one.

Mr. GUBSER. No. I am happy to learn that the substitute I was referring to will not be offered. However, I shall continue to address myself to some of the defects, because those defects are the basis of the very arguments which are being used against the O'Neill amendment.

Mr. HAYS. Mr. Chairman, will the gentleman yield?

Mr. GUBSER. I must warn the gentleman that if I yield, I will have to ask for an extension of time.

Mr. BOGGS. Mr. Chairman, I will have to object if the gentleman so requests.

Mr. GUBSER. Then I cannot yield.

Mr. HAYS. I just wanted to correct the record, if the gentleman will give me a second.

Mr. GUBSER. Surely, I yield to the gentleman from Ohio.

Mr. HAYS. Just to say that a substitute will be offered. I have it and I am going to offer it.

Mr. GUBSER. With the substitute we would have an impossible parliamentary complication of matters before the House. Suppose an amendment were defeated in the Committee. Suppose subsequently another amendment were adopted which was contradictory to the defeated amendment. Then suppose you

go into the House and the House reverses the Committee of the Whole and adopts the amendment which was previously rejected. Then you would have a situation of a bill containing two contradictory provisions. The only thing you could do would be to pull up stakes and go right back into the Committee and straighten the whole mess out. The O'Neill amendment would bring a clean bill to the House. It would deliver a finished product and in which all parts would be consistent with other parts. So I do not believe we should unnecessarily complicate the O'Neill amendment.

I could go on and talk further about what kind of amendments would be eligible for the rollcall vote in the House. Will it be the amendment as originally introduced? Will it be the final modified version which is defeated, or will it apply to all amendments, including substitute amendments? You will create nothing in the world but unmitigated confusion if you go back into the Committee and ask for recorded rollcall votes on defeated teller votes. So I urge the House to stand fast and adopt the O'Neill amendment without an amendment.

Mr. Chairman, the time has come when the people's business should not cower in the dim light of only half the truth. If our system is to survive it must receive the spotlight of the full truth and the whole truth.

Mr. BOGGS. Mr. Chairman, I rise in support of the amendment, and I ask unanimous consent to proceed for an additional 5 minutes.

The CHAIRMAN. The gentleman from Louisiana requests unanimous consent to proceed for an additional 5 minutes. Is there objection to the request of the gentleman from Louisiana?

Mr. HAYS. Mr. Chairman, I reserve the right to object in order to inquire of the gentleman if I did not see him on his feet saying he was going to object to the gentleman from California (Mr. GUBSER) asking for additional time.

Mr. BOGGS. I may have said that.

Mr. HAYS. In that case, Mr. Chairman, I object.

The CHAIRMAN. Objection is heard.

The gentleman from Louisiana is recognized for 5 minutes in support of the amendment.

Mr. BOGGS. Mr. Chairman, I might say to my good friend, the gentleman from Ohio, that the gentleman from California had already had 10 minutes, but I appreciate the gentleman's courtesy.

Mr. Chairman, in my judgment this is indeed a historic day. This is a day which will make the House of Representatives truly relevant.

As is the case with so many of the rules of this Chamber, the procedure known as teller voting is deeply rooted in the legislative process. Its origin can be traced centuries ago when the British Parliament devised it as a method of voting the will of the people while escaping the wrath of a powerful and vengeful monarch. One hundred and thirty-eight years ago, when Parliament no longer had reason to fear the Crown, the system was reformed to permit a public record of votes. Unfortunately, with never a King to fear and only the public to serve, the rule has been retained in the House of Representatives. We did so because we said it helped expedite the often slow legislative process. Unfortunately, it has also been used a shelter from the public eye.

I do not believe representative government can afford the luxury of a shelter from the public eye. The American people are entitled to know the recorded judgment of each Member on the great issues of our time. We cannot ask our people to respect our institutions unless the institutions themselves are self-critical and self-reforming.

As majority whip, it is my responsibility to inform Members of legislation pending on the floor and to encourage their attendance whenever votes are taken. In my opinion, teller voting, as it is now conducted, is a hindrance rather than an assistance to the majority whip. Important amendments are often adopted or defeated in the Committee of the Whole House by a small fraction of the total membership of the House. The truth is, the system of teller voting is a major contributor to absenteeism. This proposal to record teller votes would be a major step toward encouraging the full participation by all parties in forging the law of the land. In this respect, This amendment would be a great assistance to the majority and minority whips, and I think to the fair and full operation of the legislative process.

We hear a great deal of talk these days about the unresponsiveness of our institutions. The founders of this country never intended its institutions to be inflexible and set in their ways. The architects of our Government intended its three branches to be capable of growth and continuous self-renewal. This is the real import of this bill and the real significance of this amendment. For these reasons, I support this amendment and I urge all my colleagues to do so also.

This is not a liberal amendment. It is not a conservative amendment. It is not a Republican amendment. It is not a Democratic amendment. It is an amendment for this House of Representatives.

When the people and the media say that this House has ceased to be relevant, then, Mr. Chairman, if true, American democracy has ceased to be relevant.

When the people assert that the House of Representatives is not representative, then the last best hope of mankind has been lost. Because if we are not representative, then no institution is.

I have given my life to this Chamber. I love it and the Republic for which it stands. Come September 10, I will observe the 30th anniversary of my first election to the House. I came here when I was 26 years of age.

Today I am proud of the fact that I have a son who wants to come here, too. He believes that service here is a high calling. With all due deference to my colleagues on the Republican side, I hope that he is elected. I am doing everything I can to help him. He thinks the House is relevant. I think it is relevant.

But I know that this system of teller votes is not relevant. I have served for 15 years here as whip or as deputy whip, and there have been countless occasions when I have spent hours and days attempting to get members to come here and do their duty and walk through that teller line and vote.

I know this so-called hanky-panky in the cloakrooms. I know how some conservatives say, "Well, we can make a deal with the liberals." And some liberals say, "we can make a deal with the conservatives." And the beat goes on.

Well, we really do not govern that way. Those deals seldom have worked out. The pressures are too great on both sides on major issues.

All we are saying by this amendment is that the archaic system adopted some centuries ago to protect the Members of Parliament from despotic kings should be abolished in the House of Representatives of the United States of America as it was in the House of Commons many years ago.

We are saying, "Let a man stand up and be counted." What is wrong with that? Tell me what is wrong with being counted if one is a Representative. If you do not want to be counted, why did you come here in the first place, and why do most of us seek to return to this historic Chamber?

Finally, one last thought. A story is told in history about one of the great men who helped found this country, Alexander Hamilton.

Hamilton brought a visitor into the gallery of the old House Chamber, now Statuary Hall. The visitor sat with Hamilton and noting the pandemonium on the floor, which you frequently see in this body even as of this day, questioned Mr. Hamilton, "What goes on there?" And Hamilton replied, "There, sir—there, sir, the people govern."

Well, here, Mr. Chairman, almost two centuries later, the people must continue to govern. Let us support this amendment.

Mr. HOWARD. Mr. Chairman, I rise today in support of the amendment offered by my colleagues, the gentlemen from Massachusetts and California, to H.R. 17654, the Legislative Reorganization Act of 1970, to allow the recording of teller votes.

The practice of not recording votes in the Committee of the Whole was necessary at one time in the British Parliament to preserve the independence and integrity of that body. I submit the practice was never necessary in the United States and should be abandoned now. Indeed, the practice was abandoned in England 138 years ago.

The real issue here is not the modernization of House procedures, but rather the right of the American people to know how their elected Representatives vote in Congress. In this very session we have seen crucial votes on such vital issues as the antiballistic missile system, the supersonic transport, and Vietnam policy cast under various cloaks of anonymity, the most significant being the teller vote procedure.

Accountability of elected officials to the people was one of the guiding principles of the founders of this Nation, and it has continued to be one of the hallmarks of a government of a free people. Just a few

years ago, proposals to lengthen the term of office for Members of the House to 4 years were forwarded with some vigor. One of the chief arguments against that movement was the notion that the 2-year term was purposely designed to keep the Congress responsive to the people by forcing the Members to stand for election frequently. Fears were raised that 4-year terms in the House coupled with the 6-year terms in the Senate would cut off a significant means of popular control over the Government. Those arguments carried the day then. The logic behind them is even more valid now when applied to unrecorded teller votes. If the electorate cannot even know how a Member votes on important amendments, how can they intelligently exercise their power to vote?

The issue is clearly presented. We must not shirk from our responsibilities to the people we represent. Today we can assure an inquiring public that they have the right to know what really happens in this Chamber. Mr. Chairman, the credibility of this institution is on the line. The choice is clear, and I urge my colleagues to join me in making this the last necessarily secret vote on the House floor.

SUBSTITUTE AMENDMENT OFFERED BY MR. HAYS FOR THE AMENDMENT OFFERED BY MR. O'NEILL OF MASSACHUSETTS

Mr. HAYS. Mr. Chairman, I offer a substitute amendment for the amendment offered by the gentleman from Massachusetts.

The Clerk read as follows:

Substitute amendment offered by Mr. HAYS for the amendment offered by Mr. O'NEILL of Massachusetts: On page 47, after line 5 and before line 6, insert the following:

"RECONSIDERATION BY ROLLCALL VOTES OF AMENDMENTS DEFEATED IN COMMITTEE OF THE WHOLE HOUSE

"SEC. 123. Rule XXIII of the Rules of the House of Representatives is amended by adding at the end thereof the following new clause:

"'9. When any measure is reported from a Committee of the Whole House, it shall be in order, immediately after the order for the engrossment and third reading of the measure and before consideration of the question of final passage, for any Member, who has proposed an amendment to that measure in the Committee of the Whole House which has been defeated by teller vote, to offer a motion, which shall require for adoption the affirmative vote of at least one-fifth of a quorum, demanding the reconsideration of that amendment by rollcall vote taken in the manner provided by rule XV. Such motion is of the highest privilege and shall be decided without debate. If, upon reconsideration by rollcall vote, the amendment is adopted, then the amendment shall be deemed to have been read in the third reading, and shall be included in the engrossment, of that measure.'."

Mr. GIBBONS. Mr. Chairman, I want to raise a point of order against the consideration of this amendment at this time.

The CHAIRMAN. The gentleman will state his point of order.

Mr. GIBBONS. Mr. Chairman, as I understand the substitute, the substitute is addressed to rule XXIII of the House, whereas the current amendment, the one offered by the gentleman from Massachusetts (Mr. O'NEILL), is addressed to rule I. The O'Neill amendment primarily deals with procedures under consideration in the Committee of the Whole, whereas the substitute primarily deals with matters in the House rather than in the Committee of the Whole. That is the main substance of my objection.

The CHAIRMAN. Does the gentleman from Ohio desire to be heard on the point of order?

Mr. HAYS. I would like to be heard, Mr. Chairman.

Mr. Chairman, I think the situation we are in now is indicative of the difficulty in amending the rules on the floor. What I am trying to do and what this amendment would try to do is to substitute the procedure for defeated amendments, or not substitute but use exactly the same procedure for amendments that are defeated as we now have for amendments that carry.

I have consulted the best legal counsel I can around here, and they say that this is the way to get at it. If it is all right to ask for a separate vote on an amendment that passes and get a record vote, I would like to have a record vote if anyone desires it—and a substantial number of people, one-fifth of a quorum, support it—I would like to get a record vote on that amendment which is defeated.

What I would like to do is to have the vote in the regular way with a rollcall vote. I am not sure that passing between tellers and having the Clerk write down the names is going to be very accurate. As a matter of fact, maybe we ought to reverse the situation and have the press sit over here where, when you go through the tellers, they can check it. Turn the lounge upstairs over to the taxpayers and let them earn their money.

Or, perhaps, we ought to reverse the teller lines. I do not really care which way we do it. You can go ahead and have Clerks to record the teller votes, but you are not really going to cure it by having people walk through the tellers with their backs to the press and with a Clerk writing down the names of the Members, a Clerk who may or may not get them correct. I would like to see us take some action in the interest of accuracy with respect to this matter.

Further, Mr. Chairman, I want to say that I yield to no one insofar as being willing to go on record. I suspect I am on record as much as anyone in this body. A lot of times when we ought to have a record vote, I announce where I stand. Some of my enemies have said about me, "I do not like him much, but at least you will never have any doubt about where he stands."

Mr. Chairman, the issue is how do you do it and how it can be accomplished in the most accurate way.

Mr. ARENDS. Mr. Chairman, will the gentleman yield?

Mr. HAYS. Yes, I yield to the gentleman from Illinois.

Mr. ARENDS. Does the gentleman mean that a defeated amendment on a teller vote would receive when back in the House the same treatment as the adoption of an amendment that has been agreed upon by a teller vote?

Mr. HAYS. I will say to the gentleman from Illinois that it would have the same possibility of adoption being voted on by a record vote, by a rollcall vote, which will be printed in the RECORD.

Mr. ARENDS. Mr. Chairman, if the gentleman will yield further, then there really is not much use of going into the Committee of the Whole House on the State of the Union?

Mr. HAYS. Well, I do not know. Maybe not. Maybe we should legislate everything on the floor of the House with a quorum of 218 being present.

Mr. YATES. Mr. Chairman, will the gentleman yield?

Mr. HAYS. I yield to the gentleman.

Mr. YATES. After the adoption of a successful amendment in the Committee of the Whole, any Member may ask for a rollcall vote on it once the committee goes back into the House.

As I understood the amendment which has been offered by the gentleman, it says that the vote must be called for by the Member offering the amendment in the Committee of the Whole. In other words, he must be the one who offers it later on?

Mr. HAYS. Well, I do not care if he were the one asking for a vote on it or anyone else asking for a vote on it. That is a minor detail.

Mr. YATES. But, if that particular Member is not present at the time the Committee of the Whole House on the State of the Union dissolves itself and goes back into the House, can another Member ask for a vote?

Mr. HAYS. I had intended it to be that way.

Let me say in conclusion, everyone is talking about the rules being too restrictive, but some of the very people who are complaining about it do not mind raising a point of order so you cannot get a vote on this. I know it is out of order and I concede the point of order.

The CHAIRMAN (Mr. NATCHER). The point of order is conceded.

The point of order is sustained.

SUBSTITUTE AMENDMENT OFFERED BY MR. SMITH OF CALIFORNIA FOR THE AMENDMENT OFFERED BY MR. O'NEILL OF MASSACHUSETTS

Mr. SMITH of California. Mr. Chairman, I offer a substitute amendment for the amendment offered by the gentleman from Massachusetts.

The Clerk read as follows:

Amendment offered by Mr. SMITH of California as a substitute for the amendment offered by Mr. O'NEILL of Massachusetts: On page 42, immediately below line 20, insert the following:

"RECORDED TELLER VOTES IN THE HOUSE THROUGH THE USE OF ELECTRONIC EQUIPMENT

"SEC. 122. (a) Clause 5 of Rule I of the Rules of the House of Representatives is amended—

"(1) by inserting "(a)" immediately after "5."; and

"(2) by adding at the end thereof the following new paragraph:

"'(b) In lieu of a teller vote conducted under paragraph (a) of this clause, a recorded teller vote through the use of electronic equipment to record the names of the Members voting in the affirmative and of those voting in the negative may be required on any question by the Speaker, in his discretion, or by at least one-fifth of a quorum either as an original demand or as a substitute for tellers named or demanded under paragraph (a) of this clause. The Clerk of the House shall list, in alphabetical order

in each category, the names of those Members recorded as voting in the affirmative, the names of those Members recorded as voting in the negative, and the names of those Members not voting. Such list shall be entered on the Journal and published in the Congressional Record.'.

"(b) The contingent fund of the House of Representatives is made available to provide the electronic equipment necessary to carry out the purposes of the amendment made by subsection (a) of this section. Notwithstanding title V of this Act, the provisions of this subsection shall become effective on the date of enactment of this Act."

Mr. SMITH of California. Mr. Chairman, I had to offer this in the nature of a substitute because it was impossible for me to place it within the language of the amendment offered by the gentleman from Massachusetts (Mr. O'NEILL). This does not in any way affect the purpose or intent of the amendment offered by the gentleman from Massachusetts (Mr. O'NEILL) and the gentleman from California (Mr. GUBSER) and that so many of the Members are in support of.

It simply provides, in my opinion, a better way to bring about the teller vote, and a more accurate way. It does add, in addition to it, to the previous amendment, the recording of those voting in the negative so that those in the affirmative would vote, those in the negative would vote, and those not present would be recorded.

It will require you to be on the floor of the House, where we should be if we have a teller vote. This I have no objection to, and I am perfectly pleased to record any vote, but that is where we should be, and that is the purpose of our being here.

The subcommittee considered a number of suggestions along this line, and we came to the conclusion at the particular time that probably we were a little premature, because the House Committee on Administration had been working quite diligently on this overall electronic situation. But as time developed on the situation it became clear that apparently a majority of the Members wished to be recorded on a teller vote.

So I made a study of this subject, and obtained information. Here is how my proposal would work.

Upon the demand for a recorded teller vote, the Members would file up the center aisle the same as they do now. We can have one of two things. Two machines, as I understand it, are available. I have not had the time to see them, but I am told they are available.

We could have one machine on one side that would record the "no" votes, and another machine on the other side that would record the "yes" votes; or we could have a machine on both sides that would record the "yes" and "no" votes.

Now, let me explain it to you in this way: You will have a magnetic type card, the same as the card that is made for you now to identify you, and you would just have your number that you have now, just below your license plate. That can all be recorded with the machine and the machine will take that number and will record your name such as for me, SMITH, California, with my number, and the "yes" or "no." If we do not have the "yes" or "no" we can have the name and number, and then have the machine for "yes" on one side, and the machine for "no" on the other side. But if you have a "yes" or "no" machine on both sides, then one end of the card will have to be "yes" and the other end of the card will be "no." I think the simplest way would be to have one machine on each side.

Mr. O'NEILL of Massachusetts. Mr. Chairman, will the gentleman yield?

Mr. SMITH of California. If the gentleman will secure me an additional 5 minutes, I will be happy to yield to the gentleman.

(On request of Mr. O'NEILL of Massachusetts, and by unanimous consent, Mr. SMITH of California was allowed to proceed for 5 additional minutes.)

Mr. O'NEILL of Massachusetts. Mr. Chairman, will the gentleman yield?

Mr. SMITH of California. I shall be pleased to yield to the gentleman from Massachusetts.

Mr. O'NEILL of Massachusetts. Mr. Chairman, I would ask the gentleman how would this protect the Member of Congress who forgot the card to insert into the electronic device?

Mr. SMITH of California. The question is: How would we protect any Member who forgot his name card. The answer is that that Member could not vote that day, until he got another card.

Mr. EDMONDSON. Mr. Chairman, will the gentleman yield?

Mr. SMITH of California. I yield to the gentleman from Oklahoma.

Mr. EDMONDSON. Mr. Chairman, I thank the gentleman for yielding.

Mr. Chairman, I think there is considerable merit in the proposal of the gentleman from California in coming up with an up-to-date procedure of electronic voting. I wonder if the gentleman from California intends to propose also an advance to electronic voting on the record rollcalls of the House in addition to the use of the device for the teller votes?

Mr. SMITH of California. First of all, I think that it should be done. The Committee on House Administration has been looking into the matter, and I think they were out to see it in operation in California, where we have it in the California State Assembly, and where we had it at the time I was there some 14 years ago.

Of course, we only had 80 members instead of 435. But I think you have to come to electronic rollcall voting and teller voting.

Incidentally, I might say to the gentleman from Massachusetts that I made a rather flip answer that a Congressman who forgot his card could not vote. And I really think he should have the card with him, and he should vote, which is really what the whole thrust of this is. But I do think it probably could be worked out, that is, a Member who had forgotten his card could have his name recorded. But this just provides for a record vote by a card. Frankly, I had not considered the matter of what would happen in the event of a card being lost. He would probably have to be issued a second one, with an "X" on it to show that it was a second card.

Mr. WHITE. Mr. Chairman, will the gentleman yield?

Mr. SMITH of California. I yield to the gentleman.

Mr. WHITE. In answer to this problem, what we would have to do is to keep duplicate cards up there with the Clerk, and if a Member lost his card he would go up and pick up the card and vote and return it.

Mr. SMITH of California. So in any event you have this small box on the side and Members would go through and vote and on a computer it would be counted and tallied and immediately available at the desk to show how many and who voted for and against. This would provide accuracy in teller counts.

The actual cost, as best I can estimate of the two types, one is a small type to handle only the electronic teller voting system and does not go into the overall rollcall vote and the like. They are about the size of a breadbox—two of them. This cost runs approximately $750 per month. It is sort of a small typewriter attached to the side of the box and prints the name on it with a piece of paper.

A teller system also could be set up using an existing computer, and there is one at the Library of Congress. It is a little more expensive to utilize.

This would probably cost a little more—possibly about $1,200 per month.

So far as I am concerned, if we are going to have a teller vote, and I am all for it, I would think we could proceed in a way where we get an accurate count.

In this particular, let me bring this to your attention. The bill we are considering, of course, will not become law until such time as it is passed by the other body and signed by the President. If we proceed with this electronic equipment, which I think we are eventually going to come to, if this can be introduced and if Members support it, it can be introduced as a separate resolution and taken before the Committee on Rules and we could come down and get started immediately on it so we might have it available for use at the beginning of the next session, if contingent funds are provided in this particular measure so we can get started on it.

It seems to me preferable to get an accurate vote and it would save a considerable amount of time rather than have a clerk on each side who may say—SMITH down to BOLLING and back to Mr. SISK and check off the "yeas" and "nays." In this way there could be a confusing and inaccurate situation.

Mr. ARENDS. Mr. Chairman, will the gentleman yield?

Mr. SMITH of California. I yield to the gentleman.

Mr. ARENDS. Under your proposition, then if some individual does not go through the teller line at all, does not vote either way, it will show in the RECORD then that he is absent?

Mr. SMITH of California. It shows that he has not voted on that teller vote—the same as a recorded vote or a quorum call.

Mr. ARENDS. But each teller vote

would be so recorded in the RECORD the next day?

Mr. SMITH of California. That is right.

Mr. McCLORY. Mr. Chairman, will the gentleman yield?

Mr. SMITH of California. I yield to the gentleman.

Mr. McCLORY. My understanding of your amendment is that it would authorize this change in the rules so that teller votes could be recorded through electronic equipment. It does not specify the details you have outlined as to some of the capacities and that would be up to the House administration.

Mr. SMITH of California. That is as to the use of electronic equipment on a record vote.

Mr. McCLORY. The gentleman knows that I intend to offer an amendment. I regard the use of electronic equipment in the recording of quorum calls and rollcall votes that would be of the same nature. The teller vote amendment substitute that you are offering is along that same line; is that correct?

Mr. SMITH of California. Along the same line except I think your amendment takes on a much bigger subject and more difficult than just a teller vote with two little machines.

Mr. McCLORY. I thank the gentleman.

Mr. STEIGER of Wisconsin. Mr. Chairman, will the gentleman yield?

Mr. SMITH of California. I yield to the gentleman.

Mr. STEIGER of Wisconsin. I notice in reading the text of the amendment that at no point do you specify a time such as the time period specified in the O'Neill-Gubser amendment. Am I correct that there is no maximum or minimum time?

Mr. SMITH of California. There is no time in this amendment for two reasons. In the first place, it would become effective if it goes into the bill at all after it is passed by the Senate and signed by the President.

Then it is written into the rules and that means forthwith.

Mr. STEIGER of Wisconsin. The O'Neill-Gubser amendment has in it a 12-minute period in which a Member could go from his office and reach the floor to be recorded on a teller vote.

Mr. SMITH of California. No time is provided like that in this amendment.

Mr. STEIGER of Wisconsin. May I ask the gentleman from California as to how he handles the problem of a Member who may be meeting with and involved with constituents in his office handling business in his office and who could not be on the floor at the time the teller vote was demanded and who, therefore, would not be able to reach the floor in the period of time in which he then could be recorded?

Mr. SMITH of California. There is no provision. We would write that into the rules of the House on this amendment.

Mr. BOLLING. Mr. Chairman, I move to strike the requisite number of words.

The CHAIRMAN. The gentleman from Missouri is recognized.

Mr. FRASER. Mr. Chairman, will the gentleman yield?

Mr. BOLLING. I yield to the gentleman from Minnesota for a question.

Mr. FRASER. The question I would like to address to the gentleman from Missouri is this: I favor electronic voting, not only for teller votes, but for any voting procedure in which Members are recorded. But what I would like to ask the gentleman is about the failure of the Smith substitute to provide any minimum time in which Members can get to the floor to participate in a teller vote. The O'Neill-Gubser amendment does provide a minimum of 12 minutes.

So far as the gentleman knows, is the pending amendment intended, in effect, to force Members to stay on the floor if they want to participate, or what is the reason for failing to provide in the amendment a minimum time period?

Mr. BOLLING. I will yield to the gentleman from California to answer that question.

Mr. SMITH of California. My amendment does not provide any time limitation. At the time the amendment was drawn up I did not know that the O'Neill-Gubser amendment provided a time. We will have exactly the same time under my amendment as we now have under the rules as the rules exist today.

Mr. FRASER. Mr. Chairman, will the gentleman yield further?

Mr. BOLLING. I yield to the gentleman from Minnesota.

Mr. FRASER. I think a study of teller votes would show that on the average about half of the House participates; that is, 190 to 200 Members vote. This means that on the average recorded teller vote the other 200 would be recorded as "not voting," unless they were on the floor at the time tellers were ordered or sufficiently close by. The O'Neill-Gubser amendment does seek to deal with that question, by providing a minimum of 12 minutes. I would like to see electronic voting, but I am not sure that we want to make this other jump, this other change of procedure, which would force Members to stay on the floor.

Mr. SMITH of California. Twelve minutes on each teller vote would delay the actions of the House to a large extent, in my opinion.

(On request of Mr. JACOBS, and by unanimous consent, Mr. BOLLING was allowed to proceed for 5 additional minutes.)

Mr. MARTIN. Mr. Chairman, will the gentleman yield?

Mr. BOLLING. I yield to the gentleman from Nebraska.

Mr. MARTIN. I should like to point out, in relation to the colloquy of a moment ago, that on most of the major issues that we have on the floor we do have extended debate in the Committee of the Whole and, as a consequence, it is notable procedure to set a time limit for a vote and to cut off debate at that time. I think it is the responsibility of Members to be present on the floor of the House at the time of that vote. That procedure occurs on most of the major amendments offered to legislation.

Mr. BOLLING. I thank the gentleman.

Mr. GUBSER. Mr. Chairman, will the gentleman yield?

Mr. BOLLING. I yield to the gentleman from California.

Mr. GUBSER. As one Member who has served in a State legislature where every vote was taken by an electronic device, I can well recall numerous instances in which that electronic device was out of order. Since the amendment offered by the gentleman from California (Mr. SMITH) does not provide any alternative to the electronic device, suppose we had a mechanical failure and had a very important and timely issue before the House at the time. Would we not have boxed ourselves in?

Mr. BOLLING. I would not attempt to answer that question.

Mr. SMITH of California. Mr. Chairman, will the gentleman yield?

Mr. BOLLING. I yield to the gentleman from California (Mr. SMITH).

Mr. SMITH of California. We would have recorded votes only when they are requested with tellers. Every teller vote would not necessarily be recorded under the amendment.

Mr. BOLLING. Does the gentleman from Illinois desire that I yield?

Mr. ARENDS. Mr. Chairman, will the gentleman yield?

Mr. BOLLING. I yield to the gentleman from Illinois.

Mr. ARENDS. I would like to have the gentleman from Missouri express his opinion as to whether he feels that one-fifth in case of an amendment being adopted or one-fifth in the case of an amendment being defeated is fair, and whether the record vote should be had on the basis of the same one-fifth.

Mr. BOLLING. I will answer the gentleman when I proceed in my own way. I will deal with that question.

Mr. ARENDS. I thank the gentleman.

Mr. BOLLING. Mr. Chairman, I would like to speak to the Smith substitute to the O'Neill-Gubser amendment.

This is a very interesting legislative situation. I believe in all frankness we should say that the subcommittee and the Committee on Rules were overrun by the interest of the Members in having record votes on amendments.

There was extraordinarily little interest in the subject when we had our long hearings and consideration, but there developed in the past few months a tremendous amount of interest. It became apparent that probably a majority of the House did wish to have recorded votes on amendments.

Although I am not putting any words in the mouth of the gentleman from California (Mr. SMITH) who speaks very well for himself, I believe it is safe to say that his amendment is an attempt to improve on the proposal offered by the gentleman from Massachusetts and the gentleman from California in terms of the realities. This institution has had great difficulty not with the integrity of its clerks but with the accuracy of its clerks. We remember the trouble that we have had. The purpose of moving to electronics is to see to it that we have accuracy, a foolproof system which will not be subject to any charge that the votes were rigged. And that charge has been made, and not wholly and satisfactorily answered because of the difficulty of a

clerk in seeing to it that he is absolutely 100-percent accurate.

Personally, I favor a complete move to electronic voting. I am not proposing such an amendment, because it carries with it so many complexities. If one goes to electronic voting in toto, there is absolutely no justification for perpetuating the Committee of the Whole House and its quorum of 100, because pretty inevitably we are going to arrive at the time when Members will know that we will be voting on amendments; they will be on the floor of the House waiting the recorded votes on amendments, and the whole method of the operation of the institution will change.

I believe we should come to that. I believe we will come to that. It will massively change the way in which this institution works. But I so strongly favor that we be on record on any amendments offered that I have not offered such a proposal for fear that it would kill any hope of taking a step forward.

I believe that we have the opportunity to give the people of the United States their right—their right to know how their Representatives vote on issues of importance to them. The best way we can do that is to adopt the Smith of California substitute.

I do not believe that any amount of time to vote will satisfy all Members. I believe that we can very well be expected to be here on the floor in the amendment stage of an important bill, as we have not been on this bill. I believe we can be expected to give it serious consideration.

Therefore, I propose to vote for the Smith of California substitute. If it passes, of course, that will be that. But if it is defeated, I propose to vote for the Gubser-O'Neill of Massachusetts amendment, because I believe this issue—the issue of having a record vote on all amendments—is the one critical issue that faces us here on the consideration of this matter and which has been given enough thought to justify its adoption now.

Mr. MOSS. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I rise to speak in support of the Gubser-O'Neill amendment and to point out the fact that in my judgment there are two failures in the Smith substitute. One gives to the very nature of the equipment and the high potential, even among the most sophisticated of electronic gear, to break down. As my colleague from California (Mr. GUBSER) pointed out, there is no alternative method, because it says:

> In lieu of a teller vote conducted under paragraph (a) of this clause, a recorded teller vote through the use of electronic equipment.

That leaves no alternatives. Then every Member of this body knows that you are on committees and tied up in committees that are meeting in violation of the rules of the House, where they may not get, even by unanimous consent, the right to meet when we are in debate under the 5-minute rule, but nevertheless they do meet.

I have had the experience of the gentleman from Louisiana in attempting to bring Members to this floor. I know how widely dispersed they are. Time is necessary to permit the Members to come over and vote on a teller vote that is going to occur very rapidly.

I think underlying both of the proposals is the fact that we are finally facing up to the need, the gentleman from Missouri (Mr. BOLLING) said, the right of the people to know. But there is a need for the people to know, also. There is a need to know how we represent them; there is a need to know how we vote in order that an honest evaluation of our effectiveness as a Representative may be made by the voters in the election. I think it would give more body and more substance to the dialog in election campaigns if the people had the knowledge of what we actually do in our workshop. The Committee of the Whole is the workshop of the House.

Just 3 years ago Congress passed an act which is called the Freedom of Information Act. This applies to the executive departments and to the independent agencies, but it does not apply to the Congress.

I think there is no area of information in this Government where there is a greater need or a firmer right to know about what happens than the votes that we cast individually here in the Committee of the Whole House on the State of the Union as we march down the teller line. That is where a lot of mischief is done legislatively. That is where it is possible to confuse the folks back home. It is the vote that you cast there. Your side did not prevail, so on the recorded vote, when you go back into the Committee of the Whole House a different complexion is taken on by the Member. That is a form of duplicity. This body is too great to resort to duplicity in dealing with the people it represents.

Mr. GUBSER. Mr. Chairman, will the gentleman yield?

Mr. MOSS. I am pleased to yield to my colleague.

Mr. GUBSER. I will ask the gentleman's opinion on this point. As I read the O'Neill-Gubser amendment I see nothing in the language which would prevent the use of an electronic device as an aid to the clerks in taking these teller votes electronically. Does the gentleman agree with me?

Mr. MOSS. I agree with you completely.

Mr. GUBSER. Therefore, the Smith substitute is unnecessary.

Mr. MOSS. I think it is unnecessary, however desirable it is that we go to electronic voting. I hope that we do at the earliest possible moment not only for teller votes but for the entirety of the business of the House.

Mr. O'NEILL of Massachusetts. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, the written record shows that the amendment I offered in the Committee on Rules was defeated by a vote of 6 to 6. There was no offer at that time, as I recall it, of any electronic voting or anything of that nature. I am fearful of the fact that there are those among us who would like to have a recorded vote but they are going to think twice about this entire matter when they leave here this afternoon. We are probably not going to finish this bill for at least a few days and perhaps not by the time this week is over. They will start thinking about the fact that, certainly we are elected to legislate, but we also run a public service agency, we also try to take care of the economy of our areas and try to take care of the funds for our districts, I know that I have a thousand and one problems that confront me as a Congressman.

You have a thousand and one problems that confront you as a Congressman. It is absolutely impossible to be on this floor at all times. I do try to get on the floor when the important issues are pending such as the ABM or the MIRV or the SST, or other issues of national importance or something in which I am interested that affects my district. I am on the floor as much as possible, but I am not here constantly. I am just the average Congressman and all of you act exactly in the same manner as I do.

Mr. Chairman, on the 73 teller votes that we had last year, we only had an average of 190 people on the floor as against the teller votes on the floor the year before when we had an average of 203.

Mr. Chairman, I say to you that this amendment, the amendment which was offered by the gentleman from California (Mr. GUBSER) and myself, gives you time to get on the floor. It gives you at least 12 minutes to get over here. I am located at the farthest end of the building in the Rayburn Building and I can time myself to get over in time to vote.

Mr. GUBSER. Mr. Chairman, will the gentleman yield?

Mr. O'NEILL of Massachusetts. Yes; I yield to the gentleman from California.

Mr. GUBSER. The gentleman heard me, as his coauthor, a moment ago state that it was my opinion that the language of your amendment would allow the employment of an electronic device.

Could I ask the gentleman, as the principal author of the amendment, is that the gentleman's point of view?

Mr. O'NEILL of Massachusetts. Would our language permit that?

Mr. GUBSER. Your language as it is written, could, if the House saw fit to do so, use an electronic device?

Mr. O'NEILL of Massachusetts. Would you restate your question?

Mr. GUBSER. The point I am trying to make is that if your language passes and becomes a part of the rules of the House as it is now, the Committee on House Administration could forthwith authorize an electronic device and we could under your language use it?

Mr. O'NEILL of Massachusetts. The gentleman is right. Our amendment allows for any method of recording the votes.

There is a passage contained in this bill providing for a study to be made into the question of the use of electronic

devices. As a matter of fact, the amendment offered by me and cosponsored by the gentleman from California says that upon the adoption of this amendment, notwithstanding title V of this section, the provisions of this subsection shall become effective upon the date of the enactment of this amendment. In other words, on the day when this is enacted, with your amendment how are you going to have a teller vote, with clerks or electronically, when the equipment will not be here?

As I have stated before, as I analyze the bills, in 1968 there were 63 teller votes and last year there were 73 teller votes. There was never in either one of those years more than 20 important amendments on which you would want to be recorded so that the public would know how you had voted. I don't see that electronic equipment will be used a great deal if it is just for the recorded teller vote. So, you want to put in electronics equipment, but I say let us, first, accept electronic voting for the entire Congress for all matters, and if you accept this amendment the teller votes would become part and parcel of the entire package.

Mr. HAYS. Mr. Chairman, will the gentleman yield?

Mr. O'NEILL of Massachusetts. I yield to the gentleman from Ohio.

Mr. HAYS. There are two points I would like to make. One is, I think the gentleman's analysis is correct and I am going to support his amendment. But I think he will find, if it passes, there will be a lot more teller votes than before because there will be a chance to get on record.

Second, I am going to offer an amendment—and I hope someone interested in reform will not make a point of order against it—a very simple amendment to the amendment which has been offered by the gentleman from California (Mr. SMITH) to the effect that on teller votes there shall be 12 minutes elapse from the time the vote is called until it is announced—or does the gentleman favor such procedure? I am for the Smith amendment because I think it helps your amendment and makes its accuracy almost infallible.

Mr. O'NEILL of Massachusetts. Is not the reasonable thing to do is to wait until this Congress accepts or decides it will have electronic voting? Therefore, let us not add the burden of the cost of putting in a separate device that will, perhaps, cost almost $1 million.

Mr. Chairman, I would hope the amendment which has been offered by the gentleman from California (Mr. SMITH) will not be adopted at this time.

AMENDMENT OFFERED BY MR. CLEVELAND TO AMENDMENT OFFERED BY MR. O'NEILL OF MASSACHUSETTS

Mr. CLEVELAND. Mr. Chairman, I offer an amendment to the amendment offered by the gentleman from Massachusetts (Mr. O'NEILL).

The Clerk read as follows:

Amendment offered by Mr. CLEVELAND to the amendment offered by Mr. O'NEILL of Massachusetts: Prior to the technical amendment, insert the following new language as a new provision to clause 5 of rule 1:

"*Provided further,* That no demand for recorded teller vote may be made on any amendment unless such amendment shall have been printed in the RECORD prior to its consideration."

Mr. CLEVELAND. Mr. Chairman, I support the O'Neill-Gubser amendment. This amendment I am offering is an attempt on my part to improve their amendment.

I think a point of departure in discussing this amendment briefly, are the remarks just made by the gentleman from Massachusetts (Mr. O'NEILL). The gentleman spoke eloquently in support of his amendment and the need of the 12 minutes elapsed time to give a Member who has other things to do for his constituents, time to get to the floor. And this is quite true.

But I hope the gentleman from Massachusetts will also consider the plight of the Member who is working for his constituency in his office, or in an agency downtown, or in a committee room, I hope that the gentleman will consider the plight of that Member when he arrives on the floor.

The whole purpose of his amendment, so far as I understand it, and as I support it, is this: That the public has a right to know how a Congressman stands on an important issue. And it is because of this that I support his amendment, I feel strongly that the public should know, and I am glad to take that position.

But I do think it fair to point out to my friend and colleague, the gentleman from Massachusetts (Mr. O'NEILL), that there are times when some of these amendments are drafted on the back of a piece of paper, and they are floating around somewhere here on the floor, and it is not always possible for all Members to know precisely the amendment they are voting on in a teller vote.

I simply require, by my amendment, that if somebody feels that this procedure is important enough and invokes it, then they will have to prepare that amendment at least 24 hours in advance, and have had it printed in the RECORD where all can see it.

Mr. WAGGONNER. Mr. Chairman, will the gentleman yield?

Mr. CLEVELAND. I want to conclude my remarks, and then I will be glad to yield to the gentleman.

The whole purpose is to protect the Congressman and to protect the public as well. If the public wants to have the right to know how all the Congressmen voted, and as I have said they should have that right, then as a corollary is the right to have in writing the precise issue.

So I feel that if there is an amendment on which there is a recorded vote, then certainly it is important to prepare it in time, and put it in the CONGRESSIONAL RECORD for all to see.

Now, Mr. Chairman, I will be happy to yield to the gentleman from Louisiana.

Mr. WAGGONNER. Mr. Chairman, what the gentleman from New Hampshire is attempting to do is certainly a desirable thing to do, but it is totally unworkable and impractical because one amendment provokes another amendment.

While you are in the process of legislating, as we are now, the need for a factor of time to be added to the Smith substitute, it cannot be done, as the gentleman proposes, because when you are trying to amend an amendment you do not have 24 hours' advance notice.

Mr. O'NEILL of Massachusetts. Mr. Chairman, will the gentleman yield?

Mr. CLEVELAND. I yield to the gentleman from Massachusetts.

Mr. O'NEILL of Massachusetts. Mr. Chairman, let me say this to you: That the trivial things of today are the important things of tomorrow. I do not think it is right that we should not have an opportunity to record votes on amendments that we have not known of 24 hours in advance, because although it may appear trivial today, it may actually be very, very important, but, by virtue of the fact that we did not have access to it 24 hours in advance, we could not have a recorded vote. I think this would be wrong.

Mr. Chairman, I hope that none of the amendments I have seen so far will be adopted.

Mr. EVANS of Colorado. Mr. Chairman, will the gentleman yield?

Mr. CLEVELAND. I yield to the gentleman from Colorado.

Mr. EVANS of Colorado. Mr. Chairman, I sympathize with what the gentleman is trying to do, but I submit that what he is attempting is difficult to do.

Supposing you submit an amendment, but you do not feel that it is sufficiently important to warrant a recorded teller vote, and you propose it to the committee. Then let us suppose that there are Members who feel it is sufficiently important to have a recorded teller vote, and so, perhaps, do the majority of the Members of the Committee. Since it had not been printed then, under your amendment, I am afraid that it would be impossible to have a recorded teller vote, even though the majority of the Committee wish to have a recorded teller vote.

I regret to tell the gentleman that I have to oppose the amendment.

Mr. THOMPSON of Georgia. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, we speak of the public's right to know. The gentleman who just preceded me spoke of the right of Congress to know.

I had proposed to offer an amendment, but because of the parliamentary procedure, I could not offer it at this time because I think we have had one too many amendments so I could not do it. But I think my amendment will provide an answer and satisfy both parties in this area.

Should the recorded teller vote amendment carry, I will offer an amendment which will provide that before any vote is taken which is a recorded vote, on the demand of any one Member, there shall be distributed to the Members of the House of Representatives a printed copy of the amendment or the substitute being voted upon.

Let me emphasize this point to you. If you are in your office and you are talking to constituents, you get over here and you come over here at the 11th min-

ute, having 12 minutes to vote, then you have no time to find out really what you are voting on. If you are going to be recorded on an issue, you certainly should know what the issue is about and what you are voting on.

This amendment would simply provide that we would have in effect a small printing press in one of the rooms off the floor.

Mr. FRASER. Mr. Chairman, will the gentleman yield?

Mr. THOMPSON of Georgia. I yield to the gentleman.

Mr. FRASER. I sympathize with what the gentleman is interested in and I know that there are other amendments concerning the problem.

The argument that the gentleman is using suggests that it is OK to be ignorant of what the amendment is as long as you are not on record and only when you are going on record is it essential that you understand what is being voted upon. I am sure the gentleman does not intend that.

Mr. THOMPSON of Georgia. May I answer the gentleman in this way. To be perfectly frank with you, the proposal of the gentleman from California (Mr. SMITH) is far superior to the one that would allow you or myself or anyone else to stay in our offices and make it over here at the last minute and record a vote. The reason it is superior is because it would in effect require your presence on this House floor at all times because you would have to be over here or you would not know when the vote was going to be taken, and being present you would know what this is all about.

But if the gentleman from California's amendment does not carry, there is no need for your being on the floor because you will have 12 minutes to be recorded and most Members are concerned about whether they are recorded or not.

You will have more Members voting if it is a recorded vote than if it is not a record vote.

The point is simply this—rushing over here at the last minute, you do not know what you are voting on. This would provide that if you are to have a record vote, you would be at least handed at the time you come in a copy of the amendment you are voting on. I submit that the time in providing this would only be a very few minutes to provide 435 copies.

Mr. GUDE. Mr. Chairman, will the gentleman yield?

Mr. THOMPSON of Georgia. I yield to the gentleman.

Mr. GUDE. Mr. Chairman, I want to commend the gentleman on the amendment he has proposed.

We used a similar system of distributing amendments to members when I was in the Maryland Legislature and I see no reason why we cannot have the same system in the U.S. Congress. I think it would be an excellent addition to the Gubser-O'Neill amendment of which I am a cosponsor. Next to doing away with the seniority system, I believe a system of recording teller votes is the most progressive reform we can institute in this bill. It would be a step which will do much to build and strengthen public confidence in our democratic system in the 1970's.

Mr. THOMPSON of Georgia. I thank the gentleman. But the amendment has not been offered as yet and it may not be because of the parliamentary procedure. But immediately after the vote, should the vote be successful I intend to seek recognition of the Chair for the purpose of offering the amendment.

Mr. SISK. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from California is recognized.

Mr. SISK. Mr. Chairman, I take this time to see if there is some possibility of agreement we can reach to vote on some of these amendments. As members of the committee know, so far we have not sought to cut off debate. I am not proposing to cut off debate now. I do not propose to offer a motion. But in order to provide for orderly consideration, it seems to me, in view of the fact that we now have an amendment, a substitute, and then an amendment to the substitute, I would like first to see if we can get an indication as to how many Members would like to speak on the Cleveland amendment. I am referring now only to the Cleveland amendment, because I am going to ask unanimous consent that we reach some agreement on time on that amendment if we can.

I wish to make it clear, Mr. Chairman, that I am not attempting to cut off debate on the O'Neill amendment or the Smith substitute. I am simply trying to bring about an orderly agreement as to how many Members actually desire to speak on the Cleveland amendment. Could we get an agreement to vote on that amendment?

Mr. Chairman, I ask unanimous consent that all further debate on the Cleveland amendment close in 10 minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from California?

There was no objection.

The CHAIRMAN. The Chair recognizes the gentleman from Texas (Mr. WHITE).

Mr. WHITE. Mr. Chairman, I have an amendment to the amendment.

The CHAIRMAN. The Chair informs the gentleman that an amendment to the pending amendment would not be in order at this time.

Mr. WHITE. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. WHITE. If I wished to amend the Smith of California amendment, what nature of amendment would be in order at this time?

The CHAIRMAN. A germane amendment could be offered to the O'Neill amendment after the Cleveland amendment is disposed of and a germane amendment of the Smith substitute could now be in order.

Mr. WHITE. I thank the Chair.

The CHAIRMAN. The Chair recognizes the gentleman from New York (Mr. CONABLE).

Mr. CONABLE. Mr. Chairman, I respectfully oppose the Cleveland amendment. It seems to me that we want to avoid burdening this very important amendment to the Rules Committee bill with too many technicalities and additional problems for the Members to achieve a recorded teller vote. The basic O'Neill-Gubser amendment is a sound amendment. It would permit a good deal of latitude for working out the various technical problems that have been suggested. For that reason I oppose not only the Cleveland amendment but all amendments and susbititutes to the O'Neill-Gubser amendment.

The CHAIRMAN. The Chair recognizes the gentleman from Massachusetts (Mr. BURKE).

Mr. BURKE of Massachusetts. Mr. Chairman, I merely want to take this time to say that I am opposed to the Cleveland amendment. I intend to offer an amendment later that will clarify the O'Neill-Gubser Amendment. My amendment would include a listing of absentee membership on the teller votes. If the Smith amendment is adopted, there will be no need of my amendment, but my amendment will be voted on first, as I understand the parliamentary situation. I realize there are many Members who do not want to list absentee Members, but if we are going to be honest about it, if we are going to have courage, if we are going to separate the men from the boys, then the Committee will adopt my amendment to list the absentee Members on these teller votes.

The CHAIRMAN. The Chair recognizes the gentleman from Minnesota (Mr. FRASER).

Mr. FRASER. Mr. Chairman, I just want to add my concern about the Cleveland amendment. I think that would introduce serious complications into what would otherwise be a fairly simple and orderly procedure.

Mr. Chairman, I should like to make a point on the main amendment which is pending. In the O'Neill of Massachusetts-Gubser amendment there is every opportunity to use electronic equipment, which I hope we will install soon. It provides the underlying framework for a workable system, and does not make it dependent upon the electronic equipment working itself.

I am fearful that such dependence is one of the deficiencies in the draft before us known as the Smith of California substitute. If the O'Neill of Massachusetts-Gubser amendment is adopted and we get electronic equipment, there will be no problem. The electronic equipment can be used without further amendment to the rules.

The CHAIRMAN. The Chair recognizes the gentleman from Iowa (Mr. SCHWENGEL).

Mr. SCHWENGEL. Mr. Chairman, I rise in support of the O'Neill of Massachusetts-Gubser amendment and in opposition to the other amendments.

I remind the Members that as a member of the Committee on House Administration—and I believe my position will be confirmed by other members of the committee—I can say we are keenly aware of the many problems discussed here. I am sure if this amendment is passed, the many problems to which attention has been called will be resolved

in that committee and brought back to the House for complete resolution.

The CHAIRMAN. The Chair recognizes the gentleman from New York (Mr. BINGHAM).

Mr. BINGHAM. Mr. Chairman, I rise reluctantly in opposition to the Cleveland amendment, because I am very much in sympathy with its objectives. I have been troubled in the past by the absence of the text of amendments considered in the Committee of the Whole. At my instance, I believe, the Clerk did install a small copying machine at the desk here, which does make copies available. Perhaps a larger machine should be installed.

I am seriously worried, however, about the effect of the Cleveland amendment in adding to the complexities of the teller recording problem, particularly in respect to the text of an amendment proposed one day and printed in the RECORD, which might very well be amended on the floor the following day. Such an amendment, as I understand the gentleman's amendment, would not be subject to a recorded vote.

In the interests of simplicity the proposition as put forth in the so-called O'Neill-Gubser amendment—and both gentlemen are very much to be commended—should be adopted.

The CHAIRMAN. The Chair recognizes the gentleman from Florida (Mr. GIBBONS).

Mr. GIBBONS. Mr. Chairman, I rise in opposition to the Cleveland amendment. I believe it would put an unreasonable amount of inflexibility into the whole House procedure here. It would require that someone almost be clairvoyant, that he be able to anticipate almost exactly what amendment would be voted on.

I point out how unworkable it would be, because if the amendment of the gentleman from New Hampshire (Mr. CLEVELAND) were amended here on the floor, we could not get a record vote on that, if we tried, because he had not published it in advance.

I believe it is just an unworkable procedure. I urge support of the O'Neill of Massachusetts-Gubser amendment and defeat of the Cleveland amendment.

The CHAIRMAN. The Chair recognizes the gentleman from California (Mr. SISK).

Mr. SISK. Mr. Chairman, I ask for a vote on the amendment, and I yield back the remainder of my time.

The CHAIRMAN. The question is on the amendment offered by the gentleman from New Hampshire (Mr. CLEVELAND) to the amendment offered by the gentleman from Massachusetts (Mr. O'NEILL).

The amendment to the amendment was rejected.

AMENDMENT OFFERED BY MR. HAYS TO THE SUBSTITUTE AMENDMENT OFFERED BY MR. SMITH OF CALIFORNIA

Mr. HAYS. Mr. Chairman, I offer an amendment to the substitute amendment offered by the gentleman from California (Mr. SMITH).

The Clerk read as follows:

Amendment offered by Mr. HAYS to the substitute amendment offered by Mr. SMITH of California: On page 42, immediately below line 20, insert the following:

"RECORDED TELLER VOTES IN THE HOUSE THROUGH THE USE OF ELECTRONIC EQUIPMENT

"SEC. 122. (a) Clause 5 of Rule I of the Rules of the House of Representatives is amended—

"(1) by inserting '(a)' immediately after '5.'; and

"(2) by adding at the end thereof the following new paragraph:

"'(b) a recorded teller vote through the use of electronic equipment or other means to record the names of the Members voting in the affirmative and of those voting in the negative may be required on any question by the Speaker, in his discretion, or by at least one-fifth of a quorum either as an original demand or as a substitute for tellers named or demanded under paragraph (a) of this clause. The Clerk of the House shall list, in alphabetical order in each category, the names of those Members recorded as voting in the affirmative, the names of those Members recorded as voting in the negative, and the names of those Members not voting. Said voting period shall not terminate until the expiration of at least twelve minutes from the commencement of said teller vote. Such list shall be entered on the Journal and published in the Congressional Record'.

"(b) The contingent fund of the House of Representatives is made available to provide the electronic equipment necessary to carry out the purposes of the amendment made by subsection (a) of this section. Notwithstanding title V of this Act, the provisions of this subsection shall become effective on the date of enactment of this Act."

Mr. HAYS. Mr. Chairman, I had announced I would offer this amendment. The gentleman from Texas (Mr. WHITE) subsequently showed me an amendment which was almost identical. We merged the two amendments, and I offer this both in my name and in his.

What this does very simply is to put in the 12-minute period that is in the O'Neill-Gubser amendment. It allows the Smith amendment to stand as it is for electronic equipment. We put in the words "or by other means," which we thought we had to in order to cure it as being basically for electronic equipment. We put in a 12-minute period so that Members will have time to get over here. Now, this does not require it to be printed or anything else, but it operates exactly, exactly as the O'Neill-Gubser amendment would operate except that we have, in our opinion, in the Smith substitute a much more accurate system for recording votes.

Somebody has objected by saying that this would be too complicated. It seems to me it would be less complicated, because each Member could have a coded card, which as he went through the no box or the yes box, as the case may be, he would slide in and it would instantaneously record that he voted either yes or no, with his name on it, because his name would be on his card and it would be printed with it, so there would be no possibility of error. It would work, and you could have a printout, I believe they call it, almost instantaneously, also. So the names of all those people voting one way or the other would be recorded.

Mr. MATSUNAGA. Mr. Chairman, will the gentleman yield?

Mr. HAYS. I yield to the gentleman from Hawaii.

Mr. MATSUNAGA. If the gentleman's amendment is agreed to, as I understand it, and I myself was about to offer the same amendment as the gentleman now offers, it would mean that the procedure described under the O'Neill amendment would be still effective, would it not?

Mr. HAYS. Yes.

Mr. MATSUNAGA. And it also means that an objection raised earlier to the Smith amendment, that it would not give Members sufficient time to get here to the floor, is eliminated by allowing 12 minutes for Members to get to the floor from the time the telling has begun?

Mr. HAYS. The gentleman has put it exactly.

It seems to me that this amendment will cure the principal objection to the Smith amendment and the Smith amendment will, in my opinion, make the O'Neill-Gubser amendment better because it will insure its absolute accuracy.

Mr. MATSUNAGA. Mr. Chairman, the amendment offered by the gentleman from Ohio would certainly improve the Smith amendment and deserves support.

Mr. ARENDS. Mr. Chairman, will the gentleman yield?

Mr. HAYS. I yield to the gentleman from Illinois.

Mr. ARENDS. This is more of a statement than a question.

I am hoping in the consideration of all of these matters that when we do go to an electronic voting system here, that somehow we can do so without putting up something like a large baseball scoreboard in this beautiful House. I hope that a device can be worked out which will not in any way spoil the looks of this lovely Chamber.

Mr. HAYS. As I envision it, I can say to the gentleman, under the able chairmanship of the gentleman from Louisiana (Mr. WAGGONNER), a subcommittee of the Committee on House Administration has been studying this whole matter and has made some recommendations and is prepared to make some more if this bill does not take the ball game away from us.

What I envision is a simple little box somewhere back there on the aisle on each side where one will be marked "yes" and the other "no." When you walk by it you simply slide your coded card in and it records your vote. It is not difficult. I have a coded card now which probably does a job which is much more difficult physically. You slide it into a little box so big and it opens up the garage door where I keep my car. If you do not have the card, you cannot get the garage door open. If you do not have your coded card here, you cannot vote. You have to have it with you. Of course, someone brought up the fact that you may forget it. It is a simple device and, knowing the people where I rent the garage, they would not have it if it were very expensive, so I do not think that that is a big factor, either.

Mr. GUBSER. Mr. Chairman, I would like to ask this question for information. Under the gentleman's amendment,

would it be possible to have a record teller vote by any means other than electronic?

Mr. HAYS. I think it would be because we have the language "by other means," and that is put in there in case the electronic equipment breaks down. In other words, you could substitute something in a hurry.

AMENDMENT OFFERED BY MR. BURKE OF MASSACHUSETTS TO THE AMENDMENT OFFERED BY MR. O'NEILL OF MASSACHUSETTS

Mr. BURKE of Massachusetts. Mr. Chairman, I offer an amendment to the amendment offered by the gentleman from Massachusetts.

The Clerk read as follows:

Amendment offered by Mr. BURKE of Massachusetts to the amendment offered by Mr. O'NEILL of Massachusetts: In the amendment offered by Mr. O'NEILL of Massachusetts before the words "shall be entered in the Journal" insert the following: "and the names of the absentees".

Mr. BURKE of Massachusetts. Mr. Chairman, this is a very simple amendment. I believe that the sponsors of the O'Neill of Massachusetts and Gubser amendment inadvertently neglected this provision in their amendment. It merely calls for a listing of those who are absent and not voting. This is in the amendment offered by the gentleman from California (Mr. SMITH).

Mr. Chairman, I realize we have a lot of reformers, a lot of "do-gooders" and a lot of crusaders but I do not believe I fall into either of those categories. However, I believe there is one thing we should be here and that is as capable and honest as we can possibly be. If this amendment which has been offered by the gentleman from Massachusetts (Mr. O'NEILL) and the gentleman from California (Mr. GUBSER) is adopted, at least let us list the names of those absent and not voting, because on every teller vote which I have seen around here there have been possibly 200 to 250 Members absent. Why should those people be protected day after day, week after week and year after year? Under the type of amendment which has previously been offered they could be absent all year and the only Members who would be recorded would be those who are present and voting.

Mr. WHITE. Mr. Chairman, will the gentleman yield?

Mr. BURKE of Massachusetts. I yield to the gentleman from Texas.

Mr. WHITE. Does the gentleman's amendment state "those Members absent"?

Mr. BURKE of Massachusetts. Absentees.

Mr. WHITE. Now presently the RECORD is recorded as to Members "not voting." It does not say "absent and not voting." A Member could be present and not vote on that particular issue but would be recorded as not voting.

Mr. BURKE of Massachusetts. I would be willing to accept an amendment clarifying that situation.

Mr. WHITE. I do not have such an amendment drawn at this time nor the wording of the gentleman's amendment. I would like to study further the amendment which the gentleman has offered.

Mr. HAYS. Mr. Chairman, will the gentleman yield?

Mr. BURKE of Massachusetts. I yield to the gentleman from Ohio.

Mr. HAYS. As I understand the parliamentary situation, if the amendment that I offered to the Smith amendment prevails and then if the Smith amendment which the gentleman has offered. is that right?

Mr. BURKE of Massachusetts. That is right.

Mr. HAYS. I think the simple way to handle this is go ahead and vote on my amendment and pass it and then pass the Smith substitute, as amended, and then pass the Gubser-O'Neill amendment, as amended by the Smith amendment.

Mr. BURKE of Massachusetts. The only trouble with that is that if the Smith amendment is defeated, then I will not have the opportunity to offer my amendment again.

Mr. HAYS. Will the gentleman yield at that point?

Mr. BURKE of Massachusetts. Yes, I yield further to the gentleman.

Mr. HAYS. If the Smith substitute is defeated and the Gubser-O'Neill amendment is defeated then the gentleman will have an opportunity to offer his amendment.

Mr. BURKE of Massachusetts. I think once it is defeated, that is it. I do not think you can offer the amendment twice for the same purpose.

Mr. HAYS. It seems to me the time the gentleman should offer his amendment is after we have a vote on the Smith substitute.

Mr. BURKE of Massachusetts. I have had difficulty getting the floor all afternoon——

Mr. EVANS of Colorado. Mr. Chairman, will the gentleman yield?

Mr. BURKE of Massachusetts. I yield to the gentleman from Colorado.

Mr. EVANS of Colorado. In view of the colloquy between the gentleman in the well and the gentleman from Texas (Mr. WHITE), I ask unanimous consent that permission be given to the gentleman from Massachusetts to change his amendment to strike the words "those absent" and insert in lieu thereof the words "those not voting."

The CHAIRMAN. Is there objection to the request of the gentleman from Colorado?

There was no objection.

The CHAIRMAN. The Clerk will report the modified amendment.

The Clerk read as follows:

Amendment offered by Mr. BURKE of Massachusetts to the amendment offered by Mr. O'NEILL of Massachusetts: In the amendment offered by Mr. O'NEILL of Massachusetts before the words "shall be entered in the Journal" insert the following: "and the names of those not voting".

Mr. MAYNE. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I rise in support of the amendment to the Legislative Reorganization Act which has been offered today by the gentleman from Massachusetts (Mr. O'NEILL) and the gentleman from California (Mr. GUBSER) proposing to permit record teller votes in the Committee of the Whole. I am pleased to be a cosponsore of this important amendment and strongly urge its adoption.

We have before us this week the first comprehensive proposals to reform the Congress, and to modernize its machinery and strengthen its role in over two decades. The enactment of this legislation, including such amendments as may be added, will substantially improve our ability to represent our constituents more efficiently. H.R. 17654 reflects the dedicated efforts of many Members over the years, combining the suggestions offered by such groups as the Republican Task Force on Congressional Reform, the Joint Committee on the Organization of Congress, the Members and staff of the House Rules Committee, and by many other concerned Congressmen and individuals seeking to improve this branch of Government.

In my view it was most unfortunate that the House Rules Committee did not incorporate into this bill the vital language proposed by the distinguished Member from California (Mr. GUBSER), proposing to permit rollcall votes in the House on amendments defeated on teller votes in the Committee of the Whole. I have been happy to join the gentleman from California (Mr. GUBSER) and many other colleagues, in introducing this compromise amendment which is now before the House. It will authorize recording of teller votes if sufficient Members so demand, thus permitting record votes on major votes while retaining the present nonrecord teller system in the Committee of the Whole for less important amendments. Upon one-fifth of a quorum—20 Members—supporting a call for a record teller vote, Members would walk thrcugh one of two teller lines which would record the name of the Member as being for or against the motion or amendment. The lines would be open for at least 12 minutes, assuring Members in their offices or elsewhere on the Hill an opportunity to reach the floor in time to have their positions recorded. The result of the record teller vote, including the names of those voting for and against the question, would be reported in the CONGRESSIONAL RECORD.

Recording teller votes in this fashion would take but 12 to 15 minutes, compared to 6 to 12 minutes for nonrecord teller votes and 30 to 45 minutes for rollcall votes. This would certainly encourage greater voting participation as the names of absentees became a matter of public record.

The public is surely entitled to know how elected Representatives vote in Congress, including their position on major amendments. An informed electorate is America's best guarantee for the future of our constitutional system, and the cornerstone of our democratic processes. Failure of the Congress to make such votes a matter of public record, has contributed to a growing gap of confidence in the Congress as an institution and in its ability to relate and respond to the problems of this generation and of the future.

The historic reason for the secrecy of

anonymity of votes in the Committee of the Whole, the need in 17th-century England to protect Members of the British Parliament from the wrath of the King, no longer exists. Since the 1830's the British Parliament has provided for record teller votes. We are some 1½ centuries late in taking such action today.

This record teller vote amendment is a reasonable and appropriate method of meeting a pressing need, and its adoption is imperative.

Mr. SMITH of California. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I have no objection to the Hays amendment to the Simth substitute. I have discussed the situation with the gentleman from California (Mr. SISK) and with the gentleman from Missouri (Mr. BOLLING), and they both tell me it is all right, when I made the statement that we were willing to agree to the amendment.

Mr. SISK. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I take this time at this point to again seek some unanimous consent in connection with this matter that is before us. We all recognize that this matter of teller votes and a recording of the votes is very important. However, we are now approaching 4 o'clock. As some of you may or may not recall my indications of last Thursday that we have today and tomorrow to debate this bill, and if this bill has not been completed by tomorrow afternoon or evening, the indications are that we will be here in September or later on to take care of the matter. All I am suggesting is that we have an agreement to cut off debate so we can complete this bill by tomorrow. So I would hope that we could get some unanimous accord for when we can vote on the amendments and the substitute and amendments thereto.

Mr. JACOBS. Mr. Chairman, will the gentleman yield?

Mr. SISK. I yield to the gentleman from Indiana.

Mr. JACOBS. Mr. Chairman, the gentleman has mentioned that we are approaching 4 o'clock, and I wonder if it would be out of order for the Committee to continue past 4 o'clock now that we have taken care of the problem of the picturetaking?

Mr. SISK. If the gentleman will again refer to my remarks made last Thursday, I indicated that I would hope that no Member would expect dinner until after 7 o'clock, either tonight or tomorrow night, and I am still hoping—although I do not want to be left here alone—that we can proceed expeditiously with this matter.

Mr. FRASER. Mr. Chairman, will the gentleman yield?

Mr. SISK. I yield to the gentleman from Minnesota.

Mr. FRASER. Mr. Chairman, I think that there are some uncertainties about the exact language of the amendment offered by the gentleman from Ohio (Mr. HAYS). I wonder if, before we limit time, if a parliamentary inquiry might be presented to clear that up?

Mr. SISK. I yield to the gentleman for a parliamentary inquiry.

PARLIAMENTARY INQUIRY

Mr. FRASER. Mr. Chairman, will the gentleman yield for the purpose of a parliamentary inquiry.

Mr. SISK. I yield to the gentleman.

The CHAIRMAN. The gentleman will state the parliamentary inquiry.

Mr. FRASER. Mr. Chairman, in the Hays amendment, as it is found at the desk, the first line of paragraph (b) appears to be stricken, plus several additional words on the following line. But in checking with the Clerk, he did not read that matter stricken, and I understand from the gentleman from Ohio (Mr. HAYS) that he did not intend that it should be stricken.

Mr. Chairman, I simply want to find out what the status of the amendment is in that respect.

The CHAIRMAN. Without objection, the Clerk will again report the amendment offered by the gentleman from Ohio (Mr. HAYS) to the substitute amendment offered by the gentleman from California (Mr. SMITH).

The Clerk reread the amendment.

Mr. FRASER. Mr. Chairman, will the gentleman from California (Mr. SISK) yield for a further parliamentary inquiry?

Mr. SISK. I yield to the gentleman from Minnesota.

Mr. FRASER. Mr. Chairman, I would defer to the author of the amendment.

Mr. SISK. Mr. Chairman, I yield to the gentleman from Ohio (Mr. HAYS) to make comment.

Mr. HAYS. Mr. Chairman, it is my understanding, and again this is the situation you get into, on the very technical matter of changes in the rules when this is done hurriedly. But it is my understanding, you do not have this in lieu of a teller vote but you have it upon demand. In other words, you can have a teller vote and if somebody is not satisfied, you can have a record vote. Or if before you have an optional teller vote someone demands a recorded vote, you can get up and say so and if enough people support you—you get that.

So the words "in lieu of" seem to be unnecessary because this gives some flexibility, that you can have a vote either way. But it makes sure that you can have a record vote if anybody wants a record vote.

Mr. FRASER. Mr. Chairman, will the gentleman from California yield?

Mr. SISK. I yield to the gentleman from Minnesota.

Mr. FRASER. Mr. Chairman, the purpose of this inquiry is that originally the intention, I believe, of the authors of these various amendments has been that you can have only one vote—one teller vote—and either it is going to be a nonrecord teller vote or, if before the teller vote is started somebody demands a record vote, that recorded vote would be in lieu of the nonrecorded teller vote.

That is the significance, I think, of striking that language, that then you could have two teller votes, one nonrecorded and one recorded.

I just want to make clear that the gentleman means to make that substantive change. I am not sure I favor the change, but I just want to know what the intent was.

The CHAIRMAN. The time of the gentleman has expired.

Mr. WAGGONNER. Mr. Chairman, I ask unanimous consent that the gentleman from California (Mr. SISK) may proceed for 5 additional minutes.

The CHAIRMAN. Without objection, it is so ordered.

There was no objection.

Mr. SISK. Mr. Chairman, I yield to the gentleman from Ohio (Mr. HAYS) to explain further his amendment.

Mr. HAYS. Mr. Chairman, again let me say to you, I think by striking out the words "in lieu thereof" you would have the possibility, as the gentleman from Minnesota has said, of having two teller votes.

But on the other hand we might preclude the possibility of having a recorded vote if you had the other vote which went very substantially against or for and they saw it was going to be unnecessary. What I am trying to do here is to provide a recorded teller vote using the language of the Smith amendment, and I really do not think it makes all that much difference, but I think the idea in striking out the "in lieu of," from the advice I got, was that it would make it possible to get a recorded teller vote in any event, and that is what I think we are all after.

Mr. SISK. Mr. Chairman, I would like to renew my unanimous-consent request. As I said, I am not trying to cut anyone off. I ask unanimous consent that all debate on the O'Neill-Gubser amendment and all amendments and substitutes thereto close at 4:45 p.m.

The CHAIRMAN. Is there objection to the request of the gentleman from California?

Mr. DENNIS. I object.

Mr. SISK. Mr. Chairman, I ask unanimous consent that all debate on the O'Neill-Gubser amendment and all amendments and substitutes thereto close at 5 o'clock.

The CHAIRMAN. Is there objection to the request of the gentleman from California?

There was no objection.

The CHAIRMAN. The Chair recognizes the gentleman from Illinois (Mr. ANDERSON).

Mr. ANDERSON of Illinois. Mr. Chairman, we now have before the Committee the O'Neill-Gubser amendment, the Smith substitute, the Hays amendment to the Smith substitute, and finally the Burke amendment "to separate the men from the boys." What I am afraid of in all this discussion is that in our desire to secure the basic principle of recorded teller votes, if we adopt the substitute or any of the amendments that have been offered, somehow or other we are going to be scrambling the issue of electronic voting, which I think is an important and separate issue in and of itself, with the other basic issue of making sure that we have embedded in the Reorganization Act in unmistakable language the fact that there shall be recorded teller votes.

Frankly, my objection to the amendment offered by my distinguished colleague of the Rules Committee, the gentleman from California (Mr. SMITH) is that it goes into too much detail to prescribe the electronic aids that will be used to tabulate the vote. As I read and understand the O'Neill-Gubser amendment, even though it may imply a manual recording of the vote because it makes reference to clerks, certainly there is enough latitude within that amendment that they could employ electronic aids of any kind to assist them, to assist the clerks in carrying out their assigned function of recording the teller vote.

Mr. Chairman, I supported the O'Neill-Gubser amendment when it was offered in the Committee on Rules many weeks ago by the gentleman from Massachusetts (Mr. O'NEILL). It is absosolutely vital to take this opportunity to demonstrate to the American people that we are willing to be recorded on the important issues that confront the Nation.

The CHAIRMAN. The Chair recognizes the gentleman from Michigan (Mr. RIEGLE).

Mr. RIEGLE. Mr. Chairman, I rise in support of the Gubser-O'Neill of Massachusetts amendment. I concur with the gentleman from Illinois (Mr. ANDERSON) who just spoke, that the Gubser-O'Neill of Massachusetts amendment appears to offer everything necessary to accomplish the same objectives as the clarifying amendments just cited. It raises a question as to whether those amendments are actually necessary and thus I believe they ought to be respected.

The CHAIRMAN. The Chair recognizes the gentleman from Georgia (Mr. THOMPSON).

Mr. THOMPSON of Georgia. Mr. Chairman, I yield back my time.

The CHAIRMAN. The Chair recognizes the gentleman from Wisconsin (Mr. OBEY).

Mr. OBEY. Mr. Chairman, I rise to support the amendment by the gentleman from Massachusetts (Mr. O'NEILL) and the gentleman from California (Mr. GUBSER) to permit the recording of teller votes in the House of Representatives.

I am in support of this amendment and opposed to other amendments to this amendment above all because at the present time the method in which the Members of the House vote on amendments frustrates the public's right to know.

When the House sits as a Committee of the Whole to consider legislation, no rollcalls can be obtained on any amendment that does not pass. That means a Member can vote for any number of amendments which may cripple a water pollution bill, or render ineffective a civil rights bill or fail to provide adequate funding for hospital construction or programs for the elderly, and then he can turn around on final passage and vote for the bill he has just voted to emasculate by amendment. While on record he can pose as a champion of environmental protection, of the elderly and of the sick, he has in fact voted against their very interests.

The fact is that the least meaningful vote a Member casts is often the one on final passage. This isn't right, it is not healthy and it should be changed.

This amendment may seem like a radical departure for the House of Representatives, a legislative body which has voted in secret on teller votes since the establishment of our Republic and the creation of the Congress itself. I can understand also that many Members of the Congress may find it easier to legislate in secret. I do not believe this is so.

Before my election to the House just over a year ago, I served in the Wisconsin State Legislature for 7 years. During my service there, I got used to its practice of holding open public meetings on everything except personnel matters or land purchases—markup sessions on bills, public hearings on all legislation, meetings of the joint finance committee, and debate on all matters which came to the assembly floor.

This system did not cripple the Wisconsin legislative process. And although many politicians did not consider it particularly convenient, it certainly is the best system for the press, which must report the public's business, and for the public itself if it is to have any accountability toward those it elects to public office.

The amendment now before this House would open windows for public view of the legislative process. I believe the public wants its institutions to be more open and candid and honest. If the House hopes to regain the public confidence without which no institution can long endure, then it must recognize the public's desire for an open legislative process, and it must accept this amendment.

(By unanimous consent, Mr. OBEY yielded the remainder of his time to Mr. GIBBONS.)

PARLIAMENTARY INQUIRY

Mr. GUBSER. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. GUBSER. In the event that Members do not consume the time allotted to them, does that mean we will vote earlier than the time certain, 5 o'clock, or that debate will be extended until the time certain?

The CHAIRMAN. When the call of the list of Members is completed, the Chair intends to divide the time equitably, and should there be no further requests for time the Chair might put the question before 5 o'clock.

Mr. GUBSER. In other words, if a number of Members do not use their allotted time and we have exhausted the list prior to 5 o'clock, we will vote at that time?

The CHAIRMAN. If no other Member desires to speak, the gentleman is correct.

Mr. GUBSER. Mr. Chairman, a number of Members have gone back to their offices, and I am going to have to put on a quorum call if that is the case.

The CHAIRMAN. Does the gentleman make the point of order that a quorum is not present?

Mr. GUBSER. No, Mr. Chairman.

The CHAIRMAN. The Chair recognizes the gentleman from Florida (Mr. GIBBONS).

Mr. GIBBONS. Mr. Chairman, considering the series of amendments which are pending, this is like the rabbit who went in one hole, went all around underground, and finally came out at the same place, because if we adopted all the series of amendments, with all the hiatuses, and everything else they have in them, we would finally come out some place with the O'Neill of Massachusetts-Gubser amendment.

For that reason I am going to support the O'Neill of Massachusetts-Gubser amendment, because it is sound, it is well thought out, and we are not going to get confused by leaving in or taking out some of these other provisions.

The amendment offered by the gentleman from Ohio (Mr. HAYS) to the substitute amendment offered by the gentleman from California (Mr. SMITH) brought that amendment almost around garage, they would not have it if it were full circle, almost 360 degrees back to the O'Neill of Massachusetts-Gubser amendment. Then, when my friend from Massachusetts separated the men from the boys, he added a little more sweetening to the cake.

But there is no need for all this. All the things that have been talked about here today can be done under the Gubser-O'Neill of Massachusetts amendment. There is no prohibition in the Gubser-O'Neill of Massachusetts amendment as to using electronic equipment. All types of electronic equipment can be used under that amendment. It provides ample time for Members to get to the floor. It will not tie them down to carrying a card or something of that sort.

For that reason I believe the Gubser-O'Neill of Massachusetts amendment should be adopted.

Mr. ROSENTHAL. Mr. Chairman, will the gentleman yield?

Mr. GIBBONS. I yield to the gentleman from New York.

Mr. ROSENTHAL. I do not see anything wrong with the Burke of Massachusetts amendment. Would the gentleman comment on that?

Mr. GIBBONS. It is just not necessary. We are going to record who voted "aye" and who voted "no." If a Member did not vote either "aye" or "no," he must have not voted. That is all there is to it.

Mr. BURKE of Massachusetts. Mr. Chairman, will the gentleman yield?

Mr. GIBBONS. I yield to the gentleman from Massachusetts.

Mr. BURKE of Massachusetts. Why does the gentleman want to protect the absentees?

Mr. GIBBONS. I do not want to protect the absentees. I am not really opposed to the amendment; I just do not believe it adds anything to this.

The gentleman says that you can use electronic equipment under the Gubser amendment. I do not see how, because it says "clerks." But then he objects to electronic equipment because he says you would have to carry a card to vote with that. If you have electronic equipment, you will probably have to carry something to identify you to the electronic machines. If you can do it under the Gubser amendment, the objection is not valid, but are you sure you can do it under the Gubser amendment?

Mr. GIBBONS. Yes. I am sure we can. There will be other amendments offered here that will clear up any doubt in anybody's mind, but I am sure you can do it under the Gubser amendment now. It is entirely possible.

The CHAIRMAN. The Chair recognizes the gentleman from Texas (Mr. WHITE).

Mr. WHITE. Mr. Chairman, I support the Hays amendment. It is an alternative that allows a Member on the floor to rise and make a motion for a recorded teller vote by electronic system or other means. If the electronic system is not working the committee can devise an alternative method that will be efficient. It takes care of the problems in the original Smith amendment as to time. There is a 12-minute period to allow Members to come to vote. Seven minutes is all that is required for any Member to come from any building on the Hill.

Mr. Chairman, I support the amendment because I think it is the answer to the immediate problem.

The CHAIRMAN. The Chair recognizes the gentleman from Texas (Mr. ECKHARDT).

PARLIAMENTARY INQUIRY

Mr. ECKHARDT. Mr. Chairman, I support the O'Neill-Gubser amendment.

I should like to use my time by way of parliamentary inquiry to attempt to establish whether or not if the Smith amendment as amended by the amendment by Mr. HAYS could not be offered as a separate and additional amendment after the passage of the O'Neill amendment. If it adds an alternative and additional means of recording votes it would appear to me that it would be a matter that is in addition and not in conflict with the O'Neill-Gubser approach, and that we might resolve this matter without placing these two amendments in competition with each other.

The CHAIRMAN. Is the gentleman stating a parliamentary inquiry?

Mr. ECKHARDT. I should like to state it as a parliamentary inquiry, which is as follows: As I understand the Smith amendment as it is sought to be amended by the Hays amendment, all it would do is say that in addition to providing a manually recorded type of vote by the method that is provided in the O'Neill amendment, it would also provide an electronic record type of vote. Now, if I am correct in that assumption, would it not be in order, if we should vote down the Hays amendment to the Smith amendment, to offer this as an additional provision subsequent to the passage of the O'Neill amendment?

The CHAIRMAN. The Chair would like to inform the gentleman in answer to his parliamentary inquiry that if the amendment offered by the gentleman from Ohio (Mr. HAYS) is voted down and the substitute offered by the gentleman from California (Mr. SMITH) is voted down, then another germane substitute would be in order.

Mr. ECKHARDT. Then, may I ask further that in the event this course of events occurs and instead of offering a substitute we should pass the O'Neill-Gubser amendment, would it be in order to offer as an additional section a provision for electronic equipment as an alternative, that is, as a supplementary means of recording the vote?

The CHAIRMAN. The Chair would like to inform the gentleman in answer to this parliamentary inquiry that when the O'Neill amendment is disposed of, then certainly additional germane amendments would be in order as new sections of the bill.

Mr. ECKHARDT. Would that include an addition that might embrace the present content of the Smith amendment?

The CHAIRMAN. The Chair will not be able to pass upon that inquiry at this time.

The time of the gentleman from Texas has expired.

The Chair recognizes the gentleman from Wisconsin (Mr. STEIGER).

Mr. STEIGER of Wisconsin. Mr. Chairman, I rise to indicate my own support for the original O'Neill-Gubser amendment that is now pending with various related substitutes and amendments thereto.

I am sympathetic to the amendment offered by the distinguished gentleman from California (Mr. SMITH), but I feel very strongly that there is a weakness in that amendment; namely, the failure to provide that there is no time period during which a Member could get from his office or elsewhere to the floor. It seems to me this is the largest single reason why the Smith substitute ought not to be adopted.

Mr. Chairman, the Hays amendment, which comes somewhat closer because it contains a time element, I am also concerned about.

Thus I will vote in opposition to the substitutes that are pending to the amendment—to the O'Neill-Gubser amendment—and support the amendment offered by the gentleman from Massachusetts and the gentleman from California in their original amendment.

This has to be counted as a highwater mark in this House in an effort to assure our constituents their right to know how their Representatives have voted on the important issues pending before the Congress.

Mr. Chairman, while there have been objections to the voting procedures in the Committee of the Whole for a long time, these have gained in intensity during the past year. Presently, groups have taken to sitting in the galleries seeking to identify which Members voted on various teller votes. Several Representatives have complained that these spotters have made mistakes in their tallies. This is to be expected, given the distance between the spotters and the tellers, the fact that notes cannot be taken, and the rapidity with which the votes are taken. The press, which presumably would be one of the groups most interested in determining who voted how on these votes, is located in the worst possible location to do so.

There is no question that the fact that teller votes are not recorded is beneficial to some Representatives on certain issues. Anonymity is assured and they can vote without fear of interest groups or constituents finding out. While this may allow the Member to vote his conscience without fear of retribution, I think on the whole the system is a bad one. For one thing, it discourages participation.

The turnout rate for teller votes is significantly below that of rollcall votes. Teller votes are not counted in any interest group's voting tallies. Not only does the present system discourage participation, it encourages secrecy and deceit. Members can vote one way in the Committee of the Whole and another in the full House without their constituents knowing. Some will say that the teller procedure enables the Member to vote his conscience and avoid pressures which would be placed upon him if a vote were recorded. I think this is false for two reasons. In the first place, any amendment which passes the Committee of the Whole is subject to a rollcall vote in the full House and so the Member's position can be determined at that stage. But more importantly, I believe that the philosophy behind such an argument is contrary to what I perceive to be the job of the Congressman. We are paid by our constituents to stand up and be counted. As Harry Truman once said:

If you can't stand the heat, get out of the kitchen.

As for the specifics of the O'Neill-Gubser amendment, I recognize that there have been numerous proposals about how to obtain the desired objective. After much discussion, a bipartisan group of members concluded that the pending amendment was the best approach. The amendment provides for the retention of nonrecord teller votes but it allows one-fifth of a quorum to get a record teller vote. A record teller vote would take precedence over nonrecord votes, but in any case only teller votes would be taken on a given proposition.

The proposed amendment allows the Clerks of the House flexibility in how they think the change can best be carried out. I believe that whatever method is worked out no additional clerical staff would be required.

The teller lines would remain open for 12 minutes, thus insuring that a Member who was in his office would have sufficient time to make it over to the floor to be recorded. Because the names of those voting for and against the amendment as well as those not present would be recorded in the CONGRESSIONAL RECORD, as is presently the case with rollcall votes, I believe that participation in teller votes would increase markedly. This would encourage Members to take more interest in the proceedings of the Committee of the Whole, and perhaps foster greater attendance during debate in the committee.

Adoption of this amendment would eliminate the practice of various private groups using the motion to recommit as an indimation of a Member's position on a given issue. Many Representatives have been inaccurately portrayed as for or against some measure solely on the basis of their vote on the previous question on the motion to recommit. I, myself, have had this experience. To remedy this situation and to allow our constituents to know how we stand on the major issues of the day, I urge acceptance of this

amendment. It is time we pulled of the curtain of secrecy that covers too much, far too much, of the House's operations. If the Members of the Senate and the members of nearly all State legislatures can stand the heat of being recorded on the key issues of the day, I think the Members of this body can do no less.

The CHAIRMAN. The Chair recognizes the gentleman from Missouri (Mr. HUNGATE).

Mr. HUNGATE. Mr. Chairman, if the Hays amendment to the Smith substitute to the O'Neill-Gubser amendment as possibly amended by the Burke of Massachusetts amendment means what I think it does, I do not understand it.

Mr. Chairman, I rise in support of the O'Neill-Gubser amendment and hope it is adopted.

The CHAIRMAN. The Chair recognizes the gentleman from Florida (Mr. PEPPER).

(By unanimous consent, Mr. PEPPER yielded his time to Mr. O'NEILL of Massachusetts.)

The CHAIRMAN. The Chair recognizes the gentleman from Massachusetts (Mr. O'NEILL).

Mr. O'NEILL of Massachusetts. Mr. Chairman, I wish to thank the gentleman from Florida for yielding me the time.

There is an old saying, "Beware of Greeks bearing gifts."

Mr. BRADEMAS. Mr. Chairman, will the gentleman yield?

Mr. O'NEILL of Massachusetts. I am pleased to yield to the distinguished gentleman from Indiana.

Mr. BRADEMAS. I want to say to the gentleman that this is one Greek who is bearing the gift of his very strong support and cosponsorship of the gentleman's amendment and will oppose all amendments thereto.

Mr. O'NEILL of Massachusetts. I thank the gentleman for those remarks.

We had an opportunity in the committee when reading the bill, by a vote of 6 to 6, to adopt this amendment, but it did not prevail.

The gentleman from California could have offered his amendment or at that particular time voted with the majority and offered it at a later date.

Mr. HAYS. Mr. Chairman, will the gentleman yield?

Mr. O'NEILL of Massachusetts. I yield to the gentleman from Ohio.

Mr. HAYS. Well, the amendment. I am trying to improve upon the amendment to make it more certain.

I simply gave you notice in a fair way that I was going to offer a substitute for a rollcall record of teller votes or by the clerks writing down the names.

Now, that makes it a more foolproof method. I am all for a recorded vote.

Mr. O'NEILL of Massachusetts. I am very, very grateful for the statement of the able and learned gentleman from Ohio.

Nevertheless, I am afraid at this particular time that if the amendment as offered by the gentleman from California (Mr. SMITH) as amended by the amendment offered by the gentleman from Ohio (Mr. HAYS) is adopted it will do harm to all our efforts. Basically it looks as though it accomplishes exactly what I am looking for, but what I am afraid of is this: this bill is not going to pass today. We are going to rise this afternoon. We will probably rise tomorrow afternoon, and the Lord knows when we will get final passage on this legislation that the gentleman from California (Mr. SISK) and his committee have so diligently and so ably worked on.

As the time goes by I begin to think that the people out in the hallway are going to say "You know, the basic idea was all right, but perhaps we made a mistake by going along with electronic voting on this. It is going to cost a quarter of a million, or a half a million or three-quarters of a million or a million dollars to put some kind of an electronic gadget in here in order to record teller votes. You know, the Congress has not made a complete study as to whether we ought to have this whole Chamber realtered so that we can have electronic votes on rollcall votes. I think that perhaps we have acted at an inopportune moment. Perhaps we ought to let the bill go down the drain.

I have great respect for the gentleman from Dallas. I know he has evidently the hope that this legislation will go through, and I think perhaps that some Members may be a little naive when they get tied up with the machinations and procedure. I am afraid somewhere along the line this amendment is going to be scuttled. That is what I do not want to see happen.

To be perfectly truthful, let me say this to you, so everybody in the House will understand: When a man wants a teller vote he stands and he asks for a teller vote. If he gets 20 people to stand, when we are in the Committee of the Whole, he can have that teller vote. Now, if he wants a teller vote with clerks, he asks for a teller vote with clerks.

I said earlier that I believe there were 73 teller votes last year. Surely there will not be 73 recorded teller votes; there will only be recorded votes on about 15 or 17. So there is not this great fear that we have to be all present on the floor constantly, because with every teller vote that will be recorded, there will be sufficient time for Members to reach the floor and this will not occur on every amendment. There will be recorded teller votes only when the individual asks for clerks.

The CHAIRMAN. The time of the gentleman has expired.

(By unanimous consent, Mr. ROSENTHAL yielded his time to Mr. O'NEILL of Massachusetts.)

Mr. ROSENTHAL. Mr. Chairman, will the gentleman yield?

Mr. O'NEILL of Massachusetts. I yield to the gentleman from New York.

Mr. ROSENTHAL. Mr. Chairman, I would ask the gentleman from Massachusetts if I am correct in my analysis of what could take place under the parliamentary situation that if the amendment offered passes without an amendment—and I hope it will pass without an amendment—that if that passes there is strong likelihood of a vote on that amendment, because if the amendment passes there is good likelihood that someone is going to ask for a recorded vote when we go back into the House.

Mr. O'NEILL of Massachusetts. Oh, yes, certainly, I would say "Yes."

Mr. ROSENTHAL. If that assumption is correct, then there will be a record vote so that then the best thing we can do is have the amendment in its simplest terms so the public can understand exactly what amendment we are voting on when the recorded vote comes up. And if we introduce the problem of electronic voting a Member might be able to say "I was in sympathy with the O'Neill-Gubser amendment, but voted against it because I had some question about the feasibility of the electronic voting system."

Mr. O'NEILL of Massachusetts. The gentleman has hit it right on the head. The point that I tried to make in the four and a half minutes I had, he has very succinctly stated it in the 30 seconds time he had.

Mr. BURKE of Massachusetts. Mr. Chairman, will the gentleman yield?

Mr. O'NEILL of Massachusetts. I yield to the gentleman.

Mr. BURKE of Massachusetts. Do you not also believe that Members will have an opportunity to vote against the Gubser-O'Neill amendment if that amendment does not provide for the listing of those who are absent and not voting?

There are many Members of this House who feel that there has been too much underground opposition to my amendment.

Mr. O'NEILL of Massachusetts. Mr. Chairman, I must say that once my colleague gets his teeth into something, he does not let go.

The CHAIRMAN. The Chair recognizes the gentlewoman from Massachusetts (Mrs. HECKLER).

Mrs. HECKLER of Massachusetts. Mr. Chairman, it seems to me that the affairs of Congress have been the subject of debate for years. What is most encouraging here today is that the Congress, specifically the House of Representatives, is examining its own conscience. While there are differences of opinion and different points of view and different proposals, I think they are all motivated by a desire to achieve meaningful reform.

In the last analysis, however, it seems to me that the amendment which provides the simplest and surest route for that reform is the O'Neill-Gubser amendment. I feel strongly that the public has a right to know. But I also feel that the Member has great difficulty today, when so many of our substantive issues are disguised in parliamentary procedure in stating his position. The Member who genuinely wishes to express a point of view has difficulty achieving a clarity of position.

The O'Neill-Gubser amendment makes this situation abundantly clear and proposes a remedy. For this reason, both for the public's protection and for the clarity of position that the Member wishes and deserves to achieve, I strongly support it.

The CHAIRMAN. The Chair recognizes the gentleman from Massachusetts (Mr. HARRINGTON).

Mr. HARRINGTON. Mr. Chairman, I

have been in this Chamber a very short time. I rise in support of what I consider to be a most significant step in the direction of better informing the public that this body has taken.

The lack of information of the local press and between them and those who cover them from a national view in the public part of our activities is appalling. I wish I could be more adjectival in describing it.

I think I am naive enough to believe in the Stevensonian concept of our role being one that is directly representative of the body politic.

I think the effort being made by Representatives of O'Neill-Gubser this afternoon, which I support in its simplest form, is an ample start in the right direction.

Mr. Chairman, I ask unanimous consent to yield the balance of my time to the gentleman from Illinois (Mr. MIKVA).

The CHAIRMAN. Is there objection to the request of the gentleman from Massachusetts (Mr. HARRINGTON)?

There was no objection.

The CHAIRMAN. The gentleman from Illinois (Mr. MIKVA) is recognized for one-half minute.

Mr. MIKVA. Mr. Chairman, I rise in support of the O'Neill-Gubser amendment. It will put the elected representatives on record on the issues on which the people have a right to know and judge. An end to the secrecy of votes on amendments is a perfecting of the legislative process that is long overdue.

The CHAIRMAN. The Chair recognizes the gentleman from Indiana (Mr. DENNIS).

Mr. DENNIS. Mr. Chairman, there is only one issue of substance before the committee this afternoon and that is—are we for or against the proposition of being recorded on the teller votes, which, generally speaking, are some of the most important and meaningful votes that we cast here in this body?

There is one easy, simple way to be recorded in favor of being counted as present and recorded on the teller votes and that is to vote for the O'Neill-Gubser amendment and to vote all the other amendments down.

Mr. Chairman, the Hays-Smith substitute at best accomplishes absolutely nothing that cannot be accomplished under the O'Neill-Gubser amendment because the O'Neill-Gubser amendment will permit electronic voting if later we so see fit, and it provides for a time element in which to get to the House and vote, which is the added feature provided in Mr. HAY's amendment.

At worst, however, the Smith-Hays amendment can confuse the issue and keep us from seeing the very simple point. The thing to do here, if you are in favor of being recorded on teller votes, is to keep it simple and keep it straight, and to vote for the Gubser-O'Neill amendment.

The CHAIRMAN. The Chair recognizes the gentleman from Indiana (Mr. JACOBS).

Mr. JACOBS. Mr. Chairman, I am pleased to announce that things are back to normal, because I disagree with my colleague from Indiana on this.

First, I would like to say, Mr. Chairman, that this is a committee and this is a House of great patriots who would do anything at all for their country—except work late tonight, except work last Friday, except give up picture-taking sessions and work the night before or the night before that. I for one am prepared to stay here until midnight tonight. I would like to see those Members who are not willing to work until say, 11 or 12 o'clock tonight on this bill, which everybody has described as so important, stand up and let us see who they are.

Is there anyone here who would not be willing to work until midnight tonight? Four, five, six, seven—that is, by the way, a nonrecorded vote.

Mr. Chairman, it pleases me that the majority wants to work late tonight, so I am sure we shall.

Everybody knows that the gentleman from Massachusetts and the gentleman from California, for both of whom I have tremendous admiration, are the authors and caused this amendment to come to this floor. And I congratulate them both.

The CHAIRMAN. The Chair recognizes the gentleman from Minnesota (Mr. FRASER).

PARLIAMENTARY INQUIRIES

Mr. FRASER. Mr. Chairman, I would like to make a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. FRASER. Would it be in order that we might have a vote now on the Burke amendment?

The CHAIRMAN. If there are no other speakers on the list that the Chair has that was taken down at the time of the request of the gentleman from California (Mr. SISK) to limit debate, then that would be in order. If there are additional speakers on the list who want to speak to the Burke amendment to the amendment of the gentleman from Massachusetts (Mr. O'NEILL), they could be heard, at this time.

Mr. WAGGONNER. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman from Louisiana will state his parliamentary inquiry.

Mr. WAGGONNER. The Chair means if there are no further speakers on the Burke amendment; does he not?

The CHAIRMAN. That is correct; on the Burke amendment. In order to clarify the question, are there other speakers on the amendment offered by the gentleman from Massachusetts (Mr. BURKE) to the amendment offered by the gentleman from Massachusetts (Mr. O'NEILL)? Are there any other speakers on that amendment? If not, the Chair at this time will put the question.

The question is on the amendment offered by the gentleman from Massachusetts (Mr. BURKE), as modified, to the amendment offered by the gentleman from Massachusetts (Mr. O'NEILL).

The question was taken; and the Chairman, being in doubt, the Committee divided, and there were—ayes 52, noes 22.

So the amendment, as modified, to the amendment was agreed to.

The CHAIRMAN. The Chair recognizes the gentleman from Minnesota (Mr. FRASER).

Mr. FRASER. Mr. Chairman, acceptance of the Burke amendment will certainly not harm and perhaps may strengthen the O'Neill-Gubser amendment, so I think we are in good shape. I understand that the gentleman from Michigan will offer a further amendment to the O'Neill-Gubser amendment to make clear that electronic devices would be in order. This would then give us a fundamentally sound amendment which would do everything the Smith amendment would do, with or without the Hays amendment.

The CHAIRMAN. The Chair recognizes the gentleman from New York (Mr. BINGHAM).

Mr. BINGHAM. Mr. Chairman, they say there is nothing so powerful as an idea that has found its time, and I think today we are seeing that happen in this House—a revolutionary and most desirable change to which practically everyone is agreed. We are truly striking a blow to improve our democratic system.

The only question that remains is how this is to be done. It seems to me that the case has not been made for the Smith substitute, that is for going beyond providing for recorded teller votes and taking the further step at this time to electronic voting.

I see no need for the complications surrounding the Smith of California substitute and the Hays amendment to it, which has raised some confusion.

A question has been raised about whether the count on a recorded teller vote can be accurate without that. Surely there are ways which can be devised to have an accurate count. Surely in any case a Member who says he was wrongly counted will have the privilege—just as he now has as to a rollcall vote—of coming back to the floor later to ask unanimous consent to have the RECORD corrected. That gives full protection against any inaccuracy.

A simple way to assure that the record on a teller vote be accurate would be to have a clerk stand behind each teller with a tape recorder, and the Members could state their names on the tape recorder as they go through.

In any case the simple amendment is the best approach in this case. I hope the O'Neill of Massachusetts-Gubser amendment will be resoundingly adopted.

The CHAIRMAN. The Chair recognizes the gentleman from California (Mr. HOLIFIELD).

(By unanimous consent, Mr. HOLIFIELD yielded his time to Mr. O'HARA.)

The CHAIRMAN. The Chair recognizes the gentleman from Michigan (Mr. O'HARA).

AMENDMENT OFFERED BY MR. O'HARA TO THE AMENDMENT OFFERED BY MR. O'NEILL OF MASSACHUSETTS

Mr. O'HARA. Mr. Chairman, I offer an amendment to the amendment offered by the gentleman from Massachusetts (Mr. O'NEILL).

The Clerk read as follows:

Amendment offered by Mr. O'HARA to the amendment offered by Mr. O'NEILL of Massachusetts: Strike out "shall be entered in the

Journal" and insert "shall be recorded by clerks or by electronic device and shall be entered in the Journal".

Mr. O'NEILL of Massachusetts. Mr. Chairman, will the gentleman yield?

Mr. O'HARA. I yield to the gentleman from Massachusetts.

Mr. O'NEILL of Massachusetts. I shall be happy to accept that amendment to the amendment I offered with the gentleman from California (Mr. GUBSER).

Mr. O'HARA. I thank the gentleman.

Mr. GUBSER. Mr. Chairman, will the gentleman yield?

Mr. O'HARA. I yield to the gentleman from California.

Mr. GUBSER. The gentleman's amendment is exactly compatible with the intent of the gentleman from Massachusetts (Mr. O'NEILL) and myself, and I certainly am willing to accept the amendment.

Mr. O'HARA. I thank the gentleman.

Mr. SMITH of California. Mr. Chairman, will the gentleman yield?

Mr. O'HARA. I yield to the gentleman from California.

Mr. SMITH of California. I should like to have the amendment read again.

The CHAIRMAN. Is there objection to the request of the gentleman from California that the amendment be reread?

There was no objection.

The Clerk reread the amendment.

Mr. O'HARA. Mr. Chairman, this amendment is designed to make explicit the clear implication of the O'Neill amendment, that the teller votes provided for under the amendment can be recorded by electronic device, if that is the method provided by the House. My amendment makes it clear that the names are recorded. Tellers can be recorded by clerks manually or by electronic device at the option of the Speaker and at the direction of the House.

The CHAIRMAN. Are there any Members whose names are on the list who would like to speak to the O'Hara amendment to the amendment offered by the gentleman from Massachusetts (Mr. O'NEILL).

If not, the question is on the amendment offered by the gentleman from Michigan (Mr. O'HARA), to the amendment offered by the gentleman from Massachusetts (Mr. O'NEILL).

The amendment to the amendment was agreed to.

The CHAIRMAN. The Chair recognizes the gentleman from New York (Mr. PODELL).

Mr. PODELL. Mr. Chairman, I should like to extend my congratulations to the Committee and to the gentleman from Massachusetts (Mr. O'NEILL), and to the gentleman from California (Mr. GUBSER) who have come up with what I believe is an important and monumental change in the rules of the House.

I think, however, it is unfair to label any attempt to change or improve upon the O'Neill-Gubser amendment as merely an attempt to frustrate the bill or the amendment itself. I spoke to the gentleman from Ohio (Mr. HAYS) on many occasions. He indicated to me his desire to improve upon the Gubser amendment. I think his amendment does, in fact, improve upon it, because it will give those Members an opportunity actually to cast their vote in 12 minutes should a recorded vote be required and be necessary.

I think it is important at this time also to note that under the chairmanship of the gentleman from Louisiana (Mr. WAGGONNER) we have been investigating electronic voting for the past month, and it is entirely possible, by the time this bill is finally passed in its completed form, we will be able to report to the House a complete program for electronic voting.

So, Mr. Chairman, I think the amendment offered by the gentleman from Ohio (Mr. HAYS) does not in effect frustrate the amendment but improves upon it.

The CHAIRMAN. The Chair recognizes the gentleman from North Carolina (Mr. BROYHILL).

Mr. BROYHILL of North Carolina. Mr. Chairman, I see nothing wrong with recording teller votes by electronic means. That is why I shall now support the O'Neill-Gubser amendment as amended by Mr. O'HARA of Michigan. I will also support at the proper time an amendment to record all record votes and quorum calls by electronic means. Much time every legislative day, is wasted by the present method of recording votes, many of which take as much as 30 minutes to conclude.

So, if the Members are in favor of recorded votes—why not have the most modern, fastest way—electronic voting on all votes.

(By unanimous consent, Mr. BROYHILL of North Carolina yielded his remaining time to Mr. ARENDS.)

Mr. ARENDS. Mr. Chairman, immediately after the adoption of the O'Neill amendment, if such is adopted, I want to offer an amendment adding the sentence that when we go back into the House from the Committee of the Whole any amendment that has been adopted by a teller vote or defeated by a teller vote shall have a difference in this respect: On the adoption of the amendment it take 20 percent or one-fifth to ask for a recorded vote, but on any defeated amendment that if a vote is requested we ask for one-third of the membership to rise in order to get a vote. I believe we ought to make a distinction between an approved or disapproved teller vote amendment.

I hope this will have the consideration of the House, and I want to offer this at the present time.

The CHAIRMAN. Does the gentleman from Illinois desire to offer this amendment at this time?

Mr. ARENDS. Yes, Mr. Chairman, I offer the amendment.

AMENDMENT OFFERED BY MR. ARENDS TO THE AMENDMENT OFFERED BY MR. O'NEIL OF MASSACHUSETTS

The Clerk read as follows:

Amendment offered by Mr. ARENDS to the amendment offered by Mr. O'NEILL of Massachusetts. After the last sentence of the O'Neill amendment add the following new language:

"When any measure is reported from a Committee of the Whole House, it shall be in order, immediately after the order for the engrossment and third reading of the measure and before consideration of the question of final passage, for any Member with respect to any amendment which has been defeated by teller vote in the Committee of the Whole, to offer a motion, which shall require for adoption the affirmative vote of at least one-third of a quorum, demanding the reconsideration of that amendment by roll call vote taken in the manner provided by Rule XV. Such motion is of the highest privilege and shall be decided without debate. If, upon reconsideration by roll call vote, the amendment is adopted, then the amendemnt shall be deemed to have been read in the third reading, and shall be included in the engrossment, of that measure.".

Mr. O'NEILL of Massachusetts. Mr. Chairman, I make a point of order against the amendment.

The CHAIRMAN. The gentleman will state it.

Mr. O'NEILL of Massachusetts. I do not think the gentleman has clearly in mind what my amendment does. My amendment—actually, the only change in the present rules that we have is that if before tellers are named any Member requests tellers with clerks—and I emphasize "with clerks"—then the amendment says as follows: "and that request is supported by at least one-fifth of a quorum, the names of those voting on each side of the question shall be entered in the Journal. Members shall have not less than 12 minutes from the naming of tellers with clerks to be counted."

There is nothing in my amendment that says anything contrary to what the gentleman says. We just follow the regular rules. Unless in the Committee of the Whole an amendment is adopted, you cannot have a rollcall vote. If it is defeated, you cannot have a rollcall vote.

Mr. ARENDS. I am not changing the gentleman's amendment, but I am adding to it so that we may differentiate between an adopted amendment and a rejected amendment by teller votes, making it a requirement that one-fifth will stand to get a vote on an adopted amendment and one-third will be required to stand to get a vote on a defeated amendment by a teller vote.

I am attempting to differentiate between the two because I feel there should be some addition made in the language.

Mr. ALBERT. Mr. Chairman, will the gentleman yield?

Mr. ARENDS. Of course I yield to the distinguished majority leader.

Mr. ALBERT. The gentleman it seems is confusing the meaning of the amendment. The amendment does not change the rule about voting in the House on defeated amendments.

Mr. ARENDS. I added new language to the amendment.

Mr. ALBERT. Mr. Chairman, if the gentleman will yield further, does the gentleman want to put that language in the bill at this point?

Mr. ARENDS. Yes. I think that is the best thing to do.

Mr. ALBERT. The gentleman wants to require votes on defeated amendments?

Mr. ARENDS. Yes. If one-third of the Members stand and ask for it. I do not think we should have one-fifth standing for a vote on an accepted amendment as

against one-third standing for a nonaccepted amendment.

Mr. O'NEILL of Massachusetts. Mr. Chairman, further pursuing my point of order, on page 27 of the publication "House Rules and Manual" under that section of the Constitution of the United States it says:

> * * * and the Yeas and Nays of the Members of either House on any question shall, after the Desire of one-fifth of those Present, be entered on the Journal.

Mr. Chairman, the gentleman from Illinois is trying to change the Constitution.

Mr. GIBBONS. Mr. Chairman, in support of the point of order which has been made by the gentleman from Massachusetts (Mr. O'NEILL), and if the Chair has not made up its mind, I would say that the gentleman from Illinois' amendment is subject to the same point of order that the Chair sustained on the amendment which was offered by the gentleman from Ohio (Mr. HAYS).

Mr. ARENDS. I would say that this amendment is slightly different to the amendment offered by Mr. HAYS.

The CHAIRMAN (Mr. NATCHER). The Chair is prepared to rule.

Insofar as the constitutional question raised by the gentleman from Massachusetts is concerned, of course, the Chair would not pass upon that.

The amendment offered by the gentleman from Illinois (Mr. ARENDS) provides for the recording of teller votes. The pending amendment offered by the gentleman from Massachusetts also provides for the recording of teller votes. Therefore, the Chair overrules the point of order and recognizes the gentleman from Illinois (Mr. ARENDS).

Mr. ARENDS. Mr. Chairman, I am simply trying to say to the House that when there is an adopted amendment by a teller vote there is the requirement that only one-fifth of the membership of the House must rise on that teller vote, but on a defeated amendment, I think that one-third should be required to obtain a vote on such defeated amendment by teller vote.

The CHAIRMAN. The Chair recognizes the gentleman from Florida (Mr. BENNETT).

Mr. BENNETT. Mr. Chairman, I favor the O'Neill-Gubser amendment. I think it is a practical amendment. I do not think, however, there is anything wrong with the Hays amendment. In fact, if you were going to pass the Smith amendment, you would be in a real bad bind without the Hays amendment. So I hope no one turns down the Hays amendment on the theory that it is going to be something that is not constructive. I say this because turning down the Hays amendment might mean you would have no vote. You might be on the telephone or you might be having a sandwich and you would be unable to cast your vote. The Hays amendment is certainly a good amendment to the Smith amendment. I favor the O'Neill-Gubser as the best approach, however.

The CHAIRMAN. The Chair recognizes the gentleman from Georgia (Mr. FLYNT).

Mr. FLYNT. Mr. Chairman, I really have no objection to either approach which has been made, but it seems to me that the most practical approach is the substitute offered by the gentleman from California, as amended by the amendment of the gentleman from Ohio (Mr. HAYS).

From time to time we have seen Members rise in the well of the House to ask that a certain rollcall be corrected. If you want to see confusion take place, and the arena opened up for mistake after mistake in recorded votes on the votes of any Member on any given issue, the method of letting the tellers with the help of clerks record those votes will probably cause more confusion and more errors in the tallying of votes than any method yet devised.

With the addition of the amendments offered by the gentleman from Massachusetts (Mr. BURKE) and the gentleman from Michigan (Mr. O'HARA) to the O'Neill-Gubser amendment, the difference between the two approaches seems to be the difference between tweedledee and tweedle-dum.

Mr. Chairman, it appears to me that the best approach is the Smith substitute as amended by the Hays amendment.

The CHAIRMAN. The Chair recognizes the gentleman from New York (Mr. PIKE).

Mr. PIKE. Mr. Chairman, I think we have spent a lot of time with the angels on the head of a pin here. I do not believe it really matters how the vote is taken, whether it is taken electrically or by clerks, or by putting beans with your name on them in a bottle. I do not think it matters whether we have 12 minutes or 11 minutes or 10 minutes or 15 minutes. I think that it does not matter whether we have 15 recorded teller votes or 73 recorded teller votes; what does matter is the principle that the teller votes be recorded.

I think that it is obviously going to make our job a lot harder. There are 125 people not here today. There will be probably 250 people not here when we take our vote that will make our democracy better.

The CHAIRMAN. The Chair recognizes the gentleman from Florida (Mr. FASCELL).

Mr. FASCELL. Mr. Chairman, I support the O'Neill-Gubser amendment for having recorded teller votes, I support the Burke amendment to that amendment which provides for the recording of those who do not vote. I also support the O'Hara amendment to the O'Neill-Gubser amendment which provides that such a vote may be electronically taken. I shall vote against the substitute amendment solely because I think the question of electronic voting has been pretty well settled by the changes in the O'Neill-Gubser amendment. I am not for the Arends amendment at this time because I see no reason at this point to go into the question of whether there is to be a provision for a vote in the House on an amendment defeated in the Committee of the Whole House. I think we should consider that provision separately, and not at this point. Furthermore, now that we have amended the rules to provide for recorded teller votes while sitting as a Committee of the Whole House on the State of the Union there is less reason, in fact there may not be any, to provide for a record vote in the House of an amendment defeated in the Committee of the Whole. Therefore I am opposed to the Arends amendment.

The CHAIRMAN. The Chair recognizes the gentleman from California (Mr. DON H. CLAUSEN).

Mr. DON H. CLAUSEN. Mr. Chairman, as one of the cosponsors of this amendment to permit the recording of teller votes in the Committee of the Whole, I want to commend the gentleman from California (Mr. GUBSER) and associate myself with the remarks he has made here today.

While much has been said about the so-called secrecy aspects of the teller vote, I was particularly impressed with the gentleman's remarks regarding the history of the teller vote and I certainly agree with him that its original intent was not to "deceive," as the word "secret" so emphatically implies, but to further expedite sessions of Congress that, in those bygone days, lasted only a few months. If the teller vote was, in fact, intended to be a secret, then I submit it was one of the most poorly kept secrets ever conceived.

Instead, the main thrust of this amendment, in my judgment, is to strip away the outgrowth of suspicion, doubt, and demagogery that surrounds the teller vote by revealing the whole truth about what is actually being voted on and how each Member was recorded on the measure. In addition, I believe passage of this amendment will speed up this outmoded voting procedure and permit the people of this country to know exactly what is being considered.

The much maligned teller vote has been the subject of continuing controversy, distortion and exploitation for many years, and the reform offered by this amendment is long overdue. I strongly support passage of the Gubser-O'Neill amendment as a better method of recording votes so there cannot be any further misrepresentation of the votes cast.

I strongly believe in the American principle that holds to the view that elected representatives be held in strict accountability to the people they are privileged to serve. At a time when people demand to know, and rightly so, what their Government is doing and how they are being represented, it is our duty and responsibility to clear away any and all obstacles toward that goal. It is for this reason that I believe this distinguished body will respond to that challenge here today and pass this much-needed reform amendment.

The CHAIRMAN. The Chair recognizes the gentleman from Hawaii (Mr. MATSUNAGA).

Mr. MATSUNAGA. Mr. Chairman I rise in support of the O'Neill-Gubser amendment. Speech after speech has condemned the current practice of unrecorded teller votes in the Committee of the Whole House. Indeed, a stranger to

these Chambers might wonder how so detestable a practice, and one so widely denounced, could survive so long.

As a declared cosponsor of the amendment now under consideration, I find this display of near unanimity a sharp and pleasant contrast to the anonymity with which the House shrouded itself earlier this session on such important issues as the supersonic transport, antiballistic missiles, the Cambodian incursion, and school desegregation.

There is an old law school truism, the Latin version of which I will not attempt, to the effect that when the reason for a law changes, the law also should change. As I understand it, the practice of nonrecorded teller voting in the Committee of the Whole was first adopted by the British Parliament so that its Members could vote their consciences without incurring the wrath of the King. For some reason or other, while no such fear of King, Queen, or President existed among the founders of our system in our House of Representatives, they adopted the teller-voting practice of the British Parliament. In the 1830's the Parliament itself, having been freed from the fears of the King, abolished this practice of nonrecorded teller voting. Why then do we here in this body continue this archaic practice?

Mr. Chairman, the activities in which we as representatives of the American people engage in this House are not solely our business; they are the business of the Nation's people; and the American people have a right to know how their business is being conducted and by whom.

Mr. Chairman, there are those who would argue that the O'Neill-Gubser amendment, if adopted and implemented, would make it more difficult for a Member to consider national, as opposed to district, interests, when he casts his vote. Certainly a Member of Congress has a duty to look beyond the opinion polls in determining what is best for this country. As Edmund Burke told the electors of Bristol almost 200 years ago:

> Your representative owes you not his industry only, but his judgment; and he betrays instead of serving you if he sacrifices it to your opinion.

But even if we assume that Burke was right and voters chose their representatives on the basis of their capacity for wise judgment, the voters must at least know of the instances in which that judgment has been exercised. The O'Neill-Gubser amendment would provide a record of such instances in the Committee of the Whole House, where today there is none.

Speaking now on the Smith substitute amendment and the Hays amendment to it, I must say I was fully prepared to support the Hays amendment, which would remove the objectionable features of the Smith substitute. I was also prepared to support the Smith amendment if the Hays amendment to it were adopted. However, now that the O'Hara amendment, which I supported, has been adopted, there is little, if no, difference which I can see between the O'Neill amendment, as amended by the O'Hara amendment, and the Smith substitute, as amended by the Hays amendment. I intend, therefore, to support the O'Neill-Gubser amendment, as amended by the O'Hara amendment, and to vote against all other amendments. I urge my colleagues to do likewise.

The CHAIRMAN. The Chair recognizes the gentleman from New York (Mr. KOCH).

Mr. KOCH. Mr. Chairman. I rise in support of the amendment offered by our distinguished colleagues (Mr. O'NEILL and Mr. GUBSER). That amendment would require that teller votes be recorded so that names of Members voting and how they voted would appear in the CONGRESSIONAL RECORD and be available to the public. At the present time, as we all know, many amendments are killed in the Committee of the Whole House on the State of the Union in unrecorded teller votes—which oftentimes would have been adopted had they been subjected to a recorded vote.

There are those among us who refuse to vote for strengthening amendments to a bill, and then when voting for the weaker bill on final passage protest that the bill is not as strong as they would have liked. We must use this opportunity to prevent such deception. Whatever our point of view is—and we obviously have a plethora of different positions—each of us must have the courage to stand behind his own position with his name in the RECORD. Our constituents are entitled to know how we vote at those times when the key formative votes are being taken on legislation before it is finally voted up or down.

If this amendment ultimately becomes law, I believe it will be one of the more significant acts of the 91st Congress, and will affect, for the better, much of the legislation thereafter enacted.

The CHAIRMAN. The Chair recognizes the gentleman from New York (Mr. CONABLE).

Mr. CONABLE. Mr. Chairman, it seems to me we are very close to a sensible conclusion on this important issue. We have come along the path strewn with many split hairs, but the denouement is going to be better than many of us dared hope.

I trust the majority of the Members will support the O'Neill-Gubser amendment as amended. It seems to me that we may be putting too much confidence in electronic voting as an antidote to the possibility of fraud. I think we can proceed best under the broad outlines of the O'Neill-Gubser amendment, and certainly electronic recording should be something that we should study very carefully as we go down the path toward fully recorded votes.

The CHAIRMAN. The Chair recognizes the gentleman from Louisiana (Mr. WAGGONNER).

Mr. SCHWENGEL. Mr. Chairman, will the gentleman yield?

Mr. WAGGONNER. I yield to the gentleman.

Mr. SCHWENGEL. Mr. Chairman, I ask unanimous consent that my time be allotted to the gentleman from Louisiana (Mr. WAGGONNER).

The CHAIRMAN. Without objection, it is so ordered.

There was no objection.

Mr. WAGGONNER. Mr. Chairman, I introduced the proposed rules change that we are talking about this afternoon in the 88th Congress and have reintroduced it in succeeding Congresses. I appeared before the Committee on Rules when they were holding hearings last November the 13th, and I suggested the rules change which I believe we are now about to adopt.

Mr. Chairman, I support the O'Neill-Gubser amendment. I do so for much the same reasons which have been set forth by others today which time will not allow me to repeat but basically because it will produce better legislation.

For a while I though I was going to support the Smith substitute, as amended by the Hays amendment. But with the adoption of the O'Hara language, it appears to me that that language is now redundant.

I can assure you that the House Committee on Administration is going to make a recommendation about a change in the method of voting in this session of the Congress. Give us a chance to produce a system which can be used, and used successfully, not just recording teller votes but in recording teller votes and all other votes that might occur, whether they be on final passage or whatever. We can do something that will be satisfactory, and I believe the House will benefit from it. I believe the mood of the House is to move from the present system of voting. And I think we should.

The CHAIRMAN. The Chair recognizes the gentleman from California (Mr. LEGGETT).

Mr. LEGGETT. Mr. Chairman, I am very pleased to hear the statement by the gentleman from Louisiana (Mr. WAGGONNER), that his committee is going to report an electronic voting procedure in this session of the Congress.

As I look at the RECORD, we had measures on file since the 63d Congress and the 64th Congress and the 75th, 77th, 79th, and 88th Congresses.

I think it is time we moved ahead from the covered wagon days to the 20th-century age.

I personally am going to support the Hays-White amendment to the Smith substitute in place of the Gubser-O'Neill amendment as modified by the Burke-O'Hara amendment.

The CHAIRMAN. The Chair recognizes the gentleman from California (Mr. CORMAN) for 1 minute.

Mr. CORMAN. Mr. Chairman, I urge support of the O'Neill-Gubser amendment. We have all had it in writing for a long time and we understand it. I doubt that anyone knows the full impact of the Smith substitute with all its proposed amendments.

I would like to call the attention of the House to something that happened in California during the last primary. A man spent $200,000 to attempt to defeat a Member of this House. He spent much of that money misinforming the constituents how that man had voted on a teller vote. He lied. Then he had the audacity to offer a $5,000 reward to anyone who could prove in writing that he was wrong. That is the kind of misinformation that we find ourselves con-

fronted with. The public and the Members of this House will be best served by a yes vote on the O'Neill-Gubser amendment.

The CHAIRMAN. The Chair recognizes the gentleman from California (Mr. GUBSER) for 1 minute.

Mr. GUBSER. Mr. Chairman, today we have been provided with a classic example of a parliamentary body employing the technique of debate and compromise and arriving at a consensus.

Let us make a meaningful comparison. Take the Smith amendment as amended by the Hays substitute. Then take the O'Neill amendment as amended by the Burke and O'Hara amendments.

You have two proposals that are practically identical. It is a case of tweedle dum and tweedle dee.

The only difference is that the O'Neill amendment as amended by Mr. BURKE and Mr. O'HARA is clear. We heard one colloquy during the debate today which clearly indicated that some of the words in the hastily drawn Hays substitute to the Smith amendment are still subject to interpretation.

So in making the decision to do something, let us take the clear language of the O'Neill amendment.

The CHAIRMAN. The Chair recognizes the gentleman from Ohio (Mr. HAYS).

Mr. HAYS. Mr. Chairman, first let me say that all I sought to do with my amendment was very simple. That is to guarantee the Members 12 minutes to come over here—nothing more and nothing less.

The Smith amendment makes the electronic voting mandatory, as I understand it, unless it breaks down, with the amendment I offered.

The other amendments make it permissive.

I have no pride of authorship about it. I am not arguing from a point of view so that I can say that I did it or I did not do it. I want all of you to know that all I wanted to do was to guarantee Members a chance to get over here. I think that is guaranteed now, so I really think, as the gentleman from Minnesota (Mr. FRASER) has said, it does not make much difference which amendments are defeated or passed; if you pass the Smith amendment with my amendment, you come out at the same place.

The CHAIRMAN. The Chair recognizes the gentleman from California (Mr. SMITH).

Mr. SMITH of California. Mr. Chairman, when this matter was first brought to our subcommittee, we decided that it should be left for the Committee on House Administration and that we would not make a recommendation. The recommendation by the gentleman from Massachusetts (Mr. O'NEILL) was made in the Rules Committee on the day we were getting ready to vote out the bill. I thought we should have electronic equipment. I had the amendment which I offered prepared by legislative counsel and the Library of Congress, which had it perfected.

I told the gentleman from California (Mr. GUBSER) that if he would consider electronic equipment, I would cooperate with his amendment. I told him about a week ago. I have accomplished my purpose here. I think the amendments are now identical except paragraph (b) of the substitute. I would be pleased to support the Gubser-O'Neill amendment as now amended, because they have worked so hard, and I would like them to have the pride of authorship.

There is one difference, Mr. Chairman, and that is the paragraph in my substitute amendment which would provide money upon signing of the act, and we would not have to wait until next January when the law would go into effect.

The CHAIRMAN. The Chair recognizes the gentleman from California (Mr. SISK) to close the debate.

Mr. SISK. Mr. Chairman, this has been an excellent debate on a very important subject. I wish to commend everyone who has taken part. The gentleman from Ohio (Mr. HAYS) and the gentleman from California, my colleague (Mr. SMITH) have achieved their purpose, as has already been conceded here. I wish to compliment them on bringing the O'Neill-Gubser amendment into a form that seemingly all of us can support. Therefore, to that extent, as I said, this has been a most productive debate.

Mr. PEPPER. Mr. Chairman, this amendment to permit negative teller votes on amendments offered in the Committee of the Whole to be recorded so that our constituents and the people of the country will know how we voted on amendments, many of them of the most serious importance, is one of the most important proposals this House will be called upon to determine. The people have a right to know how we voted on anything pertaining to the public business, to the discharge of our duties as the people's representatives, whether the vote we cast is in Committee or when the House is in regular session or whether the Members are meeting in the Committee of the Whole House on the state of the Union. The precedent of having votes in the Committee of the Whole without them being recorded was adopted in the House of Commons in England hundreds of years ago when the members of the House of Commons had to meet in secret to keep the speaker from telling the king how the members voted on revenue bills the king wanted the house to enact.

To avoid the Speaker, the Commons believed, from reporting on their vote to the king, the Commons met secretly, elected their own chairman in whom they had confidence—who would not report to the king how they voted—and decided how they were going to vote on revenue measures the king was pressing them to enact. But the House of Commons, where the practice of having unrecorded votes in the Committee of the Whole originated, abolished this rule more than 100 years ago. Yet this House, for whatever reason, is still following that old outmoded rule. Some of the most important votes we cast are in the Committee of the Whole when we walk down the aisle in a teller vote and vote no on an amendment which under present rules is not recorded. While people in the gallery can see whether a Member votes yes or no, how the Member votes can always be a matter of uncertainty. The Member can claim that the observer who said he saw how the Member voted was mistaken. So there should be a record of how we vote when we vote against important, meaningful amendments to bills which are offered when the House is in the Committee of the Whole.

The people have a right to know how we vote, whether it be for an amendment or against an amendment offered to a bill. Under present rules if an amendment is adopted in the Committee of the Whole, there can be a record vote when the Committee of the Whole rises and the House resumes sitting. Why should the same rules not apply to a vote a Member casts in a teller vote against an amendment, if a feasible method can be found under which negative votes on an amendment can be recorded without it taking too much time in a body as large as the House. This problem is resolved by the O'Neill-Gubser amendment. If the required number of Members ask for a record teller vote then the clerks of the House, who know all the Members, will simply stand at the end of the line through which Members go voting yes and then no in separate lines and record the votes cast for and against an amendment and enter in the votes in the record with a notation made in the record of those who were absent. Thus, we can even in this large body have recorded negative votes on important amendments without it taking appreciably more time than is taken by teller votes now. Moreover, the O'Neill-Gubser amendment allows 12 minutes for one to go through the line and be recorded so as to give a Member time to come to the floor from his or her office.

We in Florida have a law enacted by our legislature and affirmed by our supreme court that all public bodies must conduct their business in the open. We call it "Government in the sunshine." That is a good rule. I would like to see all votes in committee and on the floor either in the House or in the Committee of the Whole recorded. This amendment goes a long way toward that end in the House.

I hope that the House Committee on Administration will soon report to the House a rule which will make due provision for the use of electronic equipment in voting in the House such as we have in our State legislature, with appropriate safeguards for the Members. The O'Neill-Gubser amendment as amended now would permit the electronic recording of teller votes if that procedure is provided and determined by the Speaker. So the O'Neill-Gubser amendment is clear, it is right, it is feasible. I hope, therefore, it will be adopted and will give it my hearty support.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Illinois (Mr. ARENDS) to the amendment offered by the gentleman from Massachusetts (Mr. O'NEILL).

The amendment to the amendment was rejected.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Ohio (Mr. HAYS) to the substitute

amendment offered by the gentleman from California (Mr. SMITH).

The amendment to the substitute amendment was rejected.

The CHAIRMAN. The question is on the amendment in the nature of a substitute offered by the gentleman from California (Mr. SMITH) to the amendment offered by the gentleman from Massachusetts (Mr. O'NEILL).

The substitute amendment was rejected.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Massachusetts (Mr. O'NEILL) as amended.

The amendment, as amended, was agreed to.

AMENDMENT OFFERED BY MR. M'CLORY

Mr. McCLORY. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. McCLORY: On page 39, immediately below line 4, insert the following:

"RECORDING OF ROLLCALLS AND QUORUM CALLS THROUGH ELECTRONIC EQUIPMENT

"SEC. 119. (a) Rule XV of the Rules of the House of Representatives is amended by adding at the end thereof the following new clause:

"'5. In lieu of the calling of the names of Members in the manner provided for under the preceding provisions of this rule, upon any roll call or quorum call, the names of such Members voting or present may be recorded through the use of appropriate electronic equipment. In any such case, the Clerk shall enter in the Journal and publish in the Congressional Record, in alphabetical order in each category, a list of the names of those Members recorded as voting in the affirmative and those Members recorded as voting in the negative, or a list of the names of those Members voting present, as the case may be, as if their names had been called in the manner provided for under such preceding provisions.'

"(b) The contingent fund of the House of Representatives shall be available to provide the electronic equipment necessary to carry out the purpose of the amendment made by subsection (a)."

(By unanimous consent, Mr. McCLORY was allowed to proceed for an additional 5 minutes.)

Mr. McCLORY. Mr. Chairman, in the course of the debate on the last amendment, we had a great deal of discussion of the subject of electronic voting and the recording of votes by the use of electronic equipment.

What my amendment would do is to merely make it permissive for the House to adopt an electronic system for recording rollcall and quorum call votes. The amendment would recognize on the part of the House that we can utilize electronic equipment effectively in connection with such rollcall votes and quorum calls. It does not require any particular system or device. It makes the electronic method permissive. It provides an alternate system by which we can record these votes and hopefully save a great deal of the time of the House in connection with these time-consuming oral rollcalls and quorum calls as required now under rule XV.

This is not a new suggestion by any means. It was recommended to the House in 1914, and has been the recommendation of a number of committees. I might say that in 1914 it was rejected because it was reported that the House did not need to save time. It was pointed out in the minority views at that time that there was no need for the House to save time, because the House was completing its work before the Senate, and also it was felt that the use of any such electronic equipment was incompatible with legislative work.

I am sure we recognize now that to adopt a modern system, a modern method, of recording our votes, will enable us to save time for our multitudinous other legislative duties. Such a change is consistent with the entire purpose of the Reorganization Act.

I cannot help but feel that this amendment would be a signal to the American people that we are determined to modernize our methods and procedures to the end that we can perform our jobs in a more efficient and less time-consuming manner.

I should like to point out that a report on this subject was made by a member of the original Reorganzation Committee, the gentleman from Missouri (Mr. HALL). It is also the subject of legislation at this session introduced by the gentleman from Florida (Mr. BENNETT), and the gentleman from Wisconsin (Mr. DAVIS).

I know that the Committee on House Administration has already undertaken studies. I know that the Clerk has made recommendations to the Committee on House Administration, and I feel that this amendment is an expression of support of the House for the work of the Committee on House Administration and perhaps to emphasize the need to bring their recommendations to the floor of the House in the form of a more specific and detailed change at the earliest possible time. It does not specify a particular system.

Mr. Chairman, may I say that there are some fears that somehow we are going to spoil the appearance of this Chamber. This is something I certainly do not want to do. I would like to point out that there are methods now by which you can have a clear, frosted glass panel with no names appearing on it, but upon which the names will appear electronically only at the times that the rollcall vote or the quorum call is occurring.

The question also has been raised as to whether or not we will have to assign seats. We do not have to have assigned seats in order to locate activating buttons or devices for indicating our votes. We can have stations or tables at which the activating buttons may be placed. There are a great many details that can be worked out, but first of all we have to grant the authority for such an alternate system. That is the entire purpose of the amendment I am offering. It is an alternate method of voting on rollcalls and quorum calls other than the laborious system required under rule XV of the present rules.

Mr. HECHLER of West Virginia. Mr. Chairman, will the gentleman yield?

Mr. McCLORY. I am glad to yield to the gentleman from West Virginia.

Mr. HECHLER of West Virginia. Mr. Chairman, I very strongly support the amendment offered by the gentleman from Illinois. It seems to me that the Congress ought to be at least as up to date as many State legislatures which have already installed electronic voting and thereby brought their procedures up to date. We waste so much time on this floor by rollcalls and quorum calls. I think we can logically extend what we have done through the amendment offered by the gentleman from Massachusetts (Mr. O'NEILL) to provide for electronic voting on the floor. I commend the gentleman from Illinois and all of his associates who are supporting this amendment.

Mr. McCLORY. I want to thank the gentleman from West Virginia first of all and point out that the system we are capable of installing here can be an improvement over any of those already in existence in the various State legislative bodies.

Mr. PODELL. Mr. Chairman, will the gentleman yield?

Mr. McCLORY. I yield to the gentleman from New York (Mr. PODELL).

Mr. PODELL. I am a member of the subcommittee which has been doing some investigation into the field of electronic voting for some time. We certainly wholeheartedly support an amendment which would give to the House electronic voting.

The question I have to ask relates to one word in your amendment which says that the House may prescribe electronic voting. Will you tell us why the word "may" rather than "must" or "shall" has been inserted in your amendment?

Mr. McCLORY. The word "may" is in there so that the House through its organized committees can proceed to complete its work and so that we can record votes in that way. However, under my amendment it would not be necessary to record votes and rollcalls electronically, nor would we necessarily record all votes in that way. These are questions to be determined at a later time when details of the system are worked out.

Mr. DAVIS of Wisconsin. Mr. Chairman, will the gentleman yield?

Mr. McCLORY. I yield to the gentleman from Wisconsin (Mr. DAVIS) who is the author of a bill before this House on this subject.

Mr. DAVIS of Wisconsin. Mr. Chairman, I want to express my strong support of the amendment offered by the gentleman from Illinois and to commend him for the leadership he has taken in this matter.

I think his wording is the correct one because it will help us to get this job done rather than trying to dictate that it must be done at a particular time.

Mr. ANDERSON of Illinois. Mr. Chairman, will the gentleman yield?

Mr. McCLORY. I yield to the gentleman from Illinois.

Mr. ANDERSON of Illinois. I, too, Mr. Chairman, want to congratulate the gentleman in the well for the leadership that he has displayed on this issue.

The language is permissive. It is designed to encourage rather than to frustrate the work being done on this

in the Committee on House Administration. It will clearly express the desires of the House and will be helpful to the Committee on House Administration in carrying out its work.

Mr. BELL of California. Mr. Chairman, will the gentleman yield?

Mr. McCLORY. I am glad to yield to the gentleman from California.

Mr. BELL of California. I want to commend the gentleman for his leadership in proposing this amendment.

I rise in support of it. There is nothing that is needed more in our legislative process than an up-to-date system of voting. Electrical, electronic, or mechanical systems are now being used in so many of our State legislatures throughout the Nation. Our outdated system is placing us behind the times and delaying our legislative process. It is of utmost importance that our national legislative process be at least modernized enough to equal the capabilities of most of the State legislatures of our Nation.

The time factor with our legislative load is such, that it alone demands a more facile handling of legislation.

Mr. Chairman, I think it is very important that we have an electronics voting system in the House of Representatives.

Mr. GIBBONS. Mr. Chairman, will the gentleman yield?

Mr. McCLORY. I yield to the gentleman from Florida.

Mr. GIBBONS. I thank the gentleman from Illinois for yielding. Let us go right to the wording of the gentleman's amendment, the very guts of it. You say "in lieu of calling of the names." I have always understood "in lieu of" to be "in place of," and I do not see how we could call the roll any other way except electronically if the reading of your amendment follows the language as I read it.

Mr. McCLORY. It is so worded as to continue to permit the calling of the names as already provided in rule XV. Upon a rollcall the names of such Members may be recorded through the use of electronic equipment in place of doing it as at the present. In other words, we would be permitted to do it in that way. That is the meaning of it. I had this drawn by the Office of Legislative Counsel and I requested it to be drawn in that way.

Mr. GIBBONS. In other words, when the gentleman says "in lieu of," the gentleman means we do have an alternative method of doing it?

Mr. McCLORY. We would have an alternative way if this amendment is adopted.

Mr. WAGGONNER. Mr. Chairman, will the gentleman yield?

Mr. McCLORY. I yield to the gentleman from Louisiana.

Mr. WAGGONNER. As I interpret this proposed amendment, I interpret it as one which provides for an optional method of voting not in the Committee of the Whole as we are now, but in the whole House; is that correct?

Mr. McCLORY. That is correct. This is for quorum call votes and rollcall votes.

Mr. BENNETT. Mr. Chairman, will the gentleman yield?

Mr. McCLORY. I yield to the gentleman from Florida, a Member who has been in the forefront of this effort.

Mr. BENNETT. I want to congratulate the gentleman from Illinois upon his leadership in this effort and say that everyone who has experienced electronic voting as I have in the State legislatures knows that this represents a step forward.

Mr. BELL of California. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I rise in support of the amendment offered by my distinguished colleague from Illinois to provide for a plan for up-to-date electronic voting in this body.

That the efficiency of voting procedures in this House is exceeded by the majority of State legislatures is an anachronism we can no longer tolerate.

Over a century ago the technology existed for speeding up our dismally slow rollcalling procedure.

For more than half a century, legislation to improve this system has been pending—no action scheduled.

But our opportunity to remedy the present situation, however late in coming, does exist today.

We must act on this opportunity.

Mr. Chairman, a corporate manager who, year after year, refused to institute a procedure which would save countless hours of executive time would soon be replaced by his board of directors—or the board would be replaced by the stockholders.

We are in essence our own managers—and our own board of directors.

But our "stockholders," the taxpayers and citizens of this Nation, are at a relative disadvantage when it comes to initiating changes in our procedures.

It is they, however, who are so greatly affected when our time, our quality of decisionmaking, is hampered by the inordinately wasteful system which cuts into our deliberative floor work by as much as one-fourth.

When the First Congress convened in 1789, there were 65 Members of the House of Representatives.

Each represented a constituency of approximately 60,000 individuals.

In those days the Congress annually wrestled with a total Federal budget of about $5 million.

Since then, that budgetary workload has increased 40,000 times—to the present $200 billion level.

But we do not need those figures to know that the demands on our time have increased in a geometric progression—our nearly year-round sessions tell us that.

Mr. Chairman, the very reform bill we are presently considering, and many of the amendments which are being offered to it, will themselves increase even more the burden of time required for floor action.

The Gubser-O'Neill amendment, for example, which I strongly support, can add a considerable amount of time to the voting process.

We must find a method of speeding up this legislative process.

If we do not, a year will not be long enough to enact our business.

To be offered a reasonable proposal which would provide us with countless additional hours to perform the job our constituents elected us to perform and not to act on it, would represent the height of irresponsibility to our citizens and to ourselves.

Mr. Chairman, I urge most strongly that we approve the pending amendment.

AMENDMENT OFFERED BY MR. LEGGETT TO THE AMENDMENT OFFERED BY MR. M'CLORY

Mr. LEGGETT. Mr. Chairman, I offer an amendment to the amendment offered by the gentleman from Illinois.

The Clerk read as follows:

Amendment offered by Mr. LEGGETT to the amendment offered by Mr. McCLORY:

After the word "rollcall" on line 4 strike "or".

After the word "present" strike the word "may" and insert the word "shall".

After the words "electronic equipment" insert the following: "commencing with the opening of the second session of the 92d Congress.

"The automatic voting procedures shall be established by the Clerk with the advice and counsel of the House Administration Committee which will meet the following minimum criteria:

"All foregoing votes shall be—

"(a) Recorded within a maximum 15 minute period of time, and

"(b) Supervised, such that the integrity of the voting system will be preserved".

Thereafter strike the words "In any such case,".

Mr. LEGGETT. Mr. Chairman, my amendment to the amendment offered by my colleague from Illinois (Mr. McCLORY) is very simple, and will bring this body under appropriate safeguards 18 months to come into the 20th century with appropriate modern machinery.

The amendment would require and authorize the Clerk of the House, with the advice and counsel of the House Administration Committee—particularly the Waggonner subcommittee—to install a system that would be as secure or more secure than the pending system and that would allow the completion of a rollcall or quorum call in a maximum of 15 minutes.

Gentlemen, I think we are all too busy to spend 25 percent of our total floor time in the recording of our vote or presence under the very cumbersome procedure now in effect.

In one of the flyers I sent around to every Member of the House, I said that my amendment could save you 2 hours a week. This amendment could do better than that.

Let us look at the record of the past three sessions of this House. How much time were we in session? How much time was required for rollcalls and quorums, but not including standing and teller votes?

An analysis of the time spent follows:

1967

Time House Convened: 868 hours, 16 minutes.

Time Calling Roll (includes both Roll Calls and Quorum Calls): 201 hours, 9 minutes, equaling 22.3%.

Average time for Roll Call was 27 minutes.

1968

Time House Convened: 726 hours, 36 minutes.

Time Calling Roll (includes both Roll Calls and Quorum Calls): 198 hours, 32 minutes, equaling 27.8%.

Average time for Roll Call was 27.8 minutes.

1969

Time House Convened: 747 hours, 21 minutes.

Time Calling Roll (includes both Roll Calls and Quorum Calls): 172 hours, 11 minutes, equaling 23%.

Average time for Roll Call was 29.3 minutes.

Source: Annual report of House Reading Clerks to the Clerk of the House.

The enactment of the pending amendment could change all this. A maximum time of 15 minutes would be provided for each voting procedure. The Clerk would be mandated with appropriate advice and counsel of the House Administration Committee to create and deploy a system—a system whereby each Member could perhaps individually pick up his electronic card—like a charge plate or bank card or thumbprint—and could vote yes or no and visually observe on an electric panel or sedate screen his vote. This he cannot do under the present system.

He could visualize his colleagues' vote before he voted if he so desired. This he cannot do under the present system. The leadership could visually observe the whole board were they interested in effecting a voting change during the 15-minute period.

We would effectively get rid of dead time—that time after the bells ring when we continue to sit in our office until after the second bells ring to move to the floor.

Mr. Chairman, do you realize that on every rollcall the Clerk calls out 1,000 names—1,000 chances for human error—2 times 435 plus recognition of 200 Members many times in the well of the House.

Consider the value of the time lost—the average time for a rollcall is 30 minutes, of late 45 minutes—we could save half of this time.

If this rule had been in effect last year, every Member of the House could have saved 100 hours to do people's business or anything else. At $20 per hour, that would equal $2 million of productive work saved for the people.

We would be creating more democracy on the floor—more time might mean more votes on important issues and more time to express the will of this House.

This is not a new concept. I include in the RECORD at this point the testimony of colleagues Ron Cameron and Winfield Denton as presented to the Joint House-Senate Committee in August of 1965:

STATEMENT SUBMITTED BY HON. RONALD BROOKS CAMERON, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF CALIFORNIA

Mr. Chairman, distinguished members of the committee, I doubt that any of us take issue with the memorable description of Congress as set forth by Josiah Quincy, of Massachusetts. To us, as it was to him, it is "this solemn assembly, the representatives of the American people, the depositary of their power, and in a constitutional light, the image of their wisdom."

I also doubt that any of us would express these democratic values in the form of rigid and unchanging rules, precedents and procedures. For few rules, perfect as they may seem, can remain valid and static over a period of time. Like nations, they cannot stand frozen in antiquity, unmoved by the fresh currents of contemporary needs and demands.

I do not think that when the Founding Fathers met in Philadelphia they meant to decree every rule or procedure as sacrosanct, shrouded in absolute wisdom, exempt from any true test of relevancy to the present.

True to itself as a living institution, Congress in its historic course has wisely rejected this view. Through each generation of legislators, the House has evolved, devised and adopted its rules in response to the needs and conditions of the times. Nowhere is this better illustrated than in our continuing attempt to cut down on timewasting procedures, a trend which is indeed the highlight of internal rulemaking decision by the House. As Woodrow Wilson observed, "Congress is a business body and it must get its business done."

The economic and social development that transformed the United States from an 18th century agrarian society of 4 million people into today's complex Nation of nearly 200 million inhabitants created new needs and new problems, many of which required corresponding Federal responsibility.

The need for the House to keep pace with these developments—complicated by an increase in House membership from 106 in 1790 to 435 in 1910—compelled the Congress to economize its time. Debate was limited by adoption of the 1-hour rule and the 5-minute rule. Procedures were repealed, revised, and abbreviated, and they were all aimed at expediting and bringing debate to an ultimate vote.

It is in recognition of the need to continually search for timesaving procedures that I respectfully urge the committee to examine the feasibility of electric voting as a substiture for the present system of oral rollcalls, a system which cripples and constricts while it exasperates, a system which is appropriately described as the greatest single waste of time on Capitol Hill.

If adopted, an electric voting system will bring to the House greater speed and accuracy in conducting rollcalls, more time for careful deliberation of the matters before us, and a more dynamic and impressive demonstration of democratic legislative activity.

Examine, for a moment, what happens in a typical rollcall under our present system.

The insistent summons of three bells usually finds us in the midst of multifarious committee and office work. As we sprint from our offices and hearing rooms, the tally clerk starts to call the roll. For the benefit of those Members who fail to respond the first time, the roll is ordered repeated. In both cases names are called out in a slow, droning fashion, each second, each syllable stretched, to allow the tardy among us to arrive and vote. Then follows an interlude wherein Members inquire of each other how they voted. Votes are sometimes changed. Pairs are sometimes found and registered. Latecomers frequently get on the record by convincing the presiding officer that they didn't hear their names called or were unavoidably detained on an urgent matter.

What of time spent on this activity of attendance and voting? During the 6-year period from 1958 to 1963 there were 632 rollcall votes in the House. The average legislative day during this period lasted about 4 hours. Figuring an average rollcall at 40 minutes, 111 full legislative days were consumed on rollcall votes alone.

During this same period, the House had 725 quorum calls. Figuring an average call at 22 minutes, the House used 69 legislative days on this activity.

Thus a total of 180 legislative days were spent on rollcalls and quorum calls over a 6-year period. In terms of a 5-day week, House Members spent more than 8 months just responding when their names were called.

And what of costs?

During the 88th Congress the House was in session for 334 days. More than 2 months—68 legislative days, to be exact—of our time was consumed with rollcalls and quorum calls. Computed from fiscal 1965 legislative appropriations, the cost of each daily session was slightly more than $64,000.

Thus, $4.4 million was spent on rollcalls and quorum calls during the 88th Congress alone. It cost each of our constituencies $10,000 for us to respond to our names.

Surely, in view of the President's pledge to provide increased economy in government, in view of the House's responsibility to insure that the American taxpayer gets a dollar of value for every dollar spent, it is incumbent upon us to prove that economy begins at home. How better can we show this than by increasing the efficiency of legislative procedures?

With electric voting machines, rollcalls could be disposed of in a matter of 10 to 12 minutes—including sufficient time for Members to arrive on the floor—saving a full half-hour on every call. Members would have more time to attend to constituent problems, more time for committee work, more time to discuss and debate the great issues which come before us.

The mounting volume of bills and resolutions introduced each session—more than 15,000 in the 88th—demands that Congress seek more rapid and efficient methods of disposing of its business.

The Senate is having similar problems and the distinguished majority whip is conducting his own personal campaign to have electric voting devices installed. He has been quoted as saying, "Why should the Senate waste all that time?" I feel I must ask the same question of the House.

The idea of electrical voting is, of course, not novel. Thomas Edison first developed such a system in response to what he felt then to be a necessity. Literally scores of bills incorporating the same idea were introduced in the 63d, 64th, 75th, and 77th Congresses, and every Congress from the 79th to the 88th. In fact, exactly a half century ago a House subcommittee presented a favorable report on the matter. It was the majority view that a "system can be adopted which will save time, encourage the regular attendance of Members and insure absolute accuracy in registering and recording the votes of Members * * *."

Support for the proposal was registered before a joint congressional committee in 1945, a Senate committee in 1948, and another Senate committee in 1951. The proposal has been supported by the CIO, the League of Women Voters, and the National Planning Association.

Since 1916, many State legislatures have had electrical rollcall systems installed in their chambers. As a member of the California Assembly for 4 years, I, and many of my colleagues in the State's congressional delegation, used such a system. It served us well.

It has served other lawmaking bodies equally well. The State legislatures of Alabama, Arkansas, Florida, Illinois, Indiana, Iowa, Louisiana, Maryland, Michigan, Minnesota, Mississippi, Nebraska, New Jersey, North Dakota, Ohio, Tennessee, Virginia, Washington, West Virginia, and Wisconsin have found their electrical rollcall systems satisfactory from all points of view.

The following are typical comments from legislators who have used such systems:

"It is worth at least $100,000 a year to the people of Virginia * * * it saves time, it is accurate, and it is attractive. If the system were installed in the Congress, it could do twice as much work in half the time and save the Nation millions of dollars."

Another Virginia delegate says "it enables us to dispose of the calendar in about one-fourth of the time that was used prior to its installation."

A North Dakota assemblyman reports that "every member was more than pleased with the machine. As a matter of fact, it is worth 10 times what it cost the state."

Another State legislator says that he likes "the fact that a member's vote on any question is public and open from the time it is cast. The only question in my mind is how other legislative bodies, including our Congress, gets along without this excellent machine."

A New Jersey assemblyman calls it a "great timesaving device and it eliminates the monotony of interminable rollcalls."

From another legislator: "I believe that it would take at least 120 days under the old rollcall system to carry out the work which we now do in 50 days under the electric rollcall system."

These are but a few of many individual endorsements for electric voting machines. I am sure that those of us who have served in State legislatures where the system is in use can give additional testimony of support.

On an international scale the system has won acceptance in the United Nations. A special U.N. committee charged with improving General Assembly procedure visited the New Jersey Legislature, spent several hours inspecting and discussing the system, and returned to New York fired with enthusiasm As a result the General Assembly voted 51 to 10 to install an electric voting mechanism, and this was completed several months ago.

In addition to saving time and money, there is another important advantage, immeasurable but significant, which would accrue to the Congress with installation of an automatic voting device. Each year tens of thousands of American children and adults, and foreigners too, visit Washington to view the greatest representative assembly in the world. Unfortunately, too many of them go home unimpressed—and often disappointed—with what they see.

Why?

In large measure because they are subjected to the dull drone of a dragged-out oral rollcall.

There can be no question that visible and instantaneous results of electrical voting would sharpen visitor interest in legislation under discussion, and help dispel the myth that our membership is composed of 435 old men and women who are still nodding their way through the 19th century.

In my judgment an electric rollcall device would—rightly, and essentially—also become a tool of the deliberative process of the House.

I think most of our colleagues would agree that, under the excuse of saving time by dispensing with rollcalls, many measures are accepted and rejected through procedures which avoid recording how each Member voted. Installation of an electrical voting machine would discourage this practice and promote more record votes. In my opinion this is something strongly to be desired.

With vital legislative matters more subject to record votes, it can be expected that more than a handful of Members would be present on the floor during debate. Decisions heretofore made only by a minority would become more representative of the total membership.

Presence of a majority, debate participation by a majority, and voting by a majority are bound to more truly reflect public sentiment. Knowing that their votes will be a matter of record, Members could certainly be expected to respond more readily to responsible constituent opinion, to acquire a congressional voting record that is more representative of the people, a record which more accurately conforms to the expressed beliefs and ideals of their communities. In my judgment, anonymous voting does not inspire the same responsiveness to public attitudes and the same realty to the common good.

Electrical voting, of course, means simultaneous voting.

To some, this may be politically disadvantageous.

However, these disadvantages are not wholly respectable.

A Member who may wait to learn how the vote is going before sounding his yea or nay will certainly be discomfited. So, too, the Member who may prefer to avoid putting his vote on record on measures which may be politically embarrassing. Anonymity is always a good aspirin for political headaches.

Simply put, the issue is: Shall we perpetuate the convenient anonymity of unrecorded voting at the expense of the people's right to know?

Shall we deny them easier access to our voting performance?

Shall we deny them their right to compare our stands on the issues with their needs and ideals?

Now, what of the arguments against the system?

There are those who allege that nothing would be accomplished by speeding up House voting because we generally finish our business before the Senate and then must wait for the other body to catch up.

However, I submit that any time saved from floor voting need not be spent in idle waiting. More time could be spent processing legislation in committee, into action on thousands of bills left unconsidered each year because of time limitations, into carrying out our responsibilities as the personal representative of constituents who have legitimate grievances and demands to make of the National Government.

There are those who will contend that the wisdom of hurrying legislative work is questionable. Agreed. But I hasten to point out that the objection wrongly assumes that any saving in time resulting from electrical voting necessarily detracts from the prudent deliberation called for in the consideration of bills. Decisionmaking on bills and amendments occurs in committee and during floor debates, not in the act of voting.

And there are those who might argue that committee work would suffer because electric voting will compel continuous attendance by Members. I do not find this an accurate appraisal of the congressional process. Save for two committees, meetings are usually held before the daily floor sessions commence. Also, Members would be given sufficient notice before an electric rollcall vote is actually taken. Under this arrangement, Members would not necessarily have to be in continuous attendance.

Congress through the years has responded to the need of doing its business in efficient fashion. I believe the time is again at hand for Congress to meet the demands of the day.

Where in 1860 there were only 400 bills to discuss, now we find no less than 15,000 legislative items to consider each year.

Where a century ago each Member had only 40,000 citizens to represent, today we have an average of 400,000 constituents to serve. The pressure on Congress from the vast industrial complex of American economic life, the proliferation of our society into a thousand fields, steadily increases rather than reduces the House's basic need to save time.

Beyond these considerations, however, my appeal today involves fundamental values which govern our democratic system. When confronted with the issue of adopting electrical voting in the United Nations, the Soviet Union fought the proposal. Communists believe that the system will strengthen the representative functions of the General Assembly and reduce the anonymity of unrecorded votes, an anonymity which allows the Soviet Union and its satellites some degree of protection from public censure.

Electrical voting, as I have tried to show, will inspire each Member of Congress to be more deliberate, more involved in floor debates and voting, and more conscious of the full import and significance of his vote.

Electrical voting will contribute to more responsible and more representative decisionmaking.

It will save millions of dollars.

It will afford every citizen of this country an opportunity to examine our voting records and judge us accordingly.

The historic achievement of the House of Representatives as a democratic institution is its capacity to reflect the views of the country accurately, rapidly, and responsibly, as well as the willingness of its Members to submit to the closest scrutiny by the people. My request today proceeds from this basic character of the House.

Thank you, Mr. Chairman.

STATEMENT OF HON. WINFIELD K. DENTON, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF INDIANA

Representative DENTON. Mr. Chairman and members of the committee, I can truly say that I am happy to appear before you today to express my views concerning the organization of Congress. As my testimony will all be geared toward a speeding up of certain legislative procedures and with the ultimate goal of conserving the most valuable time of the Members of Congress, I shall continue that goal by making this address as brief as possible.

Although there are many Members of Congress who have been here much longer than I, I feel that I have been here long enough to use personal expereince as one criterion for my recommendations to this committee, which are—

(1) That automatic vote recording and tabulating machines be installed in the House of Representatives; and

(2) That Congress enact a law calling for the primary election of all Members of Congress to take place on the same day.

I have introduced legislation which would accomplish both these things.

Let me substantiate my stand in this way: I am sure that you all have realized that the legislative process is taking longer and longer, and that you have more and more mail to answer, and that committee hearings are taking more and more time. I think the last two elections we had demonstrated that we had to campaign when we ought to have been in Congress. It is very hard to campaign, because you cannot set up meetings. You felt like you were acting surreptitiously in getting out to campaign, and people might say: "Why are you campaigning when you ought to be in Congress?" On the other hand, the man you are running against is out campaigning for a whole year. That means that the Members of Congress have about 2 or 3 or 4 weeks in which to campaign, and your opponent has a full year, which is not very fair.

And then our committee meetings take longer and longer. We have problems with our constituents—we have many more problems with constituents than we used to have.

And the newspapers say a good deal about our traveling, but I feel that on the two committees that I am a member of, it is absolutely impossible to perform my duties of these committees unless I travel more than I did before.

Is there any one of you who would not welcome more time to take care of your business? I know that I certainly would like to have a 28- or 30-hour day in order that I could spend more time on the various functions to which I must tend. I think I must have at least 20 visitors who come into my office every day. That is a great many more than it was when I first came here.

Well, let's look at what we do. During this

session of Congress, so far, there have been 236 rollcalls in the House of Representatives. And we can anticipate some 250 to 300 before the session is over. At any rate, of the 236 rollcalls, 117 were votes on pending legislation and 119 were quorum calls. Taking a figure which I feel is conservative I assigned a time consumption of 45 minutes for each vote and 30 minutes for each quorum call. The total amount of time spent on these calls was more than 147 hours.

Now, if we were using 20th century methods of automatic vote recording and tabulation, the actual time consumed could have been cut to approximately 4 hours instead of 147 hours.

Now, I know that one of the excuses given for not having automatic equipment in the House is that the calling of the roll gives Members time to get from their office, or wherever else they might be, to the floor. When I first came to Washington, I remember they said they did not want to have voting machines, because a man could be any place in Washington and, leaving when the rollcall started, he could get there in time. They could not do that with the traffic conditions as they are today. I know that I have tried that, and I know that it just does not work.

At any rate, we could allot a 15-minute waiting period between the time a vote is called for and the actual recording of the vote, or pushing of the buttons. If that were the case, I am sure that we could all get to the floor from our offices or from committee rooms. Now, if that had been the standard procedure during the session so far the total time consumed in those 236 rollcalls would still have been less than 80 hours.

Gentlemen, could you have used an additional 68 hours in your office or committee rooms this year? I get the 68 hours by taking 15 minutes off and giving you time to get there. I know that I could have used the 68 hours. Do you realize that that is, in terms of a 5-day workweek, better than a week and a half of 8-hour days? Or a full 14 days of normal House activity of approximately 5-hour sessions. This means about 3 weeks, or perhaps closer to 1 month that could be saved. I say to you that the time has come for us to take some action. In this complex world we live in today we cannot afford the luxury of leisurely calling the roll any longer. Time is too important and we should be putting it to better use.

Now, there is one more important aspect of automatic vote recording versus the rollcall method. And that is the impression we are making on the public.

Many of you will recall the days years ago when it was unusual to find visitors in the galleries. Today there is hardly a day but which there are more visitors than the galleries can hold. I hate to go past the galleries to one of my committee meetings which is right in back of the galleries. It is hard to get through, because so many people are waiting to get into the galleries of the House of Representatives.

And I honestly believe we are creating a bad impression on our constituents through the slow, time-consuming rollcalls and the impression of utter confusion that reigns at such times. I noticed yesterday—I thought about this—that the galleries were full, people were waiting to get in. The rollcall was going on, the Members were all walking around, and it was taking time and wasting time. I believe that the quick, efficient method of automatic vote recording would give the impression of an alert, modern, and capable body. That is the type of impression I think we should give. After all, we don't go back home to campaign in a horse and buggy; why use antiquated methods here?

Currently, automatic voting machinery is in use in the legislatures of more than 20 of our States. We have them in Indiana. Mr. Chairman, I served in the legislature some years ago, and I always had a bill in to have voting machines put in the legislature. We never had them while I was there. They have them now, and they tell me that they would not be without them today. I am sure if you put them in the House that you would never be without them. You would be as pleased with them as our State legislature is in the State of Indiana.

Surely visitors who have seen a State legislature and the efficient appearance given them through the use of these machines must be taken aback when they see the antiquated rollcall method being used here. And I imagine that at some time or other many of you have had errors made in your vote through the rollcall method. The automatic method, gentlemen, is completely accurate. And we should keep in mind, too, that of all States that have adopted these machines, none has abandoned them; again attesting to their efficiency.

A final point about voting machines, is that they would undoubtedly, through saving time, cut some of the extraneous costs of running the Congress and thereby save some money. I mean that while Congress is not in session, it does not cost as much as when it is in session, and by voting machines so far this year we would have saved 3 weeks' time, and probably before we get through it will be a whole month's time.

Now the other point I want to make is the waste of time caused by various States holding their primary elections on different days. There are some 30 different dates on which primary elections are held. By tradition and by consent, there are no rollcalls held on these days so that Members who must be absent to vote or to campaign will not be penalized. Normally, the day prior to such an election, and often the day following, are lost because of travel time.

Again, gentlemen, that is at least 31 valuable days lost to Congress; that is, in an election year.

Time which we could well put to good use, either to deliberate more fully matters before us, or to handle on the same day, we would lose at a maximum only 3 days every other year. I have been told that it was not within the constitutional power of the Congress to do this. I have looked up the law, and I have very little doubt that we have that right constitutionally. It is within the constitutional powers of Congress to set such a primary voting date and I urge that this committee recommend such action.

The authority is given in section 4 of article I of the Constitution which provides as follows:

"The Times, Places and Manner of Holding Elections for Senators and Representatives, shall be prescribed in each State by the Legislature thereof; but the Congress may at any time by Law make or alter such Regulations, except as to Places of chusing Senators."

Pursuant to the authority granted in the foregoing provision of the Constitution, Congress adopted the following provision found in the United States Code, title 2, section 7:

"The Tuesday next after the 1st Monday in November, in every even numbered year, is established as the day for the election, in each of the States, of Representatives to the Congress commencing on the 3d day of January next thereafter. This section shall not apply to any State that has not yet changed its days of election, and whose constitution must be amended in order to effect a change in the day of the election of State officers in said State. [Italics supplied.]"

Through the Constitution, Congress has decided that the general election will be held on a certain day. You can see how bad that would be if we did have general elections held on different days. Congress has taken care of that. Do they not have the same power in primary elections? I do not think there is any doubt about it. In the *Newberry* case, with which most of you are familiar, the Supreme Court so held, that this power did not extend to the Congress, and then a case came up from Louisiana, and the Court held that it did.

In *United States* v. *Classic* (313 U.S. 299), at page 1038 of the 61 Supreme Court Reporter, the Court held that primary elections were elections within the foregoing provision of the Constitution—it is a very lengthy discussion, but it is summed up this way:

"For we think that the authority of Congress, given by section 4, includes the authority to regulate primary elections when, as in this case, they are a step in the exercise by the people of their choice of representatives in Congress."

Gentlemen, as I said in the beginning, I want to conserve the time of the Members of Congress, so I shall go no further at this time. However, I will gladly answer any questions which you may wish to pose.

Cochairman MADDEN. Thank you, Congressman Denton, for your fine and concise statement. It will make, I am sure, a major contribution toward not only streamlining and consolidating the operations of the Congress, but it would be a great step in economy, too, so far as the cost of operating Congress is concerned. My figures indicate we waste a great deal of time on quorum calls and rollcalls—almost 70 days on rollcalls alone. Am I correct?

Representative DENTON. I think you are. I think you had it very conservatively. Of course, I have only figured about—well, 7 months. Of course, that year we ran 12 months; I think that is about right. You would have saved nearly 2 months that year, and in an average year you could save at least a month.

Cochairman MADDEN. Of course, the situation that you mentioned that the Members would object on account of the fact that they would have to come from their offices or committee rooms to answer a rollcall or a quorum call. Could there be some method worked out whereby the Members could get a warning call by a bell ringing—ringing the bell for 5 minutes before the possible rollcall?

Representative DENTON. I thought 15 minutes ought to be enough time for them to get over here. I noticed this morning that I came from my office in the Rayburn Building in less than 15 minutes. I left a quarter to 10, and I was here just a little before 10 o'clock.

Representative HECHLER. You have a subway.

Representative DENTON. I think we ought to install the subways for the other buildings. I think that would be another help in speeding up matters. That does save some time.

I think that if you did put in voting machines, that you should put in subways to the other two buildings.

Cochairman MADDEN. In connection with your recommendations on installing modern electrical equipment for quorum and roll calls, of course, I think the majority of the Congress would be happy to have that, and some solution can be worked out on that problem. A great number of the witnesses who have been before this committee have stated that there is a need for a change in congressional procedures.

Representative DENTON. Yes.

Cochairman MADDEN. Now, we have practically just taken office when we are only a year from our next primary.

Representative DENTON. Yes.

Additionally, I insert at this point in the RECORD the report of the Clerk of the House on electronic voting, dated April 1, 1969.

[A report prepard by the Clerk of the House for the Committee on House Administration]

ELECTRONIC VOTING FOR U.S. HOUSE OF REPRESENTATIVES

In a continuing effort to find ways of increasing the efficiency and improving those systems and procedures now existing in the House, research has been conducted to provide an automated approach to Member voting in the House Chamber. The purpose of this report is to provide a complete orientation of the various approaches and concepts related to electronic voting and offer a recommendation for implementation.

I. Steps taken by the Office of the Clerk

The problem of electronic voting has been intermittently looked at for over a year and a half. At given opportunities, members of the Clerk's staff have visited several State Capitols and viewed those systems in the State legislatures. The systems operating in State legislatures are not electronic but electrical-mechanical and were found to be limited and outdated. Many of them have been in operation, without modification, for over a quarter of a century.

The House should have a modern system that meets not only the voting needs, but all other unique requirements related to Floor activity.

To attain this goal, we have solicited Requests for Proposals (RFP) to the computer and electronics industry, to provide us with a realistic approach to a modern system of electronic voting consistent with the present and future needs of the House, without any, or a minimum degradation of the aesthetic environmental and traditional dignity of the House Chamber. A copy of the RFP is attached as enclosure No. 1.

For the past several weeks, we have reviewed the proposals submitted by industry. The results of this review are contained in this report.

II. Major points to consider

Before a definite approach to electronic voting is determined and a particular vendor is given the contract, a decision must be made with regard to the following procedural points:

A. Roll Call—(Alphabetical calling of names) The continuation of a roll call to take a vote or quorum and using an electronic system of recording the vote, will offer some advantages such as instant verification with displays, computer interface for quick retrieval and analysis, error reduction, but it will *not* reduce the voting time.

B. Simultaneous Vote—All Members present in the Chamber voting from individual voting stations will provide all the benefits of an automated system in addition to saving a substantial amount of time. With this approach the vote can be taken in *three minutes* rather than thirty.

C. Time Limit Vote—A compromise to A and B above would be the allowance of time, say 15 or 20 minutes, from the time the bells ring to the close of the vote. This approach will provide all the benefits of automation and reduce somewhat the time it takes presently to take a vote.

Note: B and C would require a change in the Rules.

D. Type of Display—With reference to the display of Members names and vote condition, there are two approaches, *full* and *partial*. A full display is one in which all 435 Members names are permanently fixed in the Chamber. A partial display is one that displays only 8 to 10 Members at any given time. That is, as a Member votes, his name and vote condition appear for a short time and "crawl" off the display as other Members names appear and vote. More detail will be given below. Consideration of A, B, and C above, will influence the type of display desired.

III. Major components of an electronic voting system

A. Input:

With a Roll Call—Should the vote be taken by calling the roll, the Clerk will input all vote conditions (yeas and nays and presents for quorum calls) into a single console or input terminal. As a Member calls out his vote, the Clerk will press his name and a yea or nay to record that Member's vote. The Clerk's action of inputting the yea or nay automatically results in the Member's name and vote condition to appear on a display, be stored in a computer or on machine readable media, appear on a hard copy for permanent record, and changes the running total of yeas and nays appearing on the display.

This console must be simple to operate in order to quickly respond to any vote changes, late voters and above all, eliminate to the maximum, the possibility of error.

It must have the capability to input all the statistics of the bill, such as the bill number, sponsor, short title and amendments.

A disadvantage of this type of input in addition to its being time consuming, is that we still have to rely on the Clerk's hearing the Member's response so it will be recorded properly. Of course, with an electronic voting system the Member can verify his vote instantly by viewing the display and bringing any corrections to the attention of the Clerk.

B. Simultaneous and Time Limit Vote—Two general approaches are individual voting stations and voting stations strategically located throughout the Chamber.

1. Individual voting stations could be: A three button "pad" fixed to each seat with the Member having to use a key or "personalized credit card" to open his station. The three buttons would be yea, nay, and present. When a button is depressed, it could illuminate in perhaps green (y), red (n), and white (p). If it is not desirable to carry a key or "credit card", all the voting stations could be opened and closed by a main switch at the Speaker's rostrum. This approach will require assigned seats for Members while voting.

2. Strategically located voting stations would be: "Touch-Tone" pads similar to the one on your telephone. Each Member would be assigned a three digit code by pressing those three digits on the pad then pressing yea, nay, or "zero" for present. The computer would identify the Member by his three digit code and record his vote.

The use of a station that accepts a specifically coded card by which the computer could identify the Member and record his vote. In this case, the Member would put in his card and press the button marked yea, nay, or present. Assigned seats would not be necessary with this input approach.

In either approach, when a Member presses a button to vote, that vote is automatically displayed next to his name in the Chamber, it is stored in the computer or on machine readable media, for retrieval and analysis, put on a hard copy for permanent record and the vote totals on the display boards are adjusted accordingly.

Vote security should be a consideration when studying an input approach.

C. Output—Output is broken down into three areas, display, hard copy, and computer storage.

1. *Display*—The purpose of a display is to insure the accuracy of vote recording by providing a real time visual check of the Clerk's input or that of the individual Member's vote input.

In addition, it provides descriptive information such as bill number, sponsor, short title, and the dynamic status of the vote to the Members, the press and others.

The types of displays are as follows:

a. Scoreboard—All 435 names appearing on at least eight large fixed panels on the east and west walls of the Gallery. This is the most difficult problem involved in a system. The displays should not upset the decor of the Chamber and should be so designed as to blend in with it.

The scoreboard uses 4 inch letters having the Member's names in three columns in each of four panels in the Gallery. Next to each Member's name will appear the condition of his vote, yea, nay, or present. These conditions can be in green (y), red (n), or white (p). Due to the large number of Members, the names would have to be split into Democrats on one side (Republican side) of the Chamber, and Republicans on the other (Democratic side), to insure adequate visibility with existing distances.

The scoreboard display is applicable for roll call voting or simultaneous voting.

A second and separate display is required with the scoreboard display to show the statistical data.

The balance of displays covered are partial displays. That is, they show only eight to ten Members names at any given time. Utilizing a crawl" effect, as a new name appears on the bottom line, all the other names move up, while the top name disappears. One part of the display contains the statistical data while the other part shows the names and vote conditions.

This approach is not very practical when used with a simultaneous vote, and is somewhat limited for roll call votes.

b. Window flaps—Panels containing rows and columns of windows. The letters are formed by "flaps" in these windows, which are computer generated.

c. Electro-magnetic light reflecting—The letters are formed by small reflector discs. When power is applied to a disc, its reflector side spins outward. The computer generates the proper discs to form the letters.

Visibility on both b and c is good, but the panels that contain them are not very attractive and would require a cover while not in use.

d. Cathode Ray Tube (CRT)—A CRT is similar to a TV screen. All the information appears on the screens which would be strategically placed throughout the Chamber. In addition, the installation of a number of TV monitors throughout the Chamber would depreciate the decor of the room.

e. Large Screen—A large screen on each of the north and south walls using high quality front throw projectors located in the attic of the Chamber. The quality of the letters is excellent even in a lighted room. All fixed and dynamic data would be projected on the screen.

Advantages of this system are that amendments to bills on the Floor could be typed into the Clerk's console and projected on the screen. The projectors can accept video from off the air, a TV camera or video tape recorder to project any picture material desired on the Floor.

2. *Hard Copy*—Permanent record of the vote, individual and total, will be made on a hard copy off a teleprinter, pre-printed punches paper or photo electric recorder, immediately after the vote is closed.

3. *Computer Storage*—The voting results would be stored in the computer for retrieval at anytime. This voting information can be analysed to provide any breakdown needed such as individual total vote, geographic totals, type of legislation totals and others.

D. Computer/Special Electronics—Make up the heart of the system.

IV. Manufacturers

The Clerk has on file a list of vendors with a summary of their approach and costs.

V. Cost

The costs of the system proposals range from $81,000.00 to $600,000.00.

VI. Recommendation

The importance of procuring the highest quality system which meets all our present needs and those anticipated needs of tomorrow, cannot be overstressed. A system with

optimum reliability, simplicity of operation and conformity to the aesthetic and traditional environment of the Chamber is necessary.

It is therefore recommended that a system be installed with individual voting stations for each Member, a full display board containing all names, a projector and screen display system for statistical data, running totals and the capability to display amendments immediately and a CRT input for the Clerk.

It is further recommended that a CRT, driven by the system, be placed in the offices of the Speaker, the Majority and Minority Leaders, the Whips, the Parliamentarian, the Clerk of the House, and others, as desired. This will allow these offices to follow closely all activities of the Floor from their offices and allow the Clerk, who would be responsible for the system, to monitor the condition of the system.

Although this approach involves more than one vendor, it is recommended that only one contractor be responsible for the installation of the whole system.

If this approach is acceptable, it is recommended that a small pilot system be built and demonstrated to the Committee. The pilot system should include a typical voting station and a display module. Also, the Committee should see a demonstration of the projector-screen system.

Adequate time should be allowed from award of contract to completion of the project to insure long dependable performance. A minimum of nine months should be considered.

Mr. BURTON of California. Mr. Chairman, will the gentleman yield?

Mr. LEGGETT. I yield to my colleague from California.

Mr. BURTON of California. Mr. Chairman, I rise to commend the gentleman from California, and to associate myself with his remarks, and to urge that this very important amendment be adopted.

The most vital single thing that any of us in this Congress need is time. This is going to free time for us to do the other important matters and the other important duties we have as Members of the Congress.

Mr. LEGGETT. I thank the gentleman for his support.

Mr. EVANS of Colorado. Mr. Chairman, will the gentleman yield?

Mr. LEGGETT. I yield to the gentleman from Colorado.

Mr. EVANS of Colorado. Mr. Chairman, I have great sympathy with what the gentleman is attempting to do here, but there is one aspect of this amendment which is not made clear. It is my understanding of the language of the amendment offered by the gentleman that the only way a record vote could be taken if the language of the gentleman is adopted would be by electronic means.

What would you do if the electronic device broke down?

First of all, is this true, and if so, what is the remedy if the electronic device should break down?

Mr. LEGGETT. I think the same procedure as we followed in the State legislature; we ask unanimous consent to manually record it in the record. That is all we do. I mean, this happens all the time. You do not have a deadlock. If you want to write in an amendment as we did in the White amendment to the Smith amendment, of course we could do that. I do not believe it is required, but certainly it would not deadlock the House. We could proceed under the manual method.

Mr. EVANS of Colorado. Mr. Chairman, will the gentleman yield further?

Mr. LEGGETT. I yield further to the gentleman from Colorado.

Mr. EVANS of Colorado. In a further colloquy on this question of the voting machine breaking down, I have had a conversation with the gentleman from New Jersey——

The CHAIRMAN. The time of the gentleman has expired.

(On request of Mr. WAGGONNER, and by unanimous consent, Mr. LEGGETT was allowed to proceed for 2 additional minutes.)

Mr. EVANS of Colorado. If the gentleman will yield further, in a discussion with the gentleman from New Jersey on this very issue, he raised a very interesting point, and I would like to submit it to you.

If the vote is taken, or is going to be taken, and the machine breaks down, the gentleman says the remedy for that is to ask unanimous consent to suspend the rules and take the vote in another fashion.

Suppose it is a vote that I do not agree with and I object. The only thing you can then do is to agree that the rules be suspended. But you could not vote on that because the device does not work. What would you do under those circumstances?

Mr. LEGGETT. I think probably 40 of the legislatures in the States that have automatic or mechanical or electrical machines in effect have been able, as you are going to have on this, they have been able to handle that particular situation.

Mr. EVANS of Colorado. If the gentleman will yield for one comment, I am not so much worried about the machine as I am about the provision of the language. I am very much in sympathy with it.

Mr. LEGGETT. Certainly, if the gentleman has a perfecting amendment that would accommodate, I would be pleased to accept it.

Mr. SCHWENGEL. Mr. Chairman, will the gentleman yield?

Mr. LEGGETT. I yield to the gentleman.

Mr. SCHWENGEL. Mr. Chairman, I have listened intently to the argument and the gentleman has presented a very persuasive case for electronic voting.

I am the ranking member on the subcommittee dealing with special House administration, and I can assure the gentleman that the House Administration Subcommittee has been working on this diligently.

We have had a staff that has probably spent several thousand man-hours in studying it already.

We have had a committee visit California particularly and other places to visit electronic voting.

So there is no question about our desire and our interest. But we also recognize the very serious problem you have here, and the fact that we have a larger number, and also some special problems.

Already it is going to limit time. Your amendment will be impractical because I think you have changed the word "may" to "shall"—and the date to next January; is that right?

Mr. LEGGETT. No; a year from January—18 months.

Mr. SCHWENGEL. That sounds a little more practical and even then that might stymie us but not too much. But I just want to assure the gentleman that the subcommittee is working on this and we are going to bring something here just as soon as we can.

Mr. REES. Mr. Chairman, I move to strike out the last word.

Mr. Chairman and members of the committee, I urge Members to vote for this amendment because I feel that if we do not mandate electronic voting, we are never going to get it. It is being studied. It was being studied last year. It was being studied the year before. It was being studied long before I was born. I think it has been studied to death.

I served in the California State Legislature for 8 years. I do not think our voting machine ever broke down more than once or twice and when it did it was for 15 or 20 minutes, because it got overheated. That voting machine was put in there when I was about 12 years old. It is a very good voting machine.

Those Members who have served in a legislative body of that type know that in one morning of voting there can be about 20 or 30 votes because the voting is on a lot of small bills. But here, if we have two or three votes in a day, it is a big issue. Sometimes we may go a week without a vote.

If the technology is not here, then what has happened to technology? We have a man on the moon. We have the SST's and we have all of these things. Can we not put a little board on the wall here? Can we not have a little box here where we can vote "yes" or "no" or "present"?

I think the technology is available and I feel that if we do not do something about it now and say that in 18 months we shall have electronic voting, it is going to be 18 years, and maybe 20 years, and maybe 50 years before we ever get around to doing it again.

I am glad that the committee went to California and studied the problem. They could have asked about 10 of us who served in that legislature for our advice and experience, because we have used the system.

I think the only way is to really mandate this and vote for the Leggett amendment so that we have a target date of 18 months, and we can put everything in, and we can worry about the esthetics and everything else. But in 18 months we can have electronic voting.

Mr. Chairman, I urge an "aye" vote on the amendment.

Mr. HECHLER of West Virginia. Mr. Chairman, will the gentleman yield?

Mr. REES. I yield to the gentleman from West Virginia.

Mr. HECHLER of West Virginia. I support what the gentleman from California is saying. I think the only way that this can be attained is to do it and to mandate it. I, therefore, plan to sup-

port the Leggett amendment. I have been officially informed that 37 out of the 50 State legislatures now have electronic voting. I repeat, can we not in Congress be at least as up to date as 37 out of the 50 State legislatures? I think we can do it. I hope the Leggett amendment is supported and adopted.

Mr. GUDE. Mr. Chairman, will the gentleman yield?

Mr. REES. I yield to the gentleman from Maryland.

Mr. GUDE. I merely wish to support the comments of the gentleman from California on the Leggett amendment. The gentleman spoke of the members of the committee having gone to California to study the equipment there. I point out that we have electronic voting in Annapolis and it works perfectly. I hope the amendment will be adopted.

Mr. STEIGER of Arizona. Mr. Chairman, will the gentleman yield?

Mr. REES. I yield to the gentleman from Arizona.

Mr. STEIGER of Arizona. I thank the gentleman. Is it the gentleman's understanding that the 18-month time prescribed by the Leggett amendment to the McClory amendment would preclude an earlier installation than 18 months? Is there a technological barrier?

Mr. REES. I believe the Leggett amendment states "shall be installed" by X date, and X date would be the beginning of the second session of the next Congress.

Mr. WHITE. Mr. Chairman, will the gentleman yield?

Mr. REES. I yield to the gentleman from Texas.

Mr. WHITE. Perhaps the point about which I shall speak has been covered before. I observe that the McClory amendment, as proposed to be amended, states in essence that the negatives and the affirmatives shall be recorded, and those voting "present." We presently have a system whereby those present can also be recorded. We have a negative vote, an affirmative vote, and we have a category of "present," not "or." I wanted to point out that deficiency in the language.

Mr. REES. There may be minor deficiencies. Remember that these are amendments to the House Rules. If we find a deficiency in the House Rules, we can bring a resolution before the Rules Committee and have it on the floor practically the same day.

Mr. WHITE. All you would do would be to place those who wanted to be recorded as "present" among those also recorded?

Mr. REES. Yes.

Mr. WAGGONNER. Mr. Chairman, I rise in opposition to the amendment and move to strike the requisite number of words.

Mr. Chairman, I believe that anyone who has been around here for awhile will realize that what the gentleman who just preceded me says we can do cannot be done, or else we would not have this proposed reform package of rules here today under the circumstances that we do.

Let us get one thing in proper perspective. Nobody has been studying, except in the 91st Congress, anything having to do with an electronic voting device.

Let us get some other things in proper perspective. All the voting devices which exist in every one of the State legislatures are either electrical or mechanical. None of them are electronic. The Committee has been working just in the 91st Congress.

What we have just done in the previous amendment was to adopt an amendment which provides a record vote, utilizing either of two alternative methods in recording teller votes in the Committee of the Whole. What we are talking about now has nothing whatever to do with the functions of the House in the Committee of the Whole. What we are talking about now has to do with the operation of the House and the recording of votes when we are in the Whole House out of Committee.

Let us devise something that can work in both places. Let us meld the two. Let us have a little bit of opportunity to provide something that will work in the Committee of the Whole and in the Whole House. Do not be swayed by the fallacious argument that you can go to the Rules Committee and bring back a rules change almost the same day. You know it cannot be done. It never has been done and it never will be done. The Committee on House Administration has been working just in this Congress. The Committee on House Administration is going to bring back some proposals, some recommendations to this Congress.

I want to tell you what we found out. I did not go, but some of the committee went to California and to Washington State. They told me that the legislators out there told them that there was more hanky-panky with the voting devices out there than we have with our system. There are two criticisms of what we are doing: We use too much time, and sometimes there is some hanky-panky. You cannot eliminate either problem but you can reduce them to a minimum.

We have to be practical. We have to think about a system that will work. We must be realistic.

How many Democrats are in the House of Representatives today? It was 244, I believe—before we lost our esteemed colleague from Ohio, tragically enough, last night.

How many seats are there on this side of the aisle? There are 224. And there are 224 over there.

What sort of system will we use? We do not have assigned seats so we cannot have individual stations. We will develop one that will work, after we give it proper study? We have a mandate from the Congress, I believe, to provide a recommendation. We can proceed to do it under the language of the McClory amendment. We can dovetail that with what was proposed and adopted here today in the O'Neill of Massachusetts-Gubser amendment.

If the Members want something that will work, and will be better for this Congress, just give us an opportunity to put it all together. I suggest it would be far better for us today to reject the Leggett substitute for the McClory amendment and to go ahead with the McClory amendment, and let us proceed, in due time and with haste.

Mr. ROBERTS. Mr. Chairman, will the gentleman yield?

Mr. WAGGONNER. I am happy to yield to the gentleman from Texas.

Mr. ROBERTS. I thank the gentleman for yielding. The proposer of the amendment stated that it would give 15 minutes' time, and it would take 2 or 3 minutes to get the total. That is 18 minutes.

Mr. WAGGONNER. Let me say that there is nothing in the amendment which has to do with time.

Mr. ROBERTS. It takes 27 minutes now. That means at the most it would save 9 minutes. On 100 votes, saving 9 minutes for each, that is 900 minutes a year, at a cost of $200 million. I believe we could wait until we can get a machine to do the job.

Mr. McCLORY. Mr. Chairman, will the gentleman yield?

Mr. WAGGONNER. I yield to the gentleman from Illinois (Mr. McCLORY)

Mr. McCLORY. I thank the gentleman for yielding and for his expression of support. It seems to me that the gentleman's argument is very valid.

Is it not true that if we adopt an electronic method of recording votes on rollcall votes and quorum calls, we will need detailed changes in the rules in order to accommodate ourselves to this alternative system that would be developed?

Mr. WAGGONNER. There is no question about it. Everything we are doing here today is going to project some other rules changes.

Mr. LEGGETT. Mr. Chairman, will the gentleman yield?

Mr. WAGGONNER. I am happy to yield to the gentleman from California.

Mr. LEGGETT. I compliment the gentleman for the good work he is doing with his Mechanical Data Processing Subcommittee. I presume the reason why we have not gotten through the electronic rollcall recommendations is that the gentleman has been spending so much time with the data processing procedures up to now during the 91st Congress.

I am pleased to have the assurance of the gentleman that this committee, and the subcommittee of which he is chairman, will make recommendations during this Congress. With that in mind, I believe I will take his assurance. I know he is doing good work. He has several subcontracts out now for data processing.

I rely on that, and I am willing to withdraw my amendment to the McClory amendment at this time.

Mr. Chairman, I ask unanimous consent to do so.

The CHAIRMAN. Is there objection to the request of the gentleman from California?

Mr. JACOBS. Mr. Chairman, I object.

The CHAIRMAN. Objection is heard.

Mr. PODELL. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, when I rose on the floor a moment ago, I asked about changing

the wording in the McClory amendment from the word "may" to the word "shall" because I was so very much interested in bringing about a mandate on electronic voting to the House, and I thought that language was necessary and important.

As the debate has developed, a number of things did come to my mind, as well brought out by the chairman of the subcommittee, the gentleman from Louisiana (Mr. WAGGONNER). We have spent many, many hours of intense work on the question of electronic voting and on the question of mechanical voting. We did go to California.

I have seen electronic voting in New York State, in the Empire State. About 4 years ago in New York State we installed an electronic voting system.

I can tell the Members something they do not know. It has not been working. It is not working to this day, because the system under which the State uses the electronic voting is wrong. I do not believe we ought to bog ourselves down with a mandated kind of system.

As to the system in California, the gentleman from California (Mr. REES) might be well informed. That system has been criticized generally by the members of the legislature out there as being a means for members to play, as they call it, Russian roulette with the results.

There is a problem because the tote board would give individuals an opportunity to change their vote back and forth and before you knew it votes began switching until the Speaker finally banged his gavel down.

Mr. MILLER of California. Will the gentleman yield?

Mr. PODELL. I yield to the gentleman.

Mr. MILLER of California. So that credit will be given where credit is due, this system used in the California Legislature—and I was there 2 years after it was installed, preceding Mr. REES by a few years—was adopted from the system invented and installed in the Virginia Legislature.

Mr. PODELL. I thank the gentleman from California.

I would like to say this, and then I will be glad to yield. I think there are a number of problems with voting procedures, as we have seen in various States of the Union. I do think these problems can be and will be overcome. I certainly believe, however, that there are many questions such as the length of time during which you will be required to vote, or the matter of identification of the individual voting, or who votes for whom and whose card goes into the slot in the voting system, and so forth. So I take the position that the amendment introduced by the gentleman from Illinois (Mr. MCCLORY) in its present form is the better of the two. I think it should be adopted in its present state, and if there are any changes, we can subsequently do that by amending the rules.

Mr. HECHLER of West Virginia. Mr. Chairman, will the gentleman yield?

Mr. PODELL. I yield to the gentleman from West Virginia.

Mr. HECHLER of West Virginia. I respect the gentleman from New York's judgment. I would like to ask him this question: Is not 18 months enough of a period of time to work out any possible bugs in this system? That is all the amendment offered by the gentleman from California (Mr. LEGGETT), does. It allows 18 months. It seems to me that is certainly a long enough period to work out the necessary details in order that we have an effective and workable system which we can definitely install rather than making this permissive and having it lost in the shuffle.

Mr. PODELL. The amendment offered by the gentleman from California provides for electronic voting. You may have a difference between electronic voting as brought out by the gentleman from Louisiana (Mr. WAGGONNER) and mechanical voting and electronic voting. I have never seen an electronic voting system as it is supposedly envisioned and in operation as yet with a computer take out of the result for an immediate result, which we hope to have here. Whether or not this is better than the voting system or procedures now used in many of the States we do not know. I think we do require the time. I certainly feel we should not be mandated by anyone here.

Mr. HOWARD. Mr. Chairman, I move to strike the last word.

Mr. Chairman, although we may be in favor of electric voting, we cannot vote for this amendment this afternoon because it has one loophole that has been discussed and which must be cleared up. One person can prevent the House from voting and close the House down at any time. If an amendment is to be voted upon or a final passage vote is to occur and the electronic mechanism breaks down, then the only alternative is to ask unanimous consent that we vote orally or manually. If I thought the amendment would pass and I were against the amendment, I would stand up and object to that unanimous-consent request, at which time the chairman of the committee would then move that we vote manually or orally. That can be voted on by a voice vote or a division vote or a teller vote. When we just passed an amendment for the recording of teller votes, Mr. O'NEILL stated under his provision that could be and probably will be done electronically. So we will be in a position of trying to have an electronic teller vote on a machine that does not work on a motion that we vote manually because the electronic machinery is out of order.

Mr. MCCLORY. Will the gentleman yield?

Mr. HOWARD. I am happy to yield to the gentleman.

Mr. MCCLORY. If the gentleman is talking about my amendment, my amendment provides an alternative or additional method of recording votes on quorum calls and rollcall votes and would still leave the existing rule XV the way it is in case the Speaker wanted to have the rollcall that way.

It also, of course, leaves us with the alternative that we may want to record those who want to vote "present" in the present form and also with reference to pairs under the existing system. So, we are merely providing an additional method to the existing system for quorum calls and record rollcall votes by employing the proposed time-saving device of an electronic system for recording such votes and attendance.

Mr. HOWARD. If a Member wishes an electronic vote and wishes to call for it and the mechanism is not working, then how is that person to be deprived of having the right to vote the way he wishes—not the substantial number that you need to rise for that vote?

Mr. BURTON of California. Mr. Chairman, few Members have worked any harder than our colleague in the well, the gentleman from New Jersey, in improving the rules of the House.

I would submit that the issue before the House is a very simple one and that is this: Do we not want to make it perfectly clear that we will require some kind of automatic voting? If that does prevail, I am sure we will have no difficulty within the time frame spelled out in the amendment which goes through calendar year 1971 to effect this procedure.

I am sure that collectively we will have no difficulty ironing out any wrinkles, real or imaginary, in the basic thrust of the amendment which is to make it clear, first, that this procedure be required for the recording of votes; and, second, that it be clear that it is done within the time frame, to wit, sometime before the beginning of the second session of the 92d Congress. That is the issue before us. Whether or not there may or may not be some minor inadequacies in the thrust of the amendment, I am sure if the amendment is adopted this House will direct its will sometime during the next year and a half to perfect that omission.

Mr. HOWARD. I will state to the gentleman from California that should such an occasion arise this will come before the Rules Committee. Would it be the intent of the Rules Committee, if it finds itself in this kind of a bind, to have a resolution brought before the House so that we would not be in a position of one person objecting to a unanimous-consent request that the Committee would have to rise no matter what time of day it is or merely whether he was invited down to the White House to have his picture made for campaign purposes?

Mr. SISK. If the gentleman will yield, I am not clear as to just what the question is that the gentleman has directed to me.

Mr. BURTON of California. Mr. Chairman, will the gentleman yield?

Mr. HOWARD. Yes, I yield further to the gentleman from California.

Mr. BURTON of California. I will state to the gentleman from California (Mr. SISK) that the gentleman from New Jersey (Mr. HOWARD) wants to know that if this amendment is adopted requiring some kind of mechanical procedure by the second session of the 92d Congress, and the Rules Committee finds out that it is possible for one man to absolutely stop the House from voting on a matter, would the Rules Committee not bring to the floor between now and that time legislation to deal with that specific problem?

Mr. SISK. Mr. Chairman, if the gentleman will yield, let me say that I am only one member of the Committee on Rules. I would assume that if we have passed a bill that got us into a trap, I am sure the Rules Committee would take action in an effort to correct it.

Mr. SCHWENGEL. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I want to take this time to particularly commend those who are interested in what the Committee on House Administration is working on. We have been working diligently not only on this question but on a program of data processing, information retrieval system and an evaluation system.

The argument presented by the gentleman from California (Mr. LEGGETT) was a persuasive argument for the system and this gives great encouragement to the committee. We are just as interested in bringing something to this House as soon as possible as you are.

However, we recognize, as has already been indicated, that there are special problems relating to this situation, and whatever we have we want it to be the very best, the most accurate, and the most reliable.

Second, we are working on some other matters, as the members of the subcommittee know, and as the gentleman from New York (Mr. PODELL) knows very well because he has been coming to this study group with the task force, that would be far more valuable to us than even electronic voting—although that issue has very high priority—in order to properly coordinate the program and the ideas we have in mind, to properly equip the House with information that is available to them, but through data processing, through evaluation systems and retrieval systems, we have got to have some time to coordinate a pretty big program for the House.

So I think it may prove to us a handicap in the interest of objectivity that the gentleman wants, and I am glad he has agreed to not pursue his amendment.

But I do want to assure the Committee that we are vitally interested, very interested, and if the amendment offered by the gentleman from Illinois (Mr. MCCLORY) passes, I am sure this will quicken the interest of the subcommittee. And I am quite sure from what I know now that we can have the kind of installation the gentleman calls for without sacrificing too much of the other programs we are working on that can also benefit the House and the country, as we all want to do, I am sure.

Mr. LEGGETT. Mr. Chairman, will the gentleman yield?

Mr. SCHWENGEL. I yield to the gentleman from California.

Mr. LEGGETT. Mr. Chairman, I want to commend the gentleman and the subcommittee for their vigorous efforts in this field.

Let me ask the gentleman a question: Does the gentleman think the development of a system whereby we could complete the vote in a 15-minute period is out of reason?

Mr. SCHWENGEL. No, I believe not, at this point, and I think maybe we can even have a shorter time than that.

Mr. LEGGETT. Likewise, does the gentleman believe that an 18-month development period is within reason, or is reasonable, and will result in a possible installation?

Mr. SCHWENGEL. It is not impossible, but then if we should run into special problems we might well have to sacrifice on certain things, and not be able to give you the kind of installation that we would want, and that we deserve to have, if we had a little more time, if it is necessary.

Mr. LEGGETT. I certainly hope that the committee takes early action on this matter, however, and further consideration where necessary.

Mr. SCHWENGEL. I can assure every Member of the House that the McClory amendment will quicken the interests of the committee, and spur the committee. We are working extra hard, I am sure, and hope that we will come up with one that is equal to the need here.

Mr. MCCLORY. Mr. Chairman, will the gentleman yield?

Mr. SCHWENGEL. I yield to the gentleman from Illinois.

Mr. MCCLORY. Mr. Chairman, I want to commend the gentleman from Iowa, and also I want to commend the gentleman from California (Mr. LEGGETT) and others who are supporting this position. Because I also hope we can get this electronic voting equipment in the earliest possible time. I do feel that the amendment that I have offered will be an expression on the part of the House in support of this principle of electronic voting in the full House.

I am hopeful that we can give this as a signal and as an expression of our desire to adopt this modern system at this time in this bill.

Mr. SCHWENGEL. Very briefly, Mr. Chairman, two points:

One, many of us, and many of the Members of the House, and probably most of them, have been interested in a more effective Congress, and this will help bring this about, I am sure. But also, second, we need to bring prestige back to the body. We can do this if we are able to take advantage of the tremendous collection of information in store for us in the Library of Congress that we cannot possibly use at this time adequately and efficiently, and effectively, because we do not have the data processing equipment to do it.

So, when this total program is developed you will see an involvement again of the equity that we envision in government, and we will not be dominated, directed and influenced so much by the executive, but more by the facts at hand, and what the situation reasonably calls for. I am glad to see this interest here, and I urge the adoption of the McClory amendment.

The CHAIRMAN. The time of the gentleman has expired.

Mr. HAYS. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I want to first compliment the gentleman from Louisiana, (Mr. WAGGONNER) and his committee, because I know that they have spent a great deal of time studying the whole matter of electronic aids for the House of Representatives.

You hear a lot of talk about electronic voting and mechanical voting and other kinds of voting. You hear talk of retrieval systems. That may be an unmixed blessing. Just imagine if we had a retrieval system and you could retrieve some of the speeches that have been made here today. What a disaster that would be.

I suppose that there has been more misinformation given out in the course of the debate on this bill than anything I have heard of in the long time I have been a Member of the House.

I do not see him on the floor and I hesitate to mention his name. But the very distinguished and learned gentleman from Iowa (Mr. MAYNE) got up and read a short dissertation, to which incidentally I did not make a point of order and it is in violation of at least two rules of the House, if you will read it, which gave an impression—and it was factually correct—but it gave an impression that the British Parliament was far ahead of us—150 years he said—because the British Parliament has had a recorded teller vote for 150 years.

Well, that is right. I probably know as much about the British Parliament as he does. They go into what they call a division lobby on both sides—with their backs to the press, I guess—and there is a record made of who goes into the division lobby. That is an improvement on our system—or is it?

There has never been a rollcall vote in the history of the British Parliament. Nobody has even been able to sit up in the gallery and hear the names called and hear somebody vote "aye" or "nay." If you cannot recognize the Members from the back as they walk into the division lobby, you are going to have to wait until the next day when the RECORD comes out, to find out who voted how.

Now this body is not perfect, and I am the first to admit it. I think there are a lot of things we ought to do, to do things better. But I am not sure that one of them is playing illuminated bingo with a board with a lot of lights on it—where people can change their votes—and where somebody can pass their key or their card or what-have-you to somebody else to vote for them when they are not here. This is done in my State, I am told. Whether that is an improvement or not, I do not think we ought to mandate it here today.

You know, I almost had a notion to make a point of order. I do not know if there are 100 people here or not. But if there are, there are not over 102 or 103. But I did make it. I did not want you to think I was so vain that I wanted a quorum here to hear my speech.

But where are all of the people who were desirous of working on this bill? Some of you stayed here, as I have done, but a lot of them are gone. It is only a few minutes until 6 o'clock. Some of the very people who were saying we should stay here until midnight I do not see around.

Mr. JACOBS. I am right here.

The CHAIRMAN. The Committee will be in order.

Mr. HAYS. You are just one and I said, "some of them." I would like to get in my speech the fact duly recorded that the

gentleman from Indiana (Mr. JACOBS) was one of the proponents in favor of staying here until midnight and he is on the floor—and he is awake.

But I just think this is a pretty poor way to legislate on something as important as this.

I am not on the subcommittee. I am not talking for myself. But we have some pretty dedicated people on both sides on that subcommittee and they are working and they are moving. I got a resolution through here one day, and let me say that, with about 30 Members on the floor.

I offered a resolution to appropriate a half million dollars for this committee to let contracts and to get under way. We got that through without a quorum and without a rollcall vote or anything else. But I submit to you, I think I was the only one who voted for it. Frankly, when they asked for the "ayes" and "noes," nobody voted "no"—so it carried.

But I want to say to you that I do not think we ought to be sitting here this afternoon with about 100 people present talking about whether or not we are going to use electronic voting equipment. I think we ought to wait for the committee to finish its study. They are going to come up with some recommendations. They have contracts let. They will do the job if we give them the chance.

Mr. CLEVELAND. Mr. Chairman, will the gentleman yield?

Mr. HAYS. I yield to the gentleman.

Mr. CLEVELAND. I think you have been a little bit hard on the Members of the House. You have talked about some of the Members having gone. But knowing of your great admiration for the fourth estate, I wonder why you also do not look up in the galleries and comment on the splendid attendance up there.

Mr. HAYS. I will tell you this. I saw a Member here today making a speech who was so busy looking at the gallery and turning away from the microphone that you could not hear what he was saying. I am very much aware of how many friends I have in the press gallery, and I do not really care whether my friends in the press gallery are few in number or not. They are going to say whatever they like to say. What I say is going to be in the CONGRESSIONAL RECORD, and it is not going to be revised because I do not do that sort of thing. I feel that I can stand here and say what I want to say, and if the grammer is bad, the fellow who is taking it down will correct that, and the rest of it can go. I do not want it sent to my office. I will not revise it. It will be in the RECORD tomorrow for any of my friends, either in the press gallery or on the floor who missed it, to read.

I am asking you again not to adopt these amendments tonight.

Mr. SISK. Mr. Chairman, I move to strike the last word.

The CHAIRMAN. The gentleman from California is recognized.

Mr. SISK. Mr. Chairman, I hope that we might reach some agreement on debate. I do not desire to cut anyone off.

Before I make a unanimous consent request—and I might say to my friends that you may be seated for a few minutes if you like—this is a question of considerable importance. I appreciate the comments of my colleague and friend from Louisiana (Mr. WAGGONNER), and also what the gentleman from Ohio (Mr. HAYS), has just said. Basically, they are talking about some of the very logic that your subcommittee used in determining not to get into some of these subjects at that time.

I might say to anyone who would consider enlightenment that our subcommittee did discuss with various people interested in electronic equipment this whole problem. I wish to express appreciation to Mr. WAGGONNER for the fact that he had his task force come up and meet with our subcommittee and discuss with us some of the things that they were doing in connection with a study of electronic equipment, the progress they were making and some of the ideas that we had in mind. Because of the work the Committee on House Administration was doing, particularly the Waggonner subcommittee, your subcommittee felt that it probably was inappropriate, and not timely at the time, to actually attempt to amend the rules to make provision for electronic voting at this time.

I find no particular objection to the amendment offered by the gentleman from Illinois (Mr. MCCLORY). As I understand, it makes permissive the use when and if the Committee on House Administration makes certain recommendations. I would assume that the Committee on Rules would probably have to provide for additions to the rules, maybe, to fit the occasion, but I would have to oppose the amendment offered by my friend and colleague from California because I think it would create a situation that could lead to grave consequences. Therefore, I urge that it be voted down.

Mr. HAYS. Mr. Chairman, will the gentleman yield?

Mr. SISK. I yield to the gentleman from Ohio.

Mr. HAYS. The gentleman from California (Mr. LEGGETT), has already tried to withdraw his amendment, which was objected to, but I think in fairness to him, after the explanation of the Committee on House Administration and Mr. WAGGONNER'S explanation, he is satisfied with the progress that is being made. Somebody seemed to have misunderstood what I said. I said that I was against being mandated, which did not mean that I was against the permissive amendment, but I am against being told that we have to operate under a deadline. It may turn out that we will beat the deadline in the House Administration Committee, and if we can come up with a foolproof system, we will present it. I hope the committee can. I am not against it if we can devise one that will work. But I want to be reasonably sure that it will work better than what we have now, and that the public will really have a better opportunity to know than they have now, because I still think, with people sitting here, saying yes or no, everybody in the House checking on them and seeing it is the proper person who is responding, it is pretty foolproof.

Mr. SISK. I thank the gentleman from Ohio for his remarks, with which I agree. I appreciate the efforts of the gentleman from California (Mr. LEGGETT).

Mr. Chairman, I ask unanimous consent that all debate on the original amendment and all amendments thereto close in 10 minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from California?

There was no objection.

The CHAIRMAN. Members will be recognized for approximately two-fifths of 1 minute each.

The Chair recognizes the gentleman from Iowa (Mr. GROSS).

Mr. GROSS. Thank you, Mr. Chairman. I yield back that one-fifth of 2 minutes.

The CHAIRMAN. The Chair recognizes the gentleman from Illinois (Mr. MCCLORY).

Mr. MCCLORY. Mr. Chairman, I appreciate the generous support of the Members. While I sponsored this amendment, it is an amendment which expresses the views and hopes of a great many Members.

I believe the amendment is an expression on the part of a great many Members, and not just the sponsor. By adopting this amendment we are giving clear evidence to the American public that the House of Representatives is determined to apply modern systems and techniques in the performance of our work as the Nation's lawmakers. Adoption of this amendment is, indeed, an historic event in the life of this great legislative body.

The CHAIRMAN. The Chair recognizes the gentleman from Idaho (Mr. MCCLURE).

Mr. MCCLURE. Mr. Chairman, I rise in support of the McClory amendment and in opposition to the Leggett amendment, and I yield back my remaining time.

The CHAIRMAN. The Chair recognizes the gentleman from West Virginia (Mr. HECHLER).

Mr. HECHLER of West Virginia. Mr. Chairman, I hope that the Leggett amendment will be adopted. If not, I hope that the McClory amendment will receive resounding support.

The CHAIRMAN. The Chair recognizes the gentleman from Virginia (Mr. DOWNING).

Mr. DOWNING. Mr. Chairman, I rise in opposition to both amendments. I do not believe we ought to do away with the present system.

The CHAIRMAN. The Chair recognizes the gentleman from Louisiana (Mr. WAGGONNER).

Mr. WAGGONNER. Mr. Chairman, I simply want to take these 24 seconds to express my appreciation to the gentleman from California (Mr. LEGGETT), for his understanding of what our Committee on House Administration is attempting to do to provide an updated system of voting. I appreciate his willingness, once he gained this understanding, to be willing to withdraw his amendment.

The CHAIRMAN. The Chair recognizes the gentleman from California (Mr. LEGGETT).

Mr. LEGGETT. Mr. Chairman, again I

commend the gentleman from Louisiana for his good work. I want to renew my request once again to withdraw my amendment. I believe it does very little good at this time to lose an amendment of this importance. I believe we have a commitment from the gentleman that we will move ahead in the subject area. That was my total motivation.

Mr. Chairman, I ask unanimous consent to withdraw my amendment.

The CHAIRMAN. Is there objection to the request of the gentleman from California?

There was no objection.

The CHAIRMAN. The Chair recognizes the gentleman from Indiana (Mr. JACOBS).

Mr. JACOBS. Mr. Chairman, I am very grateful for the generous allotment of time.

I might say the reason I objected to the unanimous consent request of the gentleman from California to withdraw his amendment is that the Members of the Special Automatic Voting Committee who have spoken here have all seemed to be against the idea.

That shakes me just a little bit.

The CHAIRMAN. The Chair recognizes the gentleman from Iowa (Mr. SCHWENGEL).

Mr. SCHWENGEL. Mr. Chairman, I wish to say "thank you" for the evidence of support the committee now has to move forward in this very important area.

For the benefit of the Californians, perhaps they would be interested in knowing that the firm having one of the most responsible contracts and important assignments, already granted by the committee, is based in California. That ought to give some assurance that we will do a thorough job.

The CHAIRMAN. The Chair recognizes the gentleman from Florida (Mr. FASCELL).

Mr. FASCELL. Mr. Chairman, I rise in support of the pending amendment. I interpret the legislative history to be that by this permission granted in the rules we support the efforts of the task force and of the committee to give us an updated voting system and all other systems they are now working on for the benefit of the Congress.

The CHAIRMAN. The Chair recognizes the gentleman from Washington (Mr. FOLEY).

Mr. FOLEY. Mr. Chairman, I rise in support of the McClory amendment. With this amendment and under the leadership of the House Administration Committee, we are taking a major step in modernizing the voting system in the House. This joins with the splendid reform taken earlier today through recording the teller voting system. If this bill accomplishes nothing else, it will go down in the history of the House as a monument to its foresight in meeting the challenges of the last third of the 20th century.

The CHAIRMAN. The Chair recognizes the gentleman from Florida (Mr. BENNETT).

Mr. BENNETT. Mr. Chairman, I am pleased to support the amendment providing for an electronic voting system in the U.S. House of Representatives.

My bill, H.R. 397, introduced on the first day of the 91st Congress, January 3, 1969, would provide for a device to record and count votes in the House of Representatives. I appeared before the House Administration Committee in support of the bill last year and I believe it should be included in the legislation before the House today.

One of the first bills I introduced when I came to Congress in 1949 was a bill for electronic voting procedures in the House. Having served in the Florida House of Representatives prior to World War II, I knew from experience that a system to mechanically count members' votes was practical, efficient and effective.

I have seen the report of the Clerk of the House on electronic voting, and believe it is a good report and it has carefully considered all of the problems and ramifications of the proposed system. My legislation would authorize the recommendations of the Clerk.

The chairman of the House Standards of Official Conduct Committee, Congressman MELVIN PRICE of Illinois, urged the House Administration Committee to approve an error-proof voting system for the House of Representatives. I applaud this recommendation and believe the House should have an electronic voting system.

Voting procedures used now in the House of Representatives are, in my opinion, antiquated, time consuming, and dangerous to our democracy. The recent case of irregularity in voting is a prime example of the possible threat to the continued public confidence and veracity of the House of Representatives. Mistakes in voting are noted frequently. The time of a rollcall lasts from 30 to 45 minutes. We are playing roulette with the most important gift of our democracy—a Representative's vote for his constituents and his country.

The space age demands a modern system for recording a Member's vote, not a horse and buggy method that is subject to error and misuse of the public trust.

I urge the House to approve an electronic voting system.

The CHAIRMAN. The Chair recognizes the gentleman from New York (Mr. BINGHAM).

Mr. BINGHAM. Mr. Chairman, I rise in support of the McClory amendment.

I quite understand why the gentleman from California (Mr. LEGGETT) withdrew his amendment under the circumstances, but I wish that we were in a position to adopt that amendment, because I think what this House needs and what is perhaps becoming clear today is the pressure of time to get this job done.

The CHAIRMAN. The Chair recognizes the gentleman from California (Mr. SISK), to close debate on the amendment.

Mr. SISK. Mr. Chairman, I ask for a vote on the amendment.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Illinois (Mr. MCCLORY).

The amendment was agreed to.

AMENDMENT OFFERED BY MR. THOMPSON OF GEORGIA

Mr. THOMPSON of Georgia. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. THOMPSON of Georgia: On page 39 after line 4 insert:

"SEC. —. On demand of any one Member prior to any record vote on any amendment, substitute or amendment thereto, wherein Members are individually recorded, there shall be distributed, to each Member present, a printed copy of the amendment or substitute being voted upon."

Mr. THOMPSON of Georgia. Mr. Chairman, this is the amendment about which I spoke some 2 hours ago when we were considering whether we were going to have recorded teller votes. In substance, what the amendment does is simply this: It provides that if there is to be a recorded vote, you have some 12 minutes to get over here and vote. During this time there will be printed a copy of the amendment and when you come through the door, rather than asking what is this all about because I have not been on the House floor and I do not know what is going on, and having someone try to tell you in one or two words what the complicated amendment is about, you will in effect be handed a copy of it. This is done in many State assemblies and senates throughout the United States. The time needed to print 400 or 450 copies is a very short period of time. In fact, when there is an amendment during the debate the amendment can be printed and be ready for distribution to the Members. I say this: While the public has a right to know, I think it is also clear that we have a right to know what we are voting on. This will give us the opportunity to know what we are voting on before we actually cast our vote on an amendment when it is a recorded teller vote.

Mr. HALL. Mr. Chairman, will the gentleman yield?

Mr. THOMPSON of Georgia. I yield to the gentleman from Missouri.

Mr. HALL. Mr. Chairman, in this day of data retrieval and electronic voting and many of the other things in which we have engaged ourselves today, would the gentleman visualize under his amendment that one could sit at his desk and have a miniature automatic data retrieval system on his desk with a facsimile printed out to show what is under consideration before the Congress and then push a button yea or nay without making a trek to the floor of Congress?

Mr. THOMPSON of Georgia. I do not know about not making a trek to the floor of Congress, but I do know this: When I was in the Georgia State Senate we had demonstrated an IBM typewriter which kept the bill constantly updated. The computer was located in California, but as an amendment was offered it was typed out so that we could see it in substance and if someone would add a word in the fourth line between the fifth and sixth words, it would type it out in that order so we would have an understanding of it.

I think there is no question in any student's mind but what this is certainly

feasible at this time. I would like to point out the fact that we are not only in the dilemma of trying to enforce teller votes on the one hand to make it possible for our constituents to know how we voted, but on the other hand to make it possible for the Members to better understand what they are voting upon. This is a part of the problem.

Mr. CELLER. Mr. Chairman, will the gentleman yield?

Mr. THOMPSON of Georgia. I yield to the gentleman from New York.

Mr. CELLER. I think there is considerable efficacy in the amendment besides the fact that it will enable the Members to know the import of the amendment. It would be of great merit and value to the floor manager of the bill and the chairmen who are handling it on the floor to know exactly what amendments are pending before the committee. Ofttimes when you floor manage a bill, suddenly an amendment is offered and in the excitement that prevails sometimes in the Committee it is very difficult to comprehend and understand the nuances of the amendment. In this way the chairman of the committee or a floor manager of the bill will be able to understand in advance of what he will do with reference to that amendment. If the amendment is to be opposed, he will then have some ammunition with which to oppose it. If the amendment is to be adopted in his opinion, he will have sufficient evidence to explain to the Members why the amendment should be adopted. In that sense, it would be of great value so that amendments, when offered, can properly and maturely be considered. Therefore, this amendment which has been offered by the distinguished gentleman who now has the floor should be adopted.

Mr. CLEVELAND. Mr. Chairman, will the gentleman yield?

Mr. THOMPSON of Georgia. I yield to the gentleman from New Hampshire.

Mr. CLEVELAND. Mr. Chairman, I support the gentleman's amendment. It accomplishes what I intended it to do with an amendment of my own earlier this afternoon, but it was voted down because of the possibility that the purpose of the amendment then pending might be defeated.

Mr. THOMPSON of Georgia. I thank the gentleman from New Hampshire for his contribution.

Mr. PODELL. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I well understand the amendment which has been offered by the gentleman from Georgia to afford the Members a certain amount of time within which they can vote. The time limitation in the amendment is 12 minutes. I am not so sure that this is the appropriate amount of time. I can only say to the gentleman that we envision, perhaps, even a more rapid method of voting in certain instances and under perhaps certain circumstances on quorum calls and so forth.

However, there is one additional problem that does present itself. The gentleman envisions an immediate printout every time a Member presses a button which would afford that Member immediate knowledge of the exact result?

Mr. THOMPSON of Georgia. Mr. Chairman, if the gentleman will yield, no; my amendment does not envision an immediate printout. I was asked whether or not something of this sort was within the realm of the technology we had available to us.

We had a demonstration, as I mentioned, in the Georgia State Senate along this line. What my amendment would do would, in effect, be when you offer an amendment you would have it printed and during the debate it would be distributed to the Members—400 or 500 hundred copies—very, very rapidly and printed very rapidly, and we would be speaking and voting on a certainty and not on what we think may be the question involved.

Mr. PODELL. In other words, the gentleman is not referring to the results, but merely to the actual amendment itself?

Mr. THOMPSON of Georgia. That is correct.

Mr. PODELL. I would like to say that I congratulate the gentleman on a very wonderful suggestion and recommendation and I certainly trust that when our computer-retrieval operation is in full force and effect such will be the case.

I certainly envision that this is entirely possible, but I recommend that the gentleman leave this to the discretion of the Committee on House Administration, who have been doing a tremendous amount of work in this area, and we hope to come out with perhaps the very thing that the gentleman does recommend.

As to whether it is possible, in an instantaneous printout, for 435 Members of the House, I do not know. I certainly would hope that that would be the case. But I would suggest that, rather than going into the various problems that would be presented, that we leave this to the Committee on House Administration, so that at the time if the system to be arrived at is not satisfactory perhaps we can improve upon it.

Mr. HECHLER of West Virginia. Mr. Chairman, will the gentleman yield?

Mr. PODELL. I yield to the gentleman from West Virginia.

Mr. HECHLER of West Virginia. Mr. Chairman, I agree with what the gentleman from New York (Mr. CELLER) has said, and I strongly support the amendment of the gentleman from Georgia. I think it makes a lot of sense, and if it makes sense I do not see why we should not adopt it now, without further delay.

I thank the gentleman for yielding.

Mr. SMITH of California. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, I would appreciate it if the gentleman from Georgia would get to the microphone, because my objection is because I do not understand what the language in this amendment said.

The gentleman showed something to me this morning, but I just received a copy of this just now, and I have not had a chance to study it.

The gentleman says that on demand of any one Member prior to a record vote. Is the gentleman talking about a teller record vote that we just passed, or is the gentleman talking about a record vote in the House on an amendment which we have adopted in the Committee of the Whole House, and when the Speaker says "Is there a separate vote demanded on any amendment?" And perhaps an amendment has a separate vote demanded, or possibly on two or three amendments. Is that what the gentleman means, or does the gentleman mean by a record vote, a teller vote?

Mr. THOMPSON of Georgia. Mr. Chairman, if the gentleman will yield, this is precisely the same wording that I showed the gentleman earlier.

It may be that perhaps we should insert the wording, and I would ask unanimous consent that this be done, that when meeting in the Committee of the Whole House on the State of the Union and a record vote is taken, on which individual Members are recorded, and reword the amendment to state, if the individual Member is recorded on the record vote.

I do not know whether it applies in the House or in the committee, so I would like to ask if the gentleman will yield for this purpose, and I would like to ask unanimous consent that this amendment be corrected to apply to the Committee of the Whole.

The CHAIRMAN. Is there objection to the request of the gentleman from Georgia?

There was no objection.

The CHAIRMAN. The Clerk will report the modified amendment.

PARLIAMENTARY INQUIRY

Mr. GROSS. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state his parliamentary inquiry.

Mr. GROSS. Mr. Chairman, if this amendment is read will the gentleman in the well lose his time on the floor?

The CHAIRMAN. The Chair would like to inform the gentleman from Iowa that this will not come out of the time of the distinguished gentleman from California.

The Clerk will report the modified amendment.

PARLIAMENTARY INQUIRY

Mr. HAYS. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state his parliamentary inquiry.

Mr. HAYS. Mr. Chairman, my parliamentary inquiry is this: If the unanimous consent of the gentleman from Georgia does not prove beyond any doubt that his amendment would not work if is were passed?

The CHAIRMAN. The Committee will be in order.

The Clerk will re-report the modified amendment offered by the gentleman from Georgia (Mr. THOMPSON).

AMENDMENT OFFERED BY MR. THOMPSON OF GEORGIA

The Clerk read as follows:

Amendment offered by Mr. THOMPSON of Georgia: On page 39, after line 4, insert (a new section):

"SEC.—. When the House is meeting in the Committee of the Whole on demand of

any one Member prior to any record vote on any amendment, substitute or amendment thereto, wherein Members are individually recorded, there shall be distributed to each Member present, a printed copy of the amendment or substitute being voted upon.

Mr. SMITH of California. Mr. Chairman, at least that clarifies to some extent what we are talking about.

This presents one of the problems that the subcommittee faced during the entire consideration of this legislation, and that was to get the appropriate wording in—the if's, but's, and's and commas, colons, semicolons, and all of the other necessary language in order to write it correctly to change the rules of the House.

Here is an amendment that has just been offered. It may be a good thing. But the only recorded vote that we actually will have in the Committee of the Whole will be a recorded vote that we just now passed in the Gubser-O'Neill amendment. That will not be effective until the legislation becomes law, if it does, on January 1971, unless the Committee on Rules acts in some other way prior to that time.

I agree with the gentleman from New York (Mr. CELLER) that it would be nice to have a copy of an amendment. I have been facing that problem during the consideration of this bill.

I do say in all seriousness, we should be careful before starting to add anything to the rules that has not been studied clearly and checked with the appropriate sources to see if it is written in accordance with the rules.

So I would suggest that this not be passed at this particular time.

Mr. HAYS. Mr. Chairman, will the gentleman yield?

Mr. SMITH of California. I yield to the gentleman.

Mr. HAYS. That is one of the problems, as I understand it, that the Subcommittee on Electronic and Mechanical Equipment is studying, whether or not there is a device available that will take an amendment, handwritten or otherwise, and make a copy of it and provide 450 printouts, and how quickly they can do it.

There has been a lot of argument around here that they want to speed up things. Suppose we find no machine that can do this in under 20 minutes? What do we do then? Are we going to go in recess for 20 minutes while they are being printed?

I think it would be better to leave it to Mr. WAGGONNER'S subcommittee to find out if this is practical. They want to use it if it is rather than to write again something in here that we will have to live with whether it works or not.

Mr. SMITH of California. If any one Member on any amendment or substitute amendment thereto wanted to, he could keep us all day before we start voting on three or four amendments and it is not going to help our situation.

Mr. GROSS. Mr. Chairman, will the gentleman yield ?

Mr. SMITH of California. I yield to the gentleman.

Mr. GROSS. I think in connection with this amendment, and the way some of these amendments are being adopted, we ought to explore the possibility of making a copy of the amendment available to each Member in his office so he would not have to leave his desk and then push a button so that he can vote over there. That way it would insure that he would not ever have to come to the floor of the House.

Mr. SMITH of California. I think that can be done electronically.

Mr. THOMPSON of Georgia. Mr. Chairman, will the gentleman yield?

Mr. SMITH of California. I yield to the gentleman.

Mr. THOMPSON of Georgia. The gentleman from Louisiana, I believe, the chairman of the subcommittee, and I do not see him on the floor at present, but I do have every confidence that if asked he will look into this matter. I, for one, resent bitterly as a Representative of some 500,000 people that I am called to vote on matters on the floor of the House, and when I step in here I do not have the time to know what the item is and I have to rely on somebody's verbal representation of it. I want a printed copy and, Mr. Chairman, I ask unanimous consent to withdraw the amendment with the understanding that the committee does have this under consideration.

The CHAIRMAN. Is there objection to the request of the gentleman from Georgia that his amendment be withdrawn?

There was no objection.

The CHAIRMAN. The Chair recognizes the gentleman from Wisconsin (Mr. REUSS).

Mr. HAYS. Mr. Chairman, a point of order.

The CHAIRMAN. The gentleman will state it.

Mr. HAYS. For the purpose of having a count, so we will know exactly how many Members we are legislating with, I make the point of order that a quorum is not present.

The CHAIRMAN. The Chair will count.

One hundred and four Members are present, a quorum.

AMENDMENT OFFERED BY MR. REUSS

Mr. REUSS. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. REUSS: On page 39, immediately following line 4, insert the following and renumber the subsequent sections accordingly:

"SELECTION OF CHAIRMAN OF HOUSE STANDING COMMITTEES

"SEC. 119 Clause 3 of rule X of the rules of the House of Representatives is amended to read as follows:

"'3. At the commencement of each Congress, the House shall elect as chairman of each standing committee one of the Members thereof, who need not be the Member with the longest consecutive service on the Committee; in the temporary absence of the Chairman the Member next in rank in the order named in the election of the committee, and so on, as often as the case shall happen, shall act as chairman; and in case of a permanent vacancy in the chairmanship of any such committee the House shall elect another chairman.'"

The CHAIRMAN. The gentleman from Wisconsin is recognized.

Mr. REUSS. Mr. Chairman, we come at last to the issue of seniority. The amendment before us, which is cosponsored by Mr. VANIK, Mr. REES, Mr. MACGREGOR, and others, would merely take existing rule X, which provides that the House shall select one member from each standing committee to be the committee chairman, and add the words "who need not be the member with the longest consecutive service on the committee."

The amendment would not prohibit the most senior member from being selected chairman. It recognizes that the expertise which comes from time is difficult for younger members to match. But it does say that length of service shall not be the sole and exclusive consideration in selecting committee chairmen. It does say that a wooden application of the seniority custom is a luxury we can no longer afford.

Nor does the amendment require any particular method of selecting chairmen. It leaves it to the parties, each of which, incidentally, has appointed a blue ribbon committee, the Julia Butler Hansen Committee and the Barber Conable Committee, to study the modalities of the seniority rule. If a party wishes the chairman to be selected by the members of the committee, that would be consistent with this amendment. If a party prefers that the chairman be selected by the party caucus, that would be consistent with the amendment.

The particular method of selecting chairmen ought, in my judgment, to be left to party practice and custom. But the principle of selection should not be solely an internal House party proposition.

The House of Representatives as a body represents the American people, and the American people have a right to know how the House as a body stands on the issue of seniority.

Mr. HAYS. Mr. Chairman, will the gentleman yield?

Mr. REUSS. I yield to the gentleman from Missouri.

Mr. HALL. I appreciate the gentleman's yielding. I believe he has answered my question; namely, is it not within the province of the conference or the caucus of any party, whatever it is called, to make these decisions concerning seniority within their own group meetings?

Mr. REUSS. That is the sense of this amendment. We simply say that seniority need not be the sole and exclusive consideration. The amendment leaves it to both the parties to work out the details and the modalities.

The authors of this amendment believe that congressional reform should include a look at the seniority system. We should not spend weeks on a congressional reorganization bill and neglect seniority. Let us take, therefore, this modest step.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. REUSS. I yield to the gentleman from Iowa.

Mr. GROSS. The gentleman in his amendment uses the phrase, "and so on." What is the meaning of "and so on"?

Mr. REUSS. The amendment adds only the words, "who need not be the Mem-

ber with the longest consecutive service on the committee." That is all there is to the amendment. It simply says that seniority is not the sole consideration.

Mr. FASCELL. Mr. Chairman, will the gentleman yield?

Mr. REUSS. I yield to the gentleman from Florida.

Mr. FASCELL. As a matter of fact, those words are the same words which are now in the rules dealing with the question of acting chairmen of committees, are they not; "and so on"?

Mr. REUSS. Yes. The words "and so on" are in the existing rule. I did not perpetrate them, and they do not occur in the amendment language I suggest.

Mr. GROSS. If the gentleman will yield further, here are some other words of art: "as the case shall happen." The words are "as the case shall happen." Do things just happen?

Mr. REUSS. That also is in the existing rule X. Not a word of that has been changed. I did not conceive it to be my function to clean up extraneous matter in the rule.

Mr. WALDIE. Mr. Chairman, will the gentleman yield?

Mr. REUSS. I yield to the gentleman from California.

Mr. WALDIE. Is it fair to assume that the purpose of the gentleman in suggesting this amendment is to indicate his own conviction, and to permit an opportunity for those who share that conviction to express themselves that the seniority system is not in the best interests of the organization of the House?

Mr. REUSS. That is correct. It is my own view that this body should select the ablest, the best, and the most just men as the chairmen of its committees, just as it exercises that power with respect to the Speaker of the House.

Mr. SMITH of Iowa. Mr. Chairman, will the gentleman yield?

Mr. REUSS. I yield to the gentleman from Iowa.

Mr. SMITH of Iowa. How does the gentleman change existing rules? There is nothing in the rule now which requires the use of seniority, is there?

Mr. REUSS. That is correct, but the amendment I propose would signal to both the parties that in their deliberations, whatever modalities they may select, they must not rely exclusively on seniority.

Mr. HECHLER of West Virginia. Mr. Chairman, I rise in support of the amendment.

Mr. Chairman, I have enjoyed many privileges in this House. I have profound respect for the Speaker of the House. I have profound respect for this legislative body.

While I was a professor of political science at several institutions, including Columbia College, Barnard College, Princeton University and Marshall University, I used to contend that the seniority system in Congress was a practical and workable system largely because there was no worthwhile alternative. The first year I came to the House of Representatives, in 1959, the freshman Congressmen were treated to a breakfast at the old Senate chamber and were addressed by the venerable Speaker of the House, the late and great Sam Rayburn, as well as the man who later became President of the United States and was at that time majority leader of the U.S. Senate, the Honorable Lyndon B. Johnson. Speaker Rayburn, either during his prepared remarks or in later informal remarks—I forget which—stated what I felt then was a truism, that we might not like the seniority system when we first came to Congress, but we would get to like it more and more the longer we served in Congress.

I have found just the opposite to be the fact. I am now serving my sixth term and have been nominated for a seventh term which I shall serve, God and the voters of the Fourth Congressional District of West Virginia willing. The Congress has been mighty good to me. I now serve as chairman of the Subcommittee on Advanced Research and Technology of the House Committee on Science and Astronautics. Yet the longer I serve in the Congress, the more evils I see in the seniority system, which puts a premium on those who can survive, election after election, regardless of their ability, their responsiveness to public attitudes, and their philosophy as it relates to the policies of their political party. Being a strong supporter of party responsibility, I feel that when a committee chairman can rule his own committee internally without due and full regard to all of the committee members, and when a committee chairman can defy his own political party's policy, then the seniority system shows its defects.

Although I agree that the caucuses of the two parties should devise any system they prefer for the selection of their committee chairman, it seems to me that the Reuss amendment raises high the standard that seniority need not be the only criterion by which a committee chairman is selected. The American public is entitled to know that we in the House of Representatives feel that no reorganization of this body is complete unless it tackles one of the central issues which disturbs the people—the seniority system in Congress.

As we proceed in this debate, it may be that other proposals will be offered which I will support. For the moment, I believe the amendment of the gentleman from Wisconsin (Mr. REUSS) is worthy of wide support, and I intend to support it.

SUBSTITUTE AMENDMENT OFFERED BY MR. SCHWENGEL FOR THE AMENDMENT OFFERED BY MR. REUSS

Mr. SCHWENGEL. Mr. Chairman, I offer a substitute amendment for the amendment offered by the gentleman from Wisconsin (Mr. REUSS).

The Clerk read as follows:

Amendment offered by Mr. SCHWENGEL as a substitute for the amendment offered by Mr. REUSS: On page 39, immediately following line 4, insert the following:

"ELECTION OF CHAIRMEN AND MINORITY LEADERS OF HOUSE STANDING COMMITTEES

"SEC. 120. Clause 3 of Rule X of the Rules of the House of Representatives is amended to read as follows:

"'3. (a) As soon as possible after the commencement of each Congress, the senior member of the majority party on each standing committee shall call an organization meeting of all the members of the committee for the purpose of electing the chairman of the committee and the minority leader for the committee.

"'(b) If an organization meeting of any committee has not been called as provided in paragraph (a) within thirty days after the commencement of the Congress, a majority of the members of such committee may call the organization meeting by notifying the Speaker in writing of their desire to hold such meeting. Upon receipt of any such notification the Speaker shall specify the time and place for the meeting and may designate any member of the committee to act as temporary chairman.

"'(c) The senior member of the majority party on the committee shall act as temporary chairman at any such organization meeting unless the Speaker designates the temporary chairman as provided in paragraph (b). A majority of the members of the committee who are members of the majority party, and a majority of the other members of the committee, shall be required to be present to constitute a quorum.

"'(d) The first order of business at any such organization meeting shall be the election of the chairman of the committee. The three most senior members of the committee who are members of the majority party shall be regarded as having been nominated for the office of chairman. Tellers shall be appointed by the temporary chairman, one from among the members of the committee who are members of the majority party and two from among the other members of the committee. Voting shall be confined to members of the majority party, and shall be by secret written ballot.

"'(e) After the chairman of the committee has been elected an installed, the next order of business shall be the election of a minority leader for the committee, which shall be accomplished in the same manner as in the case of the election of the chairman except that (1) the tellers shall be appointed by the chairman, two from among the members of the committee who are members of the majority party and one from among the other members of the committee, and (2) voting shall be confined to members of the committee who are not members of the majority party.

"'(f) In case of a tie vote for the office of chairman or minority leader at any organization meeting, a new vote shall be taken, and only those involved in such tie vote shall be eligible for election on the second ballot. In case of a tie vote between those eligible for election on such second ballot, a third vote shall be taken, and in case of a tie vote on such third ballot the senior member among those eligible shall be regarded as having been elected. If two or more of those still eligible have equal seniority, one of them shall be designated by the Speaker as the chairman of the committee (if the election is for the office of chairman) or designated by the minority leader of the House as the minority leader for the committee (if the election is for the office of minority leader).

"'(g) In the temporary absence of the chairman of any standing committee, or of the minority leader for such committee, the member from the same party who is highest in rank in the order named in the election of the committee, and so on, as often as the case shall happen, shall act as chairman or minority leader, as the case may be.

"'(h) In case a permanent vacancy shall occur in the office of chairman of a standing committee, or in the office of minority leader for such committee, another chairman or minority leader shall be elected at the next regular meeting of the committee. Such election shall be conducted in accordance with the provisions of paragraphs (d), (e), and (f) of this clause insofar as those provisions are applicable to an election involving the office in which the vacancy exists.'"

Mr. SCHWENGEL. Mr. Chairman, this amendment is a result of much study

and counsel with people of competency and embodies a principle we have recognized here for a long time, which is the principle of recognizing seniority. The amendment is necessarily long to take care of the problems that may arise. It is actually a pretty simple procedure. It provides that the minority and majority committee members will elect by secret ballot the chairman and ranking members of the committee from the three most senior members within the committee. This will assure that we will have men of experience and competency and will also assure us that we will deal adequately, I think, with some of the evils that have existed under the present system.

And, there have been some evils, as you know, and I can testify from personal experience as to that.

Mr. BURTON of California. Mr. Chairman, will the gentleman yield?

Mr. SCHWENGEL. I yield to the gentleman from California.

Mr. BURTON of California. Mr. Chairman, I listened carefully to the amendment of the gentleman from Iowa. Some of my colleagues have stated that this is not a perfect solution. I fully agree with that. But this I say to my colleagues: If we are going to see that the debate on the issue of seniority is to be meaningful, we are going to have a meaningful debate if we adopt the proposal of the gentleman from Iowa, because it is a departure from current practice. That will, then, no longer leave the entire burden up to those of us who want some change to come up with a perfect solution. We will merely have to come up with a solution, perhaps, a little more stringent when we adopt the rules again next January than the more modest proposal of the gentleman from Iowa.

So, therefore, I would urge my colleagues who have been saying they want to have some change in our rules to support this proposal, not because it is ideal, but because it alters the balance, the preponderance of the evidence and the weight of the evidence that is going to have to be sustained by the moving party to an entirely higher ground of debate.

Mr. Chairman, I am serving on the seniority committee on the House side. I am not sure but what the proposal does not carry within it more harm than the good it cures, but I am absolutely certain that the amendment which has been offered by the gentleman from Iowa that retains the integrity of both the parties in terms of their own deliberative process, retains the integrity of each of the committees, is a significant step forward, first, from what we have now; and, second, will assure that when both parties caucus when we meet in January they will have to come to grips with the seniority issue.

So for the reasons I have stated, not because this proposal is necessarily perfect, but merely because it is a long step forward, I would urge every Member on this floor who wants to have a meaningful opportunity to debate this question, to support the gentleman from Iowa.

Mr. SCHWENGEL. I thank the gentleman very much.

Mr. Chairman, I want to point out that at the present time we select our chairmen in a sort of arbitrary manner and as matters now stand it is possible for them to act virtually in a dictatorial manner as chairmen, although few usually do. I want to say, and I believe this to be true, that the vast majority of the ladies and gentlemen who are chairmen will continue to be chairmen because they are serving well. But they will have to be elected by the Members with whom they serve.

Now, Mr. Chairman, there will be exceptions and I am sure there would have been in the committee that I was assigned to as a member when I came here. The chairman of that committee came from a district that was safe, but you can check the record and find that he was absent 95 percent of the time. Also, under the present tradition the chairman selects the staff and the working force. In this instance we finally discovered that nine members of the staff never lived in the District of Columbia and only one ever came here for committee business.

Mr. BOLAND. Mr. Chairman, I want to express my support for the O'Neill-Gubser amendment to record how Members vote in teller votes taken in the Committee of the Whole. Such votes are in effect cloaked in secrecy: only a head count is taken; the people do not know how any individual Member voted. The only way a constitutent can tell how his Congressman voted—or whether he voted, for that matter—is through a long vigil peering over the rail of the visitors' galleries above the Chamber. Even then, the stream of Congressmen eddying through the center aisle is so confusing that anyone would find it hard to pick out individual Members. Such voting practices violate the democratic principles of American life, defying the people's right to know and eroding their confidence in the Congress.

The Committee of the Whole is itself a hoary anachronism. Granted, it hastens the legislative process by demanding a quorum of only 100 instead of the conventional 218. Granted still further, it saves time through limited debate and other parliamentary devices. But the outright ban on rollcall votes no longer serves any legitimate purpose. Created by Great Britain's Parliament centuries ago, Committee of the Whole voting procedures were designed to shield members against the King's revenge. In 1832, however, Parliament scrapped the secret teller vote when the throne's power had waned. Yet the U.S. House of Representatives—it had borrowed the Committee of the Whole from England in the late 18th century—still lovingly embraces the secret teller vote. We are lagging almost 150 years behind Great Britain in reforming Committee of the Whole procedures. It is time we caught up.

Teller votes in the Committee of the Whole are taken on legislative amendments of more than routine significance. Once the committee rises and reports legislation to the House, of course, any Member can demand a rollcall vote on an amendment accepted in committee. But defeated amendments—and the vast majority of amendments offered in the Committee of the Whole are defeated—are not so honored. The rules, in fact, explicitly bar rollcall votes on rejected amendments. And the people, therefore, simply do not know how their representatives vote on main key amendments each year.

Recording teller votes would abruptly end injustices like this. First—and most significantly—record teller votes would meet the public's right to know, the cornerstone of the democratic process. Second, they would encourage better attendance in Committee of the Whole sessions—attendance that often falls below half that recorded after perfunctory quorum calls. Third, it would bolster public confidence in the House as a representative body. Fourth, it would discourage committees from yielding to special interest provisions.

Arguments against the record teller vote—that it might delay legislation, for example, or that it might demand a Member's continuous presence on the House floor—can be rejected out of hand.

They are simply not valid. I trust the amendment offered by our colleagues (Mr. O'NEILL and Mr. GUBSER) will be adopted.

Objections to the bill as a whole, for that matter, are valid in only a few instances. The Legislative Reorganization Act of 1970 is the first measure of its kind to reach the House floor since 1946. The product of many years of experience and practice, the bill is designed to clear away much of the confusion and secrecy in the legislative branch of American Government.

Congress established the Joint Committee on the Organization of Congress in 1965. Senator Mike Monroney and Representative RAY MADDEN, cochairmen of the committee, filed a report proposing reorganization in the 90th Congress—a report that came to be the basis for S. 355 and H.R. 2594.

The Senate passed S. 355 in 1967, but the legislation was objectionable to the House, especially to Members who disliked its changes in committee jurisdiction.

In May 1970, H.R. 17654 was reported by the Rules Committee, the final product of a special subcommittee headed by Representative SISK.

This bill is the one on which we are to vote. This is not a narrow partisan issue. It is one on which we should stand, and vote, together.

I urge the bill's passage.

Mr. VANIK. Mr. Chairman, I am pleased to cosponsor the amendment offered by my distinguished colleague from Wisconsin (Mr. REUSS) to provide that the chairman of each standing committee need not be the Member with the longest consecutive service on the committee.

Ours is a Government of laws and not men. Congress should be governed by rules and not men.

The Constitution and the laws of the

land contemplate each Congress as a new and separate entity. Legislation does not carry over from one Congress to the other—neither should one Congress commit another on either seniority or rulemaking authority.

The rules which we adopt should be directed toward providing a sense of equality to those who serve only for a short time—whose contribution must be quickly made within the framework of their term.

Under the Constitution and the laws of the land, the most junior Congressman is presumed to be equal to the most senior. The rights of seniority are arbitrary. The rights of seniority are usurped at the expense of other Members.

Our purpose should be to give every Member of the 92d Congress the full measure of his rightful share of responsibility and authority. As a Member of a new Congress, he should have a right to select leaders and be considered for leadership and the making of rules.

The great majority of the Members of Congress are men who have served or who will serve less than four terms. Some of our great leaders have been developed through service and seniority, but we can never calculate how many we have lost or how many we have suppressed.

Many Members who serve for only a short time are brief in service not because they are not qualified, enterprising, or of good judgment. It may be that they lacked only the ability to compromise for survival—a process in aging and seniority which gradually tends to erode the idealism with which most Members start and which only a few can safeguard through seniority.

A new Member gets elected to this Congress with high hopes, with great expectations, with idealism, with dedication and high purpose.

Very suddenly after his arrival, he is appalled for he receives the prerequisites of his office and gradually begins to learn that he is not an equal Member of Congress. He is subordinate, he is less than others, he is junior.

He sees the power of leadership, the awesome power of committee chairmen, those—who decide in their own usurpation of authority—what bills shall be considered and when they shall be considered, and how. He sees klieg lights when his chairman and important witnesses appear, but he is never in them. He is in their shadow. When the time arrives for his important questions, the press is gone, the room is empty. His part comes after the curtain has been dropped.

He sees the fiefdoms of committee chairmen, subcommittee chairmen, men whose profundity stems from power rather than from wisdom. He sees the power of ranking committee members who are consulted while he is not. He sees the fiefdom of the powerful committees which he can never see in action because they are exclusive and secret to him.

He learns soon that some Members of his same Congress—equal Members to the body to which he has been elected—are cleared for secrets he does not share. That almost all of the business of some committees are total secrets to which he is not entitled. He learns that five or six men in a subcommittee can transfer the spending of billions of dollars under circumstances in which he is not informed.

After all of this, he is shocked by the sudden discovery of his insignificance. He awakens to learn that he is a nobody in the citadel, and he never comes to realize that he and the other nobodies in the Congress are indeed the great majority who have let the power drift and accrue in the hands of a few who have usurped it. The Congress itself, the world's greatest showcase of representative government, if shown inside out, would reveal itself as a process of questionable democracy where few have usurped the power which, indeed, belongs to the many.

It is not seniority alone that dwarfs the new Member. It is the custom which is not part of the law. It is these customs and traditions which are outside of the law and the Constitution, which have developed the Congress into an institution at least one and one-half generations behind the times it is intended to serve.

Mr. HECHLER of West Virginia. Mr. Chairman, I strongly support the amendment to eliminate secret voting in committee of the whole on teller votes, and I am proud to be a cosponsor of this amendment. "The public's right to know" is a phrase which has been frequently mentioned and best describes the effort which nearly 200 Members of this House are cosponsoring.

I am also very happy to note that electronic voting will be permissible in recording teller votes. I support the O'Hara amendment which makes this practice in order and will substantially speed up orderly processes in the House of Representatives.

Mr. Chairman, this is a very significant amendment on which we are voting this afternoon. For too many years, the Congress has lagged behind the State legislatures, and is certainly far behind the executive branch in its use of the most modern electronic equipment. The installation of electronic or other equipment for voting would save endless hours, help regularize the schedule of activities in the House, and make it easier for all Members to cope with the mounting work load in Congress. There is an expression in law "time is of the essence"; for a Congressman, time is our great limiting factor, and is the most precious commodity we possess. This reform will furnish us with that most valuable of all items which we find in such short supply: time.

Mr. BENNETT. Mr. Chairman, I hope to introduce an amendment to H.R. 17654, to provide that in all calls of the House the doors shall not be closed except when ordered by the Speaker.

It would read as follows:

On page 40, immediately following line 22, insert the following:

"CLOSING OF THE DOORS IN CALLS OF THE HOUSE

"SEC. 120. Clause 2 of rule XV of the Rules of the House of Representatives is amended by striking out ', and in all calls of the House the doors shall be closed, the names of the Members shall be called by the Clerk, and the absentees noted;' and inserting in lieu thereof ', and in all calls of the House the names of the Members shall be called by the Clerk, and the absentees noted, but the doors shall not be closed except when so ordered by the Speaker;".

Mr. Chairman, the rule requiring the closing of the doors was to prevent Members from leaving the floor to prevent the conduct of business. The actual effect of the rule at present is to make it difficult for a Member to enter the Chamber to become a part of the quorum. If the old rule is still sometime needed in the future, my amendment would allow the Speaker to order the doors closed in such a case.

Mr. SISK. Mr. Chairman, I move that the Committee do now rise.

The motion was agreed to.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. NATCHER, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 17654) to improve the operation of the legislative branch of the Federal Government, and for other purposes, had come to no resolution thereon.

GEN. LEW WALT PAYS FINAL TRIBUTE TO JIM G. LUCAS

(Mr. EDMONDSON asked and was given permission to address the House for 1 minute, to revise and extend his remarks and to include extraneous matter.)

Mr. EDMONDSON. Mr. Speaker, on July 23d memorial services were held at Gawler's in Washington for Jim G. Lucas, the Nation's best-known war correspondent.

Highlighting those services were the brief, eloquent remarks of General Lew Walt of the U.S. Marines, who "shared a foxhole" with Jim in Vietnam not long ago.

General Walt's remarks tell the story of Jim Lucas and of the Nation's loss in his death at 56. I believe every Member of this body who knew and admired Jim, and the thousands of Americans who followed his writing regularly, will appreciate the General's words as they were delivered on July 23. The full text follows:

MEMORIAL REMARKS OF GENERAL LEW WALT

The last time I saw Jim Lucas a few days ago he asked if I would say a few words at his memorial service.

Three years ago Jim and I shared a foxhole along the DMZ in Vietnam. The enemy's artillery shells were hitting in our area. Jim turned to me and said, "I am not afraid to die but I love to live. I believe God has a plan for me and that's good enough."

The typewriter of Jim Lucas is still today but its echos will continue on. We gather here this evening to pay tribute to a very dear friend, a deeply loved uncle and brother.

We also pay tribute to Jim as a great reporter and author whose works were characterized by moral courage, utmost candor, constant objectivity, and above all, by his superb dedication and exceptional talent. He is a Pulitzer winner, twice winner of the Ernie Pyle award and recipient of many other awards in the field of journalism. Integrity and Jim Lucas are synonyms.

We also honor Jim as a distinguished, dedicated and loyal Marine and winner of the

Bronze Star medal. He liked best to be on the front line, under fire and sharing every danger with the G–I Joe. It was under these conditions he wrote his greatest stories and earned the undying admiration and love of millions of our fighting men in three wars. He was there on the front lines at Guadalcanal, Tarawa, Iwo Jima, Korea and finally in South Vietnam. He spent three years in Vietnam and strove valiantly to explain that war to the American people. He didn't feel he was successful—this bothered him deeply but he never lost faith in our cause nor with the gallant Vietnamese people whom he admired and for whom he felt a great compassion because of their great sacrifices in the cause of freedom.

Finally, we honor Jim as a great American—loyal, dedicated, honest and compassionate. He loved his country and spent his life serving it—he was a patriot of the highest order.

I, personally, am going to miss Jim, deeply and sincerely as will so many of his friends throughout the world. As President Nixon so ably stated: "He will be deeply missed but affectionately remembered".

NORWEGIAN EXPLORER THOR HEYERDAHL MAKES SHOCKING DISCOVERY OF POLLUTION FOULING THE HIGH SEAS

(Mr. HOWARD asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. HOWARD. Mr. Speaker, the Norwegian explorer, Thor Heyerdahl, has just crossed the Atlantic Ocean in the *RA II*, a papyrus reed boat, thereby proving that the ancient Egyptians could have visited the new world before Columbus.

On Friday evening I had the pleasure of meeting Mr. Heyerdahl and discussing his journey with him. The most shocking discovery he made during the crossing was the tremendous amount of pollution fouling the high seas. Indeed, the problem was so acute that on several days the crew refused to bathe in the ocean. For many days Mr. Heyerdahl and his crew saw no man, only man's garbage.

Most of the pollution comes from ocean-going ships which cleanse their oil tanks at sea and dump garbage and debris overboard. For centuries the peoples of the world have considered the oceans, because of their vastness, impossible to pollute. Apparently, as Mr. Heyerdahl reports, that is not the case.

Mr. Speaker, this is only the most recent exposition of the increasingly disturbing problem of international environmental pollution. The key fact is that no international body is able to regulate the conduct of polluters on the high seas. Many national and international bodies, several of them from the United Nations, are studying isolated aspects of the problem, but no organization coordinates their efforts.

On July 8, 1970, I introduced House Concurrent Resolution 763 calling upon the President, as the Nation's chief spokesman in foreign affairs, to convene an international conference of the leading industrial and shipping nations for the purpose of creating an international environment agency. This agency would act as a clearinghouse for information, coordinate research, and eventually establish and enforce international standards on environmental matters.

The United States cannot stand alone in the fight against pollution. The problem is one of all mankind, not of just one or two nations. The nations of the world must put aside their parochial differences and work together to conquer pollution. The United States can and should be the leader in bringing these nations together.

On Wednesday, I will reintroduce my bill and I ask my colleagues on both sides of the aisle to join as cosponsors. With a strong show of support, we can move toward passage of this legislation and an effective fight against pollution on an international scale.

ROOT OF TROUBLE IS ON CAMPUSES

(Mr. SMITH of California asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. SMITH of California. Mr. Speaker, continually we see efforts to shift the blame for campus violence from those who are responsible for it to the President or any other handy scapegoat who can be found.

However, efforts to blame the President for the failures of the leaders of the academic community and for the irresponsible actions of a few students are wrong.

A recent editorial in the San Diego Union points out that "at the very taproot of the problem, however, is weak administration."

I insert this editorial in the RECORD:

STUDY SHOULD FOCUS ON MILITANTS—ROOT OF TROUBLE IS ON CAMPUSES

If the first footprints of evidence are an indication we can expect little of startling nature from the current blue-ribbon presidential commission that is studying causes of campus unrest.

Preliminary testimony at hearings of the commission has included opinions that the rioting on campus can be attributed to the war in Vietnam, Selective Service, or to the fact that youth has no voice in government.

As certainly as the sun rises tomorrow, we will hear also that students are unhappy with the courses they are offered, that their elders do not communicate with them, that the campuses reflect the strife of the society at large and that the lack of ethnic studies generates discontent.

Perhaps all are valid complaints to a degree. However, we would hope that the commission will not be deluded into concluding that these are the root causes of our campus trouble.

It is important, we believe, for the commission to begin its eventual deliberations with the premise that it is not studying the majority of students, but only a militant cutting edge.

Most of the more than 6 million students on the college campuses work within the system, whether they are happy about Vietnam, ethnic studies or the character of their provost. Most of the physical and psychological abuse of the colleges is the handiwork of a minority and it occurs on but a small percentage of the campuses in the United States of America. Further, the militant testing of the college system would continue whether or not there were a Vietnam problem.

Surface roots of the campus violence are among the immature, bored students, as S. I. Hayakawa, president of San Francisco State College, testified.

Among the deeper roots are the students on campuses who should not be there at all because they are not qualified. Recent testimony to the California Board of Regents indicated this may be as many as 35 per cent of the students in some institutions.

Still deeper roots are the permissive instructors who encourage students to make trouble, perhaps join them in militant activity and finally reward them with good grades.

At the very tap-root of the problem, however, is weak administration that permits all of this to go on, and even acquiesces to the lowering of academic standards for admission to encourage more of it.

If we look to the origins of the trouble, we will see that "unrest" on the campuses began in 1964 at the University of California at Berkeley when administrators, the faculty and the regents capitulated to students led by militant faculty members who deliberately broke the rules. At that time the regents discussed, but did not adopt, a code for students that would require them to "assume an obligation to conduct themselves in a manner compatible with the University's function as an educational institution."

If such a code were enforced for all students in the United States, presidential commissions on campus unrest would become but a bad memory. For the fact of the matter is that such unrest will not be cured in Washington, but on the campuses themselves.

PRIDE IN OUR YOUTH

(Mr. HANLEY asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. HANLEY. Mr. Speaker, as we observe the turmoil and uncertainty which prevails both within our Nation and beyond it, we naturally become concerned with what the future holds for this world. Personally, I believe that much depends on the moral fiber of our citizenry. If it is strong and dedicated to the perpetuation of the traditions of our great country, then we have little to fear.

During the month of June I visited a number of schools and participated in several Flag Day ceremonies and commencement exercises. It was indeed heartening to observe the fine quality of the vast majority of our youngsters. This served to bolster my confidence in the ability and the intention of today's students to do what is right and just. I feel certain that as they develop into adulthood they will be endowed with a quality of character in which we can take great pride.

Speaking of pride, I am reminded of how proud I was of two students on the elementary level when I became aware of their remarks. I want to share them with my colleagues.

Nancy Harrington, a graduate of St. Joseph and St. Bridget's Grammar School, in Syracuse, N.Y., had this to say:

We live in a country, the United States of America, that is not only beautiful but it has prospered. The United States has a great history too. It has a past of which we can be proud.

Certainly, the history of the United States

is the story of a great nation created from a vast wilderness in an unbelievably short time. It is the story of a nation founded on the principle that all men have a right to "life, liberty, and the pursuit of happiness."

Five hundred years ago, not a single European settler lived in the land that is now the United States. Even as recently as 200 years ago, the United States of America did not exist.

But, during those 200 years, the United States has developed its unique culture and grown to maturity. Its Founding Fathers wrote the world's most lasting constitution. Hardy pioneers crossed the continent. Scientists experimented with inventions in every field. Brother fought against brother in a deadly civil war. Business men poured millions of dollars into growing industries. Wave after wave of immigrants found a common loyalty in their new homeland without losing their individuality. In more recent years, statesmen turned their attention to world problems, without losing sight of national ones. We are truly the inheritors of a great nation.

Our legacy—the triumphs and achievements of the best men each generation has to offer. Generations of men working together, building on work, of all those who came before them. My generation too will make contributions hopefully toward the aim of making peace among men. Men working as a team for the good of all. We can wipe out hunger and disease, free starving minds and bodies—clean the air—bring the generations together and the races of people living together as one. If we don't pull together then perhaps there will be chaos—soft rain on a planet without life. Our world—the victim of men who could not and would not work together.

If we in America want peace, as our history has shown that we have fought for it, we will have to start at home and then eventually it will spread to the rest of the world. We have to overcome our own problems before we try to tackle the problems of the world. When the tensions of the world have been relieved we will be able to live as God meant us to live in harmony with our fellow man. We will have to remove all prejudices against minority groups. Unless this is done we will never be able to live together as one working together to achieve peace.

As I see it, we are graduating into a great new decade of discoveries and scientific advances, that should help us to progress toward living peacefully with our fellow man.

Our generation believes that we can live in peace together. My generation will never give up hope as long as we can see the smallest spark of light directing us to the door of peace.

Let us pray that we will be the key that will open this door and give us the peace which was proclaimed two thousand years ago—Peace on earth—good will to men! Let there be peace on earth!

Mary Gettino, a sixth-grade student at St. Charles of Borromeo School, in Syracuse, offered these remarks:

MY FAVORITE PATRIOT

My favorite American Patriot is Nicholas A. Gettino. Perhaps you have never heard of him. This is because he is my father.

Nicholas A. Gettino was born in Syracuse, New York on June 12, 1922. He enlisted in the Air Force when he was twenty years old. After months of training as a second lieutenant he was a qualified navigator on a B24.

His crew of ten men were stationed in Italy. They flew many bombing missions. On one of his earlier missions he and his crew bombed several docked German submarines in the ports of southern France. On this mission he was shot down but, the pilot landed the plane safely. They returned to base in a week. Many of his other missions were to destroy the oil fields of Ploesti, Romania. The reason why the oil fields were the major target for bombing was that this was the Germans supply of fuel. On his forty-fourth mission he was shot down over Yugoslavia. He was picked up by the Germans and sent to a prison camp. After ten months, he was liberated by General Patton's Forces.

Upon his return to the states, he could have been honorably discharged from the Air Force, because of his experiences. However, because of his love for his country he stayed in the Air Force. He married Mary Burns in 1945 and continued in the Air Force for another year.

Now, Nicholas A. Gettino is a retired Major in the Air Force. The work he does now, concerns the defense of his country. He has tried to teach his seven children the love of their country and has succeeded in doing so. My oldest brother is now in the Air Force following in the steps of his father.

This is why I think my father is truly a great patriot.

BILL TO ALLOW DISCLOSURE OF AIRLINE TICKET TAX

(Mr. BROTZMAN asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. BROTZMAN. Mr. Speaker, on May 21, 1970, President Nixon signed the Airport and Airway Revenue Act of 1970. On the whole, I believe the Members of Congress can be proud of this legislation which will provide for the expansion and improvement of the Nation's airport and airway system.

However, Mr. Speaker, when the revenue provisions of the bill were considered by the Senate Finance Committee, an unfortunate amendment to conceal the 8-percent ticket tax from the ticket purchasers was added. This amendment was approved by the Senate, and was retained in the bill by the conferees. Because of the importance of improving the Nation's airport facilities, I, along with a nearly unanimous House, voted to accept the conference report.

Now that the important substantive parts of the bill have been passed and signed, I believe that the Senate amendment requiring concealment of the airline ticket tax should be repealed, and I am introducing legislation to accomplish that.

Section 7275 of the Internal Revenue Code provides that airline tickets shall not show separately either the amount paid for the air fare or the amount of the tax on the ticket. Furthermore, section 7275 states that airlines may not advertise ticket prices without including the tax in the advertised figure. Those who violate the provisions of section 7275 are guilty of a misdemeanor and are subject to a $100 fine.

My bill repeals that part of section 7275 which conceals the airline ticket tax. It goes on to state that airline advertising which includes a statement of price must either include the ticket tax in the quoted price or clearly indicate that the applicable Federal taxes are extra. Under my bill, disclosure is maximized. The passenger will know what part of his fare is actually for tax, and at the same time, airline advertising will have to conform to basic notions of disclosure.

The rationale behind the Senate Finance Committee's amendment is a bit obscure. However, a reading of the floor debate in the Senate suggests that the amendment will prevent passengers from being misled into thinking that the fare alone represents the total ticket cost and that passengers will not have to wait in long lines to have their fares and taxes separately computed.

Mr. Speaker, I have waited in a lot of lines at airline ticket counters, but I have never gleaned the impression that showing the airline fare and the ticket tax as separate items leads to any delay.

Even if there is an immeasurable amount of time saved at the ticket counter, a quite measurable amount of time is lost later since the tax must be shown on the auditor's and agents' copies of the ticket. Thus, section 7275 has a double barrel effect: it conceals the ticket tax from the passengers and it creates a new maze of bookkeeping problems for airlines' personnel and travel agents.

As for being misled, I believe it is quite clear that section 7275 is the culprit and not the prior practice. I am not aware of ever having heard a complaint from someone who felt they had been misled because their ticket price stated separately the fare and the tax. On the other hand, since section 7275 went into effect, I have had numerous complaints from people who feel they are being misled as to the magnitude of the airline ticket tax.

Another section of the Airport and Airway Revenue Act raises the ticket tax from 5 to 8 percent. This increase was necessary for the Nation to develop the type of airport system it must have to accommodate the rapidly increasing reliance on air travel. I am sure that most travelers are quite willing to pay this additional tax because they know that they, as the users of the Nation's airports, will be the chief beneficiaries. But, Mr. Speaker, they are entitled to know how much tax they are paying.

There has been a lot of discussion about truth in lending and truth in packaging. Indeed, the Congress has passed legislation to require fuller disclosure in these areas. I believe there should also be truth in taxation. Nobody likes to pay taxes, but they are necessary, and when they are imposed, the public has a right to know.

PRESIDENT NIXON AND THE STUDENTS: THE REPORTS OF DR. ALEXANDER HEARD AND DR. JAMES CHEEK

(Mr. BRADEMAS asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. BRADEMAS. Mr. Speaker, President Nixon is to be commended for having several weeks ago named such distinguished educators as Dr. Alexander Heard, chancellor of Vanderbilt University, and Dr. James E. Cheek, presi-

dent of Howard University, to serve as his consultants and advisers on problems on the American university campus.

Last week, on July 23, 1970, the White House released the texts of a summary by Dr. Heard of his views of his assignment and of several memorandums that he and Dr. Cheek, his coadviser, sent to the President during their temporary term of service from May 8 to June 30.

Because the statements of Drs. Heard and Cheek are so significant and thoughtful, indeed, eloquent, I hope that not only the President but that Members of Congress will read them as well.

Mr. Speaker, I insert at this point in the RECORD the texts of these memorandums to President Nixon, as reprinted in the New York Times of July 24, 1970, followed by an article in the same newspaper by Robert B. Semple, Jr., and an article by Eric Wentworth in the Washington Post of July 27, 1970, on the same subject.

The material follows:

[From the New York Times, July 24, 1970]

TEXT OF TWO MEMORANDUMS TO NIXON ON STUDENT UNREST

(NOTE.—Following are the texts of a memorandum from Dr. Alexander Heard, chancellor of Vanderbilt University, to President Nixon, summarizing what the temporary adviser to the White House had learned about student attitudes toward the Nixon Administration, and of recommendations of Dr. Heard and a co-adviser, Dr. James Cheek, president of Howard University, regarding campus unrest.)

MEMORANDUM: A STUDENT'S VIEW

This memorandum addresses three questions we have heard discussed around the White House about student attitudes and their relationship to Administration policies. We have sought to compress here the views of a "composite" student.

Something like these views are held by significant numbers of activated students, although obviously not by all such students. We report these views as an aid to understanding the questions being asked, not to imply their validity nor to question their validity.

I

Why do the President and disaffected college youth have trouble "communicating" about Vietnam? At least four factors are at work.

First, the President uses words that mean one thing to him but something different to many students. For example, he has emphasized that he and students both want "peace." By "peace," students mean an end to the killing immediately.

To them the President seems to mean not that, but "a just peace" and "self-determination for South Vietnam," which they see as probably meaning maintenance of a pro-American regime in Saigon, continued U.S. military presence in Southeast Asia, and whatever military action is necessary to produce these ends.

Exacerbating this difficulty is the belief of many students (shared, it is fair to say, by many nonstudents) that the course we are on has no real chance of success. They do not believe Hanoi can be induced to negotiate. They find unthinkable using enough military power to force Hanoi to negotiate.

They believe the longer we keep fighting the more difficult the U.S. position becomes at home and before world opinion. They believe our leaders must understand this, and consequently when those leaders do not act accordingly by "getting out," they must be either blind or evil. Frustration to the point of fury builds up from watching us follow, at an enormous cost in human life, a policy they believe to be leading nowhere.

Students' argument

When the President explains that we must act in Cambodia to protect the lives of American fighting men, they argue that it would be better protection to bring them home.

The President's admirable remarks in St. Louis on June 25, 1970, showed insight into student idealism and compassion for their anxieties. The phrase "to win peace," however, does not describe a proper goal in the eyes of some students.

Second, what the President regards as successes, students often regard very differently. Reducing the troop level in Vietnam by sometime in 1971 to something over 200,000 men seems to many in Government a formidable achievement. The President so proclaims it.

Yet to the young, who face the draft and think on the time scale of youth, these withdrawals seem wholly inadequate. Their attitude should not be mistaken for that of a draft-dodger in World War II. They are not seeking to avoid personal danger. Rather, they abhor personal involvement in war they perceive as "immoral."

Hence, a plan to have a troop level of over 200,000 men next year, and possibly indefinitely, seems intolerable—to the point that some of them say they would prefer to kill and be killed in a revolution at home to being involved in an immoral war abroad.

Third, to some students, the President appears not to understand the nature of the crisis that has come over the country. He speaks of "deep divisions" in the country. But "deep divisions" suggests a serious disagreement in a stable society, a matter of different groups holding different opinions, whereas students perceive the situation in radically different terms.

They see not just differences of opinion, but rather the whole social order as being in a state of erosion.

In the St. Louis speech, the President said, "We should do something about it and not allow that division to become something that eventually could erupt and destroy a society."

The student says the division is already erupting and destroying the society.

The President's visit to the Lincoln Memorial on May 9 was a splendid act. Reports got about, however, that the President passed pleasant queries about surfing and football. That offended students who felt immersed in a national tragedy, like telling a joke at a funeral.

Fourth, and this really underlies the other points, the President and some students proceed from vastly different assumptions. The President says, "America has never lost a war," as if "winning" or "losing" were the important consideration.

He seems to them to hold attitudes derived from the cold war, such as the domino theory and to view Communism in Southeast Asia as a source of danger to America. Wrongly or rightly, many of our best-informed students do not share these assumptions.

The President speaks of maintaining "national honor" and implies that this can be done through military power. Students distressed with the failure of their country to achieve all its ambitious ideals at home and abroad think of "national honor" as something yet to be attained.

They see the Vietnam war and its effects at home as obstructing fulfillment of their concept of national honor. Just as an earlier generation fought in World War II to preserve the nation's ideals, they want to end the war to help attain the nation's ideals.

The President presents the goal of "self-determination" for South Vietnam as a rationale for our military involvement. To students the cost is too high, so much too high as to make the war "immoral."

A faculty member wrote from . . . "At the root of the opposition to the war in Indochina is the moral revulsion to the carnage undertaken in our name. Peasant societies are subject to the most awesome destructive technology that man can devise; hugh areas are depopulated into free fire areas; defoliants, pesticides, and herbicides scorch the earth, and bomb craters create a moonscape; great masses of people are uprooted from their ancestral lands and turned into refugees in their own countries, and war spares neither the elderly nor the women and children. Surely such death and devastation are out of proportion to whatever objective we might hope to achieve."

II

Why are students not impressed by Soviet atrocities such as the invasion of Czechoslovakia?

The apparent insensitivity of students to Soviet actions and to evils in the Soviet system is at least partly explainable by considerations like these:

First, they feel that by the wrongness of our own policies, such as the war in Vietnam, we have lost our moral standing to condemn other countries.

Second, there is an obsession with our own problems, a feeling that our own crisis should occupy all our attention.

Third, the fear of Communism is less than existed a year ago.

Students perceive the Czech invasion as one more evil action by a powerful imperialist government, but they don't perceive it as a threat to the United States. Since the Sino-Soviet split, they see Communism as consisting of different and often competing national governments and styles.

The Russians appear to repress their satellite countries, but students see that fact as parallel to American domination in its sphere to influence (the Dominican Republic, Guatemala, economic exploitation, etc.)

They see the Russians as no better than we, maybe not as good, but feel more responsibility for our actions than for those of foreign powers.

III

How do they compare the United States with other countries generally?

Instead of viewing the United States as in competition with other great powers, or as being potentially threatened by them, the students we speak of tend to be suspicious of all national powers, including the United States.

As the President said in his "State of the World" message on Feb. 18, 1970. "Today, the 'isms' have lost their vitality—indeed the restlessness of youth on both sides of the dividing line testifies to the need for a new idealism and deeper purposes."

A generational loyalty appears to develop, a loyalty to young people internationally, that transcends national loyalties.

A tendency toward an absolutist conception of moral values helps to make it impossible for these students to be satisfied with the comparative superiority of the U.S. in striving for social justice and equality.

Rather than emphasize what is good about America, most students emphasize what could be better about America (which frequently appears to be merely an emphasis on what is wrong with America.)

Therefore, any form of injustice and inequality, such as is evident in our racial problems, is taken as an indictment of the entire social system, regardless of its improvements over the past or its relative superiority over other societies.

NOTE ON RECOMMENDATIONS

Detailed recommendations were made to the President on a number of subjects. Some of them proposed particular assignments for named individuals. Implementation of some of the proposals might be handicapped by making them public. All of the recommendations, like the comments on campus conditions reported above, were drafted as private communications to the President.

Among the subjects on which we made recommendations are the following:

A. That the President increase his exposure to campus representatives including students, faculty and administrative officers, so that he can better take into account their views, and the intensity of those views in formulating domestic and foreign policy.

B. That the President designate a senior staff member in the White House to have special responsibility for White House liaison with higher education.

C. That the President arrange for the considerable knowledge of higher education already available in United States Government gencies, especially the Department of Health, Education and Welfare, to be put more readily at his disposal.

D. That the President increase his exposure to representatives of the black community and other racial minorities.

E. That the President take initiative welcoming young people into political and governmental processes.

F. That the President initiate an assessment of youth opportunity programs in the Federal Government, looking toward their enrichment and better utilization.

G. That the President take steps to improve two-way communications with the campuses of the country through activities in which he, White House staff members and others in Government participate.

H. That the President and others undertake to understand the fears of "repression" among certain groups in our country and to understand the realities underlying those fears.

I. That the President use the moral influence of his office in new ways designed to reduce racial tensions and help develop a climate of racial understanding.

J. That the President increase involvement of blacks in domestic policy formation and develop an ongoing Federal mechanism for research and action on minority problems.

K. That the President act immediately to provide additional student aid funds for the coming academic year to economically disadvantaged students.

L. That the President seek to provide special additional assistance during the coming academic year to those institutions primarily serving black youth.

M. That the President make a long-term commitment to assist predominantly black colleges and universities to enable these institutions to increase their enrollment and improve their academic programs.

From time to time, Dr Cheek and I have made other recommendations to the President, orally or in writing.

[From the New York Times, July 24, 1970]

NIXON IS ADVISED TO HEED STUDENTS—HEAD OF CAMPUS UNREST UNIT PRAISES COLLEGE YOUTHS IN REPORT TO THE PRESIDENT

(By Robert B. Semple, Jr.)

WASHINGTON, July 23.—President Nixon's special adviser on campus unrest urged the President today to undertake serious efforts to improve his awareness of student attitudes and to take them into account when formulating foreign and domestic policies.

This recommendation was coupled with an equally strong plea asking Mr. Nixon to use the moral leverage of his office to ease racial tensions and give blacks some sense that the national Government understands and cares about their problems.

These and other recommendations were contained in a statement by Dr. Alexander Heard, chancellor of Vanderbilt University, who served Mr. Nixon as a consultant on campus problems from May 8 to June 30.

The statement was released by the White House late this afternoon, and consisted of a summary from Dr. Heard of his thoughts about the usefulness of his seven-week mission, a summary of his activities, and a series of revealing private memorandums that he and his co-adviser, Dr. James E. Cheek of Howard University, sent to the President during their term of service.

A single theme dominated the 40-page documents and tied together its various strands:

The student revolt, the authors insisted throughout, may seem baffling and chaotic to outsiders but underneath it is a deep moral commitment, a seriousness of purpose, to eliminate what the students genuinely believe to be the weaknesses of American society.

To this basic theme the authors added a corollary subtheme—never explicitly stated, but always close to the surface. Given the integrity, idealism and passion of the students, they suggested, the Administration would be well-advised to listen to them and ill-advised to attempt to make political capital of the disturbances they cause.

Dr. Heard seemed to be under no illusions that it would be simple to bridge the gap. He pointed out that the perceptions of the men who run the country as to what is important, and the priorities of the next generation are radically different.

He noted, for example, that the concept of an "honorable" settlement in Vietnam, important to the President, strikes the student generation as insane because, in its view, American participation in Vietnam is itself dishonorable.

Similarly, Dr. Heard reported, the country's leaders tend to believe that American society can be made whole again by patchwork methods and by drawing the alienated into the system; the students, meanwhile, are resisting the system itself and regard "the whole social order as being in a state of erosion."

NIXON'S CONCERN CITED

In an introductory statement, Mr. Heard said that Mr. Nixon had displayed serious concern over campus developments during the course of nine private and semiprivate discussions, as well as "a searching interest in what we had to say about campus beliefs, attitudes, and behaviors."

In addition, he went on, Mr. Nixon had already undertaken a variety of useful steps. He said that he and Dr. Cheek had recommended that the President sign the voting rights bill, revoke the tax-exempt status of segregated private academies, ask the Justice Department to intervene in Jackson, Miss., during the weekend of the burials of the youths killed at Jackson State, confer privately with a range of campus officials and students, and undertake other efforts to soothe campus passions.

Mr. Heard conceded that the President might have undertaken these initiatives without prompting from his two campus advisers, but he professed himself "pleased with these responses."

But in the first four memorandums that he and Dr. Cheek sent the President—dated June 19, over six weeks after the Cambodian invasion, the shootings at Kent State, and the subsequent uproar—Dr. Heard relayed to Mr. Nixon his serious doubts as to whether the President and his senior associates grasped even at that late date the dimensions or the spirit of the campus revolt.

"We do not believe that our national government really understands that a national crisis confronts us," Mr. Heard wrote the President.

"The condition cannot be conceived as a temporary abberational outburst by the young, or simply as a 'campus crisis' or student crisis.' Because of its immediate and potential consequences, the condition we face must be viewed as a national emergency, to be addressed with the sense of urgency and openness of mind required of national emergencies."

Mr. Heard buttressed this assertion with a portrait of what he described as "a large and important segment of students." He did not contend that this segment represented the entire student population, which he described as "intensely polarized," but he said that it embraced a surprising number of students of normally moderate and conservative points of view.

The portrait he drew—based on interviews and surveys—suggested a campus community driven leftward by the Cambodian venture, full of integrity and idealism, acutely conscious of its own separate identity, increasingly disaffected by what it regarded as official "repression"—including, Dr. Heard noted, "sledgehammer statements by public officials impugning the motives of dissent"—and the unresponsiveness of Government to student concerns.

WARNING ON INDOCHINA

Dr. Heard went on to say that he had been advised that "events of this summer" would determine "which colleges and universities open this fall, and under what conditions." He warned that any further widening of the war in Indochina would "make it impossible for some institutions to operate normally."

Dr. Heard said that he had made detailed recommendations to the President privately, revealing only the general areas in which he thought the President could take steps to ease tensions. They ranged from broad exhortations to the President to open himself to campus views, to specific sugegstions to provide more Federal funds for poor students and welcome more young people into government service.

[From the Washington (D.C.) Post, July 27, 1970]

NIXON TOLD OF STUDENT POWER

(By Eric Wentworth)

The attitudes of college students, like those of blacks, are "uniquely important" to governing the United States in the 1970s.

Their importance can be found in one of history's fundamental lessons: that time and again, the power of ideas has triumphed or other political, military or other forms of power.

This message was buried in the memoranda that Alexander Heard gave President Nixon during his brief term as adviser on campus problems. But it may well be the most significant advice that the Vanderbilt University chancellor offered.

"Time and again in the world's history," Heard told the President in a July 16 memorandum, "ideas have prevailed over other forms of power, from the teachings of Jesus through those of Tom Paine and Karl Marx to those of Adolf Hitler.

"Intellectual power is at work in new ways in the United States," he wrote. "New ideas are challenging established ways—which is the most important fact of all to be acknowledged and understood."

In effect, Heard was telling Mr. Nixon that counting votes is not enough, that conventional rulebooks may not apply, that the President must reckon with signs of potential revolution—peaceful or otherwise.

As for the students themselves, the chancelor saw them as idealistic sometimes to a fault, and as feeling rebuffed and overly burdened—the draft, for example—by the rest of society.

"Though often emotional and egocentric," he wrote to the President on June 19, "the passions of idealism produce not only brave heroes on the battlefield but also determined fighters in the struggles for social change.

"Whatever one may think of its origins or consequences, the idealism of college students toward domestic and overseas problems embraces an increasing willingness to abandon the conventional postures of national and personal interest."

To an "extraordinary" degree, Heard said in that memorandum, students are coming to view themselves as a separate class in American society. This "new fact of political life," he added, may become an enduring part of the national power spectrum.

"For effective national government," he continued, "this constituency requires attention and understanding" such as other groups—farmers, organized labor, veterans, blacks—have claimed.

At the same time, Heard wrote, the student constituency "has much ambition, much energy, and more future than the others." The Cambodian incursion, he continued, "catapulted" student's growing class consciousness "into something approaching a national political movement" including many previously moderate or apolitical young people.

The killings at Kent State University and Jackson State College have helped instill "feelings of fear and persecution . . . among students in general," he added. Indeed, he wrote, "One senses that from the best of our young comes the worst of despair."

Such words are not the rhetoric of some apologist for radicalism. Heard may be a Democrat, and he was clearly trying his best to awaken President Nixon to what he saw as a national crisis.

But the 53-year-old Georgia native is a professional political scientist, the author of several books including a widely respected work on campaign finances.

His statements to the President were based on seven years at Vanderbilt, service on the American Council on Education's Special Campus Tensions Committee this past year, and—since May 8 when he was invited to the White House—talks with countless students and educators, questionnaires returned from 193 campuses and a special student opinion poll by Louis Harris.

Heard wrote the President on June 19 that the campus upheavals in May were "leaving students more sensitive politically, more determined to take a part in the governmental process, and feeling more deeply about a range of issues."

A "significant proportion" say they will direct their energies through established political channels including campaign work for peace candidates this fall, he reported. But, he warned, for many it was a case of giving the existing system "one more chance."

"If those efforts are condemned," he wrote, "or receive no encouragement, and apprehensions about the war continue to deepen, then, as President James Hester of New York University put it, 'We can expect the hard-core radicals to gain influence and increasingly violent demonstrations to take place.'"

Heard later noted that college presidents are often made the scapegoat—even fired—when student disruptions cause a campus to "come apart."

"Similarly," he warned the President bluntly, "if the U.S. has a sustained, serious, national campus crisis, an unwelcome share of the 'responsibility' may be assigned to you simply because there is a problem and you are in office."

Heard recommended, among other things, that the President "increase his exposure to campus representatives . . . so that he can better take into account their views, and the intensity of those views, in formulating domestic and foreign policy."

And he advised Mr. Nixon to "take initiatives welcoming young people into political and governmental processes."

Before, Heard might have added, it's too late.

THE GUBSER-O'NEILL AMENDMENT

The SPEAKER. Under a previous order of the House, the gentleman from New York (Mr. HALPERN) is recognized for 5 minutes.

Mr. HALPERN. Mr. Speaker, I rise in enthusiastic support of the Gubser-O'Neill amendment and am privileged to have been identified as an original cosponsor of the highly laudatory step toward democratizing our legislative processes.

The public has every right to know how a Congressman votes on amendments to bills many of which are vital to the legislation. I have seen some amendments actually take the guts out of a bill and I have seen others that have put real substance into legislation. Often the key test of a Congressman's position is on such key votes. Yet, there is no record whatsoever of how he votes in such instances. The purpose of this bill is to make recorded rollcalls on amendments.

A number of citizens and groups have raised a very legitimate point regarding meaningful and important teller votes which are not a matter of record.

The absence of a recorded vote on specific issues has created a situation where individual groups now place their own interpretation on the strictly procedural vote on the previous question. This is a dangerous practice because it is subject to numerous interpretations and, furthermore, transfers minority rights to the majority.

Congress as an institution is under attack. The charge of "secrecy" is a valid one and we should move forthwith to correct what is wrong.

The antiquated teller system has outlived its usefulness. As long as it continues, Congress will be under attack and there will be some validity to the "secrecy" charge leveled against it. Every citizen has the right to know how his Congressman voted. I trust this amendment will win overwhelming approval.

HAS SOUTHERN CALIFORNIA FAILED IN AIR POLLUTION CONTROL?

The SPEAKER. Under a previous order of the House, the gentleman from California (Mr. HOSMER) is recognized for 5 minutes.

Mr. HOSMER. Mr. Speaker, as a Californian, I have always taken a certain amount of pride in the fact that this State leads the Nation in the application of air pollution control legislation and technology. Most of what the Nation and the Federal Government know about air Pollution control they learned from California, particularly Los Angeles County.

Now comes evidence that despite its landmark efforts, southern California largely has failed to achieve reasonably adequate control over one quality of its air. This is disheartening news, both for southern California and the rest of the Nation. Certainly, if southern California is failing, so too, are the other regions of the country.

Gilbert Bailey, the environmental and pollution expert with the Long Beach Independent, Press-Telegram, has recently concluded an important series of articles on California's attempts to bring the problem of air pollution under control.

I invite the attention of my colleagues to this series. The articles follow:

HAS SOUTHERN CALIFORNIA FAILED IN AIR POLLUTION CONTROL?

(By Gilbert Bailey)

PART I

There is no adequate air pollution control program in the Los Angeles basin.

There is no such thing as a no-smog day here. Every day the same poisons are belched into the air, and even on those rare days when the winds cleanse, or the rains wash the air, and Catalina can be seen, air pollution is with the millions who live here.

On a May day, when the air pollution control district had predicted no smog, a yellow-brown cloud lay over Los Angeles, clearly visible from a small plane. The cloud thinned over Orange County, but it never totally disappeared.

An Independent, Press-Telegram survey of air pollution in the Los Angeles Basin, and of the activities of the Los Angeles Air Pollution Control District, reached the following conclusions:

1. The Los Angeles Basin's struggle against air pollution, one starting in 1948, is a failing effort;

2. Air pollution, despite predictions otherwise, will get worse, not better, unless new regulations are adopted and enforced, soon;

3. Autos, while producing 50 per cent or more of the air pollution in the basin, have been assigned more than their fair share of the blame, obscuring other sources of pollution;

4. Further control of industrial pollution sources is a necessity, if air pollution is to be controlled within the basin;

5. The Los Angeles Air Pollution Control District has in the past issued unwise predictions of future success. It addition it has used and is using pollution statistics open to serious question.

6. There is no adequate air pollution control program at present in the Los Angeles Basin, and whether such a program will be instituted is doubtful.

A false picture has been drawn of smog in the basin, a picture partially the fault of the air pollution control district, and partially the fault of the news media.

"Smog is the most misused word in the English language," said Robert L. Chass, Los Angeles air pollution control officer. "There are many different kinds of air pollution."

On Nov. 1, 1969, a day picked at random, Long Beach had the following pollutants in the air (in parts per million parts of air): .11 parts of oxidants, above state standards; .56 parts of nitrogen oxides, above state standards; .34 parts of nitrogen dioxide, above state standards; .12 parts of sulphur dioxide, above state standards; 28 parts of carbon monoxide.

Photochemical smog, the air pollution produced from the invisible gases spewed out by automobiles and oil refineries, and then cooked by the sun into the usual eye-irritating Los Angeles summer brew of air, is but one of the poisonous stews we breathe.

Sulphur dioxide, one of the basic ingredients of "killer smogs" in London, New York and elsewhere, comes from sources other than automobiles, and the standards for sulphur dioxide were exceeded in Long Beach 20 per cent of the time during 1968.

In the winter sulphur dioxide and particulates, tiny pieces of liquid and dry dirt, create a different brew, one which limits visibility and can hurt the lungs, a brew for which more than just the car is responsible.

No area of the basin is exempt from air pollution. While the offshore breezes often blow pollutants out of the Long Beach area, sometimes those breezes reverse and bring

all of the basin's pollutants into Long Beach, where they can be trapped with the native pollutants by an inversion layer.

"Air pollution and its fallout on soil and water is a form of domestic chemical and biological warfare. There is no full escape from such violent ingestion, for breathing is required," said Ralph Nader in his task force report on air pollution.

The Los Angeles basin does not yet have an adequate defense for this biological and chemical attack.

PART II

Twenty-two years ago Los Angeles County began its war against air pollution.

On March 22, 1970, Louis J. Fuller, retiring Los Angeles county air pollution officer, declared victory.

"There is nothing much left for me to do here," he said as he quit.

On May 17, 1970, the basin's first smog alert of the year was declared by the Los Angeles Air Pollution Control District. More alerts followed as spring turned to summer.

A declaration of victory in the war against smog is roughly as meaningful as a declaration of victory in Vietnam, as every resident and visitor to the basin knows.

But Los Angeles County through its 22-year-old antismog district has spent $60 million in fighting smog. The district is cited throughout the world as a model smog fighter. Yet smog continues.

What happened?

Two things. First, growth continued, growth that canceled the effects of the controls installed. Second, not enough, or effective enough controls were established.

There is no indication today either that the growth will be stopped or that effective controls will be established.

Robert L. Chass, now air pollution control officer for Los Angeles County, does not claim victory.

"I have tried to point out that the district has a hell of a lot to do," he said. "I've told the oil refineries and the foundries they look like hell and they've got to clean up."

He said the district is studying tougher controls on scavenger plants, the plants which take sulphides from other sources and further refine them.

However, he and the district still put most of the blame, 80 to 90 per cent, on the auto.

"Our opinion is that it is mostly from the auto. It is an opinion," he said.

The air pollution control district is a creature of the Los Angeles County Board of Supervisors. The county supervisors are responsible for smog, and its control, or noncontrol.

The supervisors meet every so often as directors of the smog control district. They appoint the head of the district, now Chass. They also appoint a three-man hearing board to grant variances from air pollution control requirements.

Complex, sometimes tough and lengthy regulations of stationary sources, primarily industry, have been instituted. Industry has spent millions of dollars on air pollution control equipment.

The district fields 71 inspectors and three field testing teams looking for violations of air pollution regulations.

Since 1964, 1,747 violation notices have been issued to stationary sources (compared to 9,022 such notices issued by the San Francisco area pollution control district).

At the same time the special hearing board, meeting three times a week for about an hour each time, has the power to grant variances from the air pollution district's regulations.

The board is headed by Delmas Richmond, an attorney. He is joined by Wendel, W. Schooling and Robert L. Daughery, both engineers. Each member gets $50 a meeting.

The meetings are held on the sixth floor of an old wreck of a county building in downtown Los Angeles. Although the offices are but a block from the city's major newspaper, they are rarely—perhaps once a year—visited by the press or public.

Instead, employes of the air pollution control district, a deputy county counsel, attorneys for the applicants, and the applicants are all that are present for the granting or withholding of variances.

For the year ending July 1, 1969, the board granted 225 of 323 variance requests. There are 65 variances outstanding as of May 1, 1970 (latest figures available) out of roughly 9,000 permits granted to air polluters.

Chass is satisfied with the board.

It can't fault the board. "It is a quasi-judicial body. Only such a body can weigh equities," said Chass.

"We have a tremendous responsibility," said Richmond. "We could shut down industries employing thousands of people, causing all sorts of economic harm."

A glance through the list of variances shows Advance Galvanizing Co., Allied Chemical Corp., Atlas Galvanizing Co., Continental Can Co., Fresno Paving Co., Lever Brothers Co., Southern California Edison Co., Stauffer Chemical Co., Union Oil Co.

A check of three meetings of the board showed the complexity of the issues.

For example, oil companies must shut down equipment for repairs. The equipment does not meet standards immediately after it is restarted. As a result the major oil companies are almost continuously before the hearing board for variances.

As long as a variance is pending, the air pollution district, as a matter of policy, does not cite for violations.

The performance of the board is difficult to judge.

The overall performance of the Los Angeles Air Pollution Control District is easier to judge.

It was formed to end smog. It has not done that job in 22 years.

However, it has slowed the spread of smog. In all probability, without the district the Los Angeles basin would be unlivable.

PART III

The automobile has been blamed for almost all the Los Angeles basin's smog problems, yet there would be smog, even if all the cars on all the freeways disappeared tomorrow.

Robert L. Chass, air pollution control officer for Los Angeles County, estimates that the auto contributes between 80 and 90 per cent of the area's air pollution.

However, two University of California scientists, R. F. Sawyer and L. S. Caretto, both assistant professors of mechanical engineering at Berkeley, have claimed otherwise.

They said the auto's share of total air pollution in the Los Angeles basin is closer to 50 per cent than the 88 per cent, officially claimed by the Los Angeles Air Pollution Control District.

Autos contribute only 13.6 per cent of the sulphur dioxide in the air—an ingredient in smog which has killed elsewhere—and 41.3 per cent of particulates, a second ingredient in killer smogs, according to the air pollution control district's own figures.

"Industry and power plant sources of air pollution are much more important than has been commonly acknowledged," said Sawyer and Caretto, writing in "Environmental Science and Technology."

"A Southern California Edison Co. statement that only one per cent of the Los Angeles area air pollution comes from their plants is grossly understated," they added.

By weight, at least according to district figures, which can be questioned, the auto does produce 88 per cent of the air pollutants, 11,920 tons out of 13,530 per day.

However, the auto tonnage includes 9,470 tons of carbon monoxide.

Carbon monoxide is a colorless, odorless non-reactive gas. It does not contribute to photochemical smog, although it does cause significant problems of its own.

Carbon monoxide does not contribute to that which the average resident considers to be air pollution—eye irritation, visibility reduction, or odor.

Much higher concentrations of carbon monoxide are allowed under current state and federal standards, than are allowed for other gases.

If the carbon monoxide tonnage is subtracted from the total figure of pollutants poured into the air, then industrial sources are almost equal to the auto as a smog producer.

Air pollution sources are strange, hard to recognize, and even harder to control. Consider the amount of gasoline spilled with the fumes going uncontrolled into the skies every day, at every service station in Los Angeles County. The Bay Area is now studying controls of such spills.

"The numbers game, weight, is like comparing apples to oranges," said Chass.

"The media always wants a comparison. As a result the public has a distorted view of smog," he added.

However, Chass sticks by his claim that the auto is the primary, almost the only, villain in air pollution in the Los Angeles Basin.

And "Profile of Air Pollution Control in Los Angeles County," the official publication of the district, said:

"The tables, graphs, and charts in this section show that air contaminants from motor vehicles comprise approximately 90 per cent of the uncontrolled emissions in Los Angeles Country. . . . It is estimated that stationary (primarily industrial) sources now contribute slightly more than 10 per cent of the total air pollution tonnages emitted daily in Los Angeles County."

Chass pointed out that the auto probably produces 95 percent of the air pollution in downtown Los Angeles, where there are few industrial sources, and a tremendous concentration of cars.

He also pointed out there are three air pollution areas within Los Angeles with distinctive problems—the Long Beach area, downtown Los Angeles and the southeastern portion of the county.

Sulphur dioxide readings are consistently higher in the greater Long Beach area than elsewhere in the county, as are nitrogen dioxide readings. The larger number of refineries, power plants and chemical plants in the area must play a more important role in air pollution than has been previously acknowledged.

In addition these industrial sources contribute significant amounts of hydrocarbons and oxides of nitrogen to the air, the makings of photochemical smog.

The auto is a relatively minor source of sulphur dioxide. It provides less than half of the particulates that cloud our skies, and even in the area of hydrocarbons, the cause of photochemical smog, more than 30 per cent comes from other sources, according to the Los Angeles Air Pollution Control District.

Let no one be mistaken: The automobile plays a vital role in air pollution. It must be controlled before air pollution can be ended.

However, industrial, stationary sources, must also be brought under further controls, and soon, if clean air is to return to the Los Angeles Basin and "killer smogs" are to be avoided in the southland.

PART IV

Air pollution in the Los Angeles basin is going to get worse, if for no other reason than because automobile emission controls don't work.

In fact present controls have done more harm than good. And the American public,

which is paying for those controls, has not gotten its money's worth.

Robert L. Chass, Los Angeles County air pollution control officer, has predicted the skies over the Los Angeles basin will start to clear by 1976, if current auto emission standards are met.

"We have no reason to believe they will be met on the basis of the record," he added.

The controls installed in the 1960s decreased the discharge of hydrocarbons, when they worked, but increased the discharge of nitrogen oxides.

Both are smog ingredients, but nitrogen dioxide may be even more dangerous than the hydrocarbons.

"Nitrogen dioxide is twice as dangerous as sulphur dioxide and 320 times as toxic as carbon monoxide," estimated Ned Groth, Stanford University researcher, basing his findings on state standards.

If present state standards are met, the emission of oxides of nitrates will decline by 1980 to the amount discharged in 1960, Chass said.

"This is progress?" he asked in testimony before the Environmental Quality Study Council.

What happened?

"It happened only because Detroit chose to go that way. The State Motor Vehicle Control Board didn't do its job," Chass explained in an interview.

Detroit in the 1960s installed auto control devices which did decrease the emission of hydrocarbons, but increased the emission of oxides of nitrogen by 50 per cent.

Detroit had partially controlled the faucet pouring out one kind of poison, but had increased the amount pouring out of a second poison faucet.

The Los Angeles basin, therefore, is worse off today than it was before controls were installed.

That is but part of the story.

Ralph Nader's task force on air pollution reports the following testimony from Dr. John Middleton, head of the National Air Pollution Control Administration:

"Very often 75 to 80 per cent of the cars failed to meet (air pollution control tests) and they missed the target by 15 to 20 per cent. . . . It is a high percentage of cars and that fail."

Rep. Paul Rogers, D-Fla., said of Middleton's testimony:

"They (the public) have expended a billion and a half dollars and 80 per cent don't meet it (the federal standards). That's incredible."

The Congressional testimony continued.

Rep. Rogers: "But they are not working. Eighty per cent don't even work. So I don't know how good the emission control is."

Dr. Middleton: "It is not as good as it should be."

Federal officials in Washington, D.C., said but one model of car had an 80 per cent failure. Overall the average of failure was a little over 50 per cent.

One federal official added, "Air pollution authorities are discovering as they measure total exhaust emission on a mass basis that both California and federal calculations are low. The auto industry has taken advantage of this error and it's hard to believe they did so unknowingly."

He would like to see a program established whereby Detroit would be required to furnish cars at various stages of use on a regular basis for actual testing. In addition he believes that both Los Angeles and the federal government should base estimations only on actual tests, not calculations.

The problem of motor vehicle controls was put another way by Department of Housing, Education and Welfare assistant general counsel Sidney Saperstein, in a memo reprinted in the Nader report:

"In short the purchaser of a new motor vehicle is paying for something that he may not be getting—and the federal government, to which he looks for assurance that he is obtaining value for his expenditure, is not fullfilling its obligation to protect his interests."

A final comment, also from the Nader report, may sum up the situation.

"I wouldn't call the program (of auto emission controls) fradulent: I'd call it farcical," said Edward Tuerk, assistant commissioner of the National Air Pollution Control Administration.

Chass of the Los Angeles District has two answers for the problem:

1. Legislation requiring every auto to be tested on the assembly line on a go or no-go basis to make sure the emission control device works;

2. Legislation requiring the auto manufacturers to guarantee the control system for 25,000 miles.

Legislation has passed the State Assembly and is pending in the State Senate which would levy a $5,000 fine on auto manufacturers when their devices don't work.

"If the requirements presently on the books are met on schedule, projections show that there should be a noticeable reduction by 1976, and by 1985 photochemical smog should virtually disappear in Los Angeles County," Chass said.

There is no guarantee that will happen.

PART V

On a not-so-clear day in San Francisco, the official of the Bay Area Air Pollution Control District glanced out the window across the Bay 20 miles towards Oakland.

"We are calling this a medium smog day," he said. "We have a combined pollution index which takes into account all types of air pollution."

The air was dirty, but the Oakland and Berkeley hills were visible, if dimly, 25 miles away.

In Los Angeles such a day would be listed as a no-smog day.

It may be that a comparison between air pollution conditions in Los Angeles and San Francisco is an unfair one. Even so, such a comparison appears to be productive.

On the basis of statistics of air pollution source emissions—who is putting what into the air—released by the two districts Los Angeles' air should be far cleaner than it is, for according to those figures less sulfur dioxide is produced here than in the Bay Area, and the figures for particulates (small pieces of dirt) are almost the same.

The hard tests, the actual tests of air quality show a different story.

The following table shows the number of days in which air quality standards were exceeded in the Bay Area and in the Los Angeles area during 1968 (latest figures available).

Ozone:	
San Francisco	66
Los Angeles	188
Nitrogen dioxides:	
San Francisco	7
Los Angeles	132
Carbon monoxide:	
San Francisco	0
Los Angeles	6
Particulates:	
San Francisco	3
Los Angeles	166
Sulfur dioxide:	
San Francisco	0
Los Angeles	[1] 115

[1] Figures for 1969, 1968 figures not available.

Yet, Los Angeles claims almost 50 percent less sulfur dioxide, one of the key ingredients in "killer smogs," is produced in the basin than in the Bay Area, despite the huge refinery, chemical plant and power plant complex in the southwestern-Long Beach area.

The figures are: 444 tons a day in the Bay Area, 225 tons in Los Angeles.

The two districts' regulations covering sulfur dioxide emissions differ. However, Los Angeles had 115 adverse days, the Bay Area none in 1969.

The second comparison is even more perplexing.

The difference between Los Angeles' low estimation of sulphur dioxide emissions and high concentrations in the L.A. area—estimates versus hard figures—might possibly be accounted for by different weather conditions in the Bay Area and the Los Angeles Basin, with the Bay Area's sulphur dioxide being dispersed by winds.

However, the winds are not dispersing the Bay Area's ozone and some other pollutants.

If the Los Angeles estimations of emissions are underestimated, then the basin is being done a disservice. Only if the correct figures are available on emission can the basin act to correct its pollution.

Los Angeles claims that its 3.9 million cars produce 45 tons of particulates daily. The Bay Area says its 2.2 million cars produce 40 tons.

The comparison is even more mysterious because both sets of cars are governed by the same regulations—California state law on motor vehicle emissions.

And both districts say they base their figures on Air Resources Board tests.

Robert L. Chass, Los Angeles County air pollution control officer, was questioned about the figures.

Q. Are your figures accurate, or the San Francisco figures inaccurate?

A. Let me say this of the basis for the Bay Area figures. We see them the same as you do. We haven't sat down with the Bay Area people. We have no basis to say their figures are right or wrong. . . . I am not in a very good position to reply. I don't have their data.

Chass added there had been no communication on the figures between the districts and he said the San Francisco District had not contacted the Los Angeles District. However, the I,P-T learned that the question of the discrepencies had been brought to the attention of the State Air Resources Board by the San Francisco District. No reply was received.

Chass said the district's emission figures are checked by the Air Resources Board.

Q. How do you estimate your emissions?

A. "Motor vehicles are tested by the Air Resources Board. Stationary sources are tested by stack tests. Emission factors have been established over the years. . . . The Los Angeles Air Pollution Control District has more test data than the rest of the world combined."

Chass made one more point:

"Bad data in air pollution is worse than no data."

A suit was filed earlier this year in federal district court claiming the district lies in its air pollution predictions, but the suit was thrown out of the federal court because of a lack of jurisdiction.

Chass flatly denies the district has ever lied. He was angered by the suit, and by a story appearing in these newspapers, which noted conditions on a day in May and said the Los Angeles Air Pollution Control District was "lying as usual" when it predicted no smog.

"This district has never lied; print that," said Chass.

Since the suit, but not because of it, according to Chass, the district has changed its predictions to include visibility factors and ozone, instead of just eye irritation.

In fact, the district does not lie in its

predictions, it just doesn't tell all of the problem—sulphur dioxide, carbon monoxide, or that a lot of smog comes from other sources than the automobile.

As Chass said, "Bad data in air pollution is worse than no data at all."

PART VI

Smog can kill. It may be killing today in the Los Angeles basin.

Every year thousands of Los Angeles basin residents are told by their doctors to leave the basin for reasons of health.

Those who suffer from bronchial asthma, chronic bronchitis, and pulmonary emphysema are particularly hard hit by smog, according to the National Tuberculosis and Respiratory Disease Association.

The difference between the lungs of the person exposed to air pollution and those of someone living in clean air is explained in Ralph Nader's task force report on air pollution:

"On the autopsy table it's unmistakable. The person who spent his life in the Adirondacks has nice pink lungs. The city dweller's are black as coal."

Sulphur dioxide and particulates have been common to past "killer smogs," according to Robert L. Chass, Los Angeles air pollution control officer.

"Doctors found that when the daily levels of sulphur dioxide were between 0.2 and 0.4 parts per million, the number of excess deaths in New York City ranged between 10 and 20 persons," Nader reported.

The current California standard for sulphur dioxide is .04 parts per million parts of air over a 24-hour period. That standard was exceeded 115 days in the Los Angeles basin in 1969 with heavy concentrations being reported in the Long Beach area.

"Killer smogs," or "air pollution incidents," have been reported throughout the world. The major incidents include:

Meuse River Valley, Belgium, December 1930, 60 dead;

Donora, Pennsylvania, October 1948, 6,000 ill, 20 dead;

London England, December 1952, 4,000 dead;

New York City, 1953, 1962, 1963, and 1966. In 1963 an estimated 405 died from air pollution and in 1966 a total of 168.

No such smogs have been reported in the Los Angeles basin. The nature of photochemical smog, common to Los Angeles, although associated with respiratory diseases, has not yet been clearly linked with death by medical researchers.

However, some medical researchers have predicted killer smogs for the basin. They have, so far, refused to release their evidence until it is published in medical journals.

One such researcher, Dr. Kenneth Watt of the University of California at Davis Environmental System Group, has flatly predicted a killer smog in Long Beach for the winter of 1975–1976. He also named Pasadena, Lennox and Azura as danger areas. He said his group will publish its research in the fall.

Watt not only fears heavy concentrations of sulphur dioxide and particulates, tiny piece of solid and liquid dirt, and also photochemical smog, including increasing levels of nitrogen dioxide.

"It is frightening," he said about the higher levels of nitrogen dioxide, higher levels caused by motor vehicle control devices intended to decrease smog. "Nitrogen dioxide may be the most medically dangerous."

The National Tuberculosis and Respiratory Disease Association associates smog coming primarily from autos but definite medical links have not yet been established.

Dr. Watt pointed out a problem in associating death with air pollution in the basin. Air pollution hits hardest old men, second hardest aged women. However, Los Angeles and Orange counties have an extra large number of young women, making statistical comparisons difficult.

Chass of the Los Angeles County Air Pollution Control District disagrees with Watt on his prediction of killer smogs.

"He has no more basis in saying that than the man in the moon," Chass said.

But Watt counters with the concentration of sulphur dioxides in the greater Long Beach area from refineries and power plants, along with concentrations of particulates.

Watt also pointed out that the offshore breezes which usually blow smog out of the Long Beach area reverse themselves sometimes, bringing the basin's smog into Long Beach. Combined with local pollutants and a winter inversion layer, the mix could be deadly, he said.

Two unreleased studies by the state show the extent of the sulphur dioxide and particulate problems in the southwestern Los Angeles-Long Beach area.

In Long Beach the state sulphur dioxide standards were violated 20 per cent of the time during 1968.

In the area of particulates the highest reading was "measured in the southern part of Los Angeles County, where most of the refineries and power plants in addition to the Los Angeles International Airport are located, and where the emissions of particulate matter have been estimated to be the highest."

In order to meet current sulphur dioxide and particulate standards the amount of sulphur dioxide in the air must be reduced by 64 per cent and the particulates by 54 per cent.

Whether Dr. Watts dire predictions of killer smogs come true or not, there is still a lot of cleaning of the skies to be done, before they become healthy again.

PART VII

Air pollution can be halted in the Los Angeles basin, and the air returned to the quality of 1940, or earlier.

The quality of the air coming into the basin, cleansed as it is by 5,000 miles of oceans, is the best in the world. All that has to be done is to control the pollution sources, all of them, within the basin itself.

There is no such comprehensive control program witness today's skies.

On the basis of interviews with pollution control experts at as many levels as possible, and on the basis of the information reported in this series, the following air pollution control program on individual, county, state and federal level, is recommended, not as a final solution, but as a start.

First, every Los Angeles basin resident should have his motor vehicle emission control system tested, and possibly repaired. Atlantic-Richfield, as a special service, is making such tests available free at selected shopping centers.

Second, while so-called smog free gasolines are relatively ineffective in fighting air pollution, lead-free gasoline should be purchased whenever possible. Even so, working control devices are far more important than the type of gas used.

Lower horsepower cars should be purchased.

Care should be taken in the use of the auto and other pollution causing machines, including use of an over-abundance of electrical appliances, which create need for smog-producing powerplants.

Finally, if the basin resident is concerned about air pollution, he should contact his representative on the board of supervisors—the man directly responsible for smog in the basin—his state legislator, and his representatives in Congress to demand action.

On a county level the board of supervisors should institute a full-scale review of the operations of the Los Angeles Air Pollution Control District to determine why after 22 years and $60 million in expenditures, there is still smog in the district and what can be done about it.

The district's operations, its special hearing board, and its regulations are all fit subjects for such review.

In addition the district's statistics, open to question as they are, should be verified by a thorough scientific study of air pollution in the basin possibly conducted by such an air pollution control laboratory as the one at the University of California at Riverside.

The Los Angeles Air Pollution Control Officer Robert L. Chass should be instructed to draft further regulations of industry, including the oil refineries, chemical plants, power plants and foundries. Chass is already reviewing regulations concerning high sulphur dioxide emitters, but further regulations are needed. Controls of service station gas spills should also be instituted.

The final recommendation is that the district require air polluters to monitor and report their pollution to the district, at least the emission of sulphur oxides, and lead and fluorides and all other contaminants possible, as is done by water polluters.

Beyond the scope of the district, a rapid transit system, similar to the Bay Area Rapid Transit District, is needed. Voters should support such a district, if they wish to breathe healthy air.

On a state level, as well as on a Congressional one, legislation should be passed, as recommended by Chass, for all motor vehicle control devices to be tested on a go, no-go basis on the assembly line, and for the auto makers to guarantee the devices for no less than 25,000 miles.

Second, the state should divert gas tax funds, now used only for highways, to rapid transit and to fighting air pollution. A state constitutional amendment could authorize the diversion, or a bill by State Senator Alfred Alquist to raise the gas tax could accomplish the same objective.

Finally, the state and the federal government, should require auto manufacturers at their own expense to provide cars for testing on a regular basis and conduct actual tests of car emissions at various mileages on a mass basis to determine the actual level of pollution.

On the federal level, Congress should pass legislation to require all air polluters to report their pollution and to require all air pollution control bodies, using any federal funds, to report the sources of pollution within their jurisdiction. Such legislation will be offered in the United States House of Representatives shortly by a group of California Representatives, headed by Don Edwards, D–San Jose.

At present federal air pollution control inspectors do not have the right to enter private property to check on violations. They should be given that right.

In addition additional powers should be given to the National Air Pollution Control Administration so that it can step in when local or state governments fail to control pollution.

The federal standards on carbon monoxide, particulates, nitrogen oxides and hydrocarbons should be strengthened and Detroit should be told to clean up the auto or face increasing economic penalties.

Leaded gasoline should be phased out as Detroit changes its engine to no longer require such gasolines.

Finally, the federal government should help finance additional air pollution research and necessary rapid and mass transit sys-

tems. Again such funds could come out of gasoline taxes.

This program is incomplete. It is only a start—and some of it may be impractical—but it is a start.

There could be a stronger program: Cease building new roads, use the funds for rapid and mass transit, tax cars further until they are no longer practical to drive while providing other means of transportation. At the same time require polluting industries to either shut down or stop polluting.

The decision on whether there will be air fit to breath in the Los Angeles basin should not lie in the hands of the polluters, or even the politicians. It should, and does, lie in the hands of the people, who make their wishes known by action, or inaction.

Clean air has been the birthright of all mankind. It no longer is; instead the child born today must breath poison. But for how long?

What do you want to breathe?

ANNUAL LIMIT OF $20,000 ON SUBSIDIES PAID TO AN INDIVIDUAL FARMER

The SPEAKER. Under a previous order of the House, the gentleman from Pennsylvania (Mr. COUGHLIN) is recognized for 5 minutes.

Mr. COUGHLIN. Mr. Speaker, we have a remarkable opportunity this week to serve the people of the United States by cutting expenses without hurting the people this particular program is designed to help. We can do this if we take the long-needed step to stop stuffing the silos of corporate farmers with the tax moneys of all Americans. We can do this by placing a $20,000 annual limit on subsidies paid to an individual farmer.

Unlimited and unwarranted subsidies contributed beyond reason to the $3.7 billion total in farm subsidies for 1969. Each year that the Congress refuses to end this costly and unjust practice of no-limit subsidies, contributes to an erosion of its own credibility.

I intend to support an amendment to establish the $20,000 maximum when the agriculture bill is brought to the House floor this week.

Although the House Agriculture Committee has recognized that the no-limit subsidy program cannot be condoned, I feel the compromise itself cannot be justified. By setting a $55,000 annual limit per crop, the committee has devised a system that still could run up to $165,000 a year for giant farms which want to produce wheat, feed grains, and cotton.

I am not comforted by public statements that only a few farms could take advantage of the new program to obtain all the benefits. It seems relatively easy for the corporate farmer to change his programs so he still could obtain $165,000 yearly in subsidies which never were meant for him.

Agricultural subsidies originally were developed to help the struggling farmer and the small farmer. If the Congress ever should get the message from the people, it is this—immediately end the monumental agricultural boondoggle.

The millionaire farmer and the corporate farmer do not merit nor should they receive the largesse of Government tax moneys contributed by citizens who are already cornfield-high in Federal, State, and local taxes.

My own 13th Congressional District of Pennsylvania contains much farm and rural lands. It is interesting that preliminary results of my 1970 questionnaire poll show that agricultural subsidies are cited as the number one area in which less money should be spent. No one farmer in Montgomery County received more than $20,000 in 1969.

In Pennsylvania itself, only nine farmers received more than $20,000 each, with the largest subsidy amounting to about $40,000. It seems obvious that the $20,000 figure certainly will afford the necessary support to the farmers who merit it.

Too often, we, as Congressmen, criticize Government bureaucracies for refusing to change or cut back programs that have proven too costly, ineffective, and outmoded. Now we have the opportunity to take our own medicine by drastically altering this expensive program that enriches the wealthy farmer at the expense of all other citizens.

I believe I can urge this approach, not only because of the number of farms in my congressional district, but because I have applied this rule to other programs in my own area. Whether they were defense or welfare programs, I have recognized my responsibility to try to eliminate the unnecessary and ineffective for new and sounder approaches.

By adopting the $20,000 farm subsidy limit, we can effect—through a tightly administered program—about $300 million in savings. This is a substantial saving and it is an act that would help restore the Congress credibility as a responsive and responsible institution of Government.

THE ISSUES—LET'S LOOK AT THE RECORD

The SPEAKER. Under a previous order of the House, the gentleman from New Mexico (Mr. FOREMAN) is recognized for 60 minutes.

Mr. FOREMAN. Mr. Speaker, in a sincere effort to openly review and frankly discuss several of the issues recently acted on, or soon to be considered, by the Congress, I take this time to summarize some of these matters with our colleagues and other interested citizens.

It has been, and will continue to be, my aim to carefully study all of the information, for and against, every issue before it comes to a vote here in the House. Some of the questions I have in my mind as I review a bill are: First, is it in the best interests of my country, my State, and my constituents? Second, is it constitutional? Third, can we afford it? Fourth, what are the views of the people I represent insofar as this legislation is concerned? Fifth, is this a legitimate function of the Federal Government—or is it the right and responsibility of the people? Sixth, is it fair to all concerned?

I do not vote for or against a bill simply because the administration or the political party leadership is for or against it—I vote the way I do, because after weighing all of the facts available to me, I sincerely believe it to be in the best interests of my country and my constituents.

As to the matter of specific legislation, I am pleased to discuss my views on several important bills as follows:

GUARANTEED ANNUAL WAGE

I have some very serious reservations about H.R. 16311, the guaranteed annual wage welfare programs. Admittedly, the present welfare program is costly and inequitable—however, I believe this bill would move us in the wrong direction because it will probably add several million more persons to the welfare rolls, more social workers, more Federal control, bureaucracy, and dependence at an estimated additional annual taxpayer cost of $4 billion, or more, than we are now spending. Our objective should be to seek a reduction, not an increase, of overloaded welfare rolls. We should work to reduce the cost and control of government by the enactment of programs that encourage individual work, incentive, and responsibility—not reward nonproductivity and irresponsibility. We need to work toward more jobs and permanent job security rather than permanent relief.

We cannot spend ourselves into affluence; we must earn our way by our individual effort. Regardless of what some may say or think, we live under a system where the people support the Government; the Government does not, and cannot, support the people. The Government is not a creator of wealth; it gets its money from people who work and pay taxes, and we are fooling no one but ourselves when we think otherwise.

My son, Kirk, summarized the situation very well with his question, "Who's gonna pull the wagon if everybody gets in to ride?"

Most Americans who work for their living have little sympathy for the concept that every man should be guaranteed an income by the Government, regardless of whether he can or will work. A Federal Government-guaranteed annual income will destroy self-reliance, individual responsibility, self-respect, and the incentive to work. Therefore, in good conscience, I cannot support or vote for this program that I sincerely believe can eventually destroy the moral fiber of the United States of America.

EDUCATION PROGRAMS

Considerable discussion evolved over the proposed reductions in Health, Education, and Welfare appropriations—and President Nixon's efforts to halt inflation and restore the value of our dollar. No one is more deeply concerned about the need for reductions in Government spending programs than I am—and I always have been. However, when it comes to the education of our children and the Government's commitment to our federally impacted school districts that have budgeted these funds, and are depending on them for their operations, then I must support our school districts. I have in the past, and I will continue to do so in the future.

If we must make reductions in the overall appropriations program, then we

should carefully consider a reform of our costly welfare system, a reduction in our wasteful foreign-aid program, increased efficiencies in military expenditures, and a realinement of some of the ineffective OEO programs as good places to make needed cost cuts. That is why I supported education funding over the Presidential veto.

THE 18-YEAR-OLD VOTE

Mr. Speaker, during my campaign for election to Congress, I pledged to reflect the views of the citizens of New Mexico—and, further, when I took the oath of office, I swore to support and defend the Constitution. Now, from this base, let us take a look at the issue of the 18-year-old vote.

I have always said that I would vote to submit to the several States a constitutional amendment fixing the voting age at 18. Recent campus riots have not changed my mind because I would not penalize the vast majority for the transgressions of a small minority. However, I am opposed to a simple Federal statute. I am opposed for two reasons: First, I consider such a statute unconstitutional; second, even if constitutional, such a statute, as distinguished from a constitutional amendment, is unwise.

Article 1, section 2, provides that those voting for Federal officers—representatives—"shall have the qualifications requisite" for those who are eligible to vote for members of "the most numerous branch of the State legislature". The 17th amendment contains the same language as it applies to those voting for U.S. Senators.

Implicit in that language is the acknowledgment that States are authorized to fix voter qualifications in both State and Federal elections. There is no language in the Constitution or the amendments to the Constitution which says otherwise. Indeed, three of those amendments—the 15th, 19th, and 24th—which deal with voter qualifications in all elections—race, sex, and the poll tax—acknowledge that the power to fix voter qualifications cannot be taken from the States except by constitutional change.

Even if Congress has the constitutional power to lower the voting age by simple statute—which I dispute—this does not mean that it is wise for Congress to exercise that power. It is, I believe, unwise for three reasons:

First, it is unwise because it would cast a cloud of uncertainty over the 1971 elections. Even if the court tests could be concluded and a judgment of constitutionality rendered before January, it might come too late for voter applicants in voter registration periods preceding elections scheduled early in 1971.

Second, a Federal statute is unwise because it would tend to erode the federal system. In the last 5 years, 20 States have rejected propositions to lower the voting age, one of them twice. Last year, the citizens of New Mexico voted down a new constitution that would have permitted lowering the voting age. On my 1969 annual legislative questionnaire poll on this matter, the citizens voted 2 to 1 against this provision. This year, 15 States have the proposition on their ballots. For the sake of the federal system, is it wise for the Congress, even if it has the raw power to do so, to veto the will of half the States?

Third, a Federal statute with a built in constitutionality court test is unwise because it confronts the Supreme Court with an impossible dilemma. If it sustains the statute, the Court will be accused of amending the Constitution by judicial fiat. If it declares the statute unconstitutional, the Court will be blamed for frustrating the expectations of 11 million young Americans between the ages of 18 and 21.

It is, I repeat, unwise to expose the Court to such needless abuse. It is unwise to encourage and then perhaps disappoint the young men and women of our country at a time when they are already concerned about the broader gap between promise and performance.

The wise course, the safe course, the unchallengeable course, the tried-and-true course, is to amend the Constitution in the manner which the charter itself provides.

CONGRESSIONAL REFORM

I believe reform and improvement is a vitally necessary part of growth and development. Modernization and reform of the congressional process is in order and has my support.

The "people's right to know" must be honored and protected. Except for matters involving our national security, congressional committee proceedings should be open to the public. While recorded teller votes may consume additional time. I certainly have no objection to placing my name on the record on every vote of the public's business.

These basic concepts and reforms seem to find general acceptance among most Members of this House—but there are other proposed specific changes that will probably encounter strong resistance. Because of these, I seriously doubt that a meaningful reform measure will be finalized this year.

HILL-BURTON HOSPITAL PROGRAM

I support the Hill-Burton program of Federal assistance for the construction of needed hospital facilities and improved health standards. The goal of increasing hospital beds is even more critical today than it was when this program was instituted.

In terms of money made available for hospital construction, we approved almost double the amount for fiscal year 1971 as compared with fiscal year 1970. This House approved $172.2 million in construction grants; and, a $500 million loan guarantee allocation for fiscal year 1971, of which $166 million is expected to be committed with the $5 million provided for interest subsidy. This also gives an improved hospital construction position for the smaller communities.

Earlier, I supported the President's veto of an authorization bill, originally approved as an acceptable bill by the House, but later altered in the Senate by the mandatory spending language of the Yarborough amendment—an amendment which restricted Presidential leeway in spending. I will continue to support a sound, effective Hill-Burton program within our ability to finance it.

POLLUTION CONTROLS

Mr. Speaker, no New Mexican wants Los Angeles smog to choke Las Cruces or Roswell. No New Mexican wants our rivers and streams to get in the same shape as the Potomac River or Lake Erie which died in its own filth a few years ago.

I want to make it clear that I support adequate Federal pollution laws and enforcement. Pollution does not respect State boundaries.

Unless and until we have fair and equitable standards, which can probably be improved best on a regional basis, there is likelihood of penalizing industries and municipalities in one State which has good antipollution laws when a neighboring State does not have adequate laws.

THERE ARE OTHER KINDS OF POLLUTION

The quality of life goes beyond the issue of air and water pollution.

There is the pollution of inadequate education, of street crime, of poverty, of racial conflict—the pollution of young minds and bodies with narcotics and dangerous drugs and, smut and pornography.

The Government and the courts themselves sometimes may even contribute to this pollution. There is no better example than the present struggle over the survival of neighborhood schools and the insidious ideas of compulsory busing of students to achieve racial balance. We cannot improve the quality of life by arbitrary, unworkable decrees that destroy neighborhood schools.

In the battle against the pollution of our young people's minds, I strongly support effective, tough Federal laws and administrative measures that are being utilized to crack down on the dope pushers and halt the importation of drugs into this country. And, I am grateful and appreciative of the concern and positive attitude of the SOS youngsters who are working to help understand the tragic dangers of drug abuse and the pitfalls and heartaches of narcotics experimentation.

SPENDING PRIORITIES

I support the request that the Congress establish a firm ceiling on total expenditures which would apply to the Congress as well as to the President. This will protect the taxpayer and the consumer and require both the legislative and executive branches of Government to determine priorities and live within the established ceiling.

In President Nixon's 1971 budget, for the first time in 20 years, spending for human resources—health, education, welfare, retirement programs, and so forth—will exceed defense spending. In 1962 under President Kennedy, the Federal Government spent 48 percent of its budget for defense and only 29 percent for human resources. By 1968, the comparison was 45 percent to 32 percent. This fiscal year only 37 percent goes for defense and 41 percent for human resources.

President Nixon's 1971 budget calls for more than $83 billion to be spent for domestic social programs while defense spending is moving down to $73 billion.

The budget includes $3 billion for elementary and secondary schools, $1.5 billion for higher education, $1.2 billion for vocational and other special education, and $2.7 billion for manpower training. Health programs in the Federal budget add up to $14.9 billion. And initial cuts of $12 billion in defense already have been made.

FOREIGN AID PROGRAM

Mr. Speaker, never before in the history of mankind has there been demonstrated such shortsighted generosity as our expensive, badly executed, unrealistic, uncontrolled, and uncontrollable foreign aid giveaway program. This is the only Federal aid program I know of that does not exert Federal control along with the granting of Federal funds.

Since its inception, we have dished out $199 billion, counting the interest we have paid on the money we have borrowed to give away, to over 100 of the 120 nations on the face of the earth, and we have less international respect and fewer friends than we did when we started this runaway boondoggle.

IMPORTANT TRUTHS

The public debt of the United States stands at more than $360 billion. The annual interest alone on that debt is more than $18 billion.

Interest on Federal borrowing is now more than 7 percent. Compare this with the rate at which loans are now made under foreign assistance—2 percent for the first 10 years and 3 percent for the next 30 years.

Federal taxes are at their highest level to say nothing of State and local taxes. We hear with increasing frequency of a taxpayers' revolt. If the taxpayers knew the full story of the extravagance and waste in this program, the threat would be even more real.

Three countries that have been receiving, and will continue to receive, funds under this bill—Thailand, Korea, and Taiwan—are now lending money to the United States at 6-percent interest.

Let us tell these hard truths to our constituents and see what kind of a response we get on how to vote on this grab bag.

CONCERN FOR THE HUNGRY?

To those who ask me, "Do you not care about the poor or the hungry people of Africa or India?" I reply, of course, I am concerned about them, but I am more concerned about the poor overburdened taxpayers of America who are stuck with the bill for the irresponsible waste involved in these aid programs. At a time when we have millions of hungry and uneducated Americans in our own country, why do we not give them some aid? How about feeding them and educating them, first? Why do we not look after our own family before we start trying to raise the living standards of the world?

PROPOSED SOLUTION

We must initiate drastic reductions in foreign aid in all instances, except where technological and military assistance is necessary to the defense of the free world and is economically advantageous to the United States. We must initiate some tough-fisted management over it. We must use commonsense on our administration of it and curb its waste and mismanagement.

We can do this by restricting grants to the careful distribution of surplus farm products to friendly underdeveloped countries to fill hungry bellies, by providing needed medicines to the sick, and by providing technological assistance and instruction to those who show a willingness and desire to help themselves. Our money and equipment sent to countries needing help should be only to non-Communist countries, and this should not be grants; rather it should be in the form of sound, hard, reasonable interest-bearing loans, backed up with collateral, and to be repaid according to a specified, sensible, businesslike schedule.

Mr. Speaker, it is an unforgivable disgrace, indeed, for a country with a national debt greater than all the countries of the world combined, to continue to tax our people to give away our goods to try to buy friends among people who readily turn against us when the till goes empty and the chips are down. Any supporter of this wasteful throwaway program, who has one hungry child or one depressed business in his district, should hang his head in shame if he continues to vote funds that are to be so irresponsibly spent. How absurd, how ignorant can we get when we throw our money away so foolishly?

LISTEN TO AMERICA

Across this great land of ours, Mr. Speaker, are millions of proud, independent, hard-working, flag-loving patriots who still love our country, support our Government and believe in the basic constitutional principles of limited government and free enterprise that made us what we are today.

I respectfully urge my colleagues in the Congress and our national leaders, regardless of their political party affiliations, to give heed to the voice of the heartland of America. This is a great, wonderful, productive and proud land. Do not kill it with an overly powerful paternalistic central government and socialism which has brought about the downfall of other nations.

Cultivate it, encourage it, and praise our country; do not ridicule and condemn it. With all its problems and imperfections, it is still the finest country ever known in the history of mankind.

Let us rededicate ourselves to the task of preserving our freedom, our heritage, our constitutional rights and principles and our great Nation "under God." Let us get back in balance again, economically and spiritually, and let us place the welfare of this great country ahead of political considerations.

VETERANS: AN UNFULFILLED DEBT

The SPEAKER. Under a previous order of the House, the gentleman from Indiana (Mr. HAMILTON) is recognized for 10 minutes.

Mr. HAMILTON. Mr. Speaker, the second session of the 91st Congress has only partially met its obligation to the Nation's veterans.

Congress has taken several helpful steps, but several more must be taken to meet our obligation.

Already in this session two major pieces of legislation have been signed into law. In the last 4 months the House has passed and sent to the Senate seven additional major pieces of legislation.

LEGISLATION ENACTED

It is now public law that under the veterans' education assistance programs, certain categories of veterans are entitled to an increased allowance. An average overall increase of 34.6 percent is provided. The costs of schooling have risen sharply since the days of World War II and the Korean conflict; therefore, educational assistance to veterans had to be increased accordingly. Enactment of this piece of legislation represents a significant congressional effort to provide new and special programs to attract and assist educationally disadvantaged and academically deficient veterans under the GI bill.

One of the more important pieces of veterans legislation which has been signed into law is the serviceman's group life insurance amendments. The law increases the amount of insurance under the serviceman's group life insurance—SGLI—program from the present $10,000 to $15,000.

BILLS PASSED BY THE HOUSE

The House recently sent to the Senate a bill modifying the reporting requirement and establishing additional income exclusions relating to pension for veterans and their widows. Additionally, it liberalizes the oath requirement for hospitalization of veterans. This liberalization follows the trend established by similar liberalizations authorized for widows seeking social security benefits, or civil service retirement benefits. It is a logical and equitable extension of present law.

Recently, the House approved a new home loan financing bill. Investment of up to $5 billion in assets of the national service life insurance fund will be provided to purchase mortgages from private lenders for financing of veterans home loans of $30,000 or less. Enactment of this bill will make more capital uniformly available for investment in guaranteed loans during the next 5 years. It will assist the growing number of post-Korean veterans to finance their home purchases.

The House passed several measures increasing direct monetary benefits to veterans: First, a bill increasing the automobile allowance for seriously disabled service-connected veterans from its present $1,600 to $2,500; and second, a bill extending for 2 additional years the authority of the Administrator of Veterans' Affairs to set interest rates at a level necessary to meet the mortgage market for guaranteed and insured loans to veterans. These bills, of course, are measures to equalize veterans benefits with the rising cost of living and the inflationary conditions of the economy generally.

Finally, the House has approved, three bills extending medical care and benefits to veterans: First, a bill furnishing outpatient care and other medical services

to any veteran who is in need of attendance by another person, or who is permanently house bound; second, a bill authorizing transfer of a veteran who is hospitalized under the VA auspices for a non-military-connected condition and who has received maximum benefit from such hospitalization, to a public or private institution for nursing home care at Federal expense; and third, a bill to achieve a more effective and improved administration of the program for sharing of certain specialized medical resources with community medical facilities.

This I believe has been a creditable record. I am proud of supporting all five of these bills on the floor of the House. However, it is important to realize that our obligation has not been completely fulfilled. The words of Teddy Roosevelt are very timely in this respect:

No other citizen deserves so well of the Republic as the veteran. They did the one deed which, if left undone, would have meant all else in our history went for nothing. But for their steadfast promise, all of our annals would be meaningless, and our great experience in popular freedom and self-government would be a gloomy failure.

Let us honor our obligation to these veterans by approving the following pieces of legislation.

LEGISLATION CONGRESS SHOULD ENACT

The 91st Congress should add the following legislation to the books before it adjourns.

WORLD WAR I VETERANS

During the course of our efforts to provide veterans with necessary benefits, we have overlooked the special needs of our veterans from World War I. There are presently two bills pending in the House which should be approved: First, a bill providing for significant increases in the monthly rates of compensation for veterans with service-connected disabilities, second, a bill increasing the rates of pension payable for non-service-connected disability or death to veterans of World War I and later conflicts, or to the widows and surviving children of such veterans. Additionally, income limitations applicable to such pensions should be revised so as to increase the number of income categories and raise the maximum amount of other income an individual may have while still remaining eligible for some pension.

VIETNAM VETERANS ASSISTANCE

The House should pass a measure permitting servicemen on active duty to qualify for veterans education assistance benefits after 180 days of service. Incentives should be provided for returning veterans to encourage their participation in the job market. For example, the scope of veterans educational assistance benefits should be extended to cover programs of education required as a condition of certain loans from the Small Business Administration.

VETERANS PATENTS

I have introduced a bill providing for the extension of the term of certain patents of persons who served in the military services of the United States. No legislation has been approved since World War II dealing with this problem. Veterans deserve extensions of time for patents they have not been able to exploit because of military service. It is only equitable that these privileges now be extended to all veterans. Rather than considering this question anew following the end of each conflict in which we participate, let us now extend the provisions to all veterans who have not benefited from previously enacted legislation.

HEALTH CARE

I feel that the historic right of veterans to prompt and adequate health care has been jeopardized by funding cuts. Funding deficits in the Indiana Veterans' Administration hospitals of some $1.4 million in fiscal year 1970 posed the prospect of curtailment of care to our veterans with battle wounds or service-connected disabilities. Consequently, I am supporting the funding level for the Veterans' Administration medical program as voted by the Senate. The Senate voted an additional $100 million over the House appropriation. For several years the Veterans' Administration has been in an impossible budget squeeze between higher medical costs without a proportionate increase in funds and staff personnel. Therefore, the additional $100 million is essential for a modern medical program for veterans.

In fiscal year 1971 we will spend nearly $9 billion to provide services and benefits for America's 27.5 million veterans who make up nearly 18 percent of this Nation's population. I believe the legislation passed during this session, and the legislation we hope to pass, will insure that this country is living up to the responsibility it owes to the fighting men on whom we all depend.

Let us live up to this obligation and responsibility by approving these remaining pieces of veterans legislation.

SENATE COMMITTEE ACTION ON BANK HOLDING COMPANY LEGISLATION

The SPEAKER. Under a previous order of the House, the gentleman from Texas (Mr. GONZALEZ) is recognized for 10 minutes.

Mr. GONZALEZ. Mr. Speaker, as many members of the House know, during the last session of Congress, the House Banking and Currency Committee spent many days and weeks working to produce sound legislation to regulate one bank holding companies. Admittedly, this was a complex and controversial task. But the result, I believe, was reasonably sound legislation as it passed the House of Representatives on November 5, 1969, and was sent to the Senate for action.

To be sure, lobbyists on all sides of this issue were hard at work during House consideration of this most vital piece of legislation. However, it seems to me at least that the House did itself credit by ignoring much of the pressure and passing a bill that was in the public interest.

On July 7 the Senate Banking and Currency Committee ordered reported its version of H.R. 6778, to amend the Bank Holding Company Act of 1956. To the surprise of many, including both representatives of the banking industry, as well as representatives of businesses most threatened by the expansion of nonbank activities of bank holding companies, the bill ordered reported by the Senate committee strongly favored certain nonbanking corporations controlling a single bank. Thus, the Senate committee bill would permit a privileged group of corporations to carry on precisely the kind of activity—the mixing of banking and nonbanking activities—that was sought to be prohibited in the original proposals for amending the Bank Holding Company Act.

Even the American Banker, the trade publication of the banking industry, is highly critical of this very unusual action. The respected business publication, Business Week, in its July 18, 1970, issue was also highly critical of the Senate committee's action. How the Senate committee action evolved is discussed in an excellent article appearing in the July 18, 1970, issue of the National Journal.

At this point in the RECORD I insert the National Journal article and the editorials from Business Week and the American Banker:

[From the National Journal, July 18, 1970]

FINANCIAL REPORT: BANK LOBBY SCORES IN SENATE WITH SECOND EFFORT ON ONE-BANK HOLDING BILL

(By Frank V. Fowlkes)

In getting the Senate Banking and Currency Committee to erase every tough clause in the House-approved one-bank holding company bill, banking lobbyists have once more demonstrated the importance of what football fans know as "the second effort."

The Senate Committee version of the bill, reported out on July 7:

Discarded a House "laundry list" of proper banking activities which would have kept banks from operating travel agencies or selling most insurance and put limits on their sale of data processing services.

Replaced the "laundry list" with language which permits banks to engage in any activity "functionally related" to banking, a phrase for which no legal or working definition yet exists. (*See "definition" box.*)

Permitted holding companies to retain subsidiaries that are not "functionally related to banking as long as they were acquired before a "grandfather" date of March 25, 1969. The House bill required divestiture of such holdings acquired after 1956.

Gave holding companies up to ten years to sell subsidiaries not related to banking if they were acquired after the "grandfather" date.

Exempted holding companies with bank subsidiaries whose assets are less than $3 million or less than 25 per cent of the company's net assets.

BACKGROUND

Bank holding companies first became a congressional issue in 1954. At that time, the Federal Reserve Board, which was trying without success to control holding companies under existing law, asked Congress for more power.

The bill: The next year the House gave the Fed authority as pass on all bank holding company acquisitions. The Senate, however, exempted holding companies which owned only one bank. In conference, the House agreed, and the bill containing the one-bank loophole became law in 1956. President Eisenhower remarked when he signed the bill that he was pleased with the regulation but not with the one-bank exception.

The loophole was to help small town banks, which Congress felt would go out of

business if not permitted to affiliate with non-banking companies. But the big banks quickly took advantage of it.

By 1969, seven of the eight largest banks in the nation were controlled by holding companies. They simply converted the management of their companies into holding companies, with the banks themselves becoming subsidiaries.

This tactic exempted them from Fed regulation in acquiring non-banking affiliates, and they began major acquisition programs.

Every year between 1958 and 1965, the Fed recommended bringing the single-bank companies under the law. The House tried to do this with its Holding Company Amendments of 1966, but the proposal was rejected by the Senate.

Plugging the hole: Alarmed by the fact that the nation's largest commercial banks were taking advantage of the loophole, both Rep. Wright Patman, D-Tex., chairman of the House Banking and Currency Committee and the Nixon Administration in 1969 introduced bills to close the loophole.

The Administration bill, the weaker of the two, would have prevented one-bank holding companies from acquiring firms not "functionally related" to banking. It also would have forced them to shed any nonconforming acquisitions made after June 30, 1968, the so-called "grandfather date." The Fed, the Comptroller of the Currency and the Federal Deposit Insurance Corp. would have divided regulatory authority over one-bank holding companies.

Patman's bill—Essentially on extension of the 1956 law to one-bank holding companies, the Patman bill would have required acquisitions to be "so closely related to the business of banking as to be a proper incident thereto."

The Patman language, identical to that in the 1956 law, was opposed by the holding companies as more confining that the "functionally related" alternative. Moreover, the Patman proposal would have forced one-bank holding companies to divest themselves of all nonconforming acquisitions made after passage of the 1956 law. Patman proposed to give complete regulatory authority to the Fed—traditionally the toughest of the three bank regulators.

Committee action—Lobbyists followed House committee action closely through the hearings and a precedent-setting open committee markup session. A veteran committee staff member said he had never seen one bill attract so much attention. When the committee completed its work in June of 1969, the banks and the holding companies appeared to have won a victory.

The bill the committee reported was clearly closer to the Administration bill than to Patman's and more liberal than either. Under the committee bill, all holding company acquisitions made before Feb. 17, 1969 were to be exempt.

House reversal—Victory for the banks was short-lived, however. High interest rates and the banks resulting public disfavor aided a strong lobbying push by groups who feared increased competition from the holding companies—chiefly travel agents, insurance agents and data processors. And, on Nov. 5, the House reversed the direction of the committee bill and approved an even tougher version that the Patman original.

The final House version required one-bank holding companies—with minor exceptions—to get rid of all non-bank-related subsidiaries acquird since 1956. In addition, it specifically prohibited their entry into the following businesses: mutual funds, travel agency, insurance, data processing and property leasing. The Fed was given sole regulatory authority.

As an added twist of the knife, Patman in the floor debate took pains to see that the legislative history would record that the House intended the prohibitions against entering nonbanking fields to apply to single banks as well as to holding companaies.

SECOND EFFORT

The House bill represented a serious setback for the banking and holding company interests, but it has been a long time since legislation favorable to banks has been voted out of the House.

Bank lobbyists expect to lose House votes and seek to make up for the losses in the Senate Banking and Currency Committee, where ranking members are more favorably inclined toward banks and the staff is a traditional training ground for bank lobbyists.

Moratorium hope: Moreover, this time the banks and the holding companies saw a reprieve in the offing.

Several weeks before the President was due to release his Feb. 2 Economic Message, word spread through banking circles that a Presidential commission would be named to study the nation's financial structure.

Further, it was rumored that the announcement would be accompanied by a request for a legislative moratorium on the one-bank holding company issue pending completion of the study. A moratorium would have killed the House bill.

The moratorium request never came. For weeks, Sen. John Sparkman, D-Ala., chairman of the Senate Banking and Currency Committee, waited for the Administration to commit itself on whether it wanted hearings. Finally, on April 21, under strong pressure for action from holding company opponents, Sparkman announced that the Senate committee would begin hearings May 12.

Gathering forces: After their setback in the House, the banks and the holding companies set about making sure the experience was not repeated in the Senate. As a first step, the American Bankers Association, the principal banking lobby, hired James B. Cash, a former professional staff member of the Senate Banking and Currency Committee. The addition of Cash gave the ABA two lobbyists with committee connections. ABA general counsel Matthew Hale is a former general counsel for the committee.

To consolidate the nation's bankers in opposition to the House bill, the ABA began issuing a newsletter called *Capitol Current*, devoted entirely to informing bankers of progress on the one-bank holding company bill. The second issue, dated Dec. 23, told bankers that the ABA was "using all available resources to fight for equitable treatment in the U.S. Senate."

Permissible activities: The overriding concern of the ABA in lobbying the Senate committee was to loosen what banks and holding companies considered a straight jacket—a list of prohibited activities contained in the House bill.

The ABA favored language permitting bank entry into any field "functionally related" to banking. The Administration had supported this language in testimony before the House committee—and was to do so again in the Senate—but potential holding company competitors opposed it, fearing future liberal interpretations by the Fed.

Key language—The "functionally related" language was also promoted by former chief clerk of the Senate Banking and Currency Committee John H. Yingling, who told *National Journal* the phrase was the heart of the bill. Yingling is a lobbyist for the First National City Bank (a holding company subsidiary), the Association of Corporate Owners of One Bank and an adviser to the Boston Co. House staff members consider him among the most effective of more than 20 registered bank lobbyists.

On the other side of the issue, lobbyists for interests which would have enjoyed "laundry list" protection under the House bill argued for its retention or, alternatively, for reversion to the "closely related" language of the 1956 Act. Among those urging more restrictive language was former Attorney General Ramsey Clark, who wrote and visited committee members on behalf of Automatic Data Processing Inc.

Committee vote—According to one committee staff member, however, the interests seeking laundry list protection were "in complete disarray." Clark's appeal, he noted, was "a case of too little too late." The committee, in executive session, voted 11–4 against substituting "closely related" for "functionally related."

Voting for "functionally related" were Sparkman; Thomas J. McIntyre, D-N.H.; Walter F. Mondale, D-Minn.; Ernest F. Hollings, D-S.C.; Harold E. Hughes, D-Iowa; Alan Cranston, D-Calif.; Wallace F. Bennett, R-Utah; John G. Tower, R-Tex.; Charles H. Percy, R-Ill.; Charles E. Goodell, R-N.Y.; and Robert W. Packwood, R-Oreg.

Voting for the more restrictive "closely related" language were Edmund S. Muskie, D-Maine; Harrison A. Williams, D-Del.; William Proxmire, D-Wis.; and Edward W. Brooke, R-Mass.

WILLIAMS AMENDMENT

The most controversial and suprising development in the Senate committee was adoption of an amendment offered by Williams which effectively exempted conglomerate holdings of bank subsidiaries from the bill.

The Williams amendment exempted from the act's strictures those holding companies which own only one bank, provided the bank meets at least one of two requirements:

Its total net assets are less than $3 million.

Its total net assets are both less than $50 million and less than 25 per cent of the combined assets of the parent company.

The Williams amendment, on which no record vote was taken, was similar to a draft circulated earlier to the staff and members by Robert Oliver, the lobbyist for Sperry & Hutchinson, the green stamp company which is also a one-bank holding conglomerate.

Amendment critics: During committee debate on the amendment, Proxmire read letters from both the Fed and the Justice Department critical of the exemption.

Robertson—Fed Vice Chairman J. L. Robertson stated his belief that "the approach of the amendment is totally inconsistent with the purposes of the Act." "I am aware," he added, "of no reason for treating a conglomerate bank holding company different from a congeneric one, insofar as the potential evils of combining banking and nonbanking businesses are concerned."

Justice—For the Justice Department, Assistant Attorney General for the Antitrust Division Richard McLaren, who directs Administration anti-conglomerate activities, wrote: "The proposed amendment would, in our opinion, substantially negate the intended effects of the proposed bill to bring one-bank holding companies within the coverage of the Bank Holding Company Act of 1956." The distinction between conglomerate and congeneric holding companies, he added, "appears to bear little relation to the dangers that could result from the transfer of economic power from banking into other activities."

No Treasury position: The position of the Treasury was different. In a letter to Proxmire written June 30, the same day as those from the Fed and Justice, Treasury Under Secretary Charls E. Walker said that "enactment of the Williams amendment . . . would not defeat the basic purpose of the legislation." The Walker letter came as a surprise to committee staffers who had been told earlier by Treasury Deputy General Counsel Roy Englert that the Treasury would probably oppose the amendment.

Transcript deletion: The Williams amend-

ment created considerable acrimony on the committee and among the staff. During hearings on the proposal, Proxmire referred to it contemptuously as the "green stamp amendment;" a reference that was deleted from the transcript because of Williams' objection.

Companies exempted: No one has as yet ascertained exactly how many holding companies will be exempted by the Williams amendment, but a list prepared by an ad hoc lobbying group, the Association of Traditional One-bank Holding Companies, included a minimum of 26 firms.

Texas exclusion: During the executive markup session, Tower tried to alter the Williams amendment to raise the $50-million upper limit on bank subsidiaries' net assets to $100 million. The attempt, which failed, would have permitted the Texas Commerce Bank of Houston to be included under the exemption.

C.I.T. PROVISIONS

Another company which the Williams amendment did not benefit was the C.I.T. Financial Corp., which owns the National Bank of North America with assets of over $100 million.

C.I.T. lobbyists gave highest priority to an amendment which would give a holding company the longest possible time to divest itself of holdings which the Fed might in the future rule were not "functionally related." Specifically, C.I.T. sought an automatic ten-year grace period, and an additional three years at the discretion of the Fed. The law now allows only two years, but permits the Fed to grant an additional three years for divestiture.

Other changes: C.I.T. had other modifications on its shopping list:

It wanted the bill to permit holding companies to continue to make nonconforming acquisitions during the divestiture period as long as they got rid of either the banking or the non-banking subsidiaries by the end of the period.

It wanted holding companies to be able to shift functions between its various subsidiaries.

It wanted holding companies to be able to continue to make acquisitions in lines of business in which they were already engaged, rather than being confined to internal expansion as recommended by the Administration and prescribed in the House bill.

It wanted the law to specify Level 2 of the Commerce Department's Standard Industrial Classification Code to be used to define lines of permissible businesses for holding companies subject to the act. The code consists of four groupings of companies considered to be "lines of business."

Level two divides industries into more general categories than levels three and four, and therefore would give a holding company greater freedom in choosing its activities.

Odom's role: The chief lobbyist for C.I.T. was Lewis G. Odom, a former Senate Banking and Currency Committee staff director who lives in Montgomery, Ala. Odom moved into the Carroll Arms Hotel across the street from the committee offices while executive sessions were in progress.

All of the changes Odom sought—with the exception of the request for Level 2 classification—found their way at least in modified form into the committee print of the bill. (The committee print is the document from which the committee works in marking up the final draft of a bill. Control of what goes into the print confers a tactical advantage since a majority of the committee must be swayed before changes can be made.)

Drafting the print: The drafting task fell to Banking and Currency staffer Hugh Smith, a Sparkman aide. Smith solicited the help of Assistant to the Board of Governors of the Federal Reserve Board Robert L. Cardon, who worked on an earlier draft bill in early June. According to Cardon, the draft he submitted called for a five-year divestiture period, not the ten-year period which the committee print prescribed.

With the exception of Smith, no one on the committee staff ever saw the Cardon draft. Alan Lerner, vice president and general counsel for C.I.T., was not sure he had not seen it. "I may have seen something like that, though I don't recall it being specifically from the Fed or from Bob Cardon," he told *National Journal*. "There were so many pieces of paper floating around down there, people were showing me my own drafts and asking me what I thought of them." Lerner did recall, however, that he had seen at least one proposal for a divestiture period of five years.

Committee action: In the markup session, the committee dealt with CIT provisions as follows:

The divestiture period was set at five years, with another five available at the Fed's discretion.

On a Proxmire amendment, future acquisitions in areas where the company already did business were forbidden unless the company divested itself of its bank.

The option to sell either the bank or the non-banking subsidiaries at the end of the divestiture period was retained; but a Proxmire amendment gave the Fed authority to block interim acquisitions deemed contrary to the purposes of the act.

The right to shift functions between subsidiaries was retained.

Nothing was specified as to how lines of business should be defined.

MAJOR REVISIONS

Some of the remaining major changes in the bill were made for particular bank situations and others were made to cover all bank holding companies.

Grandfather date: During the holding company bill's travel thus far through Congress, the barometer of its harshness as seen from the bankers' point of view has been the grandfather clause.

The Administration asked for a date of June 30, 1968. The House committee agreed on Feb. 17, 1969. The full House moved it back to May 9, 1956. In the Senate committee, the date was again advanced, this time to March 24, 1969.

For many conglomerates the change will be unnecessary boiler-plate if the Williams amendment sticks, because it would exempt them from the act anyway. But if the Williams amendment is dropped either on the floor or in conference, the later date could be significant for companies which made non-conforming acquisitions between June 30, 1968 and March 24, 1969. A partial list of such acquisitions follows:

General American Transportation Co. acquired LaSalle National Bank, Chicago ($374 million in deposits) on November 19, 1968.

Sperry & Hutchinson Corporation acquired State National Bank, Bridgeport, Conn. ($320 million in deposits) on September 30, 1968.

National Lead Company acquired Lakeview Trust & Savings Bank, Chicago ($284 million in deposits) on January 15, 1969.

Baldwin-Central Inc. acquired Central Bank & Trust Co. of Denver ($209 million in deposits) in mid-1968.

C.I.T. acquired three X-ray and hospital equipment firms in the second half of 1968.

Gulf & Western acquired Associates Corporation of North America (which owns First Bank & Trust Co. of South Bend) on July 31, 1968.

An attempt in executive session to hold the grandfather line at Jan. 1, 1969, was defeated by a 9–3 vote, with Muskie, Hollings and Proxmire in the minority.

Union Bank amendment: A sidelight to the issue of the grandfather date was the case of the Union Bank of California. The Union Bank, an aggressive one-bank holding company, had acquired an insurance brokerage firm in June of 1969, too late to be "grandfathered in" by the Senate bill.

The bank contended that it had entered into a binding commitment to acquire the bank in January 1969 and therefore should be permitted to retain it. Former Senate Minority Whip Thomas H. Kuchel was retained as a lobbyist to push for the necessary changes in the language.

Despite opposition by the Fed, the committee adopted an amendment offered by Cranston making a binding commitment tantamount to acquisition for purposes of the act.

Bank of America amendment: Another provision, which was pushed by Bank of America lobbyist Robert James, and which got into the bill at the committee print stage, permitted U.S. holding companies to acquire non-conforming foreign businesses which do more than 50 per cent of their business abroad. A Proxmire amendment altered this language to require that any business done in the United States must be only incidental to the foreign business. James told *National Journal* that the Bank of America had no particular foreign acquisition in mind.

Boston Safe Deposit and Trust Co.: A Brooke amendment, pushed by lobbyist John Yingling, provided that, for purposes of the act, an institution is not defined as a bank unless it engages in commercial lending. Virtually the only bank which does no commercial lending and therefore fits the description is the Boston Safe Deposit and Trust Co., a subsidiary of the Boston Co. The effect of the amendment is to exempt the Boston Co. from the bill.

Labor Union amendment: An additional amendment lobbied into the bill in part by Esther Peterson, for the Amalgamated Clothing Workers Union, would exempt banks owned by labor unions. The largest union-owned bank is the National Bank of Washington, which belongs to the United Mine Workers of America. Mrs. Peterson, who committee staffers say "virtually camped on the doorstep," is a former special assistant to President Johnson for consumer affairs.

Tie-in amendment: An amendment offered by Brooke and accepted by the committee gives private litigants the right to sue for treble damages in instances where bank subsidiaries of bank holding companies engage in tie-in practices, such as making patronage of another subsidiary a condition for granting credit.

The anti-tie-in provision of the bill is the only one intended to apply to single banks as well as to bank holding companies. The Senate bill differs in this respect from the House measure, in which all prohibitions are intended to apply to both banks and holding companies.

Standing before Fed: The Senate bill would answer one grievance of bank holding company competitors by granting them standing to appear before the Federal Reserve Board to appeal holding company acquisitions. In a recent Denver case in which a holding company had sought to acquire two insurance agencies, the board overruled one of its hearing examiners and granted standing to competitors of the agencies who opposed the acquisition.

OUTLOOK

The key to the outcome of the one-bank holding company bill will be Sparkman's selection of a Senate conference delegation.

"Selection of the conferees is vitally important," said a Senate staff source. "It will be the tip-off as to what Sparkman intends to do with the bill."

Should Sparkman pick a seven-man delegation, seniority will dictate that it be composed of a majority of Senators who oppose

major pro-holding company provisions in the Senate committee's bill. He can avert this by naming a five-man delegation, bumping Muskie and Brooke from the conference.

A five-man delegation, composed of Sparkman, Tower, Bennett, Williams and Proxmire, would result in majority support for all major provisions of the bill as reported by the committee. A seven-man delegation, however, would divide as follows:

Functionally related: As evidenced by the executive session vote, Sparkman, Tower and Bennett would support the committee language, while Williams, Proxmire, Brooke and Muskie would favor the "closely related" language proposed by Patman.

Williams amendment: A five-man delegation would back the committee provision exempting many conglomerates, but a seven-man delegation would include at least three—Proxmire, Muskie and Brooke—who oppose the exemption. In addition, Tower, whose vote could tip the balance to 4–3 against the amendment, is unhappy with the Williams amendment because its $50 million ceiling on the exemption to too low to cover the Texas Commerce Bank of Houston.

Grandfather date: A seven-man conference would include both Proxmire and Muskie, who opposed the March 24, 1969, grandfather date in the vote during executive session. In addition, it would include Brooke, who missed the committee vote but opposes the late date. The fourth vote necessary to make a majority could come, sources close to the bill say, from either Bennett or Tower, either of whom might support reversion to the Administration's original proposal of June 30, 1968.

[From Business Week, July 18, 1970]

KEEPING THE BANKERS IN BUSINESS

Regulation of one-bank holding companies has been one of the hardest-fought issues in a session of Congress that has produced some spectacular fights. Late last year, bank-hating Representative Wright Patman, chairman of the House Banking & Currency Committee, caught the industry's lobbyists asleep and rammed through a bill that was tough to the point of viciousness. Last week, when the Senate Banking Committee produced its rewritten version of the bill, the lobbyists obviously were wide awake. The Banking Committee's idea of regulation is so lenient that it comes close to being no regulation at all.

The principal virtue of the Senate bill is that it would not try to rewrite history by making banks divest themselves of all the nonbank businesses they have acquired in recent years. The effective date would be Mar. 24, 1969, the day the Nixon Administration first sent one-bank holding company legislation to Congress. The House bill, by contrast, would roll the date back to 1956.

The Senate bill, however, leaves far too much latitude when it prescribes the sort of businesses that the one-bank holding companies could enter. It would let them go into anything "functionally related" to banking, with the governors of the Federal Reserve Board deciding just what that meant.

The Senate bill, moreover, would allow many of the manufacturers, retailers, and conglomerate corporations that own a bank to ignore all rules and keep making acquisitions as before. This provision, sponsored by Senator Harrison Williams (D-N.J.) has already come under attack from Richard W. McLaren, chief of the Justice Dept's. Antitrust Div.

The job for the Senate, when the bill comes to the floor, clearly will be to nail up the loopholes and produce a bill designed to keep banks in the business of banking. The argument that bankers, the custodians of other people's money, should be bankers and not travel agents or insurance salesmen gains force with each day that passes. In a time of falling business and tight credit, a bank should have its assets concentrated in the banking business, not spread all over the map. If the legislation does not establish that point once and for all, it might as well not pass.

[From the American Banker, July 21, 1970]

COMPLETE REVERSAL OF PURPOSE

The version of the one-bank holding company bill delivered up by the Senate Banking Committee surprised almost everybody except the lobbyists for the conglomerates who engineered it.

And well it might. For now that some of the shock has worn off, the Senate committee's bill can be discerned as a complete reversal of the primary purpose of one-bank holding company legislation.

The main idea from the outset was to reaffirm the important line between commerce and finance, which, in the judgment of many leaders both inside the banking industry itself and among its regulatory officials was becoming dangerously blurred. There was great concern expressed over the risk of permitting the two to blend into a combination which could create serious problems of concentration or economic power.

Bankers, for their part, also were thoroughly disgruntled over the fact that nonbank corporations were perfectly free to take over banks, but banks were not allowed to take over non-bank corporations. And while there was some desire expressed by some bankers to reciprocate in kind and drop all barriers, the preponderant view among banking industry leaders has been that it would be better if banks could be protected from being taken over by non-banks, and left free to develop as banks, and not as subordinate parts of commercial or industrial conglomerates.

But the bill that the Senate committee has produced ignores all that reasoning. Commercial conglomerates that own banks now will be able to keep them, and, within a wide latitude which rules out only very large banks as potential targets, commercial conglomerates also are given a green light to go right on adding banks to their collections.

Compounding the inequity is the fact that holding companies in which banks are the leading elements still would be denied the right to acquire any but organizations functionally related to banking.

That would be fair enough if the commerical conglomerates were told to keep hands off banking; but under the terms of the Senate committee bill, the commercial conglomerates are given a broad hunting license and the banks a severely restricted one. And that is not fair at all.

It may be flattering in a way that the commercial conglomerates have demonstrated such determination and skill in pressing their case to hold on to the banks that they have already acquired, and to keep the way clear for further acquisitions. But such enthusiasm also shows just how useful they think it is to have a bank as part of the combination. Obviously it is highly beneficial to any commercial or industrial organization to have a bank of its own. There is something special about it, and the special relationship clearly is important enough to fight hard to keep.

And it strains the imagination to envision such a fight being fought entirely in the interests of the general public, which the banking industry, in its quasi-public role, with duties and privileges carefully established by law and regulatory policy, is designed to serve.

Banking was put in a bad spot by the bill which was passed by the House last fall, which would restrict far too severely the activities of banks; but it could be put in an even worse spot by the passage of the Senate committee version, which would liberalize far too much the activities of those who would take over banks.

The industry could come out of this legislative gauntlet fettered, or defenseless, or even both. The need for a clear definition of areas where banks may function and grow, and a clear line across which nonbanking institutions may not encroach, has been gaining industry acceptance ever since one-bank holding company legislation was first proposed nearly two years ago. But the emergence of this second clear threat to the industry's integrity now should make that need bright and clear even where it never was before, in the mind of every member of the industry.

THE EQUAL EMPLOYMENT OPPORTUNITY COMMISSION BILL (H.R. 17555)

(Mrs. MINK asked and was given permission to extend her remarks at this point in the RECORD and to include extraneous matter.)

Mrs. MINK. Mr. Speaker, the Committee on Education and Labor has voted to report H.R. 17555, to further promote equal employment opportunities for American workers. Section II amends title VII of the Civil Rights Act of 1964 by authorizing the Equal Employment Opportunity Commission to enforce the prohibition against discrimination based on race, color, religion, sex, or national origin in the Federal Government.

The need for legislation to protect the employment rights of women in the Federal service has long been pressing. Numerous instances of sex discrimination have been brought to my attention that impugn the claim that the Federal Government is an equal opportunity employer. The ugly facts are that where it does exist in government our agencies have adopted spurious reasons and rationale to continue this discrimination against women.

It is time for the Federal Government to live up to the same requirements we are imposing on private industry. The only way to do this is to enact H.R. 17555 and empower the EEOC to enforce the law through cease-and-desist orders.

I hope my colleagues of the House will take the time to read a few sample cases which I have tried to battle through the various agencies. All of these women whose cases I took are not constituents of mine, but I was so outraged to read of their treatment that I started in 1966 to try to help them without the benefit or assistance of a single Federal agency. About all these 4 years of effort on my part have produced is permission for husbands of overseas employees to shop in the commissary.

I refer specifically to employees of the overseas dependents schools system, which is charged with the responsibility of educating the dependents of our military serving abroad. The rights of teachers and others employed in this system have not been protected by existing law, by Executive order, by regulations, or by the agencies determining their employment and the conditions of their employment.

In urging my colleagues to help eliminate sex discrimination in the Federal service by voting in favor of H.R. 17555, I cite for their benefit the existing legal

authority that may be presumed to protect Federal employees from sex discrimination, and evidence that such authority has not been used to protect against sex discrimination in the Federal service. Instead it has been cited to promote it:

[From the Civil Rights Act of 1964 (Public Law 88-352), sec. 703(a)]

DISCRIMINATION BECAUSE OF RACE, COLOR, RELIGION, SEX, OR NATIONAL ORIGIN

SEC. 703. (a) It shall be an unlawful employment practice for an employer—

(1) to fail or refuse to hire or to discharge any individual, or otherwise to discriminate against any individual with respect to his compensation, terms, conditions, or privileges of employment, because of such individual's race, color, religion, sex, or national origin; or

(2) to limit, segregate, or classify his employees in any way which would deprive or tend to deprive any individual of employment opportunities or otherwise adversely affect his status as an employee, because of such individual's race, color, religion, sex, or national origin.

EXECUTIVE ORDER 11478—EQUAL EMPLOYMENT OPPORTUNITY IN THE FEDERAL GOVERNMENT

It has long been the policy of the United States Government to provide equal opportunity in Federal employment on the basis of merit and fitness and without discrimination because of race, color, religion, sex, or national origin. All recent Presidents have fully supported this policy, and have directed department and agency heads to adopt measures to make it a reality.

As a result, much has been accomplished through positive agency programs to assure equality of opportunity. Additional steps, however, are called for in order to strengthen and assure fully equal employment opportunity in the Federal Government.

Now, therefore, under and by virtue of the authority vested in me as President of the United States by the Constitution and statutes of the United States, it is ordered as follows:

Section 1. It is the policy of the Government of the United States to provide equal opportunity in Federal employment for all persons, to prohibit discrimination in employment because of race, color, religion, sex, or national origin, and to promote the full realization of equal employment opportunity through a continuing affirmative program in each executive department and agency. This policy of equal opportunity applies to and must be an integral part of every aspect of personnel policy and practice in the employment, development, advancement, and treatment of civilian employes of the Federal Government.

Section 2. The head of each executive department and agency shall establish and maintain an affirmative program of equal employment opportunity for all civilian employees and applicants for employment within his jurisdiction in accordance with the policy set forth in section 1. It is the responsibility of each department and agency head, to the maximum extent possible, to provide sufficient resources to administer such a program in a positive and effective manner; assure that recruitment activities reach all sources of job candidates; utilize to the fullest extent the present skills of each employee; provide the maximum feasible opportunity to employees to enhance their skills so they may perform at their highest potential and advance in accordance with their abilities; provide training and advice to managers and supervisors to assure their understanding and implementation of the policy expressed in this order; assure participation at the local level with other employers, schools, and public or private groups in cooperative efforts to improve community conditions which affect employability; and provide for a system within the department or agency for periodically evaluating the effectiveness with which the policy of this order is being carried out.

Section 3. The Civil Service Commission shall provide leadership and guidance to departments and agencies in the conduct of equal employment opportunity programs for the civilian emloyees of and applicants for employment within the executive departments and agencies in order to assure that personnel operations in Government departments and agencies carry out the objective of equal opportunity for all persons. The Commission shall review and evaluate agency program operations periodically, obtain such reports from departments and agencies as it deems necessary, and report to the President as appropriate on overall progress. The Commission will consult from time to time with such individuals, groups, or organizations as may be of assistance in improving the Federal program and realizing the objectives of this order.

Section 4. The Civil Service Commission shall provide for the prompt, fair, and impartial consideration of all complaints of discrimination in Federal employment on the basis of race, color, religion, sex, or national origin. Agency systems shall provide access to counseling for employees who feel aggrieved and shall encourage the resolution of employee problems on an informal basis. Procedures for the consideration of complaints shall include at least one impartial review within the executive department or agency and shall provide for appeal to the Civil Service Commission.

Section 5. The Civil Service Commission shall issue such regulations, orders, and instructions as it deems necessary and appropriate to carry out this order and assure that the executive branch of the Government leads the way as an equal opportunity employer, and the head of each executive department and agency shall comply with the regulations, orders, and instructions issued by the Commission under this order.

Section 6. This order applies (a) to military departments as defined in section 102 of title 5, United States Code, and executive agencies (other than the General Accounting Office) as defined in section 105 of title 5, United States Code, and to the employees thereof (including employees paid from nonappropriated funds), and (b) to those portions of the legislative and judicial branches of the Federal Government and of the Government of the District of Columbia having positions in the competitive service and to the employees in those positions. This order does not apply to aliens employed outside the limits of the United States.

Section 7. Part I of Executive Order No. 11246 of September 24, 1965, and those parts of Executive Order No. 11375 of October 13, 1967, which apply to Federal employment, are hereby superseded.

RICHARD NIXON.
President of the United States.

AUGUST 8, 1969.

PRESIDENT'S MEMORANDUM OF MARCH 28, 1969, TO HEADS OF DEPARTMENTS AND AGENCIES ON EQUAL EMPLOYMENT OPPORTUNITY

The concept of nondiscrimination is inherent in the Civil Service Act of 1883, which calls for a Federal service based on merit and fitness alone. "Nondiscrimination" was broadened by President Eisenhower to "equal employment opportunity" with his issuance of Executive Order 10590 in 1955. In the years that followed, other Executive orders designed to insure equal opportunity in the employment, development, advancement, and treatment of employees of the Federal Government have been issued. This series of Presidential directives reflects continuing support for this program at the highest levels of Government.

I want to emphasize my own official and personal endorsement of a strong policy of equal employment opportunity within the Federal Government. I am determined that the executive branch of the Government lead the way as an equal opportunity employer.

Although under the leadership of the Civil Service Commission significant progress has been made towards the goal of equal employment opportunity, much remains to be done. Accordingly, I have directed the Chairman of the Commission to make a thorough review of all present efforts to achieve equal employment opportunity within the Federal Government and to report back to me on or before May 15, 1969, with recommendations for desirable policy and program changes in regard to those efforts.

Meanwhile, I want every reasonable effort made to insure that the Federal Government is an equal opportunity employer. I further urge you, if you have not already done so, to communicate your personal support for this program to all officials and employees of your agency.

RICHARD NIXON,
President of the United States.
THE WHITE HOUSE, *Washington, D.C.*

WILL NOT HIRE MARRIED WOMEN

First. Mrs. H. R. and Mrs. R. M., teachers at Ramey Base Schools, Ramey Air Force Base, P.R., were denied the possibility of being hired in the continental United States for work overseas because they were married women. The Air Force justifies this discriminatory practice on the presumption that married women cannot be reasonably expected to fulfill their agreement.

If one is hired in the continental United States for work overseas, one is subject to the benefits of a transportation agreement which provides many additional perquisites such as a living quarters allowance and use of medical and dental services, school facilities for their children, sales commissary, base exchange, and recreational facilities.

Because Mrs. H. R. and Mrs. R. M. could not be hired in CONUS, they received none of the privileges accompanying the transportation agreement that is freely awarded to all male stateside recruits, married and unmarried. They were consequently denied the use of the base's medical and dental services as well as exchange, commissary, and recreational facilities.

According to Air Force regulations, a married female teacher cannot be hired in the continental United States unless her husband is also employed at Ramey Air Force Base, but if he is so employed she still cannot be hired under Ramey regulations. The Air Force letter explaining this discriminatory policy follows:

DEPARTMENT OF THE AIR FORCE,
Washington, June 17, 1969.

DEAR MRS. MINK: This is in further reply to your letter to the Secretary of the Air Force regarding benefits to which locally recruited employees at Ramey AFB, Puerto Rico, are entitled.

Department of Defense Directive 1400.6 requires maximum hiring of persons available locally before civilian employees are transferred from or recruited in the continental United States (CONUS). The hiring of civilians in the CONUS for overseas duty is generally limited to those possessing required skills and qualifications which are not available locally. Except in emergency conditions, an oversea commander is not permitted to

request recruitment of United States citizen employees from the CONUS until his command is able to provide adequate on-base facilities which are not otherwise available.

The employees recruited from the CONUS serve under a transportation agreement. Additionally, there are a few employees locally recruited overseas who have a bona fide place of residence in the United States and meet the restrictive eligibility criteria for a transportation agreement. The commander has the responsibility of providing them with adequate facilities on base if they are not otherwise available.

Under Air Force regulations, the commander in an oversea area may determine the feasibility of permitting personnel, other than military members and their dependents, to use base facilities and to establish limitations. This applies to the commissary as well as the facilities supported by nonappropriated funds, e.g., the base theater, exchange, and recreation sports facilities. The policies of Ramey AFB commander are in accordance with the governing laws and implementing regulations and appear to be equitable and appropriate. His policies also provide equal treatment for male and female civilian employees since entitlement is determined by recruitment circumstances rather than sex. Granting base privileges to local recruits, other than as currently authorized by the base commander, would violate the general concept that base facilities must not compete with local private businesses.

Personnel at Ramey AFB serving under a transportation agreement are authorized to use the medical and dental services, school facilities (children of locally hired teachers may attend tuition free), sales commissary, base exchange, golf course, skating rink, theaters, bowling alley, gymnasium, horseback riding stables, hobby shops and Aero Club.

All employees are authorized to use the eating facilities, base library, financial and postal services, the chapel and the education services. Depending upon their grade, they may apply for associate membership in the officers or noncommissioned officers open messes.

Employees of other federal agencies which are supporting Ramey AFB activities, and of entities such as Cornell University officials assigned to the Arecibo, Puerto Rico Observatory and Inter-American University, that are under contract to the Air Force, are granted the same base privileges as Air Force civilian employees if they are serving under a transportation agreement. Locally hired employees of these agencies/entities are afforded the same base privileges as locally hired Ramey AFB employees who are not serving under a transportation agreement.

Ramey AFB has over 800 Air Force appropriated fund civilian employees, including teachers, who are United States citizens. Six hundred and fifty-three, locally hired, are not eligible for full base privileges. Of these, 40 teachers as well as 31 school support and 40 nonschool employees claim CONUS residence but are not eligible for a transportation agreement.

Air Force regulations, equally applicable to males and females, stipulate that normally we do not hire in the CONUS for oversea assignment either a single person with dependent children or the wife or husband of military or civilian personnel stationed or about to be stationed in the same country in which the applicant desires employment. One reason for this limitation is that the CONUS recruit must be eligible to sign a transportation agreement with a reasonable expectation of complying with the conditions of the agreement. Our experience reflects that accompanying spouses are not overseas for the primary purpose of government employment, usually resign from employment to go with their sponsors leaving the area and are not as stable as single employees recruited in the CONUS. Of course, the wives before going overseas may send an inquiry to the oversea base for employment consideration upon arrival or may be hired locally after arrival. In fact under DOD policy they receive preferential consideration.

The current Ramey Base School Policy Manual provides for the employment of teachers who are husband and wife if both possess outstanding qualifications and are accepted by the superintendent of schools. Those with dependents are not discouraged from applying for positions. Yet a married female teacher will not be hired from the CONUS unless her husband is also employed by Ramey AFB at the same time in an appropriated fund position as a stateside hire. Furthermore, as a general rule, a single applicant with dependents will not be hired from the CONUS.

We hope the foregoing information will serve to clarify this matter for you.

Sincerely,

B. M. ETTENSON,
Colonel, USAF, Chief, Congressional Inquiry Division, Office of Legislative Liaison.

WILL NOT HIRE OVERSEAS

Second. Mrs. E. M. W., a teacher at Ludwigsburg Elementary School, had applied for overseas hire at Lowry Air Force Base, Colo., and at the Pentagon, and was rejected because she was a married woman. Assured that she could be hired locally, she traveled to Europe with her husband in 1964.

The fact that her employment determined the location of her family was repeatedly evidenced by her accepting a substitute's position at Ludwigsburg in April 1965, her accepting a 1-year position in Izmir, Turkey, in December 1965, and her traveling to Italy on her own with her husband and then accepting a position at Ludwigsburg by mail and returning to Ludwigsburg to assume that position in September 1967.

If the denial of a continental U.S. contract or its equivalent, with its attendant privileges, to married female employees in case No. 1, is predicated on the supposed unreliability of such employees because their spouses determine the location of the family, then the rationale of such discrimination did not apply to this case.

Yet Mrs. W.'s application for living quarters allowance, renewal agreement, and tuition-free enrollment of her dependent children in Department of Defense schools was denied. This time the rationale was that her presence overseas was not due to her Government employment—a requirement applicable to men as well as to women. All she had to do was to be overseas because of her job; in other words, to be hired in CONUS.

What the rationale does not state, however, is that the system will not hire women in CONUS but will hire men. Again, the effect is to deny these privileges to women. The letter setting forth this policy follows:

U.S. CIVIL SERVICE COMMISSION,
Washington, D.C., January 16, 1970.

Hon. PATSY T. MINK,
House of Representatives.

DEAR MRS. MINK: I regret that we have not been able to make a more prompt reply to your letter of September 12 regarding the teacher in the overseas school, Mrs. E. M. W., and the fact that her employing agency has denied her certain job-related benefits. The delay resulted from the fact that we did not limit our inquiry to Mrs. W.'s case, but used her case as a means of examining the general question as to whether the quarters allowance regulations (the Standardized Regulations of the Department of State) are discriminatory against the female sex.

After examining the regulations and discussing them with Commission officials and a representative of the Department of Defense, I am satisfied that the regulations are not discriminatory. They no longer contain separate provisions relating to "a married woman employee"; all references having been changed to "a married employee". We are assured by the representative of the Department that all married employees, whether male or female, are treated exactly alike under the regulations. For example, if all other qualifying factors are met, section 031.13 of the regulations authorizes a quarters allowance to a marrried employee "residing with his or her spouse" when "he or she is the member of the household whose job determines the location of the family" and "he or she is the only member of the household receiving a quarters allowance from the United States Government."

Mrs. W's complaint is actually not based upon an allegation of sex discrimination. She questions the fairness of the regulations because they continue to deny her a quarters allowance even though she is a career employee with four years' service by reason of the fact that when she was hired her presence in the foreign area was not directly attributable to her Government employment. This fact has nothing to do with either sex or whether or not the employee is married. Indeed, a married male employee in the same situation would also continue to be disqualified for a quarters allowance. While we understand Mrs. Wagoner's objection that this fact continues to disqualify her even after her several years of service, this is not a matter of sex discrimination covered by Executive Order 11478.

I hope the foregoing will clarify both Mrs. W.'s case and the nature of the Standardized Regulations.

Sincerely yours,

IRVING KATOR,
Director, Federal Equal Employment Opportunity.

CANNOT HEAD HOUSEHOLD

Third. Mrs. K. C. M., a teacher at Baumholder American High School, was denied living quarters allowance and transportation privileges upon her appointment in August 1968, because she went overseas to be with her working husband and not for the sole purpose of employment with the U.S. Government. Later she became head of her household and the source of 51 percent of her family's income, however, her request was again denied.

Now she is told that her status as a dependent wife, ineligible for Government housing, cannot be changed except by the death of her husband or divorce, and her status as a local hire, ineligible for a travel agreement and living quarters allowance, cannot be changed even though it was and still is impossible for her to be hired in the United States as a married woman.

JUNE 22, 1970.

Memorandum for Deputy Assistant Secretary of Defense (Civilian Personnel Policy).

Subject: Congressional inquiry concerning entitlement of a teacher in Germany to certain overseas benefits.

This is in reply to your memoranda of 15 and 25 May 1970 in which you requested in-

formation on which to base a reply to an inquiry from Congresswoman Patsy T. Mink on behalf of Mrs. K. C. M.

At the time of Mrs. M.'s appointment in August 1968, the determination was made by the Command that she was not eligible in her own right for a living quarters allowance or transportation This determination was in accordance with the Joint Travel Regulations and the Department of State Standardized Regulations (Government Civilians, Foreign Areas) which provide these benefits only to those individuals whose reason for being in the area is employment with the United States Government. Mrs. M. came overseas to be with her husband, who is an Assistant Field Director with the American Red Cross in Germany.

On 7 April 1970, Mrs. M. submitted a request for renewal agreement travel under the provisions of the Joint Travel Regulations. She was informed that she was not eligible for renewal agreement travel since she did not have a basic travel agreement. When advised of this determination, Mrs. M. was told that she could file a grievance.

We have been advised by the U.S. Dependents School, Europe that Mrs. M. has filed a Type I grievance dated 14 May 1970 appealing the decision that she is not eligible to receive either a living quarters allowance or transportation to the United States at government expense.

Army's grievance procedure provides for a review and decision on the appeal first, by the local command and, if this does not result in the requested relief, then by the intermediate command. In the event an appeal which involves application of a Headquarters Department of the Army regulation, is not resolved to the employee's satisfaction within the command, the major command headquarters forwards the appeal with full documentation to Headquarters, Department of the Army, for consideration and final decision. Placement of Mrs. M.'s appeal into Army's established grievance procedure will assure that her efforts to obtain a living quarters allowance and transportation will be given every possible consideration under the established eligibility criteria. . . .

* * * * *

JOHN G. KESTER,
Deputy Assistant Secretary of the Army (Manpower and Reserve Affairs).

The Equal Employment Opportunity Commission denied jurisdiction over this matter in the following letter:

EQUAL EMPLOYMENT OPPORTUNITY COMMISSION,
Washington, D.C., June 2, 1970.

Hon. PATSY T. MINK,
House of Representatives,
Washington, D.C.

DEAR MRS. MINK: Thank you for your letter of May 12, 1970, concerning Mrs. K.C.M.

Title VII of the Civil Rights Act of 1964 gives the Equal Employment Opportunity Commission authority to act on complaints of employment discrimination based on race, color, religion, sex or national origin involving private employers. We cannot, however, assert jurisdiction over agencies of a state or Federal government. Thus, I regret we would not be able to handle your constituent's complaint.

I would suggest that your inquiry be directed to the Office of the Chief of Legislative Liaison, Department of the Army, at the following address: Lt. Col. Carl B. Lind, Chief, Congressional Inquiry Div., Office of the Chief of Legislative Liaison, U.S. Dept. of the Army, The Pentagon—2C630, Washington, D.C. 78381.

If I can be of further assistance to you in any way, please do not hesitate to contact me.

Sincerely,

GEORGE WALLRODT,
Director of Legislative Affairs.

MALE INCOME SUPERIOR

Fourth. Mrs. J. G. M. a civil service employee since 1952 and a teacher at the overseas dependent school at Weisbaden, married a retired Air Force officer in 1966. She then became ineligible for the bachelor's quarters she had been occupying and was declared ineligible for Government family housing because, as long as her husband remained physically and mentally competent, he was considered the head of the household regardless of her providing the bulk of their family income.

A male teacher is authorized Government family housing or a full "with family" housing allowance even though his wife may be earning a greater salary than he is. Even the Civil Service Commission admitted the reason for denying similar rights to a female teacher sounded "fictitious." The rationale for this discrimination is set forth in the letters that follow:

DEPARTMENT OF THE AIR FORCE,
Washington, D.C.

Mrs. J. G. M.,
APO New York.

DEAR MRS. M.: As indicated in our letter, 31 December 1968, we are replying to your 15 November 1968 question about eligibility requirements for Government family housing. We are sorry that an earlier reply was not possible.

You advise you now receive the full (with family) living quarters allowance, because of a change in regulations. This resulted from the Department of State's 11 August 1968 revision of the "Standardized Regulations (Government Civilians, Foreign Areas)" to allow the family quarters allowance to the eligible married employee (male or female) residing with spouse (no longer requiring proof of dependency of the male spouse). This change had no effect on the criteria for assignment to Government family housing as distinguished from eligibility for family quarters monetary allowance.

The standard of eligibility for assignment to family housing is in paragraph 1h, Air Force Regulation 30–6 (not AFR 30–20 referred to in your letter) namely, in order to be eligible for family housing, personnel must be accompanied by dependents. This standard contemplates dependency in fact, that is, support. As to showing that dependency in fact exists, however, a husband is not generally required to prove that he supports his wife whereas a wife is required to prove that she supports her husband.

An explanation of the reasons for these rules may be helpful. The Department of Defense requires that Government family housing in foreign areas be allocated in accordance with a standard of eligibility which provides reasonable and equitable treatment to both military personnel and civilian employees recruited from the United States. Based on a requirement of the law, dependency standards have been established for male and female military members in order for them to be eligible for family housing. In the case of a female military member, this requirement means that the spouse of the female member must be in fact dependent upon her. In consonance with both this legal requirement and the Department of Defense requirement, therefore, dependency standards applied to male and female military personnel are likewise applied to male and female civilian employees in determining eligibility for assignment to family housing.

Moreover, because the law imposes upon the husband the duty of providing a home and support for his wife, dependency of the wife is presumed without proof where a lawful marriage is established. On the other hand, the law does not generally obligate a wife to support her husband or provide him with a house and thus the dependency of the husband is not presumed from the fact of marriage but must be proved. However, in an appropriate case such as where a husband refuses to discharge his legal duty of supporting his wife, a husband may be required to prove that he does support her in order to be entitled to various benefits, and this proof may be required notwithstanding the general rule under which dependency is presumed.

The dependency standard in AFR 30–6 applies to both male and female military and civilian personnel. Because of this and the rules described above, the distinction between the sexes is not considered to be discrimination based on sex in the equal opportunity sense, but rather to be a distinction based on marital obligation.

Sincerely,

ECKEHARD J. MUESSIG,
Chief, Legislation and Regulations Branch, Classification and Regulations Division, Directorate of Civilian Personnel.

U.S. CIVIL SERVICE COMMISSION,
Washington, D.C., September 25, 1969.

Hon. PATSY T. MINK,
House of Representatives.

DEAR MRS. MINK: This refers to your letter of September 10, 1969, asking whether correspondence from the Department of Defense concerning the entitlement of Mrs. J. G. M. to assignment to Government family housing overseas meets the intent and purpose of Executive Order No. 11478. Specifically you question whether the dependency standard which is applied by Air Force regulations to married female employees in the assignment of family housing overseas constitutes discrimination because of sex which is prohibited by Executive Order No. 11478.

I do not question that a good argument can be made that there has been discrimination in agency regulations or practices which have resulted in differences in payments or allotment of perquisites for married women and for married men. However, I do not believe that we can equate discrimination against married women with discrimination because of sex within the meaning of Executive Order No. 11478.

In cases arising under the Civil Rights Act of 1964 the courts have recognized that discrimination because of sex means discrimination between women as a class or group and men as a class or group. (See *Bowie* v. *Colgate-Palmolive Co.*, 272 F. Supp. 332 (S.D. Ind. 1967); *Cook* v. *Dixie Cup Div. of American Can Co.*, 274 F. Supp. 131 (W.D. Ark. 1967); and *Cooper* v. *Delta Air Lines*, 274 F. Supp. 781 (E.D. La. 1967), where the court held that the airline's refusal to employ married females as stewardesses did not violate the Act's prohibition against discrimination because of sex; that Congress did not ban discrimination in employment due to one's marital status; and "The discrimination lies in the fact that the plaintiff is married. * * *".)

Thus it appears that agency regulations which provide for lesser allowances for a married woman than for a married man do not discriminate solely because of sex, i.e., because she is a woman, but because she is a *married* woman. In this connection attention is invited to H.R. 469, a bill "To provide equality of treatment for married women employees of the Federal Government and for other purposes" introduced by Mrs. Griffiths on January 3, 1969. The basic concept in this pending legislation is that a *married* woman is discriminated against not because she is a female but because by law and tradition the spouse and children of a married woman are not regarded as her dependents. While the distinction here may seem more fictitious than real (i.e., that it is her sex that creates the difference in de-

pendency treatment), there is, nevertheless, a distinction that cannot be disregarded.

I believe that you will agree that any attempt to use Executive Order 11478 to reach regulatory married-women dependency differences would be an extension of the sex discrimination prohibition that is too drastic to be supportable. Accordingly, I believe that Executive Order 11478 has no application to agency regulations or practices which result in discrimination against married women.

Please do not interpret the foregoing as any lack of sympathy on our part for the type of discrimination referred to by Mrs. M. All we are concluding is that Executive Order 11478 is not the proper vehicle to rectify this matter. The Commission has been asked by the House Post Office and Civil Service Committee to report on H.R. 469. Our position on the various sections of the bill is still being developed, but I am confident we will endorse the bill's general objectives.

Sincerely yours,

ROBERT E. HAMPTON,
Chairman.

ASSISTANT SECRETARY OF DEFENSE,
Washington, D.C.

Hon. PATSY T. MINK,
House of Representatives,
Washington, D.C.

DEAR MRS. MINK: This is in further reply to your letters of 29 August 1968 and 10 September 1968 concerning the granting of commissary privileges to the husband of Mrs. J. G. M.

We have now been advised by the Department of the Air Force that Mrs. M. is entitled to commissary privileges for her husband. However, due to an error in the interpretation of the regulations, the Commander, Wiesbaden Air Base, Germany, denied the privileges. The Air Force is taking necessary action to correct this error.

By letter dated 11 June 1968, all major commands of the Air Force were notified as to the policy decision of the Department of Defense concerning the granting of commissary privileges to the spouse of a female employee without a requirement for a showing of dependency.

Your interest in bringing this matter to our attention is appreciated. We are concerned that the decision be fully understood and properly administered.

Sincerely yours,

CARL W. CLEWLOW,
Deputy Assistant Secretary of Defense (Civilian Personnel Policy).

HUSBAND'S STATUS PARAMOUNT

Fifth. Mrs. R. W. and Mrs. C. E. were recruited in the United States to teach in the Department of Defense overseas dependents schools system, were subsequently transferred to Augsburg Elementary School, and married foreign nationals.

As a CONUS hire each should have been deemed eligible for living quarters allowance, and as head of household determining the location of her family, each qualified for government housing.

Nevertheless, the husbands' prior residence in Augsburg was used as justification by their civilian personnel officer to cancel their wives' eligibility on the basis of USAREUR Regulation 210–50; that is, "For married female personnel (military or civilian) the husband's status will determine eligibility for housing."

This regulation and its interpretation deprived these women of rights and privileges granted outright to men under identical circumstances.

INELIGIBLE FOR BENEFITS

Sixth. Mrs. W. L. O., a teacher at American High School, Ankara, is married to a Turkish national, who is judged ineligible to use the U.S. military hospital and recreational facilities, although the foreign national wives of male teachers are eligible for these benefits.

The basis for this ruling is contained in a December 17, 1968, memorandum from the U.S. Air Force Office of Legislative Liaison to the Deputy Assistant Secretary of Defense—Civilian Personnel Policy—Office of the Assistant Secretary of Defense—Manpower and Reserve Affairs:

Mrs. O. asks why her husband is not eligible to use the United States military hospital when the Turkish wives of United States citizen government personnel are automatically granted this benefit. AFR 168–1, 1 July 1966, as amended specifies the limits for providing medical care in Air Force facilities for United States citizen civilian employees and their dependents outside the United States, It defines such dependents to include: "(1) Wife who is not an employee of a federal agency. (2) Husband who is physically or mentally incapable of supporting himself." This is based on Section 1072, Title 10, United States Code, which is applicable to military personnel. Since AFR 168–1 extends medical privileges to spouses of female civilian employees on the same basis as those of female military personnel, the policy appears to be equitable and reasonable. Mr. O. works to support himself; hence, he does not qualify as Mrs. O.'s dependent for this purpose.

In this policy, discrimination against women is accomplished by imposing additional requirements for women to obtain benefits for their spouses.

"EXPEDITIOUS" CORRECTIVE ACTION

Seventh. Mrs. C. I. N., a librarian at Andersen Air Force Base, Guam, is married to an unemployed American studying under the GI bill. Her husband was denied Air Force medical care by SAC headquarters on the basis of AFR 168–1, paragraph 34(a)2, which provides that medical care for the husband of a civil service employee outside the United States is available only if he "is physically or mentally incapable of supporting himself." The promised expedited decision has not been forthcoming. The spouse of a male civilian employee is eligible for medical care under any circumstances.

U.S. CIVIL SERVICE COMMISSION,
Washington, D.C., April 13, 1970.

Hon. PATSY T. MINK,
U.S. House of Representatives,
Washington, D.C.

DEAR MRS. MINK: This is a further interim reply to your letter of October 2, 1969, requesting information regarding medical care for husbands of Air Force employees.

We have pointed out to the Air Force that any differential treatment of the dependents of male or female employees would come into question under Executive Order 11478. We have now been informed that the Air Force Surgeon General is exploring extending eligibility requirements for medical care to include husbands of Air Force employees.

We will be in touch with you again when this matter is finally resolved. We have asked the Air Force to expedite its decision.

Sincerely yours,

IRVING KATOR,
Director, Federal Equal Employment Opportunity.

MUST PROVE RIGHTS

Eighth. Mrs. L. R. M., a teacher at Baumholder American High School, married an American in November 1969, and applied for family housing. As head of household, she was required to submit evidence to document the fact that she was providing more than 50 percent of her family's income.

Under identical circumstances, a married male teacher qualifies for family housing without being required to document his wife's dependence, and his wife could in fact earn more than the husband and still be his dependent.

This is one of innumerable instances of this kind of sex discrimination against a married female employee. To be eligible for housing or other privileges granted without condition to married male employees, she must establish the dependency of her spouse.

WOMEN LOSE BENEFITS

Ninth. Mrs. H. P. was single when she was recruited in the United States for a teaching position at Wurtsmith Elementary School, Clark Air Force Base, effective July 1967. After her marriage in 1968 she was declared ineligible for living quarters allowance because it was alleged that it was her husband's job rather than hers which determined the location of the family in the area.

This ruling violated not only Executive Order 11478 but also the State Department's own standardized regulations. Yet Mrs. P.'s grievance went unredressed for almost 2 years, until the Comptroller General of the United States rendered the following decision:

COMPTROLLER GENERAL
OF THE UNITED STATES,
Washington, D.C.

Mr. CECIL DRIVER,
NEA Director for Overseas Education Association, Vandenberg Elementary School, FPO New York.

DEAR MR. DRIVER: Reference is made to your letters of March 18 and March 21, 1970, concerning alleged discriminatory practices based upon sex in the application of section 7 of Public Law 86–91, 73 Stat. 213, 216, with particular reference to the cases of Mrs. H. P. and Mrs. R. H.

Section 7 provides, in part, that:

"(a) Under regulations which shall be prescribed by or under authority of the President, each teacher (other than a teacher employed in a substitute capacity) shall be entitled, in addition to basic compensation, to quarters, quarters allowance, and storage as provided by this section.

"(b) Each teacher (other than a teacher employed in a substitute capacity) shall be entitled, for each school year for which he performs services as a teacher, to quarters or a quarters allowance equal to those authorized by the act of June 26, 1930 (5 U.S.C. 118a)." [Now 5 U.S.C. 5912]

The Standardized Regulations (Government Civilians, Foreign Areas) of the Department of State, issued pursuant to delegated authority and in effect from October 13, 1963, to August 11, 1968, provided, in pertinent part, as follows:

"031.13 MARRIED WOMEN EMPLOYEES

"a. A quarters allowance may be granted to a married woman employee residing with her husband (or, if not legally separated, is working in such proximity that a common dwelling could be maintained only if

"(1) she is the member of the household

whose job determines the location of the family at the post or in the area, and

"(2) she is the only member of the household receiving a quarters allowance from the United States Government.

"b. If a married woman employee meets the provisions of section * * * 031.13a she may be granted the 'with family' rates of allowances and the supplementary post and education allowances only if her husband is 51 percent dependent upon her for support. Otherwise, she may be granted only the 'without family' rate of temporary lodging, living quarters, post, foreign transfer and home service transfer allowance."

The above regulations were revised August 11, 1968, to read as follows:

"031.13 MARRIED EMPLOYEES

"A quarters allowance may be granted to a married employee residing with his or her spouse (or, if not legally separated, is working in such proximity that a common dwelling could be maintained) only if

"(1) he or she is the member of the household whose job determines the location of the family at the post or in the area, and

"(2) he or she is the only member of the household receiving a quarters allowance from the United States Government."

We note that the regulations prior to October 13, 1963 (at least from April 2, 1961), were more restrictive in that they precluded payment of a living quarters allowance to a married female employee when her husband was physically and mentally capable of self support.

While we recognize it can be argued that the regulations as they existed prior to August 11, 1968, were discriminatory in that they applied only to married women, nevertheless, we must decline to make any determination with respect thereto at this time. The regulations were in effect for many years and applied without any question being raised as to their discriminatory aspect. They were amended on August 10, 1968, so as to be equally applicable to males as well as females and from that date would not appear to be susceptible to any allegation of discrimination. There are pending in the Court of Claims several cases involving married employees of the Federal Government in the Canal Zone wherein it is alleged that a regulation denying tropical differential to married women employees unless their husbands are incapable of self support, or 51 percent dependent upon their wives, or are legally separated, is discriminatory and, therefore, invalid. For example see *Agnes M. Anderson et al.* v. *United States*, Ct. Cl. No. 206–68, filed July 19, 1968. Finally, the Executive order precluding discrimination in Federal employment because of sex was not issued until October 17, 1967. (E. O. 11375).

Apart from any question of discrimination, however, the facts of record indicate that application of the regulations in the case of Mrs. P. was arbitrary and contrary to the underlying intent and possibly so in the case of Mrs. H. . . .

* * * * *

With respect to Mrs. P.'s claim for living quarters allowance and foreign post differential for the period August 11, 1968, through February 22, 1969, the record shows that Miss H. S. (later Mrs. P.), was recruited for a teaching position at Clark Air Force Base, effective July 30, 1967, under circumstances entitling her to living quarters allowance and post differential. On January 20, 1968, Miss S. married Mr. P. who worked for Air America, Inc., Because Mr. P. had been in the area longer than Miss S. and because his income was greater than hers, it was administratively concluded that it was his job rather than hers which determined the location of the family in the area.

The uncontrovertible fact of the matter is, however, that the P. family was in the area of Clark Air Force Base because Mr. P. and Miss S. met there. It is one thing to assert that Mrs. P., or any other person, is in an area by reason of her husband's job where she has accompanied her husband to his job site. It is quite another to make that assertion where she independently prior to her marriage arrived at the site in connection with her own employment and chose to marry while there. In the latter case her presence in the area is at least equally as much related to her employment as to her husband's.

Accordingly, instructions have been issued to allow Mrs. P. the "with family" quarters allowance (plus foreign post differential) on and after August 11, 1968. . . .

Copies of this letter are being sent to Congresswoman Patsy T. Mink and to the Secretary of the Army.

Sincerely yours,

R. F. KELLER,
Assistant Comptroller General of the United States.

These cases prove how real the need is for effective enforcement of a nondiscriminatory policy. Here in summary is the "run around" a woman is now faced with as a teacher in the overseas dependent schools system:

First. A married woman is not eligible to be hired as a stateside recruit because she cannot be reasonably expected to comply with the conditions of the agreement. She is presumed guilty.

Second. A married woman cannot qualify for quarters allowance unless she can prove her job determines the location of her family.

Third. A married woman who first went overseas to be with her husband, but who later became head of the household and the source of 51 percent of the family earnings still is not eligible for quarters allowance, because she was a local hire and not a stateside recruit. The only way for her to qualify for Government housing is if her husband dies.

Fourth. A single woman who was recruited stateside and later married overseas, and now provides the bulk of the family income, is ineligible for quarters as long as her husband is physically and mentally competent, because he is presumed to have the marital "duty" to provide for her support.

Fifth. A single woman recruited stateside who later married overseas is ineligible for quarters allowance because her husband had a "residence" overseas prior to the marriage and his "status determines the eligibility."

Sixth. A single woman recruited stateside who married a Turkish national is ineligible to have her husband cared for in a military hospital or use recreational facilities although foreign national wives may have these privileges. He is declared her dependent for transportation purposes but not for eligibility for medical care. The Air Force regulations state that to be eligible you have to be a "wife" or a "husband who is physically or mentally incapable of supporting himself."

Seventh. A single woman recruited stateside and subsequently married to a veteran who is now a full-time student under the GI bill on Guam, was denied medical care for her husband on the grounds that he could be eligible only if "physically and mentally incapable of supporting himself."

Section II of H.R. 17555, as approved by the Committee on Education and Labor, provides:

SEC. 11. Title VII of the Civil Rights Act of 1964 (78 Stat. 253; 42 U.S.C. 2000e et seq.) is amended by adding at the end thereof the following new sections:

"NONDISCRIMINATION IN FEDERAL GOVERNMENT EMPLOYMENT

"SEC. 717. (a) All personnel actions affecting employees or applicants for employment in the competitive service (as defined in section 2102 of title 5 of the United States Code) or employees or applicants for employment in positions with the District of Columbia government covered by the Civil Service Retirement Act shall be made free from any discrimination based on race, color, religion, sex, or national origin.

"(b) The Equal Employment Opportunity Commission shall have authority to enforce the provision of subsection (a) and shall issue such rules, regulations, orders, and instructions as it deems necessary and appropriate to carry out its responsibilities hereunder, and the head of each executive department and agency and the appropriate officers of the District of Columbia shall comply with such rules, regulations, orders, and instructions: *Provided*, That such rules and regulations shall provide that an employee or applicant for employment shall be notified of any fiscal action taken on any complaint filed by him thereunder.

"(c) Within thirty days of receipt of notice given under subsection (b), the employee or applicant for employment, if aggrieved by the final disposition of his complaint, may file a civil action as provided in section 715, in which civil action the head of the executive department or agency, or the District of Columbia, as appropriate, shall be the respondent.

"(d) The provisions of section 715 shall govern civil actions brought hereunder.

"(e) All functions of the Civil Service Commission which the Director of the Bureau of the Budget determines relate to nondiscrimination in government employment are transferred to the Equal Employment Opportunity Commission.

"EFFECT UPON OTHER LAW

"SEC. 718. Nothing contained in this Act shall relieve any government agency or official of its or his primary responsibility to assure nondiscrimination in employment as required by the Constitution, statutes, and Executive orders."

LEGISLATION TO PERMIT INTERCHANGE OF RETIREMENT CREDITS BETWEEN CIVIL SERVICE AND SOCIAL SECURITY

(Mrs. MINK asked and was given permission to extend her remarks at this point in the RECORD and to include extraneous matter.)

Mrs. MINK. Mr. Speaker, I am introducing legislation today to correct a serious inequity in our social security and civil service retirement systems.

My bill would provide for an exchange of retirement credits by persons who, at different periods during their employment careers, work for both the Federal Government and private industry. While working for the Government they are covered by the civil service system, and while working in private employment they are covered by the social security system.

The objective of my bill is to permit such employees to retire at age 65 under

either system and receive retirement benefits equal to what they would have received had they worked during the entire period under that system.

This interchange of retirement credits between the civil service and social security systems would help hundreds of thousands of individuals who are eligible for reduced or no retirement benefits under either system because they split their employment between the two systems.

Since there is presently no provision for an interchange of credits, many people who have been employed for years are unfairly penalized simply because they worked under two different retirement systems.

My bill is partly based on the recommendations of the Social Security Administration made last year in a report, "Relating Social Security Protection to the Federal Civil Service." The report was directed by the House Committee on Ways and Means in the committee report on the Social Security Amendments of 1967.

The report found that considerable mobility exists between Federal and private employment. In the 5 years from 1963 to 1967, an average of about 400,000 employees a year either entered or left Federal employment covered by the civil service retirement system.

About one third of those who left Federal employment had 5 or more years of Government service and thus were qualified for either a lump sum refund of their contributions to the civil service retirement fund, or a deferred annuity payable at age 62. The other two thirds, with less than 5 years of Federal service, did not have the deferred annuity option and had no choice but to accept contribution refunds.

Of those who separated after 5 or more years of coverage under civil service, but before retirement, more than three-fourths voluntarily withdrew their contributions soon after separation and thereby lost all rights to benefits under the system. These benefits may be regained only if a worker reenters Federal employment and is again covered by the system.

Thus, the great majority of those leaving the Government before retirement lose their benefits under the civil service system. For their retirement security, they must depend in most cases on social security.

Since retirement benefits under the social security system are related to length of time in covered employment, it is clear that many persons who leave the Federal service do not in their retirement years receive benefits corresponding to their actual total work contribution to the national economy.

Similarly, since the civil service retirement system is weighed to reward long periods of service, those who enter Federal employment after years under social security lose the benefit of their previous employment. They are treated by the Government as short-time employees eligible only for civil service benefits based on the portion of their work that was with the Government.

Under my bill, all employment under either system would be counted toward retirement. Those affected would fall into three categories: First, those who under present law are eligible for retirement under one system but not the other; second, those who are eligible under both systems, but whose benefits under either are less than they would be is credits for both systems were combined under one system; and third, those eligible under neither, but who would be eligible for one if credits were combined.

In any of these three instances, my bill would allow the employee to select whichever option would give him the most benefits. Thus, a person with less than 5 years of civil service employment but who is eligible for social security retirement, could count his civil service credits toward social security to receive a higher social security retirement payment. Similarly, a person eligible for relatively low retirement pay under either social security or civil service could count all his employment toward either system, and an employee who is presently ineligible under either system could count all his work under both to qualify for retirement under one of them.

Similar provisions are made in the bill for survivors of deceased workers. The survivors are able in each of the three instances previously outlined, to select coverage under whichever combination of social security and civil service credits gives them the most benefits. Unanimous consent of all eligible or potentially eligible living survivors is required, or else present law applies.

Any choice made by an individual or his survivors under the bill would be irrevocable, and no request could be made if a refund or withdrawal of employment contribution had been made unless it is redeposited with interest.

Last, the bill provides for an exchange of funds between the social security and civil service retirement systems to reflect decisions made by individuals under this legislation to retire under one system or the other.

My bill does not provide for exchanges of credits for those who retire before the age of 65, since this would introduce extensive complications in the operation of both retirement systems and require attempts to equalize benefits among the numerous groups and types of employees affected. Nor does it affect the much smaller Federal staff-retirement systems such as the Foreign Service and Central Intelligence Agency retirement systems, or retirement systems of State and local governments. These systems, and the whole areas of worker's disability compensation and medical benefits, should be the subject of similar corrective legislation.

While this legislation does not solve all the inequities arising from the mobility between Federal and private employment, it is intended to resolve the largest single area of deficiency. By enacting this bill, we would insure that our employees are not penalized for spending parts of their careers in both areas of service.

NATIONAL PARK WILDERNESS STUDIES 5 YEARS BEHIND SCHEDULE

(Mrs. MINK asked and was given permission to extend her remarks at this point in the RECORD and to include extraneous matter.)

Mrs. MINK. Mr. Speaker, when we enacted the Wilderness Act in 1964, it was properly regarded as an act of historic importance in preserving areas of the American wilderness. Indeed, this is the promise and potential of this important program, but the 1964 act really only provided the opportunity. It remains for areas of wildness to studied, proposed, and individually approved by Congress to become legally designated and protected as part of the national wilderness preservation system.

To accomplish this, to bring deserving and suitable areas under wilderness protection, we established a 10-year program for orderly reviews of potential wilderness lands by the agencies, the Bureau of Sport Fisheries and Wildlife, the Forest Service, and the National Park Service. The reports on each of these reviews, as approved by the President, were to be submitted to Congress by September 3, 1974, the 10th anniversary of enactment of the Wilderness Act. The reviews were required to be conducted on all suitable areas under criteria set forth in the act. To assure that the procedure was effected in an orderly fashion, the law required—and the agencies testified they could meet—the following timetable: the first third of the reports to be submitted by the President by September 3, 1967; two-thirds by September 3, 1971; the total thus completed by 1974.

For the most part the Bureau of Sport Fisheries and Wildlife and the Forest Service have maintained this schedule. But it is increasingly apparent that something is seriously blocking orderly progress of the wilderness reviews for areas of our national park system. In the fifth year of the 10-year schedule, we have received only five proposals from the National Park Service. That is five out of 57 park areas to be studied, leaving 52 reviews to be completed and reports submitted by the President in a little more than 4 more years.

Mr. Speaker, something is wrong in the Department of the Interior. It is apparently something common to the present administration and the one preceeding. Both administrations have professed strong interest in and commitment to the purposes of this wilderness preservation program. Yet, the National Park Service is years behind schedule. The practical results are to frustrate the will of Congress, to leave many areas properly requiring wilderness protection by statute unprotected from further development, and to place the President technically in violation of the law.

Let me hasten to add that President Nixon has personally expressed his own interest in the proper protection of wilderness. Secretary Hickel has expressly directed that the Park Service get their reviews back on schedule. But performance has followed neither the promise nor the directive of law.

These facts are plain and incontrovertible. It is clear that the preservation of parkland wilderness as provided for in the Wilderness Act is essential. In point of fact, one might interpret the apparent footdragging of the Park Service as an expression of disenchantment with this program, which would be only greater reason for assuring park area statutory protection as wilderness. Literally thousands of citizens from all walks of life and in every part of this country have supported this program and have taken a personal part in the administrative wilderness proposal hearings which have been held. I am one who supports the program. I do not believe Congress intended the designation of park wilderness areas to be a mere academic exercise, or as a low priority program that would give administrators of the National Park Service something to do on winter afternoons. No, this program vested in Congress the power and opportunity to fix firm and lasting limits on the extent to which the remnant wilderness of our parks might be further developed. Under the procedures of the Wilderness Act the initiative was with the agency, providing opportunity for their cooperation and input to the congressional decisions. If this agency is unable or unwilling to give us the cooperation required, then perhaps we shall have to find a more direct means to accomplish the goal so widely supported by the people of this country for so many years.

Someone has suggested that the planning of our parks is what is holding up this program. I can understand how that could happen, if the Service waits until 3 or 4 years have been spent in drawing up the greatly detailed master development plans for each park before initiating and finalizing their wilderness proposals. That could be why the President and the Congress have been kept waiting.

But such a procedure has the cart firmly ahead of the horse—which, of course, illustrates nicely why locomotion is so problematical. Indeed, such a procedure could be used as a deliberate means of frustrating the will of Congress. Obviously, detailed development plans are not prerequisite to wilderness decisions, which rest upon concepts of appropriate park zoning that are the earliest prerequisites to any development plans. Wilderness decisions are, in my view, prerequisite to any plan for further development of park wild lands, as the wilderness decision is intended to be a framework and limit on development that can assure that some wilderness will be retained.

Mr. Speaker, I have risen to discuss this matter because I believe it is an important, priority program and because I have become alarmed by the failure of performance that this record indicates. I am a friend of the parks and of the Park Service, and it is a friend of that great agency, sympathetic to their problems, that I raise this issue. I know my concern is one shared by many members of the Committee on Interior and Insular Affairs on which I am honored to serve. Recently the matter was aired with Departmental officials at a committee hearing. As I was unable to be present, I have written directly to Mr. George Hartzog, the Director of the National Park Service, asking for a prompt explanation and an indication of the steps he is taking to rectify the situation. I include my letter in the RECORD at the conclusion of my remarks.

Mr. Speaker, I want to see the Wilderness Act properly and promptly fulfilled, and with it the promise to which we have committed ourselves, to assure an enduring resource of wilderness for all the people forever. I believe the directive of Congress is clear and I will evaluate the response to my letter on those grounds. I intend to keep a close watch for prompt remedial action to get back on and to meet the 1974 schedule. If that will now mean some rejuggling of the Park Service planning operation, then it is clear that planning operation needed rejuggling in any case.

HOUSE OF REPRESENTATIVES,
Washington, D.C., July 6, 1970.

Mr. GEORGE B. HARTZOG, Jr.,
Director, National Park Service, Department of the Interior, Washington, D.C.

DEAR MR. HARTZOG: Questioning at a recent meeting of the House Interior Subcommittee on National Parks and Recreation brought out that the National Park Service is behind schedule in designation of wilderness areas within our nation's parks.

Since it was the intent of Congress that this program be concluded within 10 years from the time of its start, it appears there will have to be a major change in Park Service procedures to accomplish this goal. One problem is the excessive delay caused by the preparation of master plans. I believe that the speedy designation of wilderness areas under the Congressional mandate requires a simplified approach on master plans which would allow far greater progress on the wilderness areas. I am aware that sufficient funding has been provided for this purpose.

I would appreciate your indication of what affirmative actions the Park Service will undertake to meet the Congressional objective.

Very truly yours,

PATSY T. MINK,
Member of Congress.

SOME HIGH GRADES FOR LORTON

(Mr. GUDE asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. GUDE. Mr. Speaker, today's Washington Post contains an editorial with some encouraging news about the college study program at the Lorton Reformatory. In its first 15 months of operation, inmate interest and grades in courses such as sociology, English, and algebra have been high. Many of the graduates have enrolled in further education programs at District colleges upon release.

The report of the President's Task Force on Criminal Rehabilitation stressed, among other problems, the "enforced idleness" and the dearth of any adequate level of vocational training in our prisons. Education and job training should be the heart of the correctional system, if it is ever to be worthy of the name. I am delighted to see that Lorton has received grants from LEAA to expand this promising program. I am also delighted that operation of the Lorton Reformatory will continue to be under the direction of the District government where it belongs.

The editorial follows:

SOME HIGH GRADES FOR LORTON

The Lorton prison complex gets written up fairly regularly in our town's newspapers, more often than not in accounts addressed to the host of problems besetting correctional institutions across the country—living conditions, prisoner behavior and all the related investigations. It is a pleasant twist, therefore, to read about the great success Lorton is having with its college study programs. In the first 15 months of operation, grades and inmate interest have been high.

In the last academic year, 161 men in the 1850-man complex—105 adults and 56 youths—have been offered 32 college courses. During a typical quarter, 50 inmates took three freshman courses each, from sociology to algebra, English, economics and literature. Officials say the concentration of grades was in the A and B range and, according to instructors from Federal City College who conduct the courses, the students performed better than students at FCC.

The follow-up results are impressive, too. Of those students who left Lorton on parole, 80 per cent enrolled in FCC or the Washington Technical Institute, where their credits were transferred—and only three returned to prison. It is no wonder that the federal government is now tripling its funding for these programs, which will permit enrollment to increase to perhaps 20 percent of the inmate population. The new grant from the Justice Department's Law Enforcement Assistance Administration is for $73,140, a modest figure in terms of most program costs. With a contribution of $48,760 more from the D.C. corrections department, some 360 or more men may be enrolled. In the concern about crime—and education—this is money well spent, and a tribute to the success at Lorton.

STATEMENT OF HON. JOEL T. BROYHILL, REPUBLICAN, OF VIRGINIA, ON INTRODUCTION OF LEGISLATION TO REVISE PAY STRUCTURE FOR POLICE FORCES AT WASHINGTON NATIONAL AND DULLES INTERNATIONAL AIRPORTS

(Mr. BROYHILL of Virginia asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. BROYHILL of Virginia. Mr. Speaker, a critical situation involving the safety of the public and airline passengers prevails at the Washington National Airport and the Dulles International Airport. The preservation of law and order at National Airport has become an impossibility and is in a fragile marginal status at Dulles. The police forces at both airports have deteriorated to the point where dealing with the skyrocketing increase in crime and violence is no longer effective. This does not even attempt to include extreme cases which can and do arise involving airport and airliner piracy, hijackings, murder on a mass and individual basis, bombings, riots, violence, sabotage, wildcat strikes, and assassination.

The recent severe piracy of a TWA jet involving Dulles Airport points up the extensiveness of this situation as nothing else could. Every duty and overtime Dulles police officer was involved in that action, leaving the entire balance of the airport and roadways uncovered. A severe fatal head-on collision of a bus and car has taken place since the TWA piracy. All officers risked their lives in the piracy action, and two, undoubtedly saved the lives of the 59 people aboard by shooting out the tires and preventing the

second takeoff. Had the plot been larger, involving airport sabotage and more participants, it could have been carried off, due to shortage of police. All of the preceeding refers only to the Dulles Airport police.

Even more recently Washington National Airport experienced a disaster situation, a situation, give or take a few feet or seconds, could have erupted into a major Washington disaster. A cargo jet prop transport, carrying radioactive material among other things, fatally crashed just short of the runway at National Airport while in a diving left turn, killing the pilot and copilot. Quite conceivably the plane could have traveled about 600 feet further and crashed into the crowded George Washington Memorial Parkway and possibly impacted, in its slewing left heading, five to 30 or 40 autos and/or buses resulting in a very heavy loss of life and casualtise; or a few hundred feet further on the airport site, causing a far heavier committment of airport police and loss of airport security and traffic control due to denudement of already short forces—because of the low police wage crisis.

The airport police ambulance, fire, crash and rescue equipment, and airport police cruiser arrived first at the crash scene and established police, crash, and public security and took necessary emergency rescue action, had there been survivors. Geographical crash scene jurisdiction rested with park police who arrived within minutes for a fine coordinated joint security action, which continued for days. Airport police also provided complete night security with on scene duty officers. The huge holiday eve airport traffic plus the added load of the crash scene traffic jam required airport police manning of all intersections, strategic aerodrome entrances, extra security areas, crashed aircraft remains and other points. Manpower shortages due to the critical low wage situations forced recall of off-duty personnel, early call of the oncoming shift and then severe overtime work requirements for all police for the next 48 hours. The lack of full roster force, had this disaster erupted further, would have been indefensible by all concerned.

It has become necessary to enact on a crisis basis legislation in order to bring the Federal police forces at National and Dulles up to strength and technical and physical qualifications required. The present Federal police situation at National and Dulles can only be described as pitiful. It is about as far as being representative of what the Federal Government should provide at the only two model national airports which the Federal Government itself operates.

The Federal Police Department at both airports must meet criminal situations involving air piracy, murder, extortion, rape, riots, sabotage, grand larceny, as well as the more usual police functions of traffic control, assault and battery cases, car theft, and the maintenance of public safety and order. These police also coordinate with the surrounding police forces of neighboring and overlapping jurisdictions including Federal, State, county and city police forces. However, no other police forces, including the FBI, possess the highly specialized airport operational training that the airport police do.

Even though engaged in the personally hazardous, physically dangerous and highly responsible police work, they are compensated so poorly that their wages are comparable to clerical, labor, and janitor forces.

As a result, these police departments are deteriorating at an ever-accelerating, and in fact amazing rate. They are unable get any new recruits. There is no dependable recruit training program even if new people were available. They are saddled with attempting to recruit from old age brackets and career retired personnel.

At National Airport where there are 41 officers on board, 10 short of their allowance of 51, 11 officers are 40 and 14 are over 50. In the past 5 years there has been one recruit under the age of 25. At Dulles no one under 25 has ever been recruited.

Dulles has 37 police on board as against an original authorized strength of 55 officers. At some point it was administratively decided, and since the quota could not be filled anyway, that the strength should be reduced to 45. In other words, 18 under original strength and eight under the administrative cutback strength.

Dulles Airport police has lost 43 officers who left for better paying positions as well as three who are deceased.

National Airport has lost 42 officers in the past 5 years for similar reasons, in most cases.

Dulles during this same period has been able to find only 29 replacements. National lost 11 officers in the past year alone. There is no recruitment of young men. They simply will not go to work for the low salary. Thus there is no training program or career planning for young police officers at either airport.

In short, death and low pay attrition has already succeeded in partially destroying both forces, dangerously impairing their present effectiveness and has them on the way to virtual elimination in the relatively near future.

The police pay scale at both airports is by far the least in the entire Washington metropolitan area. It is not even comparable with the U.S. Park Police, for example, which has similar responsibilities and types of duties. Park Police, of course, are being paid at the level of the Metropolitan Police as are the White House Police, this by special act of Congress.

At National and Dulles a grade 4 police trainee starts at only $5,853 per annum. The police private at grade 5 starts at only $6,548. It will be noted that the grades 4 and 5 are the usual Federal classifications for clerks, typists, or stenographers.

The Washington, D.C., Metropolitan Police Department, the U.S. Park Police and the White House Police—by act of Congress—start trainees at a salary of $8,500.

The U.S. Capitol Police—by act of Congress—start trainees at $8,120, which increases to $8,816 in only 60 days, upon completion of training.

The National Zoological Park Police—by special act of Congress—start police privates at over $8,000 per annum.

The Alexandria Police salary starts at $8,665.

The Arlington Police start at $8,174 for high school graduates or $9,494 for college graduates.

The Fairfax County Police start at $8,604.

The Montgomery County Police start at $8,591 for high school graduates and $9,947 for college graduates.

The Prince Georges County Police start at $8,216.

It is proposed to reestablish the grades of police corporal and police lieutenant. This will provide for better coverage and rank located where appropriate. Too many times now a police private is in charge, including in charge of other privates. This does not work. The danger to the public is vastly increased due to the very poor rank structure. A structure so bad that career opportunity is nil. A private has to wait for one of three or four sergeants to die or retire before he can even compete with all the other privates for the job—in other words, an inordinate number of years between any chance of promotion.

On the occasion of the first airplane bombing or shootout, or piracy, hijacking and/or resulting mass murder of passengers and/or public in general on National or Dulles, the first firebomb in the hangar or multimillion-gallon gas dump, or the crowded terminals, there will be great haste to get that barn door closed after it is too late. Such a catastrophe at the Washington airports is being invited by the low security level and its occurrence should be considered imminent, from events that have recently taken place.

Mr. Speaker, I believe it is apparent that vigorous and immediate action is required to upgrade the quality and retainability of the police at National and Dulles Airports. In my mind the surest way and the quickest way to accomplish the overhaul that is required to avert disaster is to make the pay of the force at these airports competitive with other police forces in the surrounding area.

To accomplish this, I am today introducing a bill directing the Secretary of Transportation to revise the pay structure of the police force of the Washington National Airport and Dulles International Airport so as to bring the pay scale of these police into line with that now paid the police force of the National Zoological Park. While not as high as the pay of the Metropolitan Police Department the new scale will attract and retain good policemen, which I am sure this House recognizes is an urgent requirement. I urge early consideration and adoption of this legislation.

LET US GO ON THE RECORD—NOT RHETORIC

(Mr. DEVINE asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. DEVINE. Mr. Speaker, one of the most unfortunate political campaigns in our Nation's history is going on today, aided, abetted, and encouraged, if not

initiated, by some Members of this House.

That is the effort to make Negro Americans believe that President Nixon is anti-Negro and that his is a racist administration.

This attack, led by some Negro Democrats, appears to be nothing more than an attempt to persuade Negroes that the Democratic Party is the only party that seeks racial equality.

It is an effort that is both dishonest and despicable. It is despicable because in an era of trouble and turmoil it seeks to turn black against white and to polarize our Nation along racial lines.

It is dishonest because the Nixon administration has worked hard and steadily to equalize education and educational opportunity, to end discrimination in the building and construction trades, to bring black Americans into high-level posts in the administartion, to provide business opportunities for Negroes, and in every other way to insure that they become a part of the American mainstream. It is one thing to make constructive criticism and urge further constructive action. It is quite another to seek to denigrate and belittle those efforts for purely personal and political gain.

PIONEER DAY, 1970

(Mr. HANSEN of Idaho asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. HANSEN of Idaho. Mr. Speaker, last Friday, July 24, was observed in Idaho and many other parts of the Nation as Pioneer Day. It is fitting that we honor the hardy band of Mormon pioneers who entered the Salt Lake Valley on July 24, 1847, under the leadership of Brigham Young. This event marked the end of a long and difficult journey and the beginning of one of the most momentous chapters in the history of our country.

The Mormon pioneers suffered persecution and were forced to leave their homes and endure great hardships in their westward trek. They crossed the mountains and plains in search of freedom and opportunity to build anew and to practice their religion.

These early pioneers laid the foundation in the rugged mountain country on which an empire has been built. The Church of Jesus Christ of Latter Day Saints has been a powerful and positive force in the building of our Nation. Within a few years following their arrival in the Salt Lake Valley, the Mormons had established hundreds of communities in Idaho, Utah, Nevada, Arizona, Wyoming, and California. Their membership and influence has since spread to all parts of the Nation and many parts of the world.

When the Mormon pioneers came west they were poor in material goods. But, they brought with them boundless energy, resourcefulness, a willingness to work hard, and to sacrifice. By applying these qualities of character to their task they contributed greatly to the material progress of the Mountain States. They caused the desert to bloom and the valleys to become productive.

They also left another legacy of much greater value to the Nation, particularly during this time of national crisis. They were sustained by a deep faith in God, a willingness to work together and to help each other. They set an example that this generation of Americans could do well to follow.

With the same faith, courage, and vision that enabled the early pioneers to overcome the difficulties they faced, we can also overcome the problems that confront the Nation today.

Mr. Speaker, we are deeply indebted to the pioneers for their contribution to the building of America. We can best honor those who entered the Salt Lake Valley 123 years ago, however, by learning and applying in our own lives and in our own day the lessons their experiences has taught us.

STATUS OF THE OFFICE OF COAL RESEARCH IS CLARIFIED

(Mr. SAYLOR asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. SAYLOR. Mr. Speaker, it is with a considerable sense of relief that I report to you and our colleagues on the status of the Office of Coal Research. As you may recall, a few weeks ago rumors began to circulate to the effect that the Office was going to be phased out of existence. As the author of the bill which created the OCR back in 1960, I was naturally concerned about the future of the coal research activities by the Federal Government.

Mind you, I was not concerned because my "pet project" was being considered for the scrap heap—rather, my concern was for the thousands of miners and hundreds of coal companies whose lives depend on a bright future for the coal industry. Coal research is going to guarantee a bright tomorrow for the Nation's most basic commodity.

Now that the rumor about the demise of the OCR has been scotched, I do not believe any value would be gained by dragging up the machinations within the Department of the Interior which produced the report, which in turn, produced the rumors.

It is my pleasure to read to you today a letter I have just received from the honorable Walter Hickel, Secretary of the Interior Department, wherein he assures us that the Federal Government's efforts in coal research will go forward. The Secretary said in part:

I have no intention of decreasing our emphasis or commitment toward programs for coal research.

That sentence succinctly lays the cards on the table, clears the air, clarifies the issue, and reassures our coal industry that its future will be bright. I know our colleagues will be interested in the full text of the Secretary's letter and I would like to have it added to my remarks at this point:

THE SECRETARY OF THE INTERIOR,
Washington, July 27, 1970.

Hon. JOHN P. SAYLOR,
House of Representatives,
Washington, D.C.

DEAR MR. SAYLOR: I am aware of your strong concern over the future of coal and mineral research programs.

Let me make it quite clear that this Department is not seeking a reduction or decrease in emphasis in coal research programs. I will personally determine the policy formulation for these important research efforts in the Bureau of Mines.

While the budget for Fiscal Year 1972, is, of course, still in the formative stage, I believe that the continuation and encouragement of coal research is vital toward maintaining and improving both a quality environment and a strong energy position for the Country. I have no intention of decreasing our emphasis or commitment toward programs for coal research.

Sincerely yours,

WALTER J. HICKEL,
Secretary of the Interior.

FEDERAL TAX SECRECY

(Mr. VANIK asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. VANIK. Mr. Speaker, when the House of Representatives considered the conference report on the Airport and Airways Development Act of 1970, only a few Members of the House were apprised of the provisions added by the Senate in the conference which prohibited the airlines under penalty of fine from identifying that portion of the air fare which constitutes the Federal tax.

This incredible action resulted from rules of the House which did not provide adequate time for proper review and discussion.

It is ludicrous for Congress to suppress information concerning the level of Federal taxation wherever it occurs. To correct this action, I have introduced legislation which will strike out the prohibition and penalty to carriers listing the Federal tax separately on air fare schedules. In my judgment, penalties should be made to apply to anyone who would suppress information relating to Federal taxation.

Following is correspondence which I have directed to the Civil Aeronautics Board concerning this problem and their response listing new fare schedules to principal cities and the applicable Federal tax:

JULY 1, 1970.

Hon. SECOR D. BROWNE,
Chairman, Civil Aeronautics Board,
Washington, D.C.

DEAR MR. CHAIRMAN: The announced policy of your Board granting the airlines the privilege to round out air fares to the next highest dollar imposes an arbitrary and indefensible burden on the commercial airline traveler.

This policy has the effect of providing an inequitable and unbalanced fare increase to those passengers who must pay fares several pennies into the next dollar. In some cases, fares are increased as much as ten percent. This kind of arbitrary fare increase policy to eliminate coin change handling by airline ticket offices is ridiculous and should be immediately suspended.

I am also distressed with the language that was inserted in the Conference Report on the Airport and Airways Development Act of 1970 which prohibits the airlines under penalty of fine from identifying that portion of the air fare which constitutes the federal tax. Congress never intended a concealment of the federal tax in air fares. From what I can determine, the language was inserted in the Conference Report at the request of the airlines to save the airlines the added expense in calculating fares by separately computing the federal taxes.

In order to provide the public with the full information as to the breakdown between fare and airline tax under the new schedules, I would appreciate receiving from your office a complete breakdown of the new air fare schedules between the 100 major cities of America, along with the breakdown of the federal tax applicable to those fares so that a proper table can be placed into *The Congressional Record* for distribution to the American people.

The taxpayer is certainly entitled to know what portion of his charge for air travel represents tax and what portion represents cost of service.

In my judgment, it is unconstitutional for the Congress to enact legislation providing for the concealment of federal taxes applicable to a product or a service. It certainly is against the public interest.

Sincerely yours,

CHARLES A. VANIK,
Member of Congress.

CIVIL AERONAUTICS BOARD,
Washington, D.C., July 24, 1970.

Hon. CHARLES A. VANIK,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN VANIK: Thank you for your letter concerning the Board's action regarding the temporary rounding of fares taken on June 18.

As you know, this matter was occasioned by the Airport and Airway Development Act of 1970 which increased the Federal tax on tickets from 5 percent to 8 percent and required that the ticket price be stated inclusive of the tax. Previously, the fares and the tax were stated separately. The carriers have long stated their fares exclusive of tax in whole dollar amounts. Adding the new tax and stating the price on a tax-inclusive basis would generally produce fares in odd dollar-and-cents amounts unless these fares were rounded off.

The Board considered that the whole dollar policy was administratively efficient and convenient to the public and the carriers and should be continued. Continuing it, however, under the circumstances would entail changing the tariffs, whether the fares were rounded to the nearest whole dollar or the next higher whole dollar. Given the enactment of the Law on May 21, 1970, the carriers' tariff filings on June 4, 1970, and the necessity of adding the tax after June 30, 1970, changes in the tariffs could not be made within the normal 30-day public notice period. Accordingly, the Board had to determine whether it would waive this period, as it has the authority to do.

Given the likelihood that rounding the fares off in some fashion would ultimately be approved, the Board majority concluded that unless the notice period was waived, the public would be faced with two apparent fare adjustments in short succession, one on July 1 and the other as soon as three weeks later, with all the public misunderstanding and extra carrier expense this would entail. However, since waiver of the notice period would mean a change in tariffs without benefit of public comments, the Board majority decided to make its approval effective only for two months, to allow for adequate time for orderly receipt and consideration of comments on making the rounding off permanent.

The basic question, then, was whether the rounding off should be to the nearest whole dollar or the next higher whole dollar. Board staff estimates are that either method would produce an increase: $7 million in annual revenues under the nearest whole dollar method, $49 million under the next higher whole dollar method. This analysis is based on the fares in the top 40 passenger markets as shown in the passenger origin-and-destination statistics for 1968, representing approximately 23 percent of the total domestic passengers in 1968. Of these 40 markets under the rounding to the nearest whole dollar method, fares in 23 would be rounded up, 15 rounded down, and 2 would be in whole dollars and hence would not be changed.

It might be of interest to know how the fares are computed. First, the present fares are increased 8 percent, then rounded up, and then 8 percent is backed out to produce the new fare. This method produces a slight additional tax for the Airport and Airways Trust Fund. Here are examples:

Step 1	Present fare	$42.00	$44.00
	Add 8 percent	3.36	3.52
	Total	45.36	47.52
Step 2	Round up [1]	46.00	48.00
Step 3	Back out 8 percent	3.41	3.56
	To derive tax and new fare	43.59	44.44
Step 4	Additional revenue	.59	.44
Step 5	Additional tax	.05	.04

[1] Total charge to appear on tickets and in advertising.

In response to your request, I am enclosing a listing of the top 100 markets in 1968 showing the fare, tax and total charge in each. I am also enclosing for your information a copy of the Board's letter approving the fare increases and the Board's press release on the approval.

Sincerely,

WHITNEY GILLILLAND,
Acting Chairman.

AIR FARES AND TRANSPORTATION TAX EFFECTIVE JULY 1, 1970, IN THE 100 TOP-RANKED DOMESTIC MARKETS IN TERMS OF NUMBER OF PASSENGERS

THE COAL MINERS OF WEST VIRGINIA

(Mr. HECHLER of West Virginia asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. HECHLER of West Virginia. Mr. Speaker, after 18 months of prodigious work, a team of West Virginia University graduate students have produced an outstanding team report on "Coal Mine Health and Safety in West Virginia." As one who neither supported, sponsored, nor participated in this study, I believe I can state objectively that this is not only one of the most exhaustive accounts of coal mining ever written, but the analysis and conclusions are sound. The report rips the veil from the incestuous relationship between many coal operators, the United Mine Workers Union Boyle-Titler leadership, various Federal officials, and those in authority who have continued to tolerate the outrageous conditions under which coal miners live and work.

J. Davitt McAteer is the chief editor of this study which has just been completed. I am proud to insert into the CONGRESSIONAL RECORD a summary of the findings of this report, along with several news articles concerning the report which appeared in newspapers over the past weekend:

COAL MINE HEALTH AND SAFETY IN WEST VIRGINIA

(By James Davitt McAteer)

The Report of Coal Mining Health and Safety in West Virginia is the result of a year and a half of study that involved numerous methods of investigation, most prominent of which were hundreds of interviews with miners, coal operators, union officials, state and federal agency officials, and many others.

The study was funded by the following people:

The Carbon Fuel Coal Company, Charleston, W. Va.

The Erwin-Sweeney-Miller Foundation, Columbus, Indiana.

The Field Foundation, New York, New York.

Arch A. Moore, Governor, West Virginia.

Jennings Randolph, Senator, West Virginia.

John D. Rockefeller IV, Secretary of State, West Virginia.

Ralph Nader, Washington, D.C.

United Mine Workers of America, Washington, D.C.

U.S. Department of the Interior, Bureau of Mines, Washington, D.C.

These contributors are not the authors, publishers, or proprietors, of this report and are not to be understood as approving or disapproving, by virtue of the grant, any of the statements made or views expressed herein.

The chairman and editor of the report is James Davitt McAteer, who conducted the report during his third year of law student at West Virginia University. It was completed last week. The other member of the study group present is Julie Domenick.

1. Coal mines can be made safe if the companies are willing to pay for it. Some companies have significantly better safety records than others. In most cases, this is a direct result of a willingness to spend money and upgrade their safety education programs. Unfortunately, the vast majority of coal companies would rather pay a few more dollars in Workmen's Compensation premiums than risk reducing their profit margins by the amount necessary to safeguard the life and limb of the worker.

Time after time, we found specific instances of coal operators ignoring minimum safety standards in order to maximize production. Production must become a secondary consideration with safety paramount. This can only be done by making accidents more expensive than safety. Strict laws with adequate penalty provisions, which include civil liability for safety violations that result in injuries, should be given serious considerations.

2. The United States Bureau of Mines has been negligent in enforcing the Federal Health and Safety Act of 1969 and has thwarted the intention of Congress by declining to enforce specific sections of the Act. It seems clear that President Nixon is treating the miners of America with conscious disregard by allowing his Administration to refuse to enforce the law by vacillating in the appointment of an independent, strong Director for the Bureau of Mines. It is recommended that the Bureau of Mines begin vigorous and reasonable enforcement of the Federal Health and Safety Act. Safe mines are as necessary to the nation's well being as safe streets are.

3. The Federal Government should stop subsidizing the coal industry. Coal is a profitable industry. Profitability in coal is above 15% and, according to experts, net profit is currently more than $1 per ton—this amounts to more than $117 million in net profit each year in the coalfields of West Virginia alone. There is clearly little need for federal welfare payments to coal operators in the form of depletion allowances and production and utilization research. In 1969, the American taxpayer spent more than $53 million for coal research aimed, not at improving safety, but rather at increasing production. This should stop. Instead, the government should commit funds for safety research aimed at protecting the health and welfare of the more than 120,000 long neglected American coal miners.

At the present time, the government is spending at a ratio of $5 to assist coal companies to increase their profits and only $1 for the miner's health and safety—these priorities are in need of drastic revision. It is our belief that coal profits are such that, in a free enterprise system, the federal government should not subsidize production oriented coal research.

4. The State Department of Mines has never carried out its obligation to protect the miner's health and safety. Unless and until the unofficial "appointment committee" of coal operators and union officials, who in effect, select the Director of the State Department of Mines, is eliminated and the Governor is in a position to appoint an individual whose primary concern is the health and safety of the miner—someone like John O'Leary (former Director of the Bureau of Mines), there is little chance of improvement.

Inasmuch as members of last year's graduating class from the University School of Mines, were able to command salaries of $14,000 per year, Department of Mines salaries must be made competitive with industry if the caliber of men needed to fulfill its function is to be attracted and retained. Until this is done we can expect little in the way of advancement.

There is a pressing need to totally reorganize the entire State Department of Mines so that its primary concern is that of the miner's health and safety.

5. The State Government should stop subsidizing the coal operators. In 1968, coal companies had gross revenues of $725 million in West Virginia alone. The state government gave those companies welfare payments totaling more than a quarter of a million dollars in the form of support to Coal Research Bureau at West Virginia University, the production-oriented School of Mines, the administrative cost of the gas refund tax, and the Department of Highways policy of paving private roads to isolated coal mines. At the same time, the coal operators were benefitting from these welfare subsidies and paid a total of $17 million in state and county taxes in 1969. The state and county governments collected less tax revenue from one of the state's largest industries than they received from liquor and cigarette or liquor taxes in the same year. Taxes on coal should be raised to reflect the true worth of the natural resource being removed.

The counties of West Virginia should begin evaluating mineral rights at higher, more equitable rates. At the present time, county assessments of these rights are extremely low. Some counties still charge only $44.00 per acre of coal producing land, even though the coal is worth $30,000.00 or more. It is this underassessment of land that produces tremendous profits for the absentee landlord corporations that could just as easily serve as a tax base for improved schools, roads and improved health and safety research. Any one who has spent time in West Virginia is fully cognizant of the need to upgrade these services.

There is no justifiable reason why coal companies should continue to pay a pittance in local property taxes. Our studies indicate that in 14 of the major coal producing counties in West Virginia, more than 44% of the land is owned or controlled by coal or coal affiliated companies. Although these companies may have been considered economically weak during the 1950's and early 1960's, they make handsome profits today and have made such profits, just as they have in every other period of coal's prosperity by removing irreplaceable resources from the land without the slightest pretense of paying their fair share to local governments. Their recently found efforts at public relations cannot hide the scars and wounds they have made upon this state and its people. It is little to ask that local property taxes be raised sufficiently so that the companies' employees and the people residing in this state, at whose expense these companies continue to operate, provide sufficient local property taxes so that they may have decent schools and local services.

In addition, a state severance tax of at least 50 cents a ton of coal should be enacted at once. Such a tax would not only require the coal industry to pay its fair share of mineral extraction, but would also partially compensate for past damages to the people and land of West Virginia. The coal barons have ravaged the land and called it progress; they have polluted the streams in the name of free enterprise; they have blighted the landscape with abandoned coal tipples, coal camps, and mining wastes and called themselves "progressive employers"; and more important, they have blatantly disregarded the lives and welfare of their workers in the pursuit of profit. This must be stopped. The few pennies such a tax would add to the nation's electric bills (no one is naive enough to think that the companies would absorb it) is little to ask for the past degradation the state has and continues to suffer. An alternative would be the institution of a National severance tax similar to that proposed by Senator Metcalf. This would equalize the tax rate among all coal producing states so that no one state will have a competitive advantage. Such a tax would be collected by the Federal government, and most of it would be rebated to the states to be used for local purposes.

6. Mr. Louis Evans, director of safety for the United Mine Workers of America, should resign. His replacement should be by someone who will work vigorously for mine safety.

Since the days of John L. Lewis, the UMWA has neglected its duty to protect the health and safety of its miners. One of the most shocking discoveries of this report was the gross abdication of responsibility by both the national and district level officials of the UMWA for the health and safety of the membership. The failure to initiate educational and training programs, financial irresponsibility, the total lack of internal democracy, the failure to push for health and safety. Legislation, the collusion with coal operators, the nepotism of top union officials, the violation of the Landrum-Griffin Act, all would indicate that the UMWA does not have the best interests of the men it represents as a priority.

W. A. "Tony" Boyle only joined in the battle for black lung legislation after the rank-and-file miners had won the major part of the battle. The UMWA, under Boyle, did not work vigorously for the Federal Health and Safety Act and more importantly aren't working for its enforcement in the mines today.

The Justice Department should immediately set up a special task force to investigate the alleged misuse of funds from the UMWA health and welfare fund. It is also recommended that the Department of Labor join with the Justice Department in an investigation of the UMWA's internal policies which allegedly are in direct and open violation of the Landrum-Griffin Act. The UMWA, once a great union, is in shambles. It is a union run by a few for a few. It is a union to which production has become as important as it is to the operator. How ironic, that the plan for tonnage royalty payments, envisioned by John L. Lewis as answering the miner's years of misery, has developed into a system whereby operator and union put production above the miner's most immediate need—a safe place to work.

Coal miners, who pay a goodly portion of their paycheck in union dues, deserve leadership that will work with, and not against them.

7. State laws relating to mining are grossly inadequate and should be strengthened. The state Legislature, which has been controlled to a great extent by coal interests, has enacted laws favoring the coal operator and forgetting the coal miner. New laws are needed. Too often, past laws have been drawn up in back rooms by unofficial "advisory" committees of coal executives and union district officials who eliminate the more stringent safety requirements (because they cost money and could slow down production) before they reach the Legislature. Such practices must stop. West Virginia desperately needs strong state mine health and safety laws that are oriented to protect the miner.

8. The West Virginia Laws governing coal mining are in many instances inadequate and in many instances even a detriment to the operation of safe mines.

The West Virginia Legislature, either through ignorance or acquiescence to coal lobby efforts, or both, have written laws which so blatantly favor the coal operator and disregard the miner that one must assume that it is by design, rather than chance.

The writing of new laws can no longer be under the control of the unofficial advisory committee consisting of operators and union officials. The Legislature has been and continues to be duped into believing that they have Legislative and Rule making power in the coal mines. The real power continues to lie with the coal operators and production oriented union officials.

It is recommended that a complete revamping of the State mining law be undertaken along the lines of the new Federal Law irrespective of this "unofficial" committee's wishes.

9. The congressional mandate in the Federal Mine Health and Safety Law is clear. They intended that new and more stringent standards be established.

Yet President Nixon has disregarded Congress's intention by his actions; he has ignored the miners of our country. He has, in effect, rejected Congress's wishes and has acted more in line with the wishes of large coal mining companies.

To fail to appoint a Bureau Director for the six most critical months in its history, is atrocious, but further to appoint a man who sadly lacked a history of strong safety and health activity is despicable. If the President's posture toward Black Americans has been termed benign neglect, the attitude toward our coal miners can well be termed calculated indifference.

It is recommended that President Nixon appoint a Director of the Bureau who has a past record of strong safety advocation. This time the President should appoint as if his life depended on it because the nation's coal miners' lives do indeed depend upon it.

[From the Washington Star, July 25, 1970]

NIXON ACCUSED OF NEGLECTING EFFORTS FOR COAL MINE SAFETY

(By Fred Barnes)

A group which conducted a major study of the coal industry today accused President Nixon of "conscious disregard" of coal miners by failing to enforce mine health and safety laws.

"If the President's posture toward black Americans has been termed benign neglect, the attitude toward our coal miners can well be termed calculated indifference," the group said in a lengthy report.

The group, made up mainly of law students at West Virginia University, was financed in its year-long study of the coal industry by a grant from the U.S. Bureau of Mines and by contributions from Ralph Nader and the United Mine Workers.

In the report, President Nixon is charged with thwarting the intent of Congress by allowing the sweeping coal mine health and safety law enacted last year to go unenforced.

"He has, in effect, rejected Congress's wishes and has acted more in line with the wishes of large coal mining companies," the report said.

It also critized the President for demanding the resignation of Bureau of Mines Director John O'Leary last spring. It termed the nomination of mining professor J. Richard Lucas as his replacement "despicable."

Lucas, who recently withdrew his name for consideration, was described by the report as "a man who sadly lacked a history of strong safety and health activity." The group urged the President to appoint a mines bureau director "who has a past record of strong safety advocation."

"This time the President should appoint as if his life depended on it, because the nation's coal miners' lives do indeed depend upon it," the report said.

The main thrust of the report was that the coal industry, the mines bureau, state governments, the United Mines Workers and even the miners themselves put first priority on producing coal and deal with hazardous conditions in the mines only as an afterthought.

Health and safety standards in the mines are much higher in countries such as England, Czechoslovakia and Germany, "where the working conditions of the coal miner are closely monitored by governmental agencies," the group said.

The report concluded that the leaders of the UMW "have deserted the rank and file" by failing to push for strong health and safety laws and not backing miners in their efforts to improve conditions at individual mines.

Coal corporations were attacked in the report for placing the "responsibility for safety on the miner, on nature or God. . . . Neither management nor the owners have encouraged safe practices or directed efforts to eliminate hazards."

"The question is not whether safety is possible; it is whether the companies are willing to spend money to save lives," the report said.

Except for a revolt of West Virginia miners last year over the issue of "Black Lung," the majority of miners "have shown minimal interest in working for improved safety and health conditions," the report concluded.

"They have remained apathetic and silent in face of the failures of the companies, their union, their state and federal legislators. Their failure to take a more active role in seeking improvements in their condition is incomprehensible and inexcusable," it said.

[From the Charleston (W. Va.) Gazette-Mail, July 26, 1970]

VAST INDIFFERENCE SEEN FOR SAFETY OF MINERS

(By Don Marsh)

A report made public Saturday accuses union, industry and government of being indifferent to the health and safety problems of West Virginia coal miners.

The report was prepared by a group composed primarily of college students. Members conducted an investigation modeled on that of "Nader's Raiders."

Ralph Nader, creator of the concept, contributed to financing the project.

The idea of the investigation was conceived by J. Davitt McAteer, 26, a 1970 graduate of the West Virginia University College of Law.

McAteer said he decided to act for a variety of reasons. "The big one was the Farmington disaster and the failure on the part of everybody to bring about a better result. The laws and the people who wrote the laws had nothing to say and the university in the largest coal producing state, only 35 miles away, could only send notes down saying 'we're sorry'."

"I was turned off by the whole thing and after I got into it I realized that neither the university, nor state government nor the coal industry had really got into the problems of solving safety and health problems."

McAteer said a 10-page proposal was written and contributions were solicited. Contributors included Nader, Carbon Fuel Co. of Charleston, Erwin-Sweeney-Miller Foundation, Gov. Moore, Sen. Jennings Randolph, Secretary of State John D. Rockefeller IV, the United Mine Workers and the U.S. Bureau of Mines. About $9,000 was collected.

The staff included McAteer, Julie Domenick, a WVU graduate student; William Tantlinger, a law student at the university; Linda Hupp, a 1969 graduate of the WVU law school; Peter Graze, a third year medical student at Harvard; Kathleen Graze, a second year medical student at Tufts and Mike Adams of Charleston, a newspaper reporter.

The team prepared a massive report—689 pages with appendix. It was filled with criticism of public and private responses to the dangers of coal mining.

The report contends that the coal industry is oriented toward production and that those most closely involved are willing to accept an inordinately high number of accidents and an unacceptable level of illness.

The report said industry likes to show that the accident rate is going down when compared to production. But on a more stable basis—that of man hours worked—there has been no significant change in accident rates in several years.

West Virginia has the worst accident rec-

ord among major coal producing states. In 1967, one in 500 miners working underground was killed and one in seven was injured seriously enough to be reported.

One suggestion as to why West Virginia's safety record is poorer than other states is because of inadequacies of the State Department of Mines, the report said.

The report argues that pneumoconiosis—black lung—is an identifiable disease and is widespread. For a variety of reasons—including conservatism of doctors and members of the medical occupational disease board—miners have a hard time getting compensation.

The report said that West Virginia mining laws are poorly written and poorly enforced. Of the law, it quotes an unnamed mining inspector as saying, "It's just a bunch of writing. It's good guidelines if you want to follow it but it doesn't mean a thing if you want to avoid it."

It said it learned that while the Governor appoints the chief of the Department of Mines the actual selection is made by an informal committee composed of representatives of the United Mine Workers and operators of large coal companies. The two agree on a candidate they can "live with" the report said and recommend his name to the Governor. "This method of appointment may explain in part the lackluster performance of the department and their prevailing attitude."

The report also said there are indications the department is too pro-institutional. ". . . An inspector must live with the department, live with the coal operator and live with himself. When the squeeze is on, the first one of the three to go is himself," an inspector is quoted.

The report said the coal industry is economically profitable but indifferent to safety when it comes to spending money for research. In fact, the report said, the industry depends almost wholly on government for research of all kinds. The report said federal authorities spend $5 for production research to every $1 for health and safety research. The report estimates the industry makes about $1 profit for every ton of coal sold.

The United Mine Workers' record is equally bad, the report said. ". . . It is imperative to note that the logical protector of the miner, the United Mine Workers of America, has failed significantly in developing safer and healthier working conditions and has done even less in the field of health and safety research."

The report said that government in West Virginia has consistently subsidized the coal industry by undertaxing it and by such acts as refunding gasoline taxes to its trucks and building roads to its property.

In 1968, more state taxes were collected from the sale of either whisky or cigarettes than was collected from the coal industry, the report added.

It suggested that the state impose a severance tax of 50 cents a ton on coal production and that realistic assessments be made of coal property and that it be taxed at 50 per cent of its true value as other property is. (As an example, the report said acreage owned by a coal company in Marion County is assessed at 50 cents an acre. The actual value of the land is estimated to be between $25,000 and $31,000 an acre.) In 14 major coal producing counties, more than 44 per cent of the land is owned or controlled by coal interests.

The severance tax would pay for damage done by the industry, the report said. "The coal barons have ravaged the land and called it progress; they have polluted the streams in the name of free enterprise; they have blighted the landscape with abandoned coal tipples, coal camps and mining wastes and called themselves 'progressive employers'; and more important they have blatantly disregarded the lives and welfare of their workers in the pursuit of profit. This must be stopped."

The report was equally critical of the union. It called for the resignation of Louis Evans, director of safety for the UMW. His replacement should work more vigorously for mine safety, the report said.

"One of the most shocking discoveries of this report was the gross abdication of responsibilities by both the national and district level officials of the UMWA for the health and safety of the membership. The failure to initiate educational and training programs, financial irresponsibility, the total lack of internal democracy, the failure to push for health and safety legislation, the collusion with coal operators, the nepotism of top union officials, the violation of the Landrum-Griffin Act, all would indicate that the UMW does not have the best interests of the men it represents as a priority," the report added.

[From the New York Times, July 26, 1967]

NIXON CRITICIZED ON MINE SAFETY

(By Ben A. Franklin)

WASHINGTON, July 25.—The Nixon Administration was charged today with "calculated indifference" to the "unnecessary and avoidable" hazards of life in the nation's coal mines.

The Administration's handling of the four-month-old Federal Mine Health and Safety Act of 1969 was described as "atrocious" and "despicable" in a 690-page report prepared over an 18-month period and released here today by a team of graduate student researchers.

The researchers were sponsored in part and guided by Ralph Nader, the consumer and safety advocate, who endorsed their report.

J. Davitt McAteer, a 26-year-old graduate of the University of West Virginia Law School who headed the seven-man research team, stood next to Mr. Nader at a news conference this morning at the Mayflower Hotel.

Mr. McAteer said that after all the furor over mine safety that followed the last major mine disaster in November of 1968, "the question is whether or not the miners' chances of survival have been appreciably improved, and we think that they have not."

Coal mine accidents have taken more than 100 lives so far this year.

BLAME IS SPREAD

The report, which one Government mine safety official called probably the most exhaustive research document ever assembled on the subject, parceled out the blame widely for the "incomprehensible, inexcusable" working conditions in the coal industry.

The masses of charts and tables and more than 1,000 interviews with miners, mine operators, Government officials and union leaders focused on West Virginia, the leading coal-producing state. But Mr. McAteer contended that his team's findings were indicative of coal mining nationally. He noted that West Virginia mines had the highest accident rate.

The report charged timidity, confusion and "sham" in much of the Federal and State safety enforcement activity in the mines. It also criticized Congressional and State legislatures for setting work standards that it said were designed to reduce the added costs of safety provisions for the mine owners.

The report reserved its largest criticism, however, for the 110,000 member United Mine Workers of America for its alleged failure to adopt an "adversary posture" in demanding the enforcement of mine safety regulations.

INDUSTRY ASSAILED

Mr. McAteer assailed industry leaders for "an attitude that production and profit must be maximized at the expense of safety."

The report said that 14 of West Virginia's largest coal-producing counties, in which 44 per cent of the land is owned by coal interests, were assessing coal lands for tax purposes at $44 an acre although the coal alone might be worth up to $32,000 an acre.

The report called for the resignation of Lewis Evans, director of the United Mine Workers' two-man safety division.

The three U.M.W. districts in West Virginia, they said, had reported total expenditures of $14 in 1968 for safety "education and publicity" among the rank and file.

Partly because of "a lack of union leadership," the researchers said, "the majority of miners have shown minimal interest in working for improved safety and health conditions."

"They have remained apathetic and silent in the face of the failures of the companies, their union, the state and Federal legislators," the researchers said.

Mr. McAteer said that he might have revised this language had he known that thousand of miners in Ohio, Pennsylvania, West Virginia, Virginia and Kentucky would stage a series of disruptive wildcat strikes this summer to protest the lack of militant safety enforcement in the mines and to express grievances against their union.

OTHER HIGHLIGHTS

Mr. McAteer's report also urged the following:

A liberalization of workmen's compensation awards to the disabled and to widows that would "make accidents more expensive than the cost of safety" and thus motivate reforms:

An end to the 53-million-a-year federally financed research program to promote coal production and sales and using the money to develop safety technology:

A sweeping reassessment of undertaxed coal lands and a 50-cent-a-ton extraction tax on coal.

Mr. McAteer's research group was not formally along "Nader's Raiders" based in Washington under Mr. Nader's direction. But the two groups cooperated closely.

[From the Charleston (W. Va.) Gazette, July 26, 1970]

MOORE AGAIN DEALT BLOW, THIS ONE BY NADER OVER MINE ASSESSOR VETO

WASHINGTON.—Consumer crusader Ralph Nader said Saturday that Gov. Moore has vetoed the appointment of a young law school graduate to the State Tax Department because of his report on coal mine health and safety in West Virginia.

J. Davitt McAteer, a 26-year-old graduate of West Virginia University, is the chief author of a report made public Saturday that declares West Virginia coal mines are the nation's most dangerous.

In addition, the report on "Coal Mine Health and Safety in West Virginia," charges that the blame for the dangerous conditions is shared by almost everyone, including miners and their unions.

Nader said that as a result of the report, Moore has refused to approve the appointment of McAteer to a $12,000-a-year job as mine assessor for the State Tax Department.

That shows, Nader commented facetiously, that rewards come fast for diligence and the search for truth.

McAteer told newsmen in Charleston that Tax Commissioner Charles Haden had given him "the preliminary okay" for the job, "but the Governor's office said no."

He said that he had no immediate plans, "except to get married next Saturday."

Moore was one of the co-sponsors of the 689-page report. Others included Secretary of State John D. Rockefeller IV, the United

Mine Workers, the U.S. Bureau of Mines, Jennings Randolph, D-W. Va., the Carbon Fuel Co. of Charleston, the Erwin-Sweeny-Miller Foundation of Columbus, Ind., and the Field Foundation of New York.

The seven-member team headed by McAteer is not one of the Nader's Raiders teams, Nader said, but an independent group of students "home-bred" and "home-grown" in West Virginia.

Rep. Ken Hechler, D-W. Va., who neither sponsored nor participated in the report, praised the "initiative, objectivity and perception" of McAteer.

He said the report "rips the veil from the incestuous relationship between the coal industry, the . . . leadership of the United Mine Workers, the ineffective federal and state mine bureaus, and those in authority who continue to tolerate the outrageous health and safety conditions suffered by coal miners."

[From the Washington Post, July 26, 1970]

WEST VIRGINIA MINE CONDITIONS ASSAILED

(By Philip D. Carter)

A panel of young West Virginians yesterday raised a monumental indictment of coal mining health and safety conditions in their state.

Their 689-page study, "Coal Mining Health and Safety in West Virginia," concludes that mine owners, leaders of the United Mine Workers union, state and federal agencies and President Nixon all share blame for the highest rates of mining deaths and injuries in the nation.

Similar charges repeatedly have been made by other advocates of stringent measures for the protection of miners.

But the scope and depth of yesterday's report were probably unique, and so was its backing and authorship. The 18-month study was prepared primarily by West Virginia college students with under $9,000 in funds granted by consumer advocate Ralph Nader, state officials, the Department of the Interior, two private foundations, the mine workers union and a coal company.

The report's conclusions were released at a Washington press conference at which Nader introduced the study's 26-year-old principal author, former University of West Virginia law student J. Davitt McAteer.

Nader, who said he had nothing to do with the report's preparation, accused the state's coal companies of "a form of institutionalized cruelty and injustice that can only be possible in a colony."

He also accused West Virginia's Republican governor, Arch A. Moore, of vetoing the appointment of McAteer to a $12,000-a-year job as a mineral assessor with the state tax department. Moore, Nader pointed out, was one of the sponsors of the report.

"The rewards come early," he said with heavy irony, "for dedication, diligence and fact-gathering within the state of West Virginia."

There was little in the study to please anyone connected with the coal industry.

"Coal mines can be made safe if the companies are willing to pay for it," the report declared. But "time after time, we found specific instances of coal operators ignoring minimum safety standards in order to maximize production." Reversing that pattern, the study declared, will require "adequate penalty provisions," including civil liability.

Present law includes the Federal Health and Safety Act of 1969, passed in the midst of a national furor caused by the death of 78 miners in a Farmington, W. Va., mine explosion.

The U.S. Bureau of Mines, the report charged, "has been negligent in enforcing" the act and has "thwarted the intention of Congress" by declining to enforce parts of its safety provisions.

"It seems clear," the report declared, "that President Nixon is treating the miners of America with conscious disregard" by not requiring enforcement of the law and by "vacillating" in the appointment of an aggressive new director of the Bureau of Mines. The post has been vacant for six months.

The report demanded that the federal government stop "subsidizing" the "profitable" coal industry through "federal welfare payments" in the form of depletion allowances and some forms of research.

"In 1969, the American taxpayer spent more than $53 million for coal research aimed, not at improving safety, but rather at increasing production," the report declared. The study called for change in federal priorities, with greater concentration on the health and welfare of miners.

The report similarly indicted the state's department of mines for neglecting miners' health and safety, and accused the state government of "subsidizing" the industry in a variety of ways.

The report called for higher county tax assessments on coal producing land. "Our studies show that in 14 of the major coal producing counties in West Virginia, more than 44 per cent of the land is owned or controlled by coal or coal affiliated companies," the study said.

The report also recommended immediate enactment of a state severance tax of 50 cents on each ton of coal. In the study, net profits were estimated at from 80 cents to $1 per ton of coal, as against the 21 cents per ton recently claimed by the West Virginia Coal Association.

The tax, said the report, would represent a "fair share for mineral extraction" and would also "partially compensate for past damages" by the industry.

The proposed tax, the study predicted, would be passed on to consumers in the form of higher prices. As an alternative, the study proposed a national severance tax, which would equalize the tax rate among all coal producing states and thus ensure that none would suffer a competitive disadvantage.

The report also called for the resignation of UMW safety director Louis Evans and accused the union and its president, W. A. (Tony) Boyle, of being indifferent to mine safety.

"The UMW, once a great union, is in a shambles," the report declared. "It is a union run by a few for a few." The study asked for immediate creation of a Justice Department task force to investigate the alleged misuse of funds from the unions health and welfare fund.

The report also demanded revamping of the state's "grossly inadequate" mining laws, which now "so blatantly favor the coal operator and disregard the miner that one must assume that it is by design, rather than chance."

At yesterday's press conference, author McAteer said that he sought backing for the study after the Farmington mine disaster. The Fairmont, W. Va., native—both of whose grandfathers, he said, once worked for coal companies—said he had been "appalled at the lack of concern" about the explosion.

"The best that people involved can say is that it was an act of God," he said. Not satisfied with that answer, he sought and won backing for the report. Six of McAteer's contemporaries, most of them students from West Virginia, aided in the study, which required "thousands" of interviews with miners, extensve legal and legislative research and on-the-spot surveys of mine conditions.

Rep. Ken Hechler (D-W. Va.), a strong advocate of stricter mine regulations, encouraged the study and was present at yesterday's press conference. Later he issued a statement strongly endorsing its "analysis and conclusions."

McAteer made it clear that the group does not consider itself part of "Nader's Raiders," as Nader's group of consumer researchers have come to be known. "We're McAteers Racketeer's," he said.

SENATOR CITES SUFFERING OF WEST VIRGINIA COAL MINERS

A senator who sponsored a new coal mine safety law cited reports yesterday of "human suffering and tragedy" among West Virginia coal miners that he said stem from mismanagement of a union fund.

Sen. Harrison A. Williams Jr. (D-N.J.) said he has been told that hospital beds and oxygen tents were removed from the homes of some miners who were incurably ill with black lung disease.

He said he was told injured miners "totally immobilized in body casts" have been sent home, helpless, from hospitals.

Those examples, Williams said, are some of the reasons why his Senate labor subcommittee will hold hearings in Charleston, W. Va., next Thursday and Friday on the United Mine Workers Pension and Welfare Fund.

Charges of mismanagement of the fund by the UMW have helped trigger a wildcat strike in the coal fields, Williams said.

[From the Sunday Star, July 26, 1970]

STUDY ACCUSES UMW OF "DESERTING" MINERS

(By Fred Barnes)

A group which conducted an 18-month study of coal mining conditions in West Virginia has accused the leadership of the United Mine Workers of siding with the coal industry and of neglecting the health and safety of coal miners.

Union leaders "have deserted the rank-and-file," the group concluded in a 689-page report issued yesterday.

UMW President W. A. (Tony) Boyle and his lieutenants "did not work vigorously for the Federal Coal Mine Health and Safety Act (passed last year) and more importantly aren't working for its enforcement in the mines today," the report said.

Ironically, the study, made by a group of graduate students at West Virginia University, was financed in part by a $500 grant from the UMW.

U.S. BUREAU SCORED

Other financial supporters of the study, such as the U.S. Bureau of Mines and West Virginia political leaders, also were sharply criticized in the report.

Meanwhile, a senator who sponsored the new coal mine safety law cited reports of "human suffering and tragedy" among West Virginia coal miners which he said stem from mismanagement of the UMW pension and welfare fund.

Sen. Harrison A. Williams Jr., D-N.J., said he has been told hospital beds and oxygen tents were removed from the homes of some miners who were incurably ill with black lung disease.

He said he was told injured miners "totally immobilized in body casts" have been sent home, helpless, from hospitals.

"DENIED PENSIONS"

"In addition, we have received letters detailing cases of miners who worked for 30, 40 and 50 years and who paid their union dues, yet found when the time came to retire they were not eligible for pensions."

Those examples, Williams said, are some of the reasons his Senate labor subcommittee will hold hearings in Charleston, W. Va., Thursday and Friday on the pension fund's operation.

Yesterday's report said the close ties between the union and the coal industry began in 1950 when then-UMW head John L. Lewis

decided "to orient the policies of the UMW toward the increased production of coal and the improvement of the competitive position of the industry."

JOB VETO CHARGED

With the coal industry booming today, "the major coal companies no longer need the consistent support of the UMW but . . . the miners do," it said.

J. Davitt McAteer, a recent graduate of West Virginia University and the chief author of the report, said the study and its conclusions had already cost him a job with the West Virginia state government.

He said he was hired several weeks ago as assistant director of local government relations in the state tax commission office. But a few days later, he said, he was vetoed for the post by Gov. Arch Moore, who had earlier contributed more than $200 for the study.

The report drew praise from Rep. Ken Hechler, D-W. Va., a persistent crusader for mine safety. "The report rips the veil from the incestuous relationship between the union, coal industry and government agencies," Hechler declared.

The overriding contention of the report is that the federal and state governments have joined the union and coal industry in fostering coal production at the expense of miners' health and safety.

[From the Huntington (W. Va.) Herald-Advertiser, July 26, 1970]

COAL MINING IN WEST VIRGINIA BLASTED

A young crusader team declared Saturday that West Virginia's coal mines are the nation's most dangerous and the blame is shared by almost everyone involved—including the miners and their union.

The report, issued after a year-and-a-half study, accuses President Nixon of calculated indifference in enforcing the 1969 mine safety law and of failure to appoint a strong head of the Bureau of Mines.

Consumer crusader Ralph Nader appeared at a Washington news conference with the report's chief author, J. Davitt McAteer, endorsed the report and accused the coal industry of depleting the state's resources with "institutional cruelty . . . only possible in a colony."

The seven-member team headed by McAteer, a recent law school graduate at West Virginia University, is not one of the "Nader's Raiders" team, Nader said, but an independent group of students "home-bred and home-grown" in West Virginia.

But Nader was a sponsor of the project and encouraged it, he said.

Nader said that as a result of the report Gov. Arch A. Moore of West Virginia has vetoed McAteer's appointment to a $12,000-a-year job offered him by Tax Commissioner Charles Haden as mine tax assessor for the state.

That shows, Nader commented with irony, that rewards come fast for diligence and the search for truth.

Moore was listed as one of the project's sponsors along with the United Mine Workers, the U.S. Bureau of Mines—both criticized in the report—Sen. Jennings Randolph, D-W. Va., the Carbon Fuel Co. of Charleston, W. Va., the Erwin-Sweeny-Miller Foundation of Columbus, Ind., and the Field Foundation of New York.

McAteer later told an afternoon news conference at Charleston's Kanawha Airport that the basic premise of the report is that coal mines can be safe if companies are willing to pay for it.

The report accuses Nixon of "treating the miners of America with conscious disregard" because he is vacillating in appointing an independent, strong director of the Bureau of Mines. The job has been vacant since John F. O'Leary was not reappointed in March. Richard Lucas was appointed but withdrew his name.

Nixon, the report said, "has, in effect, rejected Congress' wishes and has acted more in line with the wishes of large coal mine companies."

The report says the West Virginia Legislature, the United Mine Workers and the State Department of Mines all are dominated by the coal companies and that as a result there are grossly inadequate state laws and the coal mines not only do not pay their fair share of taxes but are subsidized. The report calls also for an end to the federal subsidy.

All factions seem more interested in improving production than safety, McAteer writes in the 689-page report which calls this incomprehensible and inexcusable.

As for the miners, the report said:

"Other than the Black Lung strike of 1969, the majority of miners have shown minimal interest in working for improved safety and health conditions. They have remained apathetic and silent in the face of the failures of the company, their union, their state and federal legislatures."

The study was touched off by the Farmington, W. Va., mine disaster in November 1968 that cost 78 lives.

The team says it picked West Virginia to study because it has the worst record of all coal states, as compared with neighboring Pennsylvania's safety record which "appears to be much better."

In West Virginia, the report said, "the chances are one in six that a non-supervising miner working underground will be injured each year. The chances are one in 24 that he will be killed. In addition to this, the possibility of contracting respiratory disease is much greater than the national average or that of his non-mining neighbor."

The report has high praise for the federal mine inspectors as "competent, diligent and conscientious men" respected by the miners.

But the federal Bureau of Mines inspectors, the report said, "are unable to successfully carry out their jobs because of limitations on their authority and most importantly because of restrictions placed upon them by the bureau's hierarchy.

"Only under the directorship of Director John O'Leary did the bureau ever begin to fulfill its protective role with the passage of the new act on Dec. 31, 1969. It was felt that a new era would be embarked on in America's coal fields. But President Nixon has indeed raised doubts as to whether we will embark on a new era, or whether we will simply lower our voices as to the miners' plight."

As for state mine inspectors, the report says, they are captives of "a board of company executives and union officials who would be expected to frown on strict enforcement of the law."

"He must refrain from being too much of a threat to the operators or risk losing his job or being transferred to another district," the report says.

"The miner, whose health and safety are his responsibility, doesn't trust him and moreover, often considers him an enemy. The companies see him as a nuisance, to be dealt with, and dismissed as quickly as possible. He is in a situation of having all friendly enemies and no friends."

Among its conclusions, the report urges that the federal and state governments stop subsidizing the coal industry, saying "in 1969 the American taxpayer spent more than $53 million for coal research aimed, not at improving safety, but rather at increasing production."

At the same time, the report said, "there is no justifiable reason why coal companies should continue to pay a pittance in local property taxes." The tax rate on coal, it said, has "remained the same for 23 years while nearly every other tax rate in the state has risen."

As for the union, the report said the UMW "once a great union, is in shambles. It is a union run by a few for a few. It is a union to which production has become as important as it is to the operator."

UMW President W. A. 'Tony" Boyle "only joined in the battle for black lung legislation after the rank-and-file miners had won the major part of the battle," the report says. It added that now UMW isn't working for the enforcement of the Federal Health and Safety Act.

Louis Evans, director of safety for the union, should resign, the report says, and be replaced by someone who will work vigorously for mine safety.

While praising the new federal mine safety law as the best yet, the report says the federal government lacks authority or enforcement power necessary to promote health and safety in the mines.

Saying the coal companies have a substantial influence over state legislators, the report says the legislature has done little to protect miner health and safety.

The report concludes that "coal is a healthy industry, is profitable and can look forward to a strong future."

UMW FUND MISMANAGED, SENATOR CHARGES

WASHINGTON.—A senator who sponsored a new coal mine safety law cited Saturday reports of "human suffering and tragedy" among West Virginia coal miners which he said stem from mismanagement of a union fund.

Sen. Harrison A. Williams Jr., D-N.J., said he has been told hospital beds and oxygen tents were removed from the homes of some miners who were incurably ill with black lung disease.

He said he was told injured miners "totally immobilized in body casts" have been sent home, helpless, from hospitals.

"In addition, we have received letters detailing cases of miners who worked for 30, 40 and 50 years and who paid their union dues yet found when the time came to retire they were not eligible for pensions."

These examples, Williams said, are some of the reasons why his Senate labor subcommittee will hold hearings in Charleston, W. Va., next Thursday and Friday on the United Mine Workers Pension and Welfare Fund.

Charges of mismanagement of the fund by the UMW have helped trigger a wildcat strike in the coal fields, Williams said.

Although the public hearing announcement was made earlier, Williams did not detail the reasons for it until Saturday.

His aides were in Charleston last week lining up witnesses who could detail some of the alleged suffering stemming from pension and welfare fund mismanagement, Williams' office said.

[From the Parkersburg (W. Va.) News, July 26, 1970]

AUTHOR FIXES BLAME FOR MINING HAZARDS

(By Harry J. Lorber)

CHARLESTON, W. VA.—James Davitt McAteer, author of a 689-page report on coal mine health and safety in West Virginia, Saturday blamed coal operators and the federal and state governments for existing safety hazards in mines.

He charged all have "ignored minimum safety standards in order to maximize production."

Speaking here at a news conference, McAteer called for the federal and state government to stop subsidizing the coal industry, saying there is little need for a depletion allowance when the companies gross $725 million a year.

McAteer, a recent graduate of West Virginia University's School of Law, has been working on the report since October of 1968. It was presented in Washington Saturday by consumer champion Ralph Nader, one of nine sponsors of the study, including Gov. Arch A. Moore of West Virginia, Sen. Jennings Randolph, D-W. Va., West Virginia Secretary of State John D. Rockefeller IV, and the U.S. Bureau of Mines.

The 25-year-old Fairmont native decried the "negligence" of the Bureau of Mines in enforcing the 1969 Federal Coal Mine Health and Safety Act, saying "they have thwarted the intention of Congress by declining to enforce specific sections of the act."

Part of the reason for this, he said, is the Nixon administration's failure to come up with a new director of the bureau, since the dismissal of John F. O'Leary in March.

"These have been the six most critical months in the bureau's 60-year history," McAteer said, "yet Nixon has failed to appoint somebody to take over the directorship."

The State Department of Mines also came under fire in McAteer's report. McAteer claimed the department has never carried out its obligations to protect the miners' health and safety, and won't unless the unofficial "appointment committee" of coal operators and union officials is eliminated, and the governor "would appoint an individual whose primary concern is the health and safety of the miner."

McAteer called for total reorganization of the mines department.

McAteer strongly urged a state severance tax of 50 cents per ton of coal, saying it's time counties "get their fair share" of property owned by coal companies.

"There is no justifiable reason why coal companies should continue to pay a pittance in local property taxes," he said. "Their recently-found efforts at public relations cannot hide the scars and wounds they have made upon this state and its people."

The proposed severance tax, he said, would not only require the coal industry to pay its fair share for mineral extraction, but partially compensate for past damages to the people and land of West Virginia.

"The coal barons have ravaged the land and called it progress," he said. "They have polluted the streams in the name of free enterprise. They have blighted the landscape with abandoned coal camps and mining wastes and have called themselves 'progressive employers'."

But more importantly, they have blatantly disregarded the lives and welfare of their workers in the pursuit of profit. This must be stopped."

McAteer, obviously upset over the findings of his report, angrily lashed out at the United Mine Workers Union and especially its president, W. A. (Tony) Boyle.

"The UMWA, under Boyle, did not work vigorously for the federal health and safety act," he exclaimed, "and more importantly, isn't working for its enforcement in the mines today."

McAteer was sympathetic with a wildcat strike led by the Disabled Miners of Southern West Virginia.

"It's certainly understandable why these men are upset," he said. "They work hard, and depend on that welfare check when they get hurt. Now they find that it isn't there. They feel they're at the end of the road, and their only alternative is to make their grievances known by any means that will draw attention to their plight."

[From the Wall Street Journal, July 27, 1970]

NADER-STUDENT STUDY FINDS NUMEROUS ABUSES IN WEST VIRGINIA MINES

WASHINGTON.—A student study of health and safety conditions in the West Virginia coal industry charged numerous abuses.

These ranged from indifference to health and safety dangers on the part of major companies to inadequate taxes on coal production and failure of the state to collect taxes already authorized, the study said.

The 689-page analysis, conducted principally by West Virginia University law students affiliated with consumer advocate Ralph Nader, strongly criticized the industry and the West Virginia state government. It also said that United Mine Workers of America and the Nixon Administration should share in the blame for coal-industry conditions.

Miners themselves, described as "apathetic and silent in face of the failures of the companies, their union and their state and Federal legislators," were faulted for their own "incomprehensible and inexcusable" failure to seek improvements in their conditions.

Many of the students' points have been raised in the past by critics of the West Virginia coal industry, which dominates the state economically and politically. Following a press conference, Mr. Nader expressed the belief, however, that the thick document would prove a blueprint for changes in the state to be sought by coal miners. He noted the recent wildcat strikes in West Virginia mines over health and safety issues and predicted that more would occur.

Summarizing its findings of coal-company practices, the students' report declared, that "time after time" they found coal operators ignoring minimum safety standards to maximize production. "Unfortunately, the vast majority of coal companies would rather pay a few more dollars in workman compensation premiums than risk reducing their profit margins by the amount necessary to safeguard the life and limb of the workers," the report said.

The report accused President Nixon of, in effect, rejecting the wishes of Congress expressed in the tough 1969 coal mine safety law and acting "more in line with the wishes of large coal mining companies." It termed "atrocious" the President's failure to appoint a Bureau of Mines director following the forced resignation of Democratic holdover John O'Leary.

Moreover, the report continued, it was "despicable" of the President to seek to appoint "a man who sadly lacked a history of strong safety and health activity"—a reference to Richard Lucas, a Virginia professor of mining engineering who recently withdrew his name while his confirmation was pending before the Senate Interior Committee.

The report dedicated considerable space to proving that West Virginia is taxing coal operators too little. It recommended that county real-estate assessments on coal producing land be increased "for improved schools, roads and improved health and safety research." Under-assessment of land "produces tremendous profits for the absentee landlord corporations," the report stated. It also urged that a state severance tax of "at least 50 cents a ton of coal should be enacted at once."

According to the students' reasoning, the severance tax would be justified as a means of requiring the coal industry "to pay its fair share for mineral extraction" as well as "partially compensate for past damages to the people and land of West Virginia" resulting from coal mining.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to:

Mr. KEE (at the request of Mr. ALBERT) for July 27 on account of official business.

Mr. KING (at the request of Mr. RHODES) for the week of July 27, 1970, on account of personal business.

Mr. RYAN (at the request of Mr. HOWARD) for the week of July 27, 1970, on account of illness.

Mr. REID of New York (at the request of Mr. RHODES) for the week of July 27 on account of death in family.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to.

Mr. FEIGHAN, Tuesday, August 4, 1970, for 1 hour, to revise and extend his remarks, and to include extraneous matter.

(The following Members (at the request of Mr. FLOWERS) to revise and extend their remarks and include extraneous material:)

Mr. HAMILTON, for 10 minutes, today.

Mr. GONZALEZ, for 10 minutes, today.

Mr. ROSTENKOWSKI, for 60 minutes, July 28.

Mr. PRYOR, for 60 minutes, August 3.

(The following Members (at the request of Mr. RUPPE) to revise and extend their remarks and include extraneous material:)

Mr. HALPERN, for 5 minutes, today.

Mr. HOSMER, for 5 minutes, today.

Mr. MILLER of Ohio, for 5 minutes, today.

Mr. COUGHLIN, for 5 minutes, today.

Mr. FOREMAN, for 5 minutes, today.

EXTENSION OF REMARKS

By unanimous consent, permission to extend remarks in the Extensions of Remarks of the RECORD, or to revise and extend remarks was granted to:

Mr. HOWARD, to revise and extend his remarks on the O'Neill-Gubser amendment immediately after the remarks of Mr. BOGGS today.

(The following Members (at the request of Mr. RUPPE) and to include extraneous matter:)

Mr. WEICKER in three instances.

Mr. WYATT.

Mr. SCHERLE in five instances.

Mr. DERWINSKI in two instances.

Mr. FOREMAN in two instances.

Mr. HOSMER in two instances.

Mr. RHODES.

Mr. WYMAN in two instances.

Mr. CHAMBERLAIN.

Mr. BUCHANAN.

Mr. SCHMITZ in two instances.

Mr. FULTON of Pennsylvania in four instances.

Mr. PRICE of Texas in two instances.

Mrs. DWYER in three instances.

Mr. CONTE.

Mr. BOW.

Mr. MIZE.

Mr. AYRES.

Mr. MORSE.

(The following Members (at the request of Mr. FLOWERS), and to include extraneous matter:)

Mr. CULVER in two instances.

Mr. THOMPSON of New Jersey in two instances.

Mr. CORMAN.
Mr. OTTINGER in three instances.
Dr. DENT.
Mr. BINGHAM in two instances.
Mr. EVINS of Tennessee in two instances.
Mr. HELSTOSKI in two instances.
Mr. GONZALEZ in two instances.
Mr. HAWKINS in three instances.
Mr. HAMILTON in 10 instances.
Mr. BRASCO.
Mr. PEPPER.
Mr. MOSS.
Mr. EDWARDS of California.
Mr. HATHAWAY in two instances.
Mr. CELLER.
Mr. BROWN of California.
Mr. ASHLEY in two instances.
Mr. WILLIAM D. FORD in two instances.
Mr. MAHON in two instances.
Mr. DIGGS in five instances.
Mr. ROSENTHAL.
Mr. EDMONDSON in two instances.
Mr. BOGGS in two instances.
Mr. CHARLES H. WILSON.
Mr. UDALL in two instances.

SENATE ENROLLED BILLS SIGNED

The Speaker announced his signature to an enrolled bill of the Senate of the following title:

S. 2601. An act to reorganize the courts of the District of Columbia, to revise the procedures for handling juveniles in the District of Columbia, to codify title 23 of the District of Columbia Code, and for other purposes.

BILL PRESENTED TO THE PRESIDENT

Mr. FRIEDEL, from the Committee on House Administration, reported that that committee did on July 24, 1970 present to the President, for his approval, a bill of the House of the following title:

H.R. 17619. An act making appropriations for the Department of the Interior and related agencies for the fiscal year ending June 30, 1971, and for other purposes.

THE LATE HONORABLE MICHAEL J. KIRWAN

Mr. FEIGHAN. Mr. Speaker, I offer a resolution.

The Clerk read the resolution, as follows:

HOUSE RESOLUTION 1161

Resolved, That the House has heard with profound sorrow of the death of the Honorable Michael J. Kirwan, a Representative from the State of Ohio.

Resolved, That a committee of 54 Members of the House, with such Members of the Senate as may be joined, be appointed to attend the funeral.

Resolved, That the Sergeant at Arms of the House be authorized and directed to take such steps as may be necessary for carrying out the provisions of these resolutions and that the necessary expenses in connection therewith be paid out of the contingent fund of the House.

Resolved, That the Clerk communicate these resolutions to the Senate and transmit a copy thereof to the family of the deceased.

The resolution was agreed to.

The SPEAKER. The Chair appoints as members of the Funeral Committee the following Members on the part of the House:

Mr. FEIGHAN, Mr. ALBERT, Mr. GERALD R. FORD, Mr. BOGGS, Mr. MCCULLOCH, Mr. HAYS, Mr. AYRES, Mr. BETTS, Mr. BOW, Mr. ASHLEY, Mr. MINSHALL.

Mr. VANIK, Mr. DEVINE, Mr. LATTA, Mr. ASHBROOK, Mr. CLANCY, Mr. HARSHA, Mr. MOSHER, Mr. STANTON, Mr. BROWN of Ohio, Mr. TAFT, Mr. LUKENS.

Mr. MILLER of Ohio, Mr. WHALEN, Mr. WYLIE, Mr. STOKES, Mr. MAHON, Mr. MCMILLAN, Mr. RIVERS, Mr. WHITTEN, Mr. ABERNETHY, Mr. MADDEN, Mr. PHILBIN, Mr. ROONEY of New York, Mr. SIKES.

Mr. MILLER of California, Mr. MORGAN, Mr. PRICE of Illinois, Mr. EVINS of Tennessee, Mr. DELANEY, Mr. STEED, Mr. KLUCZYNSKI, Mr. BOLAND of Massachusetts, Mr. EDMONDSON, Mr. O'NEILL of Massachusetts, Mr. RHODES, Mr. FLYNT.

Mr. FLOOD, Mrs. GRIFFITHS, Mr. MCFALL, Mr. CASEY, Mr. SMITH of Iowa, Mrs. HANSEN of Washington, Mr. ADDABBO.

The Clerk will report the remaining resolution.

The Clerk read as follows:

Resolved, That as a further mark of respect the House do now adjourn.

The resolution was agreed to.

The SPEAKER. The House stands adjourned out of respect to the memory of our late beloved friend and colleague.

ADJOURNMENT

Accordingly (at 6 o'clock and 58 minutes p.m.), the House adjourned until tomorrow, Tuesday, July 28, 1970, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

2247. A letter from the Deputy Assistant Secretary of Defense (International Security Affairs), transmitting a semiannual report on the implementation of section 507 (b) of the Foreign Assistance Act of 1961, as amended, pursuant to that act; to the Committee on Foreign Affairs.

2248. A letter from the Director, Federal Mediation and Conciliation Service, transmitting the 22d annual report of the Service, for the fiscal year ended June 30, 1969, pursuant to section 202(c) of the Labor Management Relations Act of 1947; to the Committee on Education and Labor.

2249. A letter from the Assistant Secretary of the Interior, transmitting a copy of a proposed concession contract for the provision of facilities and services for the public at White Sands National Monument, N. Mex., for the period January 1, 1970, through December 31, 1974, pursuant to 67 Stat. 271 as amended (70 Stat. 543); to the Committee on Interior and Insular Affairs.

2250. A letter from the Commissioner, Immigration and Naturalization Service, U.S. Department of Justice, transmitting copies of orders entered in the cases of certain aliens found admissible to the United States, pursuant to section 212(a)(28)(I)(ii) of the Immigration and Nationality Act; to the Committee on the Judiciary.

2251. A letter from the President, National Safety Council, transmitting the annual audit report of the Council for 1969, pursuant to section 15 of Public Law 259, 83d Congress; to the Committee on the Judiciary.

RECEIVED FROM THE COMPTROLLER GENERAL

2252. A letter from the Comptroller General of the United States, transmitting a report on the need for increased control over local currency made available to the Republic of Vietnam for support of its military and civil budgets, Department of Defense, Department of State, Agency for International Development; to the Committee on Government Operations.

2253. A letter from the Comptroller General of the United States, transmitting a report on examination of financial statements of the accountability of the Treasurer of the United States, Department of the Treasury, for fiscal years 1968 and 1969; to the Committee on Government Operations.

2254. A letter from the Comptroller General of the United States, transmitting a report on the opportunity for savings by reducing the paperwork involved in Department of Defense bus travel; to the Committee on Government Operations.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. PATMAN: Committee on Banking and Currency. H.R. 17880. A bill to amend the Defense Production Act of 1950, and for other purposes; with amendments (Rept. No. 91–1330). Referred to the Committee of the Whole House on the State of the Union.

Mr. JOHNSON of California: Committee on Interior and Insular Affairs. H.R. 7521. A bill to reauthorize the Riverton extension unit, Missouri River Basin project, to include therein the entire Riverton Federal reclamation project, and for other purposes; with amendments (Rept. No. 91–1331). Referred to the Committee of the Whole House on the State of the Union.

Mr. JOHNSON of California: Committee on Interior and Insular Affairs. H.R. 9804. A bill to amend Public Law 394, 84th Congress, to authorize the construction of supplemental irrigation facilities for the Yuma Mesa Irrigation District, Arizona (Rept. No 91–1332). Referred to the Committee of the Whole House on the State of the Union.

Mr. JOHNSON of California: Committee on Interior and Insular Affairs. H.R. 13001. A bill to amend the act of June 13, 1962 (76 Stat. 96), with respect to the Navajo Indian irrigation project; with amendments (Rept. No. 91–1333). Referred to the Committee of the Whole House on the State of the Union.

Mr. MAHON: Committee on Appropriations. House Joint Resolution 1328. Joint resolution making further continuing appropriations for the fiscal year 1971, and for other purposes (Rept. No. 91–1334). Referred to the Committee of the Whole House on the State of the Union.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. BROTZMAN:

H.R. 18635. A bill to amend section 7275 of the Internal Revenue Code of 1954, relating to amounts to be shown on airline tickets and advertising, and for other purposes; to the Committee on Ways and Means.

By Mr. BUTTON:

H.R. 18636. A bill to amend title 13 of the United States Code to provide for a recount (by the State or locality involved) of the population of any State or locality which believes that its population was understated in

the 1970 decennial census, and for Federal payment of the cost of the recount if such understatement is confirmed; to the Committee on Post Office and Civil Service.

By Mr. FOLEY:

H.R. 18637. A bill to amend the act of August 24, 1966, relating to the care of animals used for purposes of research, experimentation, exhibition, or held for sale as pets; to the Committee on Agriculture.

By Mr. WILLIAM D. FORD:

H.R. 18638. A bill to promote and protect the free flow of interstate commerce without unreasonable damage to the environment; to assure that activities which affect interstate commerce will not unreasonably injure environmental rights; to provide a right of action for relief for protection of the environment from unreasonable infringement by activities which affect interstate commerce and to establish the right of all citizens to the protection, preservation, and enhancement of the environment; to the Committee on the Judiciary.

By Mr. GRIFFIN:

H.R. 18639. A bill to repeal chapter 44 of title 18, United States Code (relating to firearms), to reenact the Federal Firearms Act, and to restore chapter 53 of the Internal Revenue Code of 1954 as in effect before its amendment by the Gun Control Act of 1968; to the Committee on the Judiciary.

By Mr. HALPERN:

H.R. 18640. A bill to provide for financial participation by the United States in the construction of the Taft Memorial Library in Kfar Silver, Israel; to the Committee on Foreign Affairs.

By Mr. HARRINGTON (for himself and Mr. BURTON of California):

H.R. 18641. A bill to amend the Fish and Wildlife Coordination Act to provide additional protection to marine and wildlife ecology by providing for the orderly regulation of dumping in the coastal waters of the United States; to the Committee on Merchant Marine and Fisheries.

By Mr. HARSHA:

H.R. 18642. A bill: The Mercury Pollution Control Act; to the Committee on Public Works.

By Mr. HECHLER of West Virginia:

H.R. 18643. A bill to prohibit the movement in interstate or foreign commerce of horses which are "sored," and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. KEITH (for himself and Mr. SPRINGER):

H.R. 18644. A bill to require travel agents to post performance bonds to assure the performance of travel services in interstate or foreign commerce; to the Committee on Interstate and Foreign Commerce.

By Mr. LUJAN:

H.R. 18645. A bill to provide that the United States make payments on claims of nationals of the United States against the government of Czechoslovakia based on awards made by the Foreign Claims Settlement Commission, and for other purposes; to the Committee on Foreign Affairs.

By Mr. McFALL:

H.R. 18646. A bill to establish a Doctor Corps; to the Committee on Interstate and Foreign Commerce.

By Mr. OTTINGER:

H.R. 18647. A bill to amend the Defense Production Act of 1950, and for other purposes; to the Committee on Banking and Currency.

By Mr. PODELL:

H.R. 18648. A bill to amend title II of the Social Security Act to reduce from 20 to 15 the number of quarters of coverage which an individual must generally have had within a specified 10-year period in order to qualify for disability insurance benefits and the disability freeze; to the Committee on Ways and Means.

By Mr. POLLOCK:

H.R. 18649. A bill to amend the act of July 13, 1970; to the Committee on Interior and Insular Affairs.

By Mr. PREYER of North Carolina:

H.R. 18650. A bill to amend the Internal Revenue Code of 1954 to permit taxpayers to treat certain capital expenditures incurred in making buildings accessible to handicapped persons as expenses not chargeable to capital account; to the Committee on Ways and Means.

By Mr. VANDER JAGT:

H.R. 18651. A bill to amend the Truth in Lending Act to require that statements under open and credit plans be mailed in time to permit payment prior to the imposition of finance charges; to the Committee on Banking and Currency.

By Mr. VIGORITO:

H.R. 18652. A bill to compensate certain growers, manufacturers, packers, and distributors for damages sustained by them as a result of their good faith reliance on the official listing of cyclamates as generally recognized as safe for use in food prior to the unexpected action taken by the United States restricting their future use in foods and drinks; to the Committee on the Judiciary.

By Mr. WILLIAMS:

H.R. 18653. A bill to provide for an equitable sharing of the U.S. market by electronic articles of domestic and of foreign origin; to the Committee on Ways and Means.

By Mr. FINDLEY:

H.R. 18654. A bill to require Presidential reports concerning U.S. military units on foreign territory, in order that the Congress may fulfill its primary responsibility for the commitment of the Nation to war, and for the regulation of its Armed Forces; to the Committee on Foreign Affairs.

By Mrs. MINK:

H.R. 18655. A bill to amend title II of the Social Security Act to provide in certain cases for an exchange of credits between the old-age, survivors, and disability insurance system and the civil service retirement system so as to enable individuals who have some coverage under both systems to obtain maximum benefits based on their combined service; to the Committee on Ways and Means.

By Mr. CHARLES H. WILSON:

H.R. 18656. A bill to require the Secretary of Health, Education, and Welfare to conduct a study and investigation of the effects of the use of pesticides, and for other purposes; to the Committee on Agriculture.

H.R. 18657. A bill to authorize the U.S. Commissioner of Education to establish educational programs to encourage understanding of policies and support of activities designed to enhance environmental quality and maintain ecological balance; to the Committee on Education and Labor.

H.R. 18658. A bill to establish a Commission on Population Growth and the American Future; to the Committee on Government Operations.

H.R. 18659. A bill to reorganize the executive branch of the Government by transferring functions of various agencies relating to evaluation of the effect of certain activities upon the environment to the Environmental Quality Council, and for other purposes; to the Committee on Government Operations.

H.R. 18660. A bill to secure bulk power supplies adequate to satisfy the mounting demands of the people of the United States, consistent with environmental protection; to the Committee on Interstate and Foreign Commerce.

H.R. 18661. A bill to coordinate national conservation policy by establishing a Council of Conservation Advisers, and for other purposes; to the Committee on Rules.

H.R. 18662. A bill to amend the Atomic Energy Act of 1954 to permit a State, under its agreement with the Atomic Energy Commission for the control of radiation hazards, to impose standards (including standards regulating the discharge of radioactive waste materials from nuclear facilities) which are more restrictive than the corresponding standards imposed by the Commission; to the Joint Committee on Atomic Energy.

By Mr. BROYHILL of Virginia (for himself and Mr. SCOTT):

H.R. 18663. A bill to revise the pay structure of the police forces of the Washington National Airport and Dulles International Airport, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. MAHON:

H.J. Res. 1328. Joint resolution making further continuing appropriations for the fiscal year 1971, and for other purposes; to the Committee on Appropriations.

By Mr. SAYLOR:

H.J. Res. 1329. Joint resolution providing for the designation of the second week of September of each year as National Square Dance Week and square dancing as the national dance of the United States; to the Committee on the Judiciary.

By Mr. CONTE:

H. Con. Res. 691. Concurrent resolution relating to treatment and exchange of military and civilian prisoners in Vietnam; to the Committee on Foreign Affairs.

By Mr. THOMPSON of Georgia:

H. Res. 1160. Resolution amending the Rules of the House of Representatives relating to financial disclosure to require financial reporting by certain members of the press galleries of the House of Representatives; to the Committee on Standards of Official Conduct.

By Mr. FULTON of Pennsylvania:

H. Res. 1162. Resolution to change House rules relating to election of committee chairmen; to the Committee on Rules.

By Mr. CHARLES H. WILSON:

H. Res. 1163. Resolution establishing a Select Committee on Technology and the Human Environment; to the Committee on Rules.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII,

Mr. BURTON of Utah introduced a bill (H.R. 18664) for the relief of John J. Owens, Doris I. G. Owens, Anthony John Owens, Hilary Mary Owens, Jeremy Norman Owens, and Jenny Michelle Owens, which was referred to the Committee on the Judiciary.

MEMORIALS

Under clause 4 of rule XXII,

431. The SPEAKER presented a memorial of the Legislature of the State of California, relative to the Los Angeles-San Diego transportation corridor, which was referred to the Committee on Interstate and Foreign Commerce.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

555. By the SPEAKER: Petition of 170 participants at the 50th Anniversary Conference of the Women's Bureau of the Department of Labor, relative to equal rights for men and women; to the Committee on the Judiciary.

556. Also, petition of the board of directors, National Restaurant Association, Washington, D.C., relative to enforcement of the law and protection of human rights; to the Committee on the Judiciary.

557. Also, petition of Mrs. Allen Blanchard, Helena, Mont., and others, relative to appointments to the U.S. Supreme Court and other Federal benches; to the Committee on the Judiciary.

SENATE—*Monday, July 27, 1970*

The Senate met at 12 noon and was called to order by Hon. CHARLES H. PERCY, a Senator from the State of Illinois.

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

Eternal God, who art the source of our life and the end of our pilgrimage, we praise Thee for Thy presence with us all our days. Send us now to our tasks with fresh vigor and noble purpose.

Keep our country and our people in Thy hand. Heal all divisions and preserve us from inward strife. May this Nation be a beacon of hope to all who seek freedom and all who honor Thy name. May we so live as to bring judgment upon evil doers. Make us worthy to mediate Thy grace to all who seek righteousness and justice. Keep us generous and kind but always firm and resolute in the right.

In the Redeemer's name we pray. Amen.

DESIGNATION OF ACTING PRESIDENT PRO TEMPORE

The PRESIDING OFFICER. The clerk will please read a communication to the Senate from the President pro tempore of the Senate (Mr. RUSSELL).

The legislative clerk read the following letter:

U.S. SENATE,
PRESIDENT PRO TEMPORE,
Washington, D.C., July 27, 1970.

To the Senate:

Being temporarily absent from the Senate, I appoint Hon. CHARLES H. PERCY, a Senator from the State of Illinois, to perform the duties of the Chair during my absence.

RICHARD B. RUSSELL,
President pro tempore.

Mr. PERCY thereupon took the chair as Acting President pro tempore.

MESSAGES FROM THE PRESIDENT

Messages in writing from the President of the United States submitting nominations were communicated to the Senate by Mr. Geisler, one of his secretaries.

EXECUTIVE MESSAGES REFERRED

As in executive session, the Acting President pro tempore (Mr. PERCY) laid before the Senate messages from the President of the United States submitting sundry nominations, which were referred to the appropriate committees.

(For nominations received today, see the end of Senate proceedings.)

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Berry, one of its reading clerks, announced that the House had passed a bill (H.R. 18515) making appropriations for the Departments of Labor, and Health, Education, and Welfare, and related agencies, for the fiscal year ending June 30, 1971, and for other purposes, in which it requested the concurrence of the Senate.

The message also announced that the House had agreed to the concurrent resolution (S. Con. Res. 75) directing the Secretary of the Senate to make corrections in the enrollment of S. 2601.

HOUSE BILL REFERRED

The bill (H.R. 18515) making appropriations for the Departments of Labor, and Health, Education, and Welfare, and related agencies, for the fiscal year ending June 30, 1971, and for other purposes, was read twice by its title and referred to the Committee on Appropriations.

THE JOURNAL

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the reading of the Journal of the proceedings of Friday, July 24, 1970, be dispensed with.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

LIMITATION ON STATEMENTS DURING TRANSACTION OF ROUTINE MORNING BUSINESS

Mr. MANSFIELD. Mr. President, I ask unanimous consent that statements in relation to the transaction of routine morning business be limited to 3 minutes.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

WAIVER OF THE CALL OF THE CALENDAR

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the call of the Legislative Calendar, under rule VIII, be dispensed with.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

COMMITTEE MEETINGS DURING SENATE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that all committees be authorized to meet during the session of the Senate today.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

DEATH OF MICHAEL J. KIRWAN, REPRESENTATIVE FROM OHIO

Mr. YOUNG of Ohio. Mr. President, it is with a feeling of sadness that I announce the death of Congressman MICHAEL J. KIRWAN, of Ohio, at the Bethesda Naval Hospital.

MIKE KIRWAN was serving his 34th consecutive year in the Congress, representing the 19th Ohio Congressional District, commencing with the 75th Congress.

It is with a feeling of pride I inform the Members of this Chamber that MIKE KIRWAN was my close personal as well as a political friend for nearly 40 years.

As a young boy, MIKE KIRWAN worked in the coal mines and later as a very young man for the Pennsylvania, Lehigh Valley, and also Southern Pacific Railroads and as a yardmaster for the Youngstown Northern Railway. During his youth he traveled extensively in our country, particularly throughout the West working in wheat and oil fields, on ranches, and in lumber camps. In World War I, he served in combat in France. He became a sergeant in the field artillery and won decorations from our Government.

Mr. President, as a soldier MIKE KIRWAN learned devotion and as a laborer in the mines and fields he developed a sensitivity and compassion for the weak, the unfortunate, and those who toil with their hands.

In the House of Representatives, MIKE KIRWAN served as a member of the Rivers and Harbors Committee and from 1943 he served as a member of the Appropriations Committee.

He was first elected to the 75th Congress in 1936 and thereafter to every succeeding Congress and by ever-increasing majorities.

Congressman KIRWAN had very little formal education. It was necessary for him to work in the coal mines at an extremely early age. He became a self-educated and very knowledgeable man. During his years as Representative in Congress from the 19th Ohio District he spoke out in support of Democratic candidates and Democratic causes not only in every area of Ohio but in many States in the Midwest and Far West. He was a forthright and blunt speaker. He never dodged speaking out for unpopular causes. He spoke with sincerity and eloquence.

He was a sincere, honest, and industrious public servant in the House of Representatives. Due to that the 19th Ohio District, long regarded as a Republican stronghold reelected him from 1938 to 1968 by ever-increasing majorities. Last year MIKE KIRWAN announced his retirement and that he would not seek reelection. This was due to his failing health.

MIKE took great pride in bringing about the erection of dams throughout every area of the United States. Whether any particular dam has been named after him I do not know, but I do know that there are hundreds of dams, highly needed at the time, which were erected due to MIKE KIRWAN's efforts and leadership. These are his monuments.

Congressman KIRWAN was first elected to the House of Representatives in 1937. He was appointed to the Committee on Appropriations in January of 1943. He became a champion of conservation, including national parks and mineral resources, and made great efforts for the improvement of the welfare and education of the American Indian. He wanted every Indian child in our Nation to have the opportunity to have a good common school education which, due to economic conditions, was denied him.

Congressman KIRWAN was on the Sub-

committee on Interior Appropriations from 1955 to the present time. From 1965 to the present time, he was chairman of the Subcommittee on Public Works Appropriations. He was influential in pollution control and dealt with the officers of the Corps of Engineers and TVA officials. He was extremely influential in flood control in the Missouri River Basin.

Long before the present generation became aware of the problem of pollution, MIKE KIRWAN was fighting for the preservation of forests, national parks, and fish and wildlife while serving as chairman of the Subcommittee on Interior Appropriations. At the time of his death, he was chairman of the Subcommittee on Public Works Appropriations. He also served as chairman of the Democratic Congressional Campaign Committee from 1947 to the present time.

MIKE KIRWAN was devoted to his wife and children and grandchildren in addition to the public service. He and his wife, the former Alice Kane, were the parents of two sons and a daughter. In addition, he and his wife were blessed with 20 grandchildren.

Mr. President, MIKE KIRWAN, above all, was a man of integrity. He was a man whose word and fairness were unquestioned in the Congress of the United States.

The citizens of Ohio have lost a tireless and dedicated citizen. Congress has lost an able and productive legislator. All of us who knew MIKE KIRWAN have lost a loyal and trusted friend.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. YOUNG of Ohio. I yield to the distinguished majority leader.

Mr. MANSFIELD. Mr. President, I wish to join the distinguished senior Senator from Ohio in what he has just had to say about our late colleague, MICHAEL J. KIRWAN, of Youngstown, Ohio. He was, in the words of the distinguished Senator, a man of the people. He was a man who had little formal education but who had a great deal of commonsense.

I feel a personal debt to MIKE KIRWAN, because when I first came to the House 28 years ago, an attempt was made by the Army Engineers to use Flathead Lake for irrigation purposes in the Bonneville area during the course of the Second World War.

I went to MIKE KIRWAN and, because of his great assistance, we were able to thwart the desires and the plans of the Army Engineers. Out of that came the authorization for Hungry Horse Dam, which was finally completed and which saved Flathead Lake. This was achieved as the result of the astounding momentum applied by MIKE KIRWAN. Without him it might well have been a different story.

The distinguished Senator mentioned the fact that many dams were built because of his interest.

I can personally testify to that because in addition to saving Flathead Lake, he was responsible in large part for the Libby Dam now under construction, and also for the Yellow Tail Dam which is practically completed at the present time.

So MIKE has been a good public servant. His loss will be felt. It will be a long time before anyone will be able to fill his shoes. He has left behind enough in the way of monuments to make his mark and to remind the people of this Nation that he was a great public servant who worked in their behalf.

Mr. STENNIS. Mr. President, I wish to join the sentiments expressed in remarks regarding the late MIKE KIRWAN and his remarkable record in Congess. The people of this entire Nation, in my opinion, owe a debt of gratitude to him for his fine attention to details, as well as his vision, with respect to public works projects throughout the land. He gave unstintingly of his time, not only taking care of his district but also the affairs of this Nation in an able, remarkable, unselfish, and distinguished way. The people can well be thankful that he lived, and in such a fine constructive way.

I know his soul will find a lasting reward.

URBAN SCHOOL DISTRICTS MEET ON UNANSWERED DESEGREGATION QUESTIONS

Mr. SPONG. Mr. President, one of the greatest domestic problems of the moment concerns our public schools. Confusion, uncertainty, and doubt exist over constitutional requirements, court rulings, Federal policies, and sound education procedures.

The 1970–71 school year is almost upon us, yet school districts throughout our Nation do not now know the conditions under which they will have to operate this fall. In fact, the two largest municipal school systems in my State are in this position.

Moreover, the need for a law with equal application throughout the United States—a fact about which I spoke last Monday—is becoming more apparent.

In view of the common problems, 11 school districts representing areas both inside and outside the South met this past weekend in Charlotte, N.C., to discuss possible alternatives. As a result of this meeting, the school districts adopted a resolution which contains two principal parts. First, it reaffirms the agreement of the school districts that segregation by race has no place in education. Second, it specifies that the school districts do not believe that arbitrary racial balance in each school and busing to achieve racial balance are required by the Constitution.

The resolution also recognizes the responsibility of professional educational organizations and school districts to assure that consideration is given to sound education procedures in the court proceedings which are underway.

Mr. President, I should like to read the text of a telegram from the Charlotte, N.C., meeting which includes a resolution:

Here is the text of a resolution adopted in Charlotte on Saturday by representatives of eleven large urban school districts including Cincinnati, Ohio; Norfolk, Virginia; Pontiac, Michigan; Winston-Salem, N.C.; Denver, Colorado; Chattanooga and Memphis, Tennessee; St. Petersburg (Clearwater), Florida; Houston, Texas; Richmond, Virginia; Charlotte, N.C.

It is agreed that segregation by race has no place in education, both because it is unconstitutional and because it is educationally unsound. Chief Justice Burger has recently outlined a national problem when he stated: "As soon as possible, however, we ought to resolve some of the basic practical problems when they are appropriately presented including whether, as a constitutional matter, any particular racial balance must be achieved in the schools: to what extent transportation may or must be provided to achieve the ends sought by prior holdings of the court." The answers to these questions will have far reaching impact on public education and must be resolved as quickly as possible and in such a way as to promote the best possible education for our students.

To conclude that the answers to these questions require arbitrary racial balance in each school and busing to achieve racial balance is to make a decision not required by the constitution. This would be an educational decision without appropriate regard for the educational impact of the decision and without regard for the many factors involved in a good educational program. While some school boards and some State legislatures might decide that it is good public policy to achieve racial balance by busing or by any other means, it is quite a different thing to say that this is required by the constitution. Once it becomes a constitutional mandate it becomes frozen and unchangeable, whereas sound educational policy requires the trial of many different approaches and flexible decision making to meet new problems as they arise from time to time.

Professional associations and large urban school systems ought to follow pending lawsuits in this area very closely. Where these key educational issues are before the Supreme Court, professional associations and large urban school systems ought to supply amicus curiae briefs to bring to the attention of the Supreme Court the educational considerations involved in the analysis of the Chief Justice's questions.

WILLIAM E. POE,
Chairman, Charlotte-Mecklenburg Board of Education.

REQUEST FOR FAIRNESS DOCTRINE TO APPLY TO SPOT ADVERTISEMENTS ON AMENDMENT TO END THE WAR

Mr. DOLE. Mr. President, I have today released a partial list of television stations which have been requested to provide air time, without cost, to present the viewpoint of those opposing the so-called amendment to end the war.

I have written the television stations currently running or scheduled to run spot advertisements purchased by the Amendment To End the War Committee.

Under the fairness doctrine, a broadcasting station is required to present contrasting views on all issues of public controversy. That obligation to broadcast opposing views applies, regardless of the availability of paid sponsorship.

I have received a number of responses from television stations throughout the country indicating a willingness to schedule, without cost, spots presenting

the viewpoint of those who oppose the amendment to end the war.

I ask unanimous consent to have printed in the RECORD a partial list of some 60 broadcast and television institutions now running the so-called amendment to end the war spots along with my letter to those stations.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

LETTER SENT TO BROADCASTING STATIONS RUNNING "AMENDMENT TO END THE WAR" ADVERTISING SPOTS

I have been informed you are currently running a spot schedule purchased by the "Amendment to End the War" Committee in support of the McGovern-Hatfield Amendment to the Military Procurement Authorization Act.

The Fairness Doctrine, as you know, requires that you present contrasting views on all issues of public controversy. The obligation to broadcast opposing views applies, regardless of availability of paid sponsorship.

Therefore, comparable air time, without cost, to present contrasting views on the "Amendment to End the War" (Amendment 609 to H.R. 17123) is respectfully requested.

Since Senate consideration of the Amendment is pending, I urge immediate consideration of this request.

Sincerely yours,

BOB DOLE,
U.S. Senate.

PAID TELEVISION ADVERTISING FOR PURPOSES OF LOBBYING

Mr. DOLE. Mr. President, many have doubts about Members of the Senate using paid television advertising to lobby their colleagues in behalf of a legislative cause, however worthy.

A commentary by Frank Reynolds on ABC evening news of July 7 indicates that this concern goes beyond the Senate and into the media itself. I ask unanimous consent to have Mr. Reynolds' commentary printed in the RECORD.

There being no objection, the commentary was ordered to be printed in the RECORD, as follows:

FRANK REYNOLDS' COMMENTARY

Television commercials are now being shown on stations across the country—urging viewers to express their support for the McGovern-Hatfield amendments to end the war in Viet Nam.

There is nothing new about whipping up public support for, or opposition to legislation pending before the Congress. The full page newspaper ad, usually signed by everybody who contributed to its purchase is an established fixture, and I suppose there is nothing intrinsically wrong with using television for the same purpose. But may be there is something not quite right about it, too.

Whether we like it or not—television is—"Show Biz." Is it right to use show biz techniques—perfectly proper for selling products—to sell ideas and issues?

There are those, and I'm one of them, who believe we now have entirely too much Hucksterism in the selling and packaging of political candidates—but apparently the same approach is to be used in the selling and packaging of public positions on nothing less than the nation's foreign policy. And no doubt on other questions, as well.

Suppose, someday the Congress is considering a bill to raise taxes, and the people opposed to it decide to strike at the minds of the voter through his children?

Captain Kangaroo fades from the screen and on comes some joker—probably wearing a cowboy suit—who then pleads with the kiddies to remind daddy to write his congressman and make sure those bad men in Washington do not take away the money daddy spends on ice cream, or candy bars.

It could happen.

I have nothing against television commercials. Frequently, they are better than the programs they interrupt, and my choice for TV's man of the year is that poor slob who had to keep saying—

"Mama, Mia, that's a spicy meat-a-ball!" But unless something happens, he may one day be persuading us, not to buy this or that, *but* to decide on matters somewhat more momentous. And even in the television age, the country may need statesmen more than salesmen.

THE REDUCTION OF PRESIDENT'S BUDGET REQUESTS BY CONGRESS

Mr. MANSFIELD. Mr. President, I am happy to state once again that this Congress, both the Democratic and Republican Members, have together cut the President's budget request for fiscal year 1970 which ended June 30, almost a month ago, by $6,370,937,390, and that in addition, based on the second supplemental bill which passed Congress some weeks ago, Congress—both the Republicans and the Democrats—reduced the President's budget request in that instance by an additional $461,947,690.

I am happy also to note that last year Congress—both the Republican and the Democratic Members—made an allowance for a reduction of $1.437 billion in this fiscal year and that last week Congress—both the Democrats and the Republicans—passed the Interior appropriations conference bill which had a reduction of $6 million—million that is—that the bill now before us, the authorization bill for military procurement already provides a further reduction of $1.3 billion and the Senate is only beginning its consideration.

Last Tuesday the Democratic Policy Committee unanimously agreed that the White House charge that this Congress has exceeded White House requests for spending was totally erroneous and unfounded. The committee noted—to the contrary—that President Nixon's spending requests from the Congress for fiscal year 1970 had exceeded by $6.4 billion what Congress approved.

In other words, Congress reduced President Nixon's requests for spending by more thant $6.4 billion. It is true that in a few specific areas Congress added more appropriations than President Nixon requested. That was true in fields of health, education, antipollution control, poverty, and urban renewal. But at the same time Congress more than compensated for these additions by making larger cuts in President Nixon's spending requests for foreign aid and expenditures of the Defense Department.

In the face of such a record, it is difficult to envision just how Congress can be labeled "spendthrift" when it reduces President Nixon's—not President Johnson's—specific requests by $6.4 billion during his first year in office. On top of that, during the consideration of the fiscal year 1970 budget, Congress also reduced President Nixon's request for fiscal year 1971 by an additional $1.4 billion—a savings for fiscal year 1971, the year we are in now, which Congress has available to use in connection with appropriations measures it is now considering. In other words, it was a $1.4 billion savings for fiscal year 1971 made prior to the consideration of spending requests now under consideration.

In addition, Congress reduced the President's second supplemental budget request for fiscal year 1969 by $461,947,690, for a grand total of reductions so far of $8,269,883,080.

It is anticipated Congress will make similarly large reductions as it examines the spending requests it now has under consideration from President Nixon. It is always assumed that in the appropriations process Congress will make certain additions and subtractions with respect to specific item. This is a question of priorities—of where we allocate our resources—and just as last year, Congress may find the priority needs of this Nation today lie more in the fields of health education, the environment and poverty

assistance and less in foreign aid and Department of Defense requests.

In any case, it is clear that on balance Congress will again reduce the total sum requested by the administration for spending. It will do so in an effort to bring this Nation out of the economic crisis in which it finds itself.

Mr. President, I ask unanimous consent to have printed in the RECORD a table of figures bearing on what I have said, which was prepared by the Committee on Appropriations. I wish to say, before the request is considered, that what Congress has done it has done on a bipartisan basis. It is not just the majority which is responsible for these cuts, but the Congress, both Democrats and Republicans and they all deserve a great deal of credit for what has been done in this respect.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

[SENATE APPROPRIATIONS COMMITTEE PRINT]

ACTIONS ON BUDGET ESTIMATES OF NEW BUDGET (OBLIGATIONAL) AUTHORITY IN APPROPRIATION BILLS, 91ST CONG., 1ST SESS. AND 91ST CONG., 2D SESS. AS TO LABOR-HEW APPROPRIATION BILL, H. R. 15931, AND FOREIGN AID APPROPRIATION BILL, H.R. 15149—AS OF MAR. 5, 1970

[Does not include any "back-door" type budget authority; or any permanent (Federal or trust) authority, under earlier or "permanent" law,[1] without further or annual action by the Congress]

Bill and fiscal year	Budget requests considered by House	Approved by House	Budget requests considered by Senate	Approved by Senate	Public Law	(+) or (−), Public Law amounts compared with budget requests to Senate

Bills for fiscal 1969:						
1. Unemployment compensation (H.J. Res. 414)	$36,000,000	$36,000,000	$36,000,000	$36,000,000	$36,000,000	
2. Commodity Credit Corporation (H.J. Res. 584)	[3] 1,000,000,000	[3] 1,000,000,000	[3] 1,000,000,000	[3] 1,000,000,000	[3] 1,000,000,000	
3. 2d supplemental (H.R. 11400)	4,364,006,956	3,783,212,766	4,814,305,334	4,459,669,644	4,352,357,644	−$461,947,690
Release of reserves (under Public Law 90-364)	(82,463,000)	(82,766,000)	(79,999,000)	(80,230,000)	(80,230,000)	(+231,000)
Total, 1969 bills	5,400,006,956	4,819,212,766	5,850,305,334	5,495,669,644	5,388,357,644	−461,947,690
Cumulative totals	140,544,902,570	133,235,663,986	142,701,346,215	[6] 134,802,579,735	[6] 134,431,463,135	[6] −8,269,883,080

[1] In round amounts, the revised (April) budget for fiscal 1970 tentatively estimated total new budget (obligational) authority for 1970 at $219,600,000,000 gross ($205,900,000,000 net of certain offsets made for budget summary purposes only), of which about $80,700,000,000 would become available, through so-called permanent authorizations, without further action by Congress, and about $138,900,000,000 would require "current" action by Congress (mostly in the appropriation bills). Also the April Review of the Budget contemplates budget requests for advance fiscal 1971 funding in 4 items totaling $1,661,000,000.

[2] Reflects reduction of $175,000,000 for Appalachian highway program for 1970 and $175,000,000 for advance funding for 1971. Authorization Act provided for contract authority in lieu of new obligational authority, with payments for liquidation to be appropriated later.

[3] Shifted from fiscal 1970 budget a portion of which is technically classified in the budget as "liquidation of contract authorization" rather than as new budget (obligational) authority.

[4] Although a reduction in the budget estimate of $86,972,500 is reflected in the total column of the bill, it must be made clear that the budget estimate column to the Senate includes $1,226,000,000 advance funding for ESEA for 1971 whereas none of these funds were included in the conference agreement. Deducting the $1,226,000,000 from the budget estimate column gives a comparison for fiscal year 1970 only and reflects the conference agreement over the budget estimates in the amount of $1,139,027,500.

[5] The budget estimate column to the Senate includes $1,226,000,000 advance funding for fiscal year 1971 for ESEA denied by the Congress

[6] Includes reduction of $346,776,624 in the Cotton amendment, Section 410 of Labor-HEW appropriation bill, H.R. 15931.

Mr. PROXMIRE. Mr. President, will the Senator yield?

The PRESIDING OFFICER (Mr. NELSON). The Senator's time has expired.

Mr. PROXMIRE. Mr. President, I ask unanimous consent that I may proceed for 3 minutes.

The PRESIDING OFFICER. The Senator is recognized for 3 minutes.

Mr. PROXMIRE. Mr. President, I commend the majority leader for the speech he has made and the action which has been taken by the Democratic Policy Committee in demonstrating and documenting beyond any question that Congress last year and for the last 25 years has cut the request of whatever party had control of the White House. Congress cut the Johnson requests, the Kennedy requests, the Truman requests, and the Eisenhower requests consistently. Of course, last year, as the distinguished majority leader said, we cut the request by President Nixon sharply.

However, I notice that the release by the Democratic Policy Committee was published on about page 27 of the New York Times and back somewhere in the other newspapers. I noticed the President's charge received first-page headline treatment in nearly every newspaper in the country. If one talks to well-informed Americans, including many Members of Congress, they say Congress is spending more than the President and and that it is the President who wants to hold down spending. It is important that the majority leader has brought these facts to the attention of the public and we must continue to do it day after day until we get through to the American people.

I wish to ask the Senator if it is not true that the first appropriation bill to pass Congress and go to the President was the District of Columbia appropriation bill. I am aware of that because I handled it. There was a cut there of about 22 percent or $189 million below the President's request.

Mr. MANSFIELD. Yes. I forgot to mention that. I am glad the Senator has called attention to that for the RECORD.

Mr. PROXMIRE. On the basis of last year, when in 10 of 14 appropriation bills the cut was $5.5 billion, can the Senator give a figure based on the largest estimate?

Mr. MANSFIELD. That figure would be $6,370,935,390 plus $461,947,690 cut

out in the second supplemental request, plus what Congress did last year in making an allowance for a cut this fiscal year which is underway of $1,437 million. So the grand total is $8,269,883,080.

Mr. PROXMIRE. I was so convinced that the Senator from Montana is correct that we will reduce the Nixon request this year, that last week I said on the floor of the Senate that if Congress did not reduce President Nixon's request I would personally contribute to my Republican opponent's campaign the sum of $1,000 and he could have that sum out of my pocket to help him defeat me in the coming election. I thought that was kind of a spectacular proposal. I did not expect it to be a national story but I did not see anything at all about it in the newpapers.

I do not know how we can correct the impression some of the American people have. My staff and I sat up several nights trying to think of some way to dramatize this situation. It galls me that that situation exists after all the efforts by the majority leader, the minority leader, Democrats and Republicans, when the President can go on television and call Congress "spendthrift" and get away with it. What can we do? The Senator has made a very well documented speech. There is no answer from the other side, although the Senator from Kansas (Mr. DOLE) is present and he usually undertakes to answer almost anything Democrats say; and the Senator from Illinois (Mr. PERCY), and the Senator from Michigan (Mr. GRIFFIN) were here. We cannot get the story across to the American people. The public is convinced that Congress is spending money like a drunken sailor and that only the President is holding back the flood waters.

Mr. MANSFIELD. Mr. President, may I be recognized again briefly?

The PRESIDING OFFICER. The Senator from Montana.

Mr. MANSFIELD. May I say, before I yield to my distinguished colleagues on the other side, that I have emphasized that these cuts were made by both Republicans and Democrats. There is nothing partisan about this. It is something which we have done, and for which we are entitled to some credit.

May I say, by the same token, that the President is entitled to a bit of credit because of the fact that he reduced expenditures last fiscal year in excess of $3 billion.

So I would hope that, instead of throwing the ball back and forth, we would continue to work in tandem, to work together, so that in that way we can both face up to our responsibilities, bring about the necessary reductions in expenditures and appropriations, and do so on the basis of a close examination of priorities, of balance and emphasis which I am happy to note the administration is likewise undertaking.

I am delighted to yield now to the distinguished Senator from Illinois (Mr. PERCY).

Mr. PERCY. Mr. President, I appreciate the distinguished majority leader's yielding to me.

I was astounded to find the distinguished Senator from Wisconsin complaining about not being able to get "visability" for anything. It is just literally impossible for me to open any Chicago newspaper without reading about the Senator from Wisconsin. The Chicago Daily News is running every day a full-page extract of the distinguished Senator's book. I do not want to plug the book necessarily, but I think it is on the right track in many instances.

I have served on several committees with the distinguished Senator from Wisconsin, and I found there was a great "visibility" about him. So when he says he has great difficulty getting "visability," I point out that he certainly does not take second place to anyone in the Senate in emphasizing the points he makes. I say that with admiration, because I think many of the things he has had to say should have been said and brought to the attention of the American public.

What I would like to get "visibility" for is that not only is the administration trying to present a prudent budget, but it has suggested that we in the Congress should tap new sources of revenue, and that we ought to raise revenues to match our expenditures, and if we do not raise revenues to match our expenditures we are going to have deficits; and we all know that those deficits come out of the hide of housing. We all know that whatever deficit we have rolls over the field of housing, because deficits require refinancing, which causes interest rates to go up, and it all comes out of the housing field.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. PERCY. Mr. President, I ask unanimous consent to have 2 additional minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. PERCY. When we need an increase of $1.3 billion in revenues, and the President presents a bill to Congress to tax leaded gasoline, which even the oil companies say is a good bill, because this puts a premium on the kind of gasoline which is polluting the atmosphere and enables them to price their product more realistically to provide a nonpolluting product, I do not see why the Congress cannot face up to its responsibility and pass that tax.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. PERCY. I yield.

Mr. MANSFIELD. Has the President requested Congress to act on legislation containing that tax, or has he just talked about it?

Mr. PERCY. To the best of my knowledge, he has requested Congress to act on it.

Mr. MANSFIELD. I know of no legislation sent to the Finance Committee or the Ways and Means Committee requesting a tax on leaded gasoline. I know of no legislation sent to the Post Office and Civil Service Committees requesting an increase in first-class postage, which I think the President has suggested. So suggestions do not count. I assume when he sends up his budget he has it all figured out as to just how income will match outgo, and that he is doing so on the basis of the tax situation as it exists at the time the budget is sent up.

Mr. PROXMIRE. Mr. President, will the Senator yield further?

Mr. PERCY. I yield.

Mr. PROXMIRE. First, with respect to the response the Senator from Illinois has made, the Senator from Illinois did not answer at all the statement that Congress has cut appropriations. The Senator from Illinois merely made some response about the publicity the Senator from Wisconsin is getting from a Chicago newspaper which is serializing his book "Report From Wasteland."

That is the first point. Second, he says we ought to raise taxes. The President is not emphasizing that very much. He is wisely, from a political standpoint, putting his stress on Congress cutting down spending.

Is the Senator from Illinois in agreement that Congress is reducing spending, that we have cut down this and previous administration's requests, and that we have a record of reducing the President's requests? Does he agree with that record?

Mr. PERCY. I feel, if we set the record straight, that this administration has done more to cut expenditures of the very kind the distinguished Senator from Wisconsin has been emphasizing, and after all these years this is the only administration I have had experience with that has done so. Certainly, the whole idea of moving our capability from a 2½-war capability to a 1½-war capability has enabled it to work toward a reduction in our Armed Forces of about 750,000 men. That means a cut of approximately $10 billion to $12 billion.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. PERCY. Mr. President, I ask unanimous consent to have 2 additional minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. PROXMIRE. I made a speech on Friday on this very point. I said the administration has stated that it has changed its policy from a 2½-war capability to a 1½-war capability, but that there is nothing in the budget which reflected this. Any reduction in the Defense budget is as a result of the reduction of activities in Vietnam, for which President Nixon deserves a great deal of credit. But he did not put into effect the assumption that he is operating on the basis of one war instead of two wars. He is still approaching it on a two-war basis as far as strategic and tactical forces are concerned.

Mr. PERCY. Does the Senator deny that the Nixon administration has again reduced American troops in Europe by another 10,000 troops, plus their dependents?

Mr. PROXMIRE. That is from 320,000 to 310,000 troops?

Mr. PERCY. No; that is about 300,000, and it is the lowest number we have had there in 25 years.

Mr. PROXMIRE. That is a 2- or 3-

percent cut. It is not a cut that accommodates itself to a big change in policy.

Mr. PERCY. Would the Senator care to report on cuts that have been made in military installations in Wisconsin, because I can testify to cuts made in the State of Illinois, cuts we must absorb provided we are taking our fair share. This administration has more courage than any previous administration had in my experience in cutting back in some 300 congressional districts, many of which military installations had been kept there by sheer force of some congressman who said, "Cut every place but you cannot cut in my congressional district."

Mr. PROXMIRE. As far as Wisconsin is concerned, we have almost no military installations. We lost Truax Field in Madison under Secretary McNamara. However, the city council in Madison passed a resolution praising Mr. McNamara for cutting out that military installation. They did that although it meant a cut in payrolls in Madison.

Mr. PERCY. Mr. President, who has the floor?

The PRESIDING OFFICER. The Senator from Illinois has the floor.

Mr. PERCY. I want to yield to the Senator from Arizona (Mr. GOLDWATER).

Mr. PROXMIRE. The Senator from Illinois still has not answered the question. The statement made by the Senator from Montana is that Congress has been cutting appropriations below President Nixon's requests, as it has every President's requests. This point has not been answered by the Senator from Illinois. All he has talked about is bases in Illinois and bases in Wisconsin. No Senator has been able to document the serious charge made by President Nixon, against the Congress and it is a serious charge.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. PERCY. Mr. President, I ask unanimous consent to have 3 additional minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. PERCY. The distinguished Senator from Wisconsin knows full well that the Nixon administration has presented a tight, tough budget. He knows also that this administration has done more to reduce the proportion of that total budget absorbed by the military, and to increase the proportion for humanitarian programs, than many administrations in the past.

Mr. PROXMIRE. This is not a tight budget for the military, for space, or for the SST.

Mr. PERCY. So this administration has submitted a tough budget, prudently conceived, that is putting a realistic ceiling on the limit on spending; and in addition to that, the administration knows—and the distinguished Senator from Wisconsin knows—that on this floor, in night sessions and days sessions, we have added hundreds of millions of dollars to bill after bill, beyond what the administration has asked for. In addition, we have refused to come up with the added revenue that the administration has asked for in the form of a leaded gasoline tax, accelerated estate and inheritance taxes, and other revenue measures that the administration has introduced, including its urgent request that if we are going to raise payrolls and raise wages in the Post Office Department, we increase first-class postage, second-class postage, and third-class postage; and these are politically difficult recommendations to make.

They have asked for an increase of 33⅓ percent in third-class postage and 50 percent in second class. These are concrete steps this administration has taken to attain a fiscally sound policy, and we are helping defeat that fiscally sound policy on the floor of the Senate practically every time we get an appropriation bill before us.

Mr. GOLDWATER. Mr. President, will the Senator yield?

Mr. PERCY. I yield to the distinguished Senator from Arizona.

Mr. GOLDWATER. To back up what the Senator from Illinois has been saying, I do not think it is incumbent upon the Republicans to defend the charge the President has made. I do not think that the Democrats can make any case at all to the contrary. In fact, I think the great increase in the food stamp program, the great increase in HEW—in fact, almost every domestic bill we have had this year has been upped on the floor of the Senate.

I should like to add a couple of items as to what the present administration is doing in the general field of defense. I do not happen to agree with it all, but almost 200 ships will be taken out of the fleet this year, greatly reducing the Navy's strength. We have greatly reduced the total "buy" of the F–111, consequently reducing the number of squadrons. We have reduced the "buy" of the C–5A. In fact, $7 billion will be taken out of the defense budget this year. In addition to that, the subcommittees and the full Committee on Armed Services of the Senate have made further reductions.

So I think the President is correct in accusing not only the Democrats during this administration, but the Democrats prior to this administration, for the troubles we have.

Contrary to what the distinguished Senator from Wisconsin has said, the Vietnam war is not the cause of inflation. The inflation was caused by unnecessary domestic spending during the Kennedy and Johnson years, and we are now catching up with it. I intend to address myself at greater length to that subject sometime in the near future, but I thank the Senator from Illinois for his observations, which I think are eminently correct.

Mr. PERCY. Mr. President, while I hasten to state that I would hate to ever get partisanship into a colloquy on the floor of the United States Senate, but to point out a factual point, it is the $60 billion of deficit financing that we had in, particularly the latter years of the Johnson administration, which caused the present inflationary problems we are facing.

Mr. PROXMIRE. I agree with that. The Senator is correct.

Mr. PERCY. The witnesses before the Joint Economic Committee and the Banking and Currency Committee, whether they be Democrat or Republican, have testified that when you run a deficit of $25 billion in 1 year, and refuse to face the fact that you have a war going on that needs to have the public taxed to pay for it, and you think you can have guns and butter at the same time, someone is going to have to pay for it some day. Unfortunately, the burden falls on the Nixon administration to balance the budget, to stop inflation, and to grind down the war. If those are partisan remarks, so be it, but they are factual, and I daresay the Senator from Wisconsin would not attempt to refute them.

Mr. PROXMIRE. Mr. President, may I be recognized?

The PRESIDING OFFICER. The Senator from Wisconsin.

Mr. PROXMIRE. May I say to the distinguished Senator from Illinois that in the process of making what was a beautifully irrelevant speech he and the Senator from Arizona have made some statements with which I think we can all agree. His last statement is certainly correct. The Johnson administration did have a series of large budget deficits. Certainly at least the one of fiscal 1968 or fiscal 1969, a $25 billion deficit at a time of high interest and inflation, was I think a great mistake.

I would also agree with the Senator from Illinois that Congress has increased some of the budget requests made by the administration.

But, this has little or nothing to do with the point.

The argument made by the Senator from Montana is that overall, when you consider all of the appropriation expenditures overall, domestic spending, general spending, and so forth, Congress cut President Nixon's budget last year by $6.3 billion, according to the latest figures I have here, and that has not been challenged by the Senator from Illinois.

Congress cut every Eisenhower budget, every Kennedy budget, every Johnson budget, and I say that this year, if Congress does not cut President Nixon's budget, I will contribute $1,000 to my opponent's campaign.

If the Senator from Illinois, the Senator from Arizona, the Senator from Kansas, or perhaps the Vice President, would wish to make a similar offer that if Congress does not cut the President's budget, the administration will contribute something to me, I would be happy to accept it.

Maybe if the President cannot cut spending below the Congress, the Vice President will run with me from my house to the office some morning, a matter of 5 miles. He is quite an athlete, a noted golf and tennis player, but he has not demonstrated his running ability. Maybe that would be a satisfactory return to me for my willingness if Congress fails to cut Nixon spending to contribute $1,000 to my opponent's campaign.

At any rate, I have not heard any of the able Republican Senators say they believe Congress will not cut below President Nixon this year. Will the Senators surrender on that point?

Mr. GOLDWATER. Mr. President, will the Senator yield?

Mr. DOLE. Mr. President, will the Senator yield?

Mr. PERCY. Mr. President, we all want to respond to the Senator.

Mr. DOLE. Mr. President, would the Senator agree to play golf with Mr. AGNEW?

Mr. PROXMIRE. I will even do that. I will even do it without a helmet, I am so sure that Congress is going to go below the budget.

Mr. DOLE. That is the point I am making.

Mr. PROXMIRE. That is the acid test, I think. If nothing else demonstrates my sincerity, that ought to do it.

Mr. DOLE. The Senator from Wisconsin is certain he has a sure thing; and, he says, we have cut every President's budget. So I hope that is not his final offer. Also, there was a front page story about the charges made by the Democrats, that they are not spendthrifts, recently published by a newspaper in my State. I have read it very carefully——

Mr. PROXMIRE. Is that a weekly newspaper, or a daily?

Mr. DOLE. It is a daily, which I read from cover to cover. Almost every day the Senator's name is in it.

Mr. PROXMIRE. Mr. President, it must be a great paper. I think its editor should be cited.

Mr. DOLE. But I want to say to the Senator from Wisconsin, as the Senator from Arizona has said, it is not necessary to document the charges made by President Nixon. We all recognize there have been cuts—and bipartisan cuts. There have also been increases in many programs. They have not generally been bipartisan. These are the areas we will call attention to sometime later this week on the Senate floor.

HENRY JACKSON: A STATESMAN OF UNCOMMON QUALITY

Mr. STENNIS. Mr. President, the July issue of Reader's Digest contains a highly complimentary, and well-deserved tribute to one of our colleagues and to his senatorial record: the junior Senator from Washington State.

The article in the Reader's Digest, written by Ralph Kinney Bennett, is entitled "Henry Jackson: 'A Statesman of Uncommon Quality'."

The article briefly reviews the background, accomplishments and life of a man whom the President himself characterizes as an American of great credit not only to his party but, more important, to his country.

I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HENRY JACKSON: A STATESMAN OF UNCOMMON QUALITY

(By Ralph Kinney Bennett)

The afternoon session of July 17, 1969, was one of the most extraordinary in the history of the U.S. Senate. The galleries were empty. Only Senators (95 of them) and a handful of Senate officers sworn to secrecy were in the chamber. The controversy over President Richard Nixon's anti-ballistic-missile (ABM) system had reached its denouement. Senators opposing the ABM had called for the secret session in order to display a classified Pentagon chart which profiled a potential Soviet-American missile exchange. If the public could see this chart, opponents boasted, it would "overwhelmingly" oppose the ABM.

Clustered around the chart, the Senators listened quietly as the anti-ABM position was spelled out: ABM's complex of missiles and ultrasophisticated radars would not work as a system; one of the radars was too expensive and too vulnerable to attack; and, ultimately, the whole system could be smothered if enough intercontinental ballistic missiles (ICBMs) were fired at it. It appeared that the opponents of ABM were going to carry the day.

Meanwhile, Sen. Henry M. Jackson had walked into the chamber, carrying penciled notes and a black looseleaf notebook, tab-indexed to the top-secret material it contained. The stocky Democrat from Everett, Wash., was about to put his reputation for perceptive thinking on national defense, nuclear warfare and Soviet-American confrontation to the test. For most of the 48 hours preceding this secret debate, Jackson had briefed himself intently on the bewildering intricacies of missile and anti-missile strategy. Now he rose to address his colleagues in his rich baritone voice: "I think the sensible thing to do is to follow through on the chart." He proceeded to do so, disposing of the faulty arguments that had been based upon it ABM *would* work, he declared. It would strengthen the President's hand in arms-control talks with the Russians. It would not be easily overcome by Soviet missiles, since it could be adapted to meet considerable increases in the Soviet missile arsenal.

The Senator spoke firmly, pausing frequently to answer questions. Some opposition Senators remarked that Jackson was countering their argument with information on the Soviet offensive-missile buildup that they did not have.

"There is nothing mysterious about the intelligence information I got," he answered. "It is available to every Senator."

Smarting opponents said they would call another secret session to refute Jackson's remarks. But they did not and two weeks later ABM passed the Senate by a single vote, and was soundly backed in the House. "Jackson's speech was clearly the turning point," said Sen. Robert Packwood (R., Ore.).

NO LABELS

It was a victory for the White House, and the general in the field was a Democrat who, as one of his home-state newspapers pointed out, "did it against what appeared to be his own best political interests," thus proving himself to be "a statesman of uncommon quality."

Such an accolade embarrasses 58-year-old "Scoop" Jackson (the nickname, from a cartoon character, has stuck since he was four years old). But, as one of the most powerful members of the Senate, he has risen above partisanship many times to advocate a sensible American defense posture.

Once described by a newsman as "a fair-minded, clean-cut Jimmy Stewart type, who speaks his mind but is never doctrinaire," Jackson also has an enviable record in another area of vital national interest—conservation and the environment. His credentials date back through a score of bills, including sponsorship of the Land and Water Conservation Fund, the National Scenic Rivers Act and the Redwoods National Park Act. "There aren't too many U.S. Senators beloved by both the Audubon Society and Pentagon colonels," notes *Government Executive* magazine.

Jackson shuns labels and tries to take a realistic approach to each issue as it arises. After the signing of the Nuclear Test Ban Treaty in August 1963, for instance, President John F. Kennedy urged swift Senate ratification. Kennedy knew that "Scoop," the fellow he played softball with when they were bachelors in Georgetown, would sway votes if he approved it. But Jackson insisted that safeguards accompany the treaty: continued underground testing, maintenance of nuclear-weapons research, improvement of test-detection methods, and the ability to resume testing quickly in the event of a Soviet violation. "Fresh in my mind," he said, "was the sudden breaking of the nuclear-testing moratorium by the Soviets two years before."

The Kennedy people didn't want to rock the treaty boat, Jackson insisted. Finally, the safeguards he demanded were agreed upon, and on September 24 the treaty was ratified by a margin of 14 votes. The Associated Press reported: "Jackson's removal of himself from the doubtful list enhanced the chances for ratification of the pact by a substantial margin above the necessary two-thirds majority."

SOMETHING WRONG

Jackson was a freshman Senator when he first gave notice that he would play an active role in defense matters. At Kwajalein Island in the Pacific during some 1952 atomic tests, he met an "unconventional, ascetic-looking Navy captain" named Hyman Rickover.

When he learned later that this outspoken and brilliant man had been denied promotion twice, partly because of his "crazy" ideas about atomic submarines, Jackson spoke up in the Senate Armed Services Committee: "There is something wrong with the Navy's thinking and its promotion system if a man like this is passed over." Jackson won his fight. Rickover was promoted, and went on to help make the nuclear submarine a major part of our defense system.

In 1955, disturbed by the then half-hearted American ICBM program, Jackson worried that the Russians "would make a quantum jump and come up with a rocket delivery vehicle." He urged that our ICBM development be put on a wartime basis.

Prevailing on Sen. Clinton P. Anderson (D., N.M.) to join him, he drafted a letter to President Eisenhower, promoting him to undertake a full-scale briefing on the matter for the first time. Two years later, in 1957, the Russians surprised the world with the powerful rocket that launched Sputnik. Colleagues then began listening more closely to Senator Jackson, and American ICBM efforts were greatly accelerated.

The man who had been Vice President at the time of the missile letter later paid high praise to the man who had been so far-sighted. In 1968, President Nixon asked Jackson to be his Secreary of Defense. Jackson declined, for reasons that have remained a confidence between him and the President.

KREMLIN PULSE-TAKER

Senate liberals, familiar with Jackson's long voting record for civil rights, Medicare and other progressive measures, often find his energetic advocacy of military preparedness and wariness of communism disconcerting. Jackson, on the other hand, feels that some of his fellow Senators are overly sanguine or badly informed on the communist threat. "They said the ice was breaking in Eastern Europe; then Russian troops marched into Czechoslovakia." (Jackson predicted this invasion months before it happened.) "They said Vietnam was a civil war, then found out about all those North Vietnamese troops in Laos and Cambodia. Now that doesn't sound much like a civil war, does it?" In fact, he wrote an article for the Seattle *Times* years ago, in which he foresaw the movement of North Vietnamese

troops into Laos and a reaction of Cambodia away from threatening communists. "It's not clairvoyance," Jackson comments. "It's just making a judgment from available intelligence."

In four books, many speeches and articles,* he has taken the erratic pulse of the Kremlin. His National Security Subcommittee has generated a continuing flow of scholarly, direct reports on such subjects as the character of Soviet leadership, the ominous Brezhnev doctrine of Soviet intervention, and Soviet and Communist Chinese methods of "negotiation." The Vancouver, Wash., *Columbian*, a newspaper which has differed with Jackson on many issues, notes: "However much one may disagree with the Senator on military-foreign matters, one must admit that he backs his arguments with facts and logic."

MUTUAL RESPECT

In a state noted for its ticket-splitting and independent voters, Jackson has a perfect election record. Descendant of a pioneer Washington family of Norwegian ancestry, he was elected prosecutor of Snohomish County at age 26, just three years out of University of Washington Law School. Elected to Congress in 1940, he spent six terms in the House, and was elected to the Senate in 1952, defeating an incumbent Republican despite that year's Eisenhower landslide. Elected again in 1958, by 319,000 votes, he topped that margin in 1964 with a 538,000-vote plurality.

The secret of his popularity? "The people respect him," says Stanley Golub, a Seattle businessman and one of Jackson's closest friends. "And they know it's a mutual respect. He cares about people."

Jackson starts his work day at about 6:30 a.m. with an hour and a half of reading the paper work he brought home with him the previous evening. Then he battles rush-hour traffic on the way to the Capitol in his battered white 1961 Chevrolet for a morning of committee meetings. As chairman of the Atomic Weapons Subcommittee of the Joint Atomic Energy Committee, he listens to a secret briefing on nuclear-warhead development. Later, at the Interior and Insular Affairs Committee, which he chairs, he discusses Alaskan native land claims with an aide, then sits down to hearings on his National Land Use Policy bill, which would establish a system of priorities for the use of our most valuable and limited resource.

After the hearings, Jackson asks about one of the girls on his staff who is ill. "Does she need anything? Is somebody going to stop by and see her?" Then he meets with some lumbermen about a conservation bill that they fear will hurt the logging business, one of the biggest in his state. They know he talks tough. During the controversy over his proposal to create a national park in the heavily forested North Cascades Mountains, he told a gathering of lumbermen: "It is a mistake for anyone in the forest industry to retreat to a position of adamant opposition to all proposals to preserve part of our national heritage." Yet he has also been blunt about what he considers conservationsts' sometimes knee-jerk reactions: "Every time a tree is cut, a mineral mined, a dam constructed or a road built, the public interest is *not* being attacked."

THIRTY-POUND OFFICE

When he travels to his home state, Senator Jackson carries his "office" in a blue-canvas satchel bulging with about 30 pounds of notes and documents. The plane trip is a time to catch up on extra reading or to go over prospective legislation, speeches and committee reports. He makes notes with thick black lead pencils which always seem to disappear and show up later in the hands of two eager artists—his seven-year-old daughter, Anna Marie, and his four-year-old son, Peter. (Jackson's name in Washington, D.C., society pages usually had "eligible bachelor" appended to it until 1961, when he married Helen E. Hardin, a beautiful woman with a graciously candid sense of humor.)

But moments with wife and children are relatively rare in the life of a man whose solid reputation as a lawmaker is based on action. He is not a legislative dilettante who quickly tires of a bill and lets his staff see it through. Jackson's push for his National Environmental Policy Act (which requires, every government and commercial endeavor to be approached in light of its possible consequences to the already tortured environment), for example, involved three years of almost daily personal work. All the while, he fought head-to-head battles with lobbyists from the Atomic Energy Commission, the Corps of Engineers and other federal agencies and industrial interests.

"You can't say to people you'll move your plant to another town if they don't like the smoke, because today the *other* town won't have you," he told business representatives. "You've got to deal with the *problem*." When the House began gutting his bill, he got on the phone to Rep. John Dingell (D., Mich.), its floor manager. "I don't know how he did it," says Bill Van Ness, special counsel for the Senate Interior Committee, "but the bill came through with just about all Jackson wanted. He's a fighter."

When the Veterans of Foreign Wars held their convention in the nation's capital early this year, they presented Jackson with their Congressional Award. President Nixon had come to the award dinner to deliver an address, but he also took the time to deliver a tribute to the Senator. Said the President: Henry Jackson is "a man who in his public life has spoken not as a partisan but as an American, a man who is a great credit not only to his party but, more important, to the United States of America."

*See "Russia Has Not Changed Her Ways," The Reader's Digest, June '69.

AMERICAN PRISONERS IN NORTH VIETNAM

Mr. PERCY. Mr. President, over 1,400 American men are still held prisoners of war by the North Vietnamese, under conditions that violate the Geneva Convention.

While it is perhaps true, as Seneca said, that the sun also shines on the wicked, this particular North Vietnamese policy casts a shadow on the very tenets of civilization itself. Surely all civilized men, of whatever nationality, look upon this policy of the North Vietnamese with nothing but contempt and revulsion.

POLICE-COMMUNITY RELATIONS IN CHICAGO

Mr. PERCY. Mr. President, last week in Chicago I attended the funeral service of Sgt. James Severin, a police officer who had served with great distinction on the Chicago police force. I met with his family, and attended the funeral with the wonderful family of Patrolman Anthony Rizzato, who was buried the next day, his wife, Rose, daughter, Rosa, son, Anothony, brother, Nick—also a patrolman—and his wife.

These two fine men were shot in the back as they walked in an open field near a public housing project, the Cabrini-Green public housing project.

I should like to make several comments on this tragic incident in the life of the great city of Chicago.

We have tried very hard to establish communications between the community of our minorities in Chicago and the Chicago police. I feel certain that much more can be done and will be done in the future than has been done in the past. But these two men volunteered to serve as part of a team in a volunteer group with a "walk and talk" mission to improve police-community relations in the area. They were shot by men who occupied an empty apartment in the public housing project. Our public housing projects throughout the country have become areas of very high incidence of crime. The people who live in these public housing projects live in fear.

I am delighted that the measure passed by the Senate and the House, which came out of our respective Banking and Currency Committees, contains a provision—which I strongly supported—which made it illegal ever again for public funds to be used for the construction of high-rise public housing for families with children. This type of housing provides too heavily concentrated, dense populations for families with children. For 30 years we have been trying to solve a housing problem on one side and creating a whole series of social problems on the other side. We are making changes, and we are making changes to try to better understand the nature of our law-enforcement problems in the high density areas of our urban communities.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. PERCY. I ask unanimous consent that I may proceed for 2 additional minutes.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senator may have 5 additional minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. PERCY. Mr. President, I ask unanimous consent to have printed in the RECORD two editorials published in the Chicago Tribune of July 21, 1970, one entitled "Police Restraint" and the other entitled "The Reign of Terror in Public Housing."

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

POLICE RESTRAINT

The behavior of Chicago police in the investigation and manhunt which followed the fatal shooting of two of their associates at the Cabrini-Green public housing project has to date been admirable. Their restraint and coolness are especially commendable in view of the provocation offered the force. The victims were their own, and policemen can be expected to make an emotional response in these circumstances. But they have not.

Three suspected snipers who gunned down Sgt. James Severin and Patrolman Anthony Rizzato with shots in the back as they walked in an open field near the project are in custody. A fourth surrendered yesterday. The shots were fired from windows of an unoccupied flat in Cabrini-Green. The two dead officers had volunteered for a "walk and talk" mission to improve police-community relations in the area.

Moreover, police who retrieved the bodies of the two policemen were themselves the targets of sniper fire from the project. That, too, could have contributed to tension, but

the police reacted with the highest standard of professionalism.

Especially encouraging was the cooperation they received from law-abiding residents of the housing project, who live in fear under the threat of intimidation by criminals. Police Supt. James B. Conlisk paid tribute to these responsible citizens, more than 100 of whom called or gave information. They have no more use for gang members and assassins than anybody else. Conlisk also made this appeal:

"It is time for the people of this community to rise up and erase this cancer that is eating at the very heart of this country. This is a prime example to get them to come forward and exert pressure to cast out those who are responsible for these dastardly murders."

Despite the crime at Cabrini-Green, the superintendent plans to continue the walking missions to communicate with the predominantly black citizens of the area and to persuade them that the police are on their side and only are interested in eradicating anti-social elements which prey upon them.

We feel that it is especially commendable that black policemen cooperated with the Rev. Jesse Jackson, national director of Operation Breadbasket, in seeking peaceful surrender of the only suspect still at large, and this was achieved with his surrender yesterday. It was their desire to avert more violence. We agree with the Rev. Mr. Jackson that the suspected killers are entitled to lawful processes of justice and that "trial in the streets" is by all means to be abhorred.

So far police conduct in the wake of an atrocity against brother officers has been a model of restraint. This example of responsible police work can contribute greatly to confidence between the police and the black community.

THE REIGN OF TERROR IN PUBLIC HOUSING

The murder of two policemen by snipers firing from Cabrini-Green housing project raises grave questions about the operations of these gigantic welfare institutions. More than 300 apartments at this project are vacant because people are afraid to live there. Similar conditions prevail at some other buildings of the Chicago Housing Authority. Shootings, robberies, rapes and vandalism are so commonplace that the buildings evidently are controlled not by the authority but by criminal gangs.

The CHA already has spent millions to hire private guards of its properties, but Charles R. Swibel, chairman of the authority, says he is going to Washington to ask for a $7 million grant to enlarge his security force. It would be better if Congress and the federal executive department took a new look at the basic idea of public housing and its results in the last 30 years.

The only good excuse for public housing was to take care of families displaced by public improvements. Perhaps there was a further excuse in the years when thousands of families fled to northern cities as they were displaced from farms of the south.

Now, however, the highway building and other public improvement programs have diminished and the migration from the south has slowed. There has been little or no population growth in the core cities of metropolitan areas in the last 10 years.

Is there any good reason, therefore, for worsening social conditions among the residents of subsidized housing projects in the the cities? A majority of those residents want to live in peace with their neighbors. Many of them are ambitious, eager to help their children raise their standard of living.

For the sake of all the ambitious, self-respecting families, the housing authority ought to eject troublemakers and those who are unwilling to observe the decencies of a civilized society. Such a move would make much more sense than hiring more guards to protect the innocent from the criminals.

It is now clear that it was a mistake to build huge concentrations of multistory public housing. It has also been demonstrated that it is not buildings that make slums, but people. To a large extent the public housing program has been subsidizing the slum makers and penalizing the most deserving families by setting income limits.

A thoro reexamination of the whole program is long overdue.

Mr. PERCY. Mr. President, I ask unanimous consent to have printed at this point in the RECORD an editorial entitled "Terror at Cabrini-Green," published in the Chicago Daily News of July 20, and a thoughtful article written by the columnist Mike Royko, entitled "A Shovelful of Bad Thinking," published on the same day in the same newspaper.

There being no objection, the editorial and article were ordered to be printed in the RECORD, as follows:

TERROR AT CABRINI-GREEN

There is savagery loose in Chicago—no milder word can describe what happened Friday at the Cabrini-Green Homes. And yet the community must keep this tragic happening in perspective.

This is not, first, a matter of black against white, and this is true even though the snipers who killed Officer Anthony Rizzato and Sgt. James Severin were presumably black.

It remains true in the fact of the bitterly ironic fact that the two officers were at the homes on a mission designed to improve relations between the police department and the Cabrini-Green neighborhood, the scene of so much violence and street-gang terror.

Our reporters relate that the Cabrini-Green families, themselves, were stunned and horrified and gave police every co-operation in the search for the snipers. And this is logical. Through the years these families have been the main victims of the savagery wrought by a handful of terrorists.

So rather than being taken as evidence of a widening gap between the races, this tragedy should serve as a shocking reminder of the problems the races share.

The roots of the problem run deep—in young people so alienated that they live in another world, a jungle where they lead their own violent existence under their own primitive laws, at constant war with the society they despise. On the South and West sides of Chicago, these alienated youths are mainly black. And because blacks are handy—and individually defenseless—most of the victims are black, though the maiming or killing of a white policeman has become some special badge of prowess.

The Chicago Police Department has incurred a frightful toll of casualties in trying to protect the community, and especially the black community, against these savages. Its job has been harder because the black community has both distrusted the police and feared the retribution of the gangs.

Now the reasons for co-operation have once more been made shockingly clear. There can be no safety here for anyone so long as the predators can rely upon the community's fearful acquiescence. There is a long road ahead at best; if blacks and whites do not work together, it will have no end.

A SHOVELFUL OF BAD THINKING

(By Mike Royko)

Richard J. Daley had been mayor only two days when he stood on a vast stretch of empty city land, holding a silver-painted shovel in his hand.

"This is my first official act as mayor of Chicago," he told the hundreds of people who stood there with him. "Let's do more and more of these fine things for the people of the city."

Then he thrust the shovel into the ground and turned the first clods of dirt, while the cheers of the people rolled across the emptiness.

It seemed like a fine thing for the people, as he put it, at the time of the ceremonial ground-breaking, April 22, 1955.

The old slum buildings that once covered the land had been bulldozed and the city would put up high-rise public housing projects and fill them with poor families.

Some people warned against it, saying that cramming thousands of poor families into 20-story buildings was dangerous. Some day, they warned, the high-rises would be far more evil than the rickety slums they replaced.

But the high-rises were the most practical "land use," which was another way of saying that going up was the best way to put the most blacks into the smallest space. That way, they wouldn't be spilling out of their black part of town.

So last Friday, two policemen lay dead near the spot on which the mayor had stood 15 years earlier, so full of optimism that the Cabrini-Green project and others like it were the answer to the black housing problem.

Where he had broken the ground, other policemen were hugging the ground while gunfire whined down at them from the beehive buildings. Others crouched or leaned across their squad cars, scanning the windows of the high-rises through the telescopes on their rifles.

For some, it wasn't a new experience. The sound of sniper fire has become as familiar in Cabrini-Green as the roar of the jets in the suburbs.

There have been times when bullets, and hand-thrown objects, rained down from the apartments, for days on end. During a riot, a fireman described being between the skyscraper slums as something like "standing in a waterfall of bottles."

It's even more dangerous inside than outside, where there is at least space to run. Riding the elevators in the buildings may be the most dangerous form of transportation in this city. "I'd rather drive without brakes on the Dan Ryan," said a black man who lived there until he could find a flat in a conventional slum. Police have been trapped in stalled elevators and fire-bombed from above. Tenants have been murdered, raped and robbed on them.

But the tenants ride them, because that's the only way, besides the stairs, to get "home." Anyway, the stairs aren't much safer, and it's not easy to climb 5, 10 or 15 flights every day.

Besides the people who live in the project, the police are the only real experts on Cabrini-Green, because they are the only outsiders who go in there regularly. The minds that conceived the place, built it, filled it, now turn to the police to tend it.

And so the police have become the only link between the rest of society and the people who live in the nightmare world of noise, heat, crowding, violence, poverty and ignorance.

They are expected, somehow, to keep under control something that is inevitably explosive as a nuclear reaction.

That's why the two uniformed men were walking there, in the open, a couple of blue targets on a baseball field, strolling where thousands of eyes could see them from the high buildings.

Neither of them—Sgt. James Severin and Patrolman Anthony Rizzato—were even policemen when the ground was broken for the project. Neither of them had anything to do with creating the project.

More important, neither could do anything about it.

They can't offer jobs or training to black youths, because they don't represent the big all-white trade unions. They can't offer a way out of the project, because they are not part

of the real estate power structure that controls the city's housing patterns for its own profits.

All they could do is gutsily walk around, try to make friends and persuade people that a white man in a uniform is not necessarily an enemy or an oppressor. By now, everyone has read that both men volunteered for it because they had social consciences. My best friend grew up with Severin and said that even in grammar school "he was the kind of kid who wanted to help people. He thought being a cop was the way to do it."

But they didn't belong there. It was a nice idea, but, as Rizzato's brother, also a policeman, said: "Look what it got him." The brother is right. In this stage of the urban war we are in, it's asking too much for a policeman to play good-will ambassador for society, at least in any situation where he doesn't have an even chance.

They could be two of the most decent policemen in the city, as they apparently were, and they would still be nothing but a couple of white heads on blue uniforms to the emotionally brutalized young men of the high ghettos, just as the nicest black kid in the city couldn't dare walk through Cicero or Bogan without expecting violence.

We've come too far in the wrong direction to expect the Officer Friendly approach to work in places like Cabrini-Green, the Taylor Homes, or any of the towering ghettos that are more heavily populated than many suburbs. When they were built, out of ignorance and political cunning, we took a giant's step in the wrong direction.

Unless the people who have the power to make changes are willing to walk there, and hold out something besides their hands, men like Severin and Rizzato shouldn't be expected to.

Maybe nobody should walk there, or live there. Maybe just once, this bigness-crazy city should recognize that something is too big and that something smaller would be better, and should tear those damn places down.

The man who breaks ground for that kind of project will be looking beyond the end of his shovel.

Mr. PERCY. Mr. President, the death of these two men cannot be reversed. The tragedy that has been brought to their families cannot be relieved by anything that I might say here.

I felt privileged to be able to be within the confines of these fine families for a day and to better understand from them the problems that law-enforcement officials have in this country, particularly in urban areas. But what we can do is to dedicate ourselves to try to solve the problems that are brought up by these recurring incidents.

On the same occasion, I visited a Japanese-American girl, Carol Yumata and her parents at a Chicago hospital. A few nights before, her throat had been slit in the Palmer House Hotel, and she had witnessed the murder of a friend of hers in the Palmer House.

These incidents of crime must be stopped, and I dedicate myself, once again, as a result of having been privileged to be with these families who have had tragedy rained upon them, to do everything humanly possible to find a way in which we can have freedom in this country, freedom of the kind we should have—freedom from fear; not just the political freedom, the educational freedom, and the vocational freedom that were the foundations of this country and the reasons we were formed, but freedom from the fear of crime for all citizens, whether they be black or white, young or old, whether they live in cities or even in rural communities. Crime is far too prevalent in American life and must be arrested.

PURPLE MARTIN CAPITAL NEWS OF GRIGGSVILLE, ILL. NOTES BIG THICKET BATTLE; URGES SAVING BIG THICKET IN TEXAS

Mr. YARBOROUGH. Mr. President, an article concerning the proposed Big Thicket National Park appeared in a recent issue of the Purple Martin Capital News of Griggsville, Ill. This publication is a monthly conservation paper, and the article on the Big Thicket shows growing national interest in the preservation of the Big Thicket. The people of America are becoming increasingly aware of the need to save this beautiful and unique area.

The article, entitled "Save the Big Thicket," is an excellent one. It describes the proposed Big Thicket National Park which would be established by my bill, S. 4, I recommend the article to all interested conservationists.

Mr. President, I ask unanimous consent that the article by Mrs. Hazel C. Green, "Save the Big Thicket," in volume 5, No. 6, of the Purple Martin Capital News from Griggsville, Ill., dated June 24, 1970, at page 9, be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SAVE THE BIG THICKET

(By Hazel C. Green)

Save The Big Thicket! For going on 60 years now, people who recognize and are aware of the beauty, uniqueness, and ecological values of an area, have been trying to save a part of The Big Thicket of Texas. As Ethel Osborne Hill said Friday, June 12 in Beaumont, Texas, at the Senate hearing on Senator Yarborough's Bill S 4 to create a Big Thicket National Park: "I'm one of the members of the original Big Thicket Association, which died off because everybody died but me". (She's 92 years YOUNG). The present Big Thicket Association is the prime mover in the recent efforts to save some of what's left of the Big Thicket.

Senator Ralph Yarborough of Texas introduced the first Big Thicket bill (S 4) in October 1966 and each successive year since. The Senate hearing in Beaumont Friday, June 12, 1970, was the first real breakthrough we've had on our efforts. Senator Alan Bible, chairman of the Subcommittee on Parks & Recreation held the hearing which was very successful. Some 35 witnesses, mostly scientists and conservationists who have studied the Big Thicket for many years were heard and many scientific papers were submitted for the record testifying to the great value of this area. Stands taken by them were for 100,000 acres or more of a chain of unique park areas and natural preserves (called "String of Pearls") linked by environmental corriders along the areas streams roadways, as shown by the accompanying map (not printed in Record).

The lumber interests and Chambers of Commerce plugged for a stingy 35,500 acres of these selected areas, isolated and unconnected. These important park and ecological areas would soon be ruined by drainage and alterations by the everencroaching "development" and lumber-cutting.

Senator Bible, who was unusually complimentary to the proponents of the larger park, said several significant things:

1. The question was not should Texas have a third national park, but how large should it be and how much should it cost.

2. That he thinks he understands all the issues, and one is that it is urgent to get it now, and that it is important not only to Texas but to all of the United States.

3. This meeting demonstrates what has made America the great nation that it is.

4. He will ask the National Parks System to make a recommendation to the Department of Interior and Congress within 30 days after a 14-day waiting period from date of this hearing, for further letters and expressions from the people for the record.

5. Senator Bible (and Senator Yarborough) urged all people in America to write immediately to the National Parks Service and their Congressmen in Washington, D.C., urging that as much of this wilderness wonderland to be preserved as possible.

What and where is the Big Thicket? Some say it is more a state of mind than any well-defined area. In fact there are so many "defined" areas depicting the Thicket that you can take your choice of its exact coverage. Most agree that it has dwindled from a 12-county area of three million or more acres, to four counties and around 300,000 acres.

Dr. Francis E. Abernethy of Stephen F. Austin State University in Nacogdoches, edits a fascinating book: "Tales From the Big Thicket." He says there are about as many stories about where the Thicket is as there are about what is in it. "It is roped off from the general public by briars and ty-vines and by myrtle and yaupon thickets that you have to crawl through on your hands and knees. And I hope it stays that way" . . . "The Big Thicket is still thick, and its depths are still as mysterious and forbidding as they were when the first settler came to live on corn and sweetpotatoes, bear meat and venison. The little black angry bees still hive in the hollows, and the buck deer leave their big scrapes on the dim woods trails. Wild hogs that can rip a man from ankle to appetite still root for mast in the pin oak flats. And if you are desperate enough, here is one last place where you can find a hiding place till the trouble blows over".

Actually, it is an area of East Texas predominately hardwood and pine forests; rivers, bayous, creeks; springs, bogs, swamps and seeps; of prairies, hills, and canyons, rocks, and sand; and such a diversity of plants, rare molds and mosses, and ferns, of other vegetation that they have never all been counted and identified. Wild animals and some not so wild; birds—land and water—, including the long-lost ivory-billed woodpecker; and people, natural and warm and hospitable, and from whom have come five of the governors of Texas. And this I know—it can get ahold of you and once you go there, you can't wait to go back.

Here is a treasured area such as is found no where else in America according to the scientists and ecologists, being hacked up by lumbermen oil companies, and real estate promoters at the rate of 50 acres a day—the last 300,000 acres of it fast being destroyed, and a lot of it deliberately. Much of vital ecological, historical, and archeological importance has been lost forever, but we can save some of it, if we all act NOW.

If you want to see what it is like, there is a colored slide show produced by the Lone Star Chapter of The Sierra Club. It is available to organizations and groups free for nothing, if you pay the postage. You will need a Kodak Carousel projector, tape recorder, and screen. This powerful 35 mm film in picture and narrative, describes this unique biological cross roads of North America; its origins, legends, history, effects of civilization on it, and the acute situation in which Big Thicket finds itself today. Write for the film giving two or more suitable dates to: Don Wigley, Bank of Texas, P.O. Box 53270, Houston, Texas 77052.

SENATOR ERVIN, GALLANT DEFENDER OF THE CONSTITUTION

Mr. YARBOROUGH. Mr. President, during my 13 years in the Senate, I have admired the distinguished and able senior Senator from North Carolina (Mr. ERVIN) for his courageous and vigorous leadership in defense of our constitutional liberties. I regard Senator ERVIN as the most outstanding constitutional authority in Congress.

A recent newspaper article about the distinguished Senator appeared in the Houston Chronicle. The article, by Gregg Herrington of the Associated Press, is entitled "To Thousands, Senator Ervin Is Last Hope Against Police State," and is found in section 1, page 5, of the July 26, 1970, issue of the Chronicle.

Mr. President, I ask unanimous consent that the article be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TO THOUSANDS, SENATOR ERVIN IS LAST HOPE AGAINST POLICE STATE

(By Gregg Herrington)

WASHINGTON.—Sen. Sam J. Ervin, a homespun North Carolina Democrat, is attracting a following that stretches across the breadth and ideology of the country.

The affable 73-year-old Tar Heel, whose foremost guide is the U.S. Constitution, is receiving thousands of letters from people who tell him he is their last remaining hope against a computerized police state.

Last week, while the veteran of 16 years in the Senate was unsuccessfully fighting the District of Columbia crime bill as a document "as full of holes as a mangy dog is of fleas," the anticomputer mail stacked up in his subcommittee on constitutional rights.

Letter writers say they are alarmed over Army computer banks on antiwar demonstrators, federal snooping into library records to determine who is reading books on explosives, and customs agents opening personal mail from overseas.

"Freedom of the individual is one thing I've always fought for," Ervin said, "And, yes, I'm really concerned about us losing it.

"In the case of the District of Columbia crime bill," he said, "you've got the President of the United States wanting to repudiate a law put into effect by the First Continental Congress—the right to bail."

The reference was to preventive detention, that part of the bill which will allow a judge to hold a defendant without bail if the judge thinks he might endanger society if freed.

Ervin is equally contemptuous of the no-knock provision permitting warrant-armed police to break into a residence unannounced if there is reason to believe narcotics or other evidence would be destroyed if they waited for the occupants to answer the doorbell.

"It's better for a few people to get away with narcotics than to destroy the rights of all citizens," Ervin said. "I believe a man's home is his castle."

In a Senate speech against the crime bill last week Ervin said with typical emphasis "one of the great hungers of the human heart has been for a place where a man could retreat to converse with his God and family without molestation."

Some other Ervin views;

On pornography: Ervin believes local community standards should dictate, not the Supreme Court.

On Vietnam: Ervin says "you shouldn't go into a war unless you're going to win it. We could have won it long ago."

On women's liberation: Ervin said some feminists' demands are "about the same as requiring a man to nurse his baby."

Anyway, he said, in his own home Margaret, his wife of 46 years, "lays down the law."

SENATOR NELSON INVESTIGATES DRUGS

Mr. YARBOROUGH. Mr. President, a recent article concerning investigations made by the distinguished Senator from Wisconsin (Mr. NELSON) into practices of the drug industry raises some very serious questions about what should be done to protect peoples' lives and livelihood.

Senator NELSON'S investigations demonstrate that great discrepancies exist when the activities of drug companies in this country are compared to what the same companies do in other countries. In brief, while citizens in other countries are more likely to be harmed by inadequate warnings on their drugs, American citizens are more likely to be overcharged for the same drug.

It was learned from these investigations that it is not an uncommon practice for American drugs to be marketed in other countries, without disclosing known dangers of those drugs. These warnings are required to be given to American consumers but the companies do not give the same warning on the same drugs in countries whose laws are less sophisticated than ours.

Mr. President, this practice raises a serious question as to our responsibility to citizens of other nations for drugs produced in and exported from this country by U.S. companies.

The article also points out that while the citizens of the United States are better warned about their drugs, they often pay much higher prices for the same drug.

It is obvious that the same drug produced by the same company does not decrease in danger as it crosses a national border, nor does it seem appropriate that its value should change so radically by virtue of crossing that border.

Mr. President, I ask unanimous consent that the article by Mr. Morton Mintz, entitled "Medical Safety Is Geographic," published in the July 12, 1970, issue of the Washington Post, on page C1 be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MEDICAL SAFETY IS GEOGRAPHIC

(By Morton Mintz)

Suppose your child has a sore throat. You take him to a doctor. Will the doctor prescribe a potent antibiotic that could kill the child?

The answer to that question may depend on whether you happen to be in the United States or another country.

If the physician is in practice here—and if he reads and heeds warnings that the Food and Drug Administration requires the manufacturer to put in labeling and promotional materials in the United States—he will not prescribe such a medicine.

But if he practices abroad, he may prescribe the drug for the simple reason that the very same manufacturer withholds from foreign physicians the warnings he is forced to give to American physicians.

A drug company doctor must learn that "when a drug has been found too dangerous for use in this country, he can approve its use in other countries where the laws are less stringent and people have less protection," Dr. A. Dale Console, former medical director of E. R. Squibb & Sons, told Sen. Gaylord Nelson (D-Wis.) last year.

"He must learn, when a drug has been found useless on one side of the Rio Grande, it can be sold as a panacea on the other side," Dr. Console added in a letter.

ABOUT 42 VARIETIES

As a specific example, he cited Marsilid, a Roche Laboratories antidepressant. The DFA removed it from the American market in January, 1961, after reports of 53 fatal and 193 nonfatal cases of liver damage in users. Drugs "with similar therapeutic usefulness, but with greater safety were available," the agency said.

But four years later in Mexico, Console said, "I went to a drugstore and after some difficulty in giving Marsilid the proper Spanish inflection, I was offered a bottle of the drug over the counter (a common practice in Mexico)."

Spokesmen for the pharmaceutical industry, while stopping short of claiming to be observing the Golden Rule, sometimes vigorously defend their conduct.

"I will match the integrity and the morality of the pharmaceutical industry with that of our accusers any time," Foster Whitlock, chairman of the Ortho Pharmaceutical Corp., told the Rutgers Pharmaceutical Conference two years ago.

And the Upjohn Co., which no longer can sell in the United States an antibiotic combination called Panalba, says that it has informed foreign medical authorities of the circumstances and left a decision up to them. The product is sold abroad as Albamycin-T.

The classic case of a double standard for a medicine involves the potent antibiotic chloramphenicol. Various companies sell it throughout the world under a bewildering variety of at least 42 trade names, including Alficetyn, Chloramsaar, Juvamycetin, Leukomycin and Paraxin.

But in the United States and numerous other countries in Asia, Europe and Latin America, chloramphenicol is almost synonymous with Chloromycetin, the trade name of Parke-Davis of Detroit and far and away the most popular brand.

The firm has massively promoted Chloromycetin to physicians. Many of them like to prescribe it because it is relatively freer of minor side effects than rival antibiotics that, like chloramphenicol, are effective against a broad range of infections.

Parke-Davis began marketing Chloromycetin in 1949. Abroad, the firm sells it directly or through licenses or joint ventures with foreign firms.

Much more frequently than other broad-spectum antibiotics such as tetracycline, Chloromycetin can be lethal—a fact that became known almost 20 years ago. With this in mind, the FDA approved a labeling for Chloromycetin that recognizes it as the preferred antibiotic, or "drug of choice," for a mere handful of people—victims (not carriers) of typhoid fever—and as an alternative medication for another handful, the victims of other relatively uncommon infections of the salmonella species.

Every year, however, millions of people in the United States and millions more in foreign countries—in most of which drugs are sold without prescription—take Chloromycetin capsules. Still others receive it by injection.

But medical scientists have testified before Sen. Nelson's Monopoly Subcommittee that even in this country, 90 to 99 per cent of the prescriptions for Chloromycetin are needless—written either for diseases for which no medicine is effective or for diseases that can be treated by safer medications.

On the basis of exhaustive studies by the California Department of Health and the California Medical Association, Chloromycetin causes a fatal blood disease in one user in 24,200 to 40,500, depending upon dosage.

The disease is aplastic anemia. It destroys the ability of the bone marrow to manufacture blood components. It is usually fatal.

Parke-Davis includes the estimated death rates in the FDA-required labeling. It omits them from foreign labeling.

NEEDLESS DEATHS

The rates indicate that among the millions of people who take Chloromycetin every year, hundreds needlessly die. In the United States alone, an estimated four million persons have taken Chloromycetin in a single year, and, according to the California statistics, between 98 and 165 of them died as a result.

Whether here or abroad, the victims, often children, and their families were unaware of the danger or the promotional lures that may have led physicians to prescribe chloramphenicol.

In Japan, Chloromycetin is available without prescription and is extremely popular. Some thanks surely is owed the promotional exuberance and ingenuity of the supplier, Sankyo Co., Ltd.

Sankyo's labeling describes the product as a "beautiful two-layer tablet, sepia-colored on one side and yellow on the other."

A translation of the labeling also discloses that although Sankyo considers Chloromycetin "a remarkably ideal antibiotic," it has fortified its tablets with no fewer than seven B-complex vitamins. Medical scientists unhesitatingly denounce such a mixture as scientifically preposterous. But Sankyo's labeling says:

"Since the vitamins in the drug are rationally distributed, the drug is capable of controlling symptoms of vitamin B deficiency, thus strengthening the resistivity of the body to infection and increasing its recuperative power."

The labeling recommends Chloromycetin in a long list of diseases for which the FDA and Parke-Davis say in the American labeling, no data to substantiate effectiveness exist.

These diseases include measles, whooping cough, ulcerative colitis, shingles, and chicken pox.

Only "in rare cases" may aplastic anemia occur, the Japanese labeling says. There is no acknowledgment that it is usually fatal.

A FOREIGN VENTURE

A similar situation prevails in other countries, including Italy. The story goes gack to the 1950s. At the time, Dr. Console, now in private practice in Princeton, was medical director of E. R. Squibb.

Replying to a list of questions submitted by Sen. Nelson at the request of Sen. Jacob K. Javits (R-N.Y.), Console recalled that in 1955 his firm was considering the possibility of foreign marketing chloramphenicol under its own label, as a Parke-Davis licensee.

"I was presented with the prospect of . . . making all the excessive claims for the drug and excluding a warning statement since it was not required in the countries in which sale (was) proposed," he said.

"I refused to approve the tentative copy and made it clear that I would tender my resignation before I would approve the copy," Console's letter continued. The proposed arrangement never materialized.

Last year, Console and his wife, who is also a physician, were in Italy. There, they made a study of psychiatric, medical and drug practices in communities ranging from a small hamlet in Sicily through medium-sized cities, such as Bologna and Florence, to Rome.

In the medical schools and teaching hospitals, the hazards of chloramphenicol are "well appreciated," Console told Nelson in a second letter last September. Yet practicing Italian physicians continue to prescribe it so often that it ranks in popularity with tetracycline and penicillin.

Console said he was appalled to find that the brochure inserted by Parke-Davis in each package urges use of Chloromycetin in "infections of the respiratory apparatus caused by bacteria and viruses," as well as in surgical, urinary and intestinal infections.

". . . insofar as chloramphenicol is concerned, the practices I observed from 1951 to 1957 (while at Squibb) have not changed one iota," he continued. "The increasingly strong warning statements required by the FDA are for American consumption only and we are forced to the conclusion that a drug that is dangerous for Americans is eminently safe for Italians."

A confrontation about this kind of discrepancy occurred on Capitol Hill Nov. 29, 1967. At the time, most of the approximately 2,500 words in the FDA-approved prescribing instructions for Chloromycetin were, in one way or another, negative or ominous.

The labeling begins with a warning that, for emphasis, is typographically boxed. Pointing out that Chloromycetin can cause aplastic anemia, the blood disease, even in short-term use, the warning goes on to say:

"Chloramphenicol must not be used when less potentially dangerous agents will be effective."

In the boxed warning and later in the labeling, the following statement is underlined:

"It must not be used in the treatment of trivial infections or where it is not indicated, as in colds, influenza, infections of the throat; or as a prophylactic agent to prevent bacterial infections."

At another point, the same message is paraphrased in capital letters.

At a hearing before the Nelson subcommittee, the witness was Leslie M. Lueck, Parke-Davis' director of quality control. With him was Lloyd N. Cutler, special counsel for the Pharmaceutical Manufacturers Association.

Lueck had come to present evidence that his firm's version of chloramphenicol capsules enters the bloodstream in the therapeutically useful amounts with greater speed than chemically similar, less expensive generic versions.

Nelson showed Lueck a two-page Chloromycetin advertisement in the Journal of the American Medical Association. The FDA-required warnings, set in small type, filled most of one page.

Are the warnings "justifiable," Nelson asked.

Lueck's answer was, "Yes, I think they are. I think they are very adequate."

Nelson then proceeded to contrast the promotion of Chloromycetin in the United States and Britain, where, in January, 1967, the Committee on Safety of Drugs had told British doctors of 24 reported chloramphenicol deaths in the past two years.

Emphasizing that it did not know "how many cases have occurred but have not been reported," the British committee said that the 24 cases accounted for 80 per cent of all fatal blood diseases in patients taking antibiotics. Yet 54 times as many prescriptions were written for other antibiotics as for chloramphenicol.

". . . chloramphenicol should never be used systematically for the treatment of trivial infections," the committee said.

NO WARNING AT ALL

Nelson next showed the Parke-Davis witness an ad for Chloromycetin that had run in the British Medical Journal on Feb. 11, 1967. This was about a month after the Committee on Safety's bulletin and nine days before the ad in the Journal of the AMA.

That advertisement "does not have any warning in it at all," Nelson said. "How do you explain that?"

Lueck really couldn't explain it, having conceded to the senator that the effect of the antibotiotic "is the same on people in other countries as it is here." But Lueck did have a defense: Parke-Davis "has always met all the requirements, the legal requirements, of whatever country we distributed our products in . . ."

American laws require that drugs exported from the United States must comply with the law of the country of destination. Thus, for example, the FDA regulates the labeling (and the safety and efficacy) of Chloromycetin that Parke-Davis produces at a plant in Puerto Rico for the United States—but it cannot regulate the Chloromycetin synthesized at the same plant for Latin American countries.

Recently, the FDA asked the State Department to warn physicians throughout Latin America that Parke-Davis has created "a potentially hazardous health situation" by labeling Chloromycetin to overstate the benefits and understate the perils, much as in Italy, Japan and elsewhere.

After The Washington Post disclosed the FDA request to have American embassies alert physicians in Latin American countries. Parke-Davis asked to meet with the FDA. The company requested—and the FDA agreed—to add a sentence to the message the agency had drafted for the State Department, saying that Parke-Davis would change the Latin American labeling to bring it into line with that in the United States.

At the Monopoly Subcommittee hearing in November, 1967, Sen. Nelson told Lueck, the Parke-Davis executive, that meeting the requirements of other countries raises "a very serious moral question."

"It sure shocks me," Nelson said. "What the witness says is we will meet the standards of the country where the drug is sold. That means, of course, there is not a single underdeveloped country in the world that has any defense against the exploitation of their people for profit by an American corporation that does not warn them of the serious, mighty serious, possibly fatal consequences here."

The senator went on to ask:

"Do you mean to testify that your company will stand on the proposition that we will send drugs to Tanganyika, we will send to Latin American countries, we will send to all the underdeveloped countries in the world and since they do not have any standards we will fool them all we can, and make a great big profit and never tell doctors that there is a risk of serious blood dyscrasias (abnormalities)? Is that what you are telling the committee?"

Lloyd Cutler, special counsel for the drug industry organization, interceded to enter a general denial.

"You are indicting every drug company in Great Britain and the United States," he told Nelson heatedly.

The senator replied that he "would be pleased to indict on moral grounds" any company that would do what Parke-Davis had done in selling Chloromycetin abroad.

But elastic promotional standards neither begin nor end with Parke-Davis or Chloromycetin. Consider Merck & Co.'s Decadron (dexamethasone), which went on the market in the late 1950s as an anti-inflammation hormone used mainly for rheumatoid arthritis.

The late Sen. Estes Kefauver, at a hearing of the Senate Antitrust Subcommittee,

showed John T. Connor, then president of Merck, a Decadron ad that claimed, "No steroid side effects."

"This particular ad is used by our international division," a flustered Connor said. Dr. Augustus Gibson, the firm's director of medical research, then acknowledged the claim to be "not true."

Several years later, a Merck entourage appeared before Sen. Nelson to testify about indomethacin, a successor to Decadron that is sold here as Indocin and in about 100 other countries as Indocid. At the time, the FDA-approved labeling recommended indomethacin principally for rheumatoid arthritis, but—on the ground that evidence of safety and efficacy was insubstantial—not for numerous other diseases.

Nelson, at a hearing on May 3, 1967, asked Merck President Henry W. Gadsden about "your standard of guidance for advertising" in a country lacking a regulatory agency or sophisticated medical community.

"Our standard of guidance, sir, is whatever has been approved by the scientists of Merck as appropriate medical positioning of the product," Gadsden answered.

Nelson said this troubled him. Many companies "may not be as conscientious as Merck," he said.

A couple of months before the hearing, Abbott Laboratories ran an ad in the Journal of the AMA for Enduron, a thiazide diuretic used to combat high blood pressure and congestive heart failure. In removing excess fluid from body tissues, Enduron had the advantage of causing "less potassium loss" than rival thiazide diuretics, the ad claimed.

The FDA, which at this time had not yet abandoned vigorous enforcement of the drug advertising regulations, compelled Abbott to send a "corrective letter" to physicians saying that the agency considered the ad misleading.

But a year after sending the letter to doctors in the United States, the firm was making the repudiated claims to doctors in Canada and, possibly, elsewhere.

Meanwhile, the FDA and a group of 30 specialists in infectious diseases retained by the National Academy of Sciences-National Research Council have ruled the Upjohn Co. product Panalba hazardous. On the principal ground that its mixture of two antibiotics, tetracycline and novobiocin, had no advantage over its ingredients used separately, it was also ruled ineffective.

Mainly because of the needless administration of its novobiocin component, the FDA has estimated that the medicine needlessly injured hundreds of thousands of persons in the United States every year, a few of them fatally.

After resisting all the way to the Supreme Court the FDA's attempts to take Panalba off the market, Upjohn halted sales of the drug in the United States a few months ago. Elsewhere, however, the company continues to sell the mixture as Albamcycin T In 1969, foreign sales totaled $10 million.

In Kalamazoo, Mich., an Upjohn spokesman said, "In every case, we have advised competent health and registration authorities of everything that has transpired in the United States in regard to the Panalba case. "We have left it up to them to judge whether we should continue to sell the product in their country," the company told The Washington Post.

"Our action in regard to Panalba in the United States was based on our respect of a regulatory order. In no way does it alter our opinion in regard to the efficacy and safety of the combination antibiotic products."

PRICED HIGHER HERE

In pricing, as Sen. Kefauver was the first to bring out, it is often Americans who are disadvantaged. One example involves Serpasil, the CIBA brand of reserpine, which is widely used to lower blood pressure. The company's price to pharmacists for 100 tablets in the 0.25-milligram dose was $4.50 in the United States—but $1.05 in Bonn, $1.19 in London, $1.24 in Bern, $152 in Rome, $1.56 in Vienna, $1.60 in Rio and $3 in Mexico City.

Another example is Thorazine, the Smith Kline and French brand of chlorpromazine hydrochloride. This is a potent tranquilizer discovered by the French firm of Rhone-Poulence. SKF, the exclusive licensee in the United States, charged pharmacists $6.06 for 100 25-milligram tablets.

But a State Department survey made for the Nelson subcommittee showed that the price to druggists for the same product was $1.08 in London and Paris, $2.52 in Teheran, $2.53 in Rio, $3.48 in Vienna and $4.80 in Mexico City.

Selling in lots of 1,000 to the U.S. Defense Supply Agency, SKF charged the government $32.62. At the same time, the exclusive licensee in Canada, Bell-Craig, was charging $2.60—one-twelfth as much—in sales to the Canadian Department of Veteran Affairs.

MR. WILLIAM RANDOLPH HEARST, JR., COMMENTS ON THE MIDDLE EAST CRISIS

Mr. YARBOROUGH. Mr. President, an editorial on the Middle East situation by Mr. William Randolph Hearst, Jr., has come to my attention. The editorial provides some insight on the continuing crisis and suggests that the United States should act in consert with our NATO Allies and Japan in efforts to stand up to Russia in the Middle East.

I recommend to the Senate this editorial by William Randolph Hearst, Jr., entitled "Arab Canal Crossing—All-Out War," which appeared in the July 12, 1970, issue of the Hearst newspapers.

Mr. President, I ask unanimous consent to have this editorial printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ARAB CANAL CROSSING: ALL-OUT WAR

(By William Randolph Hearst, Jr.)

TEL AVIV.—Having completed the Asian part of a quick trip around the world this weekend finds us in the Middle East—which many diplomatic crisis watchers think is now the world's greatest danger spot.

We, Joe Kingsbury Smith, our chief foreign writer, and my son Willie, who has just crossed over the adult threshold, arrived here in the Miami Beach of Israel at dawn—which was 4:45 a.m. to be exact—after a 17-hour flight from Hong Kong, via Bangkok, Colombo and Bombay.

Waiting for us at the airport was a friend of previous visits, Sam Becker, representing the Israeli government, who whisked us away to the attractive seashore Dan Hotel, where Joe and I stayed on our first visit to Israel in 1955.

On the drive in from the airport, there were impressive signs of the construction that has been going on in recent years despite the fact that Israel has been in a virtual state of war since 1967, when it scored a smashing victory over the Arabs in the six-day war, but found no peace.

New office buildings and apartments have sprung up like mushrooms in what was once a virtual shanty town of old wooden houses. A few of these relics of the original Jewish colony that settled in Tel Aviv shortly after the turn of the century still stand, but they are barely noticeable in the midst of the modern, tree-lined city that this one-time heap of sand dunes has become under the dynamic drive of the Jewish people.

Evidence of what this energetic race is doing to build up its national home and turn the once barren Palestine into fertile land can be seen in the eucalyptus, pine and cypress trees that one sees along the airport route. They are part of the 100 million trees planted in Israel since the Jewish state was established in 1948.

One would never realize in the peaceful atmosphere of Tel Aviv that Israel was still fighting for its existence, with almost daily border clashes in the war of attrition that the neighboring Arab states are waging against it.

We found here the same apparent calmness that seemed to prevail when we were in Saigon and in the war-threatened Cambodian capital of Phnom Penh. It has been my experience that people in danger areas are much less jittery than those who are far away from the scene of danger.

That the Middle East is a powder keg with a rapidly burning fuse there is no doubt. The fuse may fizzle out, or it may be stamped out, if the Western powers have the good sense, courage and determination to stand up to the Soviet Union.

If Russia's rulers think the West, and especially the United States, will do nothing to protect Israel and their own vital interests in the Middle East, then the fuse might spark an explosion that could rock the world.

From our talks with General Moshe Dayan, the brilliant Israeli Defense Minister who master-minded the swift victory over the Arabs in 1967, and other knowledgeable people here in Israel, it was apparent that nobody really knows what the Soviets are up to in their latest moves in Egypt. These include the installation of Soviet SAM Two and SAM Three antiaircraft missiles in the Suez Canal Zone.

Seen from the Israeli side, the situation makes me think of a man sitting in a room in which there is a burning fuse leading to another inaccessible, mysterious room. You don't know whether the fuse is going to fizzle out when it gets to that other room, or whether it's going to set off a powder keg, the size of which is unknown.

Two things are certain, though. One is that the situation in the Middle East is deteriorating. The other is that if the Soviets don't restrain Egypt, it is going to get worse.

There is genuine fear among the Israeli leaders now that Russia is going to let Nasser attempt a major crossing of the Suez Canal with the aim of driving the Israeli forces back from the east bank.

The Kremlin is believed to be intent on re-opening the Suez Canal for a number of reasons. The closure of the Canal has meant a prolongation of up to 38 days for Soviet supplies to North Vietnam around the South African cape route.

It is also believed the Soviets want quicker access for their warships to the Indian Ocean and the Persian Gulf as part of their long-range plan for extending Russian influence in that area and filling the vacuum being created by Britain's military withdrawal from such strategically important spots as Aden.

Another factor is thought to be Soviet concern over the outcome of its ideological dispute with Red China, and a desire to flank China by establishing a naval presence in the Indian Ocean.

Israeli military leaders suspect that the installation of Soviet missiles in the Canal Zone areas is intended to overcome Israel's air superiority and thus pave the way for an Egyptian crossing of the Canal in force.

The Israelis are confident that if the United States will keep them supplied with an adequate number of the latest Phantom fighter-bombers—they are thinking in terms of dozens, not hundreds—and other anti-missile equipment, such as electronic jamming for radar, they can handle any Egyptian attempt to cross the Canal providing the Soviet Air Force does not intervene directly in the fighting.

They are willing as they always have been to pay for whatever they get, but they do want long term credits because they are facing financial difficulties at the moment.

If the Russans do intervene the Israelis assert they will not hesitate to attack them and to fight as long as they can hold out. However, they realize they cannot alone take on indefinitely the Soviet Union as well as the Arabs.

Therefore, they are hoping the United States will say, in effect, to Russia: "Don't intervene directly because if you do, we will be forced to do so."

Israel's leaders are convinced that kind of a warning would deter the Soviets, since it is doubted that Russia wants to risk another Cuba-type confrontation with the United States.

I believe that we have got to stand up to Russia in the Middle East, but I don't believe we should have to do it alone. Western Europe is dependent on the Middle East for 80 per cent of its oil requirements. Nearly 90 per cent of the oil Japan consumes comes from that area. Our NATO allies and Japan should join with us in any diplomatic or military action that is deemed necessary to deter the Soviets from recklessness in the Suez Canal area.

We have been told in no uncertain terms here that if Egypt attempts a major crossing of the Canal, it means all-out war insofar as Israel is concerned.

It is time somebody steps on that fuse—quickly.

THE BUDGET AND APPROPRIATIONS BY CONGRESS

Mr. GRIFFIN. Mr. President, earlier in the morning hour today, a colloquy took place among the distinguished majority leader, the Senator from Wisconsin (Mr. PROXMIRE), and the Senator from Illinois (Mr. PERCY), and other Senators, concerning the extent to which Congress cut or did not cut President Nixon's budget for fiscal year 1970.

The discussion would not be complete without reference to an excellent statement delivered by the distinguished Senator from Colorado (Mr. ALLOTT) on July 21, reported in the CONGRESSIONAL RECORD on page 25219. I shall not repeat in full what he had to say, but I would like to read a paragraph or two from his remarks:

Taking the narrow issue of appropriations alone, it has been argued that the Congress itself cut the Nixon budget by $7.6 billion in certain areas of governmental appropriations, added roughly $2 billion to other areas of appropriation, for a total aggregated reduction of $5.6 billion.

Not so, says Representative GEORGE H. MAHON'S Joint Committee on Reduction of Federal Expenditures, in its report on the impact of congressional actions and inactions of the 1970 fiscal year Federal budget. As shown in the following table, this Congress cut a $5.9 billion surplus by $46 million.

Mr. President, Senator ALLOTT had the table printed in the RECORD at that time; and I ask unanimous consent that it be reprinted in the RECORD.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

BUDGET SUMMARY—A SUMMARY OF FISCAL YEAR 1970 AND FISCAL YEAR 1969 FEDERAL BUDGETS—REFLECTING CONGRESSIONAL ACTIONS AND INACTIONS AFFECTING THOSE BUDGETS DURING THE FIRST SESSION OF THE 91ST CONGRESS

[In millions of dollars]

Summary totals	Budget authority (obligational and lending authority) (1)	Budget outlays (expenditures and net lending) (2)	Budget receipts (3)	Budget surplus or deficit (4)
Fiscal year 1970:				
Net total budget estimates as submitted Jan. 15, 1969	210,116	195,272	198,686	+3,414
Net total budget estimates as corrected by the new administration	211,412	196,921	198,686	+1,765
Net total budget estimates as corrected and revised to Apr. 15, 1969	205,901	192,899	198,686	+5,787
Net total budget estimates as revised and amended to date	[1] 204,201	[2] 192,880	[1] 198,800	+5,915
Adjustments for interfund and intragovernmental transactions and applicable receipts	+13,714	+13,714	+13,714	
Total gross budget estimates	217,915	206,599	212,514	+5,915
Budget estimates not requiring further action by Congress (previously enacted or permanent)	80,712	114,896	202,712	
Prior year's budget authority		(85,165)		
Current (1970) budget authority	(80,712)	(529,731)		
Budget estimates requiring action by Congress	137,203	91,703	9,802	
Effect of congressional action on budget estimates (net changes) to Dec. 23, 1969:				
House	−3,687	+362	+158	−204
Senate	+2,512	+767	−2,173	−2,940
Enacted	[3] −837	[3] −1,569	−118	+1,451
Effect of congressional inaction on budget estimates (see supporting table No. 3 and pt. 1 of supporting table No. 4)	+1,313	+1,232	−265	−1,497
Total net effect of congressional action and inaction, 1st sess., 91st Cong	+476	−337	−383	−46
Fiscal year 1969:				
Net total budget estimates as submitted in January	194,620	183,701	186,092	+2,391
Net total budget estimates, as revised	196,030	185,588	186,492	+904
Net total budget estimates, as changed by congressional action	195,568	185,263	186,492	+1,229
Actual net total as enacted by Congress and reported by the Treasury	195,568	184,769	187,843	+3,074

[1] Budget authority estimates have not been revised since the May 20 withdrawal of $1,700,000,000 for the previously proposed social security program.

[2] The summer review of the 1970 budget reflected revised budget outlay estimates at $192,860,000,000 and revised budget receipt estimates at $198,800,000,000. The revised outlay estimates reflect many increases and many offsetting decreases on which full details are not available. Since revised detailed estimates were not transmitted to the Congress, it must be assumed for scorekeeping purposes that the Congress was working with the Apr. 15 budget appropriation and outlay estimates.

[3] Includes the effect of the Labor and Health, Education, and Welfare, and the foreign assistance appropriation bills, on which Congress has not taken final action, in the amounts approved by the committees of conference.

Mr. PROXMIRE. Mr. President, will the Senator from Michigan yield?

Mr. GRIFFIN. I yield.

Mr. PROXMIRE. The table to which the Senator from Michigan refers, as I understand it, is the one that was put together by Representative MAHON; is that not correct?

Mr. GRIFFIN. The Joint Committee on the Reduction of Non-Essential Expenditures, which is chaired by the distinguished Representative from Texas, Mr. MAHON.

Mr. PROXMIRE. Does the Senator from Michigan argue that the table indicates Congress did not reduce President Nixon's budget request for appropriations for fiscal year 1970?

Mr. GRIFFIN. As the Senator from Wisconsin well knows, because this debate has raged month after month after month, it depends on which budget one is talking about.

When President Nixon took office, he inherited a budget left by President Johnson. If we refer to that budget, which President Nixon submitted shortly after taking office, we come up with one set of figures——

The PRESIDING OFFICER (Mr. HUGHES). The time of the Senator has expired.

Mr. PROXMIRE. I ask unanimous consent that the Senator from Michigan may proceed for 2 additional minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. GRIFFIN. After President Nixon had been in office awhile and had time to study the budget, he revised it and then, as I recall, there was a second revision by the Nixon administration, so that all of these various revisions must be taken into account.

I think it is quite well established that no administration can spend money that Congress does not appropriate. If we in the Congress have been doing such a good job in cutting budgets over the years, it is rather strange that the United States seems to be going further and further into debt year after year after year.

I believe I heard one of the speakers say a little earlier that Congress cut each of the Johnson budgets. I recall one year in the Johnson administration that there was a deficit of well over $20 billion. We certainly must have done a great

job in Congress in cutting the budget in that particular year.

Mr. PROXMIRE. I agree with much of what the Senator says. I agree that we did not do the job we should have done. All I am saying is that we cut every budget year after year of the President, so that if we did a poor job, the President did an even poorer job and that, of course, must include the incumbent President.

I am talking about action by Congress in fiscal 1970 on revising the budget by President Nixon. The last budget he sent down was reduced by $6.3 billion and overall by $7.8 billion below what President Nixon requested.

Mr. MANSFIELD. I should like to join the Senator from Wisconsin by making a few comments in addition to those already made on this subject. I am sorry I missed most of the initial remarks of the acting minority leader. But I do want to emphasize that the figures I submitted were the final verified figures published by the Committee on Appropriations. That Committee is composed of both Democrats and Republicans and as has been confirmed by the acting Chairman of the Appropriations Committee, the Senator from Louisiana (Mr. ELLENDER), they were figures based not on the Johnson budget but on the Nixon revised budget.

As I recall, President Nixon reduced the original Johnson budget by around $5 billion, and what the Congress did was to reduce the Nixon budget by over $6 billion—$6,370,935,390; plus, for this 1971 fiscal year, $1,437,000,000; plus, going back to the year just completed 1970, the second supplemental—H.R. 11400—we reduced that measure by an additional $461,947,690 under President Nixon's request.

So, if we want the actual figures of what this Congress has done, and this applies to the Republican side of the aisle as well as to the Democratic side of the aisle—it was a bipartisan cut—the total effect of what Congress has done in reducing President Nixon's requests for spending is to have cut $8,269,883,080 out of those spending requests.

I think that Congress—members of both parties in Congress—should be proud of this accomplishment.

I have also indicated that I am proud of what the administration has done, because President Nixon has reduced in excess of $3 billion from projected expenditures. I want to give him full credit for doing so.

If we will work in tandem, together, we can face up to this problem and accomplish a great deal, rather than throw the ball back and forth to one another creating situations which belie the facts.

Mr. GRIFFIN. Mr. President, if I may have 2 additional minutes, I want to say for the benefit of the majority leader that I inserted into the RECORD a table prepared by the Joint Committee on Nonessential Federal Expenditures, chaired by the distinguished Representative from Texas (Mr. MAHON), a table with which the majority leader is familiar—and which was included in a speech delivered by the Senator from Colorado (Mr. ALLOTT) last week. In light of the colloquy, which had developed earlier today, I believed it appropriate to call attention to the pertinent remarks which the Senator from Colorado made on July 21.

If the distinguished Senator from Montana does not agree with Representative MAHON of Texas and has some other figures from the Senate Appropriations Committee, of course, we are entitled to take a look at those, too.

Mr. MANSFIELD. May I say that I almost always agree with the distinguished chairman of the House Appropriations Committee, but I never disagree with the distinguished acting chairman of the Senate Appropriations Committee who, I think, is just as efficient and effective and as conversant with figures as is any Member of Congress in either body.

I was unable to listen to the remarks of the distinguished Senator from Colorado last week, although he told me ahead of time that he was going to make his remarks. I had another engagement. I want to repeat that it was my understanding afterward, however, that he had gone back to the original Johnson budget and used those figures, whereas what we have tried to do was to begin with the Nixon revised budget for 1970.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. MANSFIELD. Mr. President, I ask unanimous consent for 5 additional minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. GRIFFIN. Mr. President, I yield to the Senator from Illinois.

Mr. PERCY. Mr. President, I would like to express my appreciation to the distinguished majority leader for the focus in which he has put this colloquy this morning. I am certain that my friend, the distinguished Senator from Wisconsin, would agree with me.

We have a joint problem, the administration and Congress and the American people, to do everything we can to cut expenses.

What concerns me is that when we look at the end result, instead of achieving that goal, by cutting out money for health needs, hospital requirements, educational needs, and supplementary food for the poor and save money in less sensitive areas.

It is for this reason that I pledged several months ago when I began to realize that instead of a $1.3 billion surplus, we were going to have a $1.3 billion deficit by the administration's own statement in fiscal 1971 and I predict a deficit of something like $6 billion unless we do something about this.

I pledge my support where we can effect a reduction of at least $4 billion in spending.

I have enumerated $989 million that we can cut on items of this kind in the Defense Department. All other agencies of the Government can purchase abroad if there is a 6 percent to 12 percent differential, but the Defense Department cannot purchase abroad unless there is a 50 percent differential. We require that 50 percent of our agricultural products under Public Law 480 be shipped in American bottoms.

Later in the day, during the discussion on the military procurement bill, I intend to discuss food procurement. We spend $7 billion in purchasing food for the Army, Navy, and Air Force.

I think that we can save 14 percent through sensible consolidation and eliminating the jealousy which exists between the Army, the Navy, and the Air Force which results in the setting up of food service for the most part on a company basis rather than on a consolidated basis.

There is a great deal that we can do to cut unnecessary spending. We are all in accord with that and we will then have more money to spend in the areas in which it is needed.

Mr. MANSFIELD. Mr. President, it strikes me that the reason for the deficit this year will be due to the fact that in certain areas of the economy—in housing, for example, in which the Senator is well versed, in lumber and related industries—there is a—severe recession. It will mean a serious loss of revenue. When you add to that the fact that we have in excess of 5 percent of our working population unemployed, it means that there will be far less income to the Government.

Certainly there has been a miscalculation here, although an honest one. Certainly none of the experts could foresee that these events would occur.

The point that I emphasize again, and I cannot emphasize it too strongly, is that what we have done here we have done together, Republicans and Democrats, and what we want to do is to work with the administration, as the Senator from Illinois has stated several times. The idea is that together both branches can contribute to the process—the executive by paring the expenses down there and the Congress by reducing the appropriations up here. In that way, we will be able to try to bring about a leveling of the economy.

One of the places that can be touched and touched deeply—and the Senator from Illinois has mentioned this time and time again—is the $14 billion out of the defense budget which it costs to maintain approximately 525,000 American troops and dependents in Western Europe. That is apart from the salaries and the benefits we pay to the Germans who are employed in our installations.

I would hope that the 6,000-man withdrawal from the Philippines, the 20,000-man withdrawal contemplated from Korea, and the further reductions in the offing for Vietnam would be followed in due time, and shortly, by substantial withdrawals from Western Europe, as well.

I think—I do not know—that the administration is moving in that direction. And if they are, they will have my full support.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to proceed for 5 additional minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. PROXMIRE. Mr. President, the Senator from Illinois has spoken about cutting spending. It is most appropriate to point out that when we consider the pending bill, anyone who is looking for an opportunity to cut spending will have that opportunity in spades in the next few weeks as we consider the pending bill.

The pending bill would provide $19,242 million. As a matter of fact, that is below President Nixon's request by about $1.3 billion.

Here is the issue. What spending do we want to cut? Over all, in the aggregate, I think our argument is overwhelming. We did cut the budget requests by our previous actions in the 1½ years this Congress has been in session, as the distinguished majority leader has pointed out, by more than $8 billion.

It is true that many of us have voted for funds in the health and welfare areas above the President's requests. I plead guilty to that.

The fact is that with respect to overall expenditures, especially in the military area, the position taken by most Members of Congress, both Republicans and Democrats, has been to cut the amount well below the budget requests.

I am sure that the Senator from Illinois and other Senators will have an opportunity to vote on an amendment which some of us will offer to cut the President's request. That would reduce military spending overall by several billion dollars.

It seems to me that this is the most important opportunity for Senators to demonstrate whether they really believe in economy. Here is where we will get the biggest cut of all.

The Senator from Illinois and other Senators have referred to many instances in which Congress has gone above the President's request. In some cases it was by several million dollars and in some other cases it was by several hundreds of millions of dollars. We can do that consistent with fiscal responsibility by cutting the military budget by $7 billion and we are going to have the chance to do that.

Mr. PERCY. Mr. President, I wonder if the Senator from Wisconsin is prepared to indicate in what form his amendment will come. Would this be a 10-percent cut in the defense budget?

Mr. PROXMIRE. No; we are trying to develop an agreement between Democrats and Republicans who believe in reducing the defense budget overall, on a responsible and realistic figure.

We would like to get some indication of what they think would be a realistic budget cut. We have not decided whether it should be a 10- or a 15-percent cut.

This bill represents a cut below the President's request.

I feel that we should have an opportunity for Members of Congress to go on record on the matter of reducing the overall money spent.

We would like to get from the Senator from Illinois and other Senators their viewpoint on how much they feel would be a sound and responsible cut.

Mr. PERCY. Mr. President, is there any feeling on the part of the distinguished Senator that if we go at it in this apparently simple way and cut 5 percent or 10 percent across the board that we would really be abdicating our responsibility and shifting the burden to the Defense Department to decide what programs should be cut? Should we not address ourselves to specific programs?

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. PROXMIRE. Mr. President, I ask unanimous consent for 3 additional minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. PERCY. Mr. President, should we not afford the Members of Congress an opportunity to vote on specific reductions rather than on some overall catchall which really leaves no responsibility in our hands as to what programs are to be cut.

We would not know what is being reduced; whereas an amendment on a specific system, whatever it might be, gives us a chance to analyze, appraise, and hear the opinions of experts and members of the armed services and evaluate the effect on the reduction in that area.

Mr. PROXMIRE. Last year we tried to make cuts on the basis of reducing specific weapons systems. We were successful to a modest extent and we were able to make some cuts. This year the feeling is that we would do better with an overall reduction. Many people feel this is a more responsible way for Congress to act. Former Comptroller of the Defense Robert Anthony, for instance, testified that this is much better because the Department of Defense has hundreds of experts who concentrate on trying to give us the strongest military force we can get, and if we can give them discretion to live within a modest sum, they can give us a military force with more firepower, mobility, and effectiveness than if we tried to cut sharply in one area and not in other areas. Of course, an argument can be made for the other approach, but we believe this is the best way to proceed.

Mr. PERCY. I cordially invite the Senator, if he is in the Chamber at the time, to join me when I discuss the subject of food for the Army, Navy, and Air Force and what I think is the unnecessarily wasteful way in which this is being handled. I would welcome the Senator's comments. I would be happy to provide now an advance copy of my text to the Senator and his staff so they might study it. I look upon the Senator as an expert in reducing waste in connection with unnecessary expenditures. This is a bipartisan effort. This system has been in existence under both Democratic and Republican administrations. I hope this administration takes the initiative in facing up to the problem. This is the kind of expenditure we can cut in the budget.

Mr. PROXMIRE. I hope to be in the Chamber when the Senator makes his presentation.

Mr. ALLOTT. Mr. President, if it is true—as Jefferson said—that error of opinion may be tolerated where reason is left free to combat it, then certain comments of the senior Senator from Wisconsin on the floor of the Senate last Friday may be open to fair comment.

The distinguished Senator said that President Nixon, and I quote "is getting away with murder," in his charge that Congress is contributing to inflation by increasing the President's budget request. In order to avoid being labeled "big spenders" the Senator would have us examine the President's budget request last year and compare that with the amount Congress appropriated. On the narrow issue of appropriations matters alone, the senior Senator from Wisconsin concludes that Congress has been more frugal than the President due to the fact that Congress cut the President's appropriation request by $5.5 billion.

I cannot help but wonder how this kind of analysis squares with the conclusion of Congressman MAHON, the chairman of the House Appropriations Committee, that the total net effect of congressional action and inaction of the first session of the 91st Congress was to reduce President Nixon's $5.915 billion surplus for fiscal year 1970 by $46 million.

Much as I regret to mention again the facts and figures of the distinguished chairman of the House Appropriations Committee—facts and figures which I have repeatedly introduced into the RECORD—I feel that I must once again make mention of certain realities.

As Chairman GEORGE H. MAHON mentioned in his 1971 budget scorekeeping report—staff report No. 7—as of July 9, 1970:

A. BUDGET AUTHORITY FOR FISCAL 1971

1. *House* actions to July 9, 1970 on all spending bills—appropriations and legislative—have *increased* the President's requests for fiscal 1971 budget authority by $7,486,977,000.

2. *Senate* actions to July 9, 1970 on all spending bills—appropriations and legislative—have *increased* the President's budget authority requests for fiscal 1971 by $4,335,950,000.

3. *Enactments* of spending bills—appropriations and legislative—to July 9, 1970 have *added* $457,434,000 to the President's budget authority requests for fiscal 1971.

B. BUDGET OUTLAYS FOR FISCAL 1971

1. *House* actions to July 9, 1970 on all spending bills—appropriations and legislative—have *added* a net of $2,955,063,000 to the President's total estimated outlays for fiscal 1971.

2. *Senate* actions to July 9, 1970 on all spending bills—appropriations and legislative—have *added* a net of $2,555,752,000 to the President's total estimated outlays for fiscal 1971.

3. *Enactments* of spending bills—appropriations and legislative—to July 9, 1970 have *added* $191,934,000 to the President's total estimated outlays for fiscal 1971.

Mr. President, there is a curious and damaging blind spot in some of the economic analysis that takes place in this Chamber. Sometimes some Senators seem to think that if they cut an expenditure they have done all that is necessary for fiscal responsibility. This is not true. It neglects one basic fact. This is the fact that any expenditure—however moder-

ate, however responsible—must be matched by corresponding provisions for raising revenues.

The problem is this. There is a phenomenon which the economists refer to as a "revenue shortfall." You have a revenue shortfall whenever revenues fail to amount to the total that was expected when expenditures were being planned. Obviously when a revenue shortfall occurs, one of two things must happen. On the one hand, responsible authorities can revise downward their judgment of permissible expenditures. On the other hand, a deficit can be allowed to occur.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. ALLOTT. Mr. President, I ask unanimous consent that I may proceed for another 10 minutes.

The PRESIDING OFFICER. Is there objection? Hearing none, the Senator is recognized for an additional 10 minutes.

Mr. ALLOTT. Mr. President, the important thing to notice is this. If we want to avoid a substantial deficit at any time, then we must be prepared not just to cut expenditures but to allow our cuts to be governed by a close and careful projection of any possible revenue shortfalls. Moreover, the phenomenon of a "revenue shortfall" is not just a challenge to cut the budget. It is also, and equally, a challenge to see that all responsible measures are taken to generate revenues equal to the amount of the shortfall.

Mr. President, this is why it is fair to say that pruning the budget is only half the task for a responsible Congress. The other half—which is often less conspicuous, and is often more unpleasant—is the raising of revenues. In this regard it is necessary for us to face the fact if an intolerable budget deficit should result in fiscal year 1971, it will be attributable in part to congressional inaction on matters which would result in increased revenues.

One aspect of the President's message upon which the senior Senator from Wisconsin is curiously silent has to do with this question of the willingness of Congress to assume the responsibilities for the generation of adequate revenues. In his statement of July 18 entitled "Congressional Action and Government Spending," the President stated:

For fiscal year 1971, which began July 1, this administration transmitted to the Congress a budget calling for expenditures of $200 billion, and estimating revenues at $202 billion. If the Congress continues in its present pattern of proposed increases in expenditures, the total for this fiscal year will actually reach a substantially larger figure.

Some $3.5 billion of increases are caused by mandatory and virtually uncontrollable rises in costs—such as increases in the interest on the national debt ($1.8 billion) and in public assistance (over $500 million). The major pay increase for Federal employees added $1.4 billion over the amount originally budgeted. Some increases are the result of necessary new programs. But much of the total increase is due to threatened Congressional action or inaction.

On the receipts side of the ledger, the Congress has failed to provide necessary revenue. By its action on the tax bill last year, the Congress had already reduced projected revenue for fiscal year 1971 by $3 billion and for fiscal year 1972 by $5 billion below my request. Beyond this, the Congress has as yet failed to take action on my proposals for a tax on lead use in gasoline, an advance in the time of collection of estate and gift taxes, and an increase in postal rates. The Congress must produce action on these measures, or we can expect to collect much less than the $202 billion estimated in February.

And that is not all. The 1971 expenditures are an inevitable springboard for the budget of 1972. Unless the present trend is corrected by the Congress, the resulting 1972 spending could produce a massive deficit.

To underscore the President's concern—and to legitimatize it perhaps by referring once again to the facts and figures of the distinguished chairman of the House Appropriations Committee—I am forced to quote from his 1970 budget scorekeeping report—staff report No. 14—wherein he stated, and I quote, "Total net effect of congressional action and inaction of the first session, 91st Congress" was to reduce a $5.915 billion surplus by $46 million.

I do not think this is difficult to comprehend, but in all honesty, I am beginning to understand what Swift meant when he said, "complaint is the highest tribute heaven receives."

Mr. President, I ask unanimous consent to have printed in the RECORD at this point in my remarks the budget summary which appeared on page 3 of Chairman MAHON'S 1970 budget scorekeeping report—staff report No. 14—entitled "Budget Summary: A Summary of Fiscal Year 1970 and Fiscal Year 1969 Federal Budgets—Reflecting Congressional Actions and Inactions Affecting Those Budgets During the First Session of the 91st Congress."

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

BUDGET SUMMARY—A SUMMARY OF FISCAL YEAR 1970 AND FISCAL YEAR 1969 FEDERAL BUDGETS—REFLECTING CONGRESSIONAL ACTIONS AND INACTIONS AFFECTING THOSE BUDGETS DURING THE 1ST SESSION OF THE 91ST CONGRESS

[In millions of dollars]

Summary totals	Budget authority (obligational and lending authority) (1)	Budget outlays (expenditures and net lending) (2)	Budget receipts (3)	Budget surplus or deficit (4)
Fiscal year 1970:				
Net total budget estimates as submitted Jan. 15, 1969	210,116	195,272	198,686	+3,414
Net total budget estimates as corrected by the new administration	211,412	196,921	198,686	+1,765
Net total budget estimates as corrected and revised to Apr. 15, 1969	205,901	192,899	198,686	+5,787

Actual net total as enacted by Congress and reported by the Treasury	195,568	184,769	187,843	+3,074

[1] Budget authority estimates have not been revised since the May 20 withdrawal of $1,700,000,000 for the previously proposed social security program.

[2] The summer review of the 1970 budget reflected revised budget outlay estimates at $192,860,000 and revised budget receipt estimates at $198,800,000. The revised outlay estimates effect many increases and many offsetting decreases on which full details are not available. Since revised detailed estimates were not transmitted to the Congress, it must be assumed for scorekeeping purposes that the Congress was working with the Apr. 15 budget appropriation and outlay estimates.

[3] Includes the effect of the Labor and Health, Education, and Welfare, and the foreign assistance appropriation bills, on which Congress has not taken final action, in the amounts approved by the committees of conference.

Mr. ALLOTT. Emphasizing the fact that the 90th Congress has "turned away from unnecessary military expenses and extravagant programs and toward more emphasis on human resources" the distinguished Senator from Wisconsin tries to dramatize the emergence of reordering priorities by placing into close juxtaposition spending on hospitals and the C–5A as well as food programs for our children and the ABM.

Mr. President, I do not want to belabor the RECORD with the fact that military programs such as the ABM, the C–5A, the TFX, and the Cheyenne helicopter were creatures of the 1960's. I do want to underscore the fact, however, that in the search for adequate appropriations for human resources that the decade of the 1970's was launched by President Nixon's budget which called for spending 37 percent of the budget for national defense and 41 percent for human resource programs. As the President pointed out in his statement of July 18, these sharply reversed priorities were accomplished only by a massive change in emphasis and with specific cuts in military and space expenditures by some $6 billion.

The PRESIDING OFFICER. The Senator's time has expired.

Mr. ALLOTT. Mr. President, I ask unanimous consent that I may proceed for 10 minutes longer.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. ALLOTT. Mr. President, I believe that both the Congress and the President can take some credit in this question of reordering priorities. I simply feel, however, that the efforts of the President and Secretary of Defense Laird have simply not been given the credit they deserve in this instance. Last week I referred to the record of the 90th Congress, first session, on appropriation matters alone. With regard to defense appropriations in the first session of the 91st Congress, I think it is important to highlight these significant facts:

On January 15, 1969, President Lyndon Johnson submitted his last budget. It called for Department of Defense new obligational authority of $80.645 billion and $79.0 billion in expenditures.

On March 19, 1969, Secretary of Defense Melvin Laird testifying before the Senate Armed Services Committee proposed a reduction in defense spending of $2.170 billion in new obligational authority and a $0.500 billion reduction in expenditures for fiscal year 1970. This would have the effect of reducing defense requests for new obligational authority to $78.475 billion and reducing expenditures to $78.5 billion.

On April 15, 1969, President Nixon formally submitted to Congress amendments which would reduce defense new obligational authority by $3.103 billion in lieu of Secretary Laird's $2.170 billion, and reduce defense expenditures by $1.113 billion in lieu of Secretary Laird's reduction of $0.500 billion.

Thus, President Nixon's April 15 revisions to President Johnson's fiscal year 1970 budget reduced defense new obligational authority to $77.542 billion and reduced defense expenditures to $77.887 billion.

On June 10, 1969, Secretary of Defense Melvin Laird appeared before the Senate Subcommittee on Defense Appropriations in support of President Nixon's revised budget and reiterated President Nixon's request for a reduction in defense new obligational authority to $77.542 billion and a reduction in expenditures to $77.887 billion.

On August 21, 1969, Secretary of Defense Melvin Laird announced at his press conference that he had further cut his 1970 program by an additional $3 billion, thus lowering 1970 expenditures to $74.887 billion; this additional $3 billion was over and above the April reductions of President Nixon.

Mr. President, since the congressional rule of thumb measurement states $3 of new obligational authority reductions are necessary to achieve a $1 expenditure reduction—I might say there might be some quarrel with that figure; the former Secretary of the Treasury and the former Economic Adviser to the President, Gardner Ackley and Secretary Fowler, are its sources—and, since the Nixon administration accomplished an expenditure reduction of approximately $4 billion by the above-cited reductions, it is clear that Congress would necessarily have had to reduce new obligational authority by an amount not less than $12 billion to achieve actual spending reductions accomplished by the Nixon administration.

Mr. President, I think it is of paramount importance to put the question of national defense expenditures in its proper perspective as it relates to current Federal budget priorities. In this issue facts rather than opinion assume a critical role.

Let me cite some of these facts as they appear in the special analysis prepared by the highly respected institution—which obviously owes no allegiance to any political party—the American Enterprise Institute for Public Policy Research. In their recent publication entitled "U.S. Government Finances: A 22-year Perspective 1950–71" at page 21 they state the following as it relates to budgetary programing for national defense:

Reductions in national defense outlays programmed in the proposed 1971 budget, if they materialize, will lower defense spending in 1971 by approximately $14 billion, in terms of 1969 consumer prices, below the defense spending level of 1969.

Defense outlays budgeted for 1971 total $73.6—down $7.7 billion from the 1969 level. However, the $73.6 billion figures converts into $66.8 billion when expressed in 1969 prices. That is, deterioration of the purchasing power of the dollar expected to continue through 1971 lowers the budgeted figure to $66.8 billion, which is $14.4 billion less than actual defense outlays of $81.2 billion in the 1969 base year.

As indicated by the accompanying chart and the tabular data, average per capital shares of defense outlays, in 1969 prices, are estimated to drop from $404 in 1969 to $325 in 1971.

Budgeted reductions apply relatively uniformly to the three major components of the defense budget—compensation of personnel, operation and maintenance, and procurement of military hardware and other supplies.

I ask unanimous consent to have this chart printed in the RECORD.

There being no objection, the chart was ordered to be printed in the RECORD, as follows:

	Outlays in current dollars (millions)					Per capita outlays in 1969 prices				
				Estimates					Estimates	
	1967	1968	1969	1970	1971	1967	1968	1969	1970	1971
Military functions:										
Personnel [1]	$19,787	$21,954	$23,818	$25,158	$24,104	$108.77	$115.62	$118.51	$117.13	$106.51
Operation and maintenance	19,000	20,578	22,227	21,500	19,650	140.45	108.73	110.60	100.10	86.83

[1] Including pensions.

Mr. ALLOTT. Consider these charts concerning the relative importance of defense expenditures during the past decade. I ask unanimous consent to have the charts printed in the RECORD.

There being no objection, the charts were ordered to be printed in the RECORD, as follows:

[Dollars in billions]

Fiscal year	Dollars for defense	Percent of Federal budget
1960	$45.9	49.8
1961	47.4	48.8
1962	51.1	47.8
1963	52.3	46.9
1964	53.6	45.2
1965	49.6	41.9
1966	56.8	42.2
1967	70.1	44.3
1968	80.5	45.0
1969	81.2	44.0
1970	79.4	40.1
1971	73.6	36.7

The following are the facts about the nondefense origin of increases in the Federal budget during the last decade:

Government spending, nonmilitary and military, 1960–1968

[In billions]

1961	$97.8
1962	106.8
1963	111.3
1964	118.6
1965	118.4
1966	134.6
1967	158.2
1968	178.8

Nonmilitary spending

[In billions]

1961	$50.4
1962	55.7
1963	59.1
1964	65.0
1965	68.9
1966	77.9
1967	88.2
1968	98.3

Total increase (up 95 percent) $47.9 billion.

Military spending

[In billions]

1961	$47.4
1962	51.1
1963	52.3
1964	53.6
1965	49.6
1966	56.8
1967	70.1
1968	80.5

Total increase (up to 70 percent) $33.1 billion.

The PRESIDING OFFICER. The Senator's time has expired.

Mr. ALLOTT. Mr. President, I ask unanimous consent that I may proceed for 2 additional minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ALLOTT. Mr. President, my efforts today are certainly not intended to justify every single budget request President Nixon has made during this Congress. Obviously there are items in any budget of any President over which reasonable men may differ.

On the other hand, it has been my intention to try to put two or three matters in perspective. The first has to do with the question of the adequacy of appropriations for national defense. The pending military procurement authorizations bill will clearly provide a forum for further discussion on this matter. The second matter has to do with the willingness of this Congress to act upon the revenue proposals of the President. The President has been most constructive in his efforts to send up legislation which would serve to reduce budget authority and outlays during this Congress. In fact, Mr. President, legislation which would serve to reduce budget authority and outlays was notoriously neglected by the first session of the 91st Congress. A total of $1.3 billion in budget authority reductions and $1.2 billion in outlay reductions were transmitted to the Congress but not acted upon.

Mr. President, I ask unanimous consent that a chart setting forth legislative proposals to reduce budget authority and outlays which were pending at the adjournment of the 91st Congress be printed at this point in the RECORD. Again, this is material prepared by Representative MAHON's committee.

There being no objection, the chart was ordered to be printed in the RECORD, as follows:

SUPPORTING TABLE NO. 4.—LEGISLATION AFFECTING THE FISCAL YEAR 1970 BUDGET

PART I. LEGISLATIVE PROPOSALS TO REDUCE BUDGET AUTHORITY AND OUTLAYS[1]

[In thousands of dollars]

	Estimated reduction				
	Revised budget (Apr. 15, 1969)	As transmitted to date	House action to date	Senate action to date	Enacted to date
PENDING AT ADJOURNMENT OF THE 91ST CONGRESS, 1ST SESSION					
Department of Agriculture:					
Consumer and Marketing Service:					
Consumer protective, marketing, and regulatory programs (S. 568, H.R. 7444):					
Budget authority	−113	−113			
Outlays	(−113)	(−113)			
Removal of surplus agricultural commodities (S. 816, H.R. 13193):					
Budget authority					
Outlays	(−2,900)	(−2,900)			
Farmers Home Administration—Direct loan account (S. 815, H.R. 11604):					
Budget authority					
Outlays	(−292,000)	(−292,000)			
Department of Health, Education, and Welfare:					
Social and Rehabilitation Service:					
Grants to States for maintenance payments (S. ——, H.R. ——):					
Budget authority	−30,000	−30,000			
Outlays	(−30,000)	(−30,000)			
Grants to States for medical assistance (S. ——, H.R. ——):					
Budget authority	−126,000	−126,000			
Outlays	(−126,000)	(−126,000)			
Department of Housing and Urban Development:					
Mortgage credit:					
Government National Mortgage Association (S. 2864, H.R. 12937):					
Budget authority	−500,000	−500,000	[2]	[2]	
Outlays					
Department of Labor:					
Longshoremen omnibus bill (S. ——, H.R. ——):					
Budget authority	−3,475				
Outlays	(−3,475)				
Post Office Department:					
Proposed rate increase (H.R. 10877):					
Budget authority	−591,400	−591,400			
Outlays	(−591,400)	(−591,400)			
Department of Transportation:					
That the following programs be financed from trust funds rather than Federal funds: Highway beautification, traffic and highway safety, State and community highway safety programs, motor carrier safety, forest highways, and public land highways:					
Budget authority	[3]				
Outlays	[3]				

Footnotes at end of table.

[In thousands of dollars]

	Estimated reduction				
	Revised budget (Apr. 15, 1969)	As transmitted to date	House action to date	Senate action to date	Enacted to date
PENDING AT ADJOURNMENT OF THE 91ST CONGRESS, 1ST SESSION—Continued					
Veterans' Administration:					
Compensation and pensions:					
Veterans service-connected compensation (TB) (S. ——, H.R. ——):					
Budget authority	—46,000				
Outlays	(—46,000)				
Veterans non-service-connected compensation (railroad retirement exclusion) (S. ——, H.R. ——):					
Budget authority	—66,000	—66,000			
Outlays	(—66,000)	(—66,000)			
Other (duplicate burial benefits) (S. ——, H.R. ——):					
Budget authority	—54,000				
Outlays	(—54,000)				
Loan guarantee revolving fund (S. ——, H.R. 11703):					
Budget authority					
Outlays	(—123,500)	(—123,500)			
Total, pt. I:					
Budget authority	—1,416,988	—1,313,513			
Outlays	(—1,335,388)	(—1,231,913)			

[1] If positive legislative action is not taken on each item, budget authority and budget outlay estimates carried in the Budget will be increased by the amounts indicated.

[2] Successor bills S. 2864 and H.R. 13827 do not include this item.
[3] Shift between funds; no budget effect.

Mr. ALLOTT. The President has once again sent up legislative proposals to reduce budget authority and outlays in fiscal year 1971. A total of $2.2 billion in budget authority reductions and $2.3 billion in outlay reductions would be generated as a result of favorable action on the President's program in this area. Congress has already taken some action in this regard but, as can be seen from the table below, there are many legislative proposals which have not yet received congressional action.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD "Legislative proposals in fiscal year 1971 budget to reduce budget authority and outlays" as it appears on pages 15 and 16 of the 1971 budget scorekeeping report—staff report No. 7—dated July 9, 1970.

There being no objection, the chart was ordered to be printed in the RECORD, as follows:

SUPPORTING TABLE NO. 4.—LEGISLATIVE PROPOSALS IN FISCAL YEAR 1971 BUDGET TO REDUCE BUDGET AUTHORITY AND OUTLAYS [1]

[In thousands of dollars]

Authorization request (title or purpose)	Cost estimate, 1971 budget	House action to date	Senate action to date	Enacted to date

Footnotes at end of table.

SUPPORTING TABLE NO. 4.—LEGISLATIVE PROPOSALS IN FISCAL YEAR 1971 BUDGET TO REDUCE BUDGET AUTHORITY AND OUTLAYS [1]

[In thousands of dollars]

Authorization request (title or purpose)	Cost estimate, 1971 budget	House action to date	Senate action to date	Enacted to date
Department of Transportation:				
Coast Guard:				
Reserve training (H.R. 16264, S. 3593):				
Budget authority	[3] (−15,000)			
Outlays	(−15,000)			
Federal Railroad Administration:				
Alaska Railroad—sale (H.R. 16264, S. 3593):				
Budget authority	[3] (−100,000)			
Outlays	[3] (−100,000)			
Veterans' Administration:				
Compensation and pensions:				
Veterans service-connected compensation—TB (H.R. 13437):				
Budget authority	−46,000			
Outlays	(−46,000)			
Veterans non-service-connected pensions—Railroad retirement (H.R. 13438):				
Budget authority	−6,000			
Outlays	(−6,000)			
Other veterans income security programs—burial benefits (H.R. 13436, S. ——):				
Budget authority	−54,000			
Outlays	(−54,000)			
Medical care—private insurance (H.R. 16264, S. 3593):				
Budget authority	[3] −40,000			
Outlays	[3] (−40,000)			
Direct loan revolving fund (H.R. 11703, S. ——):				
Budget authority				
Outlays	(−125,000)			
General Services Administration:				
Sale of stockpile surpluses:				
Various legislation (17 bills):				
Budget authority		−180,000	−180,000	[7] −180,000
Outlays		(−180,000)	(−180,000)	(−180,000)
Various legislation (5 bills):				
Budget authority	−250,000			
Outlays	(−250,000)			
Total: [5]				
Budget authority	−2,206,577	−964,000	−964,000	−180,000
Outlays	(−2,313,664)	(−964,000)	(−964,000)	(−180,000)

[1] If positive legislative action is not taken on each item, budget authority and budget outlay estimates carried in the budget will be increased by the amount indicated.
[2] Includes effect of proposals announced in H. Doc. 91-313, postal reform message.
[3] Included in proposed Federal Economy Act (H. Doc. 91-263, H.R. 16264, S. 3593).
[4] Assumes half-year delay in rate increase.
[5] Does not reflect certain legislative proposals, shown in parenthesis above, which have no effect on the overall Federal budget, such as shifts between departments and agencies, between Federal and trust funds, or which technically do not require legislation to effect proposed reduction.
[6] Subject to or in conference.
[7] Pending signature.

Mr. ALLOTT. The last item that I want to mention today has to do with the action of Congress on revenue proposals submitted by the President which affect the fiscal year 1971 budget. The reductions achieved in the fiscal 1970 budget do not take account of the revenue portion of the ledger. President Nixon asked that whenever a Member of Congress displayed the imagination to introduce a bill that calls for more spending, he should also display the courage to introduce a bill raising the taxes to pay for that program.

Since Congress has succeeded in reducing revenues to a level below expenditures, clearly the administration is not to be faulted for its attempts to maintain some order of balance.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD a table entitled "Revenue Proposals Affecting the Fiscal Year 1971 Budget," which appears at page 14 of Representative MAHON's 1971 budget scorekeeping report—staff report No. 7.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

SUPPORTING TABLE NO. 3—REVENUE PROPOSALS AFFECTING THE FISCAL YEAR 1971 BUDGET

[In millions of dollars]

	Estimated receipts for fiscal year 1971	Congressional action on fiscal year 1971 revenue proposals to date: House	Senate	Enacted
Revenue estimate in the fiscal year 1971 budget	202,103			
Revenue estimates as revised by subsequent proposals and reestimates	204,109			
Adjustments for interfund and intragovernmental transactions and applicable receipts	16,928			
Total gross receipts	221,037			
To be derived from existing revenue legislation	216,415			
Estimated revenues to be derived from proposals in the fiscal year 1971 budget: [1]				
Excise taxes-extension of present rates (H.R. ——):				
Automobiles	260			
Telephone service	300			
Social security—increase wage base (H.R. 17550)	205	204

[1] Without congressional action on each item, estimated receipts will be reduced by these amounts.
[2] No effect on fiscal 1971 revenue: $153,000,000 in 1972, $668,000,000 in 1973, and $719,000,000 in 1974.
[3] Request assumed budgetary impact in fiscal year 1970.
[4] Committee action.
[5] Subject to or in conference.

Mr. ALLOTT. In conclusion, Mr. President, let me observe that just as it is a dangerous game to assume that only the defense appropriations bill must be reduced, so, too, is it misleading to fail to take into account the revenue producing side of the ledger. Congress and the President have tried to reorder spending priorities, emphasizing new domestic opportunities. On the other hand, Congress has not yet acted on the revenue producing side of its responsibilities. For the record, I want to assure my colleagues that I will keep inserting Representative MAHON's scorekeeping reports into the

RECORD so that everyone can be on notice as to the action or lack of action which is taking place on this aspect during this session of the 91st Congress.

Mr. President, I ask unanimous consent that the statement by the President entitled "Congressional Action and Government Spending," dated July 18, 1970, be printed at this point in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

CONGRESSIONAL ACTION AND GOVERNMENT SPENDING

I am issuing this statement today because I view with deepening concern the course of events in the Congress affecting the expenditure of the taxpayers' money. There is a persistent and growing tendency on Capitol Hill to approve increases in expenditures without providing the revenue to pay the costs. For just one example, the Congress seems on the verge of approving an education appropriation bill that provides nearly half a billion dollars more than I requested.

Given this situation, it is time to face some hard figures and some troublesome possibilities and to strive for solutions.

Our Federal budget totals over $200 billion. If we allow these outlays to overshoot the basic revenue-producing capacity of our tax system—as happened particularly in 1967 and 1968—we will produce the same result: inflation of a magnitude that will take difficult and painful measures to eliminate.

In fiscal year 1970, which ended June 30, we worked very hard and effectively—in the midst of continuing controversy—to hold the expenditure line. As a result, any deficit will reflect a short-fall of revenues from the adjustment of the economy to policies designed to combat inflation.

For fiscal year 1971, which began July 1, this administration transmitted to the Congress a budget calling for expenditures of $200 billion, and estimating revenues at $202 billion. If the Congress continues in its present pattern of proposed increases in expenditures, the total for this fiscal year will actually reach a substantially larger figure.

Some $3.5 billion of increases are caused by mandatory and virtually uncontrollable rises in costs—such as increases in the interest of the national debt ($1.8 billion) and in public assistance (over $500 million). The major pay increase for Federal employees added $1.4 billion over the amount originally budgeted. Some increases are the result of necessary new programs. But much of the total increase is due to threatened Congressional action or inaction.

On the receipts side of the ledger, the Congress has failed to provide necessary revenue. By its action on the tax bill last year, the Congress had already reduced projected revenue for fiscal year 1971 by $3 billion and for fiscal year 1972 by $5 billion below my request. Beyond this, the Congress has as yet failed to take action on my proposals for a tax on lead used in gasoline, an advance in the time of collection of estate and gift taxes, and an increase in postal rates. The Congress must produce action on these measures or we can expect to collect much less than the $202 billion estimated in February.

And that is not all. The 1971 expenditures are an inevitable springboard for the budget of 1972. Unless the present trend is corrected by the Congress, the resulting 1972 spending could produce a massive deficit.

It has become almost a cliché to say that all we need do to resolve this dilemma with regard to our Federal budget is to cut space and defense outlays and "change our national priorities." Let's set the record straight. We *have* changed out national priorities.

In the budget that I proposed for fiscal 1971, spending for defense is exceeded by spending for human resources for the first time in 20 years. In all of the last three administrations, military spending ran far above spending for other purposes. In 1962 under President Kennedy the Federal Government spent 48 percent of its budget for defense and only 29 percent for human resources. By 1968, the comparison was 45 percent to 32 percent. My budget for 1971 sharply reversed these priorities. It calls for spending 37 percent for defense and 41 percent for human resources programs. To accomplish this massive change in emphasis, military and space expenditures were cut by some $6 billion.

As a former Member of the House and the Senate, I fully understand that the Members consider appropriations and spending bills one at a time. The trouble is that the total of the parts, each in itself attractive and even meritorious, is too large a figure. Unless the Congress makes a very special effort to look at the total picture, the Members may not fully appreciate the overall effect of their fiscal actions.

In raising the issue of budget deficits, I am not suggesting that the Federal Government should necessarily adhere to a strict pattern of a balanced budget every year. At times the economic situation permits—even calls for—a budget deficit. There is one basic guideline for the budget, however, which we should never violate: except in emergency conditions, expenditures must never be allowed to outrun the revenues that the tax system would produce at reasonably full employment. When the Federal Government's spending actions over an extended period push outlays sharply higher, increased tax rates or inflation inevitably follow. We had such a period in the 1960's. We have been paying the high price—and higher prices—for that recently.

We must not let that happen again. It need not happen. Responsible government cannot let it happen. This is a time when the taxpayers of the United States will not tolerate irresponsible spending. The Congress should ask itself in every case: Will this new expenditure, when tied to all the others, require increased taxes or cause a deficit which would bring about an increase in prices? The Congress must examine with special care those spending programs which benefit some of the people but which really raise taxes and prices for all the people.

Recently I signed into law a bill fixing a "ceiling" on Federal spending for the current fiscal year. I accept that ceiling and intend to live under it. But the Congress, by making exceptions and approving measures with mandatory spending provisions, has made a travesty of this legislation.

I now ask the Congress to establish a *firm* ceiling on total expenditures—a ceiling from which only specific and genuine "uncontrollables" such as interest on the public debt would be exempt—a ceiling within which the President can determine priorities—a ceiling that would apply to *the Congress* as well as to the Executive. This will require of the Congress—as well as the President—the hard task of adjusting and pruning individual program outlays to hold their total within this ceiling. With this we can reassure citizens generally that Washington will not take spending actions that will impose on their future incomes the burdens of ever increasing tax rates. With this we can pursue vigorous policies of expansion to achieve full employment, rapid improvements in our material levels of living, and a more stable dollar.

Mr. PROXMIRE. Mr. President, will the Senator yield?

Mr. ALLOTT. I yield.

Mr. PROXMIRE. I am happy that the distinguished Senator from Colorado has made this speech today. I think it is most useful and enlightening, and it is in accordance with the speech made previously, I believe on July 21, by the distinguished Senator from Colorado.

I think it is clear that there is a sharp difference between the statistics put into the RECORD by the Senator from Colorado, taken mainly from the chairman of the House Appropriations Committee, Mr. MAHON, and those put into the RECORD by the majority leader, the Senator from Montana (Mr. MANSFIELD). The difference, I think, is based on several things.

First, the Senator from Colorado is putting in legislative and appropriation spending actions. The Senator from Montana has been putting in appropriation actions.

Mr. ALLOTT. I believe that in the first remarks of the distinguished majority leader, it was mostly in comparison with the 1970 budget of President Johnson.

Mr PROXMIRE. No, indeed. That is not correct. The Senator from Montana made it clear that his actions related to the revised Nixon budget.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. MANSFIELD. Mr. President, I would like to make that point clear. I have tried to make it time and time again.

The distinguished Senator from Colorado was kind enough to inform me that he was going to make a speech commenting on some statements I had made relative to congressional reductions in the budget. Unfortunately, I was absent on official business and I did not get to hear the speech by the distinguished Senator.

I was fully aware of the fact that when the present President came into office, he was confronted with the Johnson budget. What he did was to hold up that budget, bring about a revision, and reduce it something on the order of $5 billion, as I recall. He is to be commended for such action.

All the facts and figures I have stated and put into the RECORD, however, have to do with the revised budget offered by President Nixon. They did not concern the Johnson budget in any way, shape, or form. I want to make the record very clear in that respect.

Mr. ALLOTT. Mr. President, will the Senator yield?

Mr. MANSFIELD. I yield.

Mr. ALLOTT. I was rechecking that. The Senator is entirely correct.

Mr. MANSFIELD. I thank the Senator.

The PRESIDING OFFICER. Does the Senator from Wisconsin wish the floor?

Mr. PROXMIRE. Yes.

Mr. President, the difference is that in part, at least, the Senator from Colorado was talking about legislative as well as appropriations spending actions. The Senator from Colorado has been on the Appropriations Committee for a long time, longer than I have—I have been on it 6 or 7 years, and he was on it before that—and he is aware of the fact that very often Congress will pass rather extravagant legislative authorization bills and then not appropriate the funds for them.

In my view, the appropriation action by the Appropriations Committee, and

especially by Congress, is the decisive action to determine whether or not Congress is going to expend the funds. For this reason, it seems to me that it is perfectly fair and proper and accurate and reasonable for the majority leader to make the kind of comparison he made between the President's request and the final action on appropriations by Congress.

Of course, there are exceptions to that. Certainly, if legislative action mandates expenditures without going through the appropriation process, then I think the Senator from Colorado's position would be correct, to the extent that Congress goes above the President's figure.

Mr. BYRD of West Virginia. Mr. President, will the Senator yield for a unanimous-consent request?

Mr. PROXMIRE. I yield.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that, notwithstanding the expiration of the morning hour at 2 p.m., the unfinished business not be laid down until the morning business is closed.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ALLOTT. Mr. President, will the Senator yield?

Mr. PROXMIRE. I yield.

Mr. ALLOTT. I think that what the Senator has said is true. Unfortunately, I think that the legislative committees have been prone to think more in terms of what would be ideally desirable in putting the limitations on their authorization rather than what is possible and practical. However, we see the situation then when an appropriation committee lives up to its complete responsibility—the Senator understands what those responsibilities are as well as I do—and says that an authorization of $1 billion simply cannot be accommodated this year because $500 million is all we can possibly fit into the budget, then we hear the argument or, as Senators have heard and as I have heard 500 times this year, "Look what the legislative committee did. We authorized so much and the Appropriations Committee has refused to finance it." I do think—and I am not being critical of my friends on the legislative committees, as I am on one—that we try to watch it. We could operate more effectively as a Congress if, instead of figuring out what could be spent under any circumstances, the legislative committees would try to be more realistic in their authorizations——

Mr. PROXMIRE. I wholeheartedly agree with——

Mr. ALLOTT. Because the Appropriations Committee does try to do its job.

Mr. PROXMIRE. I want once again to call the attention of the Senator from Colorado to the fact that the measure suggested by the majority leader and by the Democratic Policy Committee is a measure of how Congress finally votes on appropriation measures for 1970 and, to the extent we have done so, for 1971. On that count, Congress has cut decisively by several billion dollars—in fact, overall by over $8 billion—below what President Nixon's request was. We are not spending more than the President requests, but less on appropriation measures, which is the final test.

In the second place, the Senator from Colorado did contend that the Nixon administration has cut defense spending. They may have cut defense spending and I think there is every evidence that they will cut defense spending, but to date I call to the attention of the Senator from Colorado the fact that expenditures by the Pentagon and the Department of Defense in fiscal 1970 for goods and services are higher by $150 million than they were in 1969.

This is, in spite of the very sharp cut made in the 1970 budget by Congress, below what President Nixon requested and far below the 1969 appropriations.

What I am saying is that the final action really is not in Congress but depends upon how much the President wants to spend out of what we appropriate and out of the unobligated balances in past years. On that test, President Nixon has used the unobligated balances so as to maintain a high level of military spending right into 1970.

Mr. ALLOTT. If the distinguished Senator will look at page 60 of the budget brief, he will see a cross-hatched table, placed there at the instance of some of us several years ago, which shows the flowthrough from the present appropriations and the flowthrough from past appropriations to the present. The table illustrates exactly the figure I used, which is that at this time of year it takes a $2 cut in appropriations to effect a $1 cut in expenditures. If we do not pass the appropriation bills, as we have not, until October or November, it takes a $3 cut in appropriations to effect a $1 cut in expenditures.

But the point I have been trying to make, which I do not think the distinguished majority leader made in his remarks, relates not only to matters concerning expenditures, new obligational authority, and legislative authority. I am also trying to put into perspective the fact that there has been a distinct shortfall in revenue-raising measures, as witness the terrible tax bill we passed last fall.

Mr. PROXMIRE. The Senator has spoken several times about the shortfall in revenue. What shall we do? Increase taxes? Does the Senator from Colorado take the position personally that we should increase taxes; that he would vote for a tax increase for insurance in the area of lead gasoline, as the administration has proposed?

Mr. ALLOTT. I would probably vote for most of them, yes; but I am looking at a supporting table of Representative MAHON'S.

The PRESIDING OFFICER (Mr. BOGGS). The time of the Senator from Wisconsin has expired.

Mr. PROXMIRE. I ask for 2 additional minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ALLOTT. The tables, which I think the Senator has seen, are of total appropriation bills. I do not know how we will ever tackle the question—it is obvious we have not done it over the past 2 years—by putting an expenditure ceiling on the President and starting to meet our responsibilities.

Mr. PROXMIRE. Directly, yes, in the event we cut military expenditures by some $5 or $6 billion. Last year we cut $5.5 billion. If we do that, the net effect of the action by Congress will be to reduce the upcoming budget this year, as we did last year. Does the Senator still persist in the belief that we would have to increase taxes under those circumstances?

Mr. ALLOTT. Yes; unless we actually provide revenues for some of the shortfalls, as for example, the increase in salaries and the other items I mentioned.

Mr. PROXMIRE. What bothers me very much is that we have had testimony before the Joint Economic Committee that if unemployment increases to 6 percent—maybe it will not, and we all pray it will not—but if it does, then on the shortfall, there will be a drop in tax revenues; and if on top of that we increase taxes further, we will simply drive ourselves into a recession and get into a position where it will be the deficit will deepen.

Mr. ALLOTT. There is a point, I will agree, where that is true. I do not think we are in danger of getting to a 6-percent unemployment rate figure at present. I cannot see it in the present projections. Maybe the Senator can. But there is a point where the principle the Senator states is true. If we raise taxes too much, it will drive us further down the road toward a recession.

Mr. PROXMIRE. I thank the Senator very much. As I said when I first began speaking, I think that these remarks have been most helpful in giving us a better and broader understanding of what this subject is all about, because there are conflicting figures concerning it.

Mr. ALLOTT. While we talk about the unemployment figure, I should like to call the Senator's attention to the fact that—I do not have the figures right at hand—I think total employment in this country today is approximately 2 million more than it was a year ago.

Mr. PROXMIRE. The Senator is about correct, I believe, but my understanding is that, for each of the past 4 months, the rather shocking realization is that the employment figures, that is the number of working Americans, have gone down, so that today 4.6 million Americans are out of work. There is the seasonal adjustment to be considered, and with that adjustment, it works out to a 4.7-percent figure, which from all the testimony I have heard from Mr. McCracken, Chairman of the Council of Economic Advisers, the Secretary of the Treasury, and others indicates that they expect a further unemployment increase, as do most Government economists. It might not go up to the 6 percent. But this is a serious economic matter as well as a matter of fiscal responsibility.

Mr. ALLOTT. The figures I gave the Senator were predicated by me in the defense and space-related fields, were they not?

Mr. PROXMIRE. What figures are those?

Mr. ALLOTT. The unemployment figures.

Mr. PROXMIRE. They were overall. The overall figures. 4.7 percent out of work. They cover all Americans, when we talk about employment. Employment in this country has actually dropped further.

Mr. MANSFIELD. Mr. President, while the distinguished Senator is on the floor, I should like to proceed for about 3 minutes to make the matter perfectly clear as best as I can. I tried to point out to the Senate, before the distinguished Senator from Colorado arrived in the Chamber, that I was getting a little bit tired of having the ball thrown back and forth and having Congress accused of being "spendthrift" or of being "big spenders," and the like.

What I am trying to emphasize is the fact that for the past 25 years every Congress under every President has reduced the President's budget request. What we did this year in Congress we did together, Republicans and Democrats alike.

By the same token, I also gave the President full credit for taking the initiative himself and, in the last fiscal year, for reducing expenditures in excess of $3 billion; and, furthermore, for reducing the Johnson budget by in excess of $5 billion. So that the President is doing his share in the administrative end of the Government in the executive branch.

We are also doing our share here. We can point with much pride to our record in this department. Rather than throwing the bill back and forth, accusing Congress of this, that, and the other thing, it would be far more constructive if we would continue to work together as a team, in cooperation, and in partnership. We can achieve a lot more and carry out our responsibilities, to the end that we may continue to be proud of our efforts regardless of party in Congress.

I want the RECORD to show that I think as much credit should go to the executive as I think we have earned here in the Congress. But up here it is a nonpartisan question. The Democrats and Republicans together, and not the majority party, should be given credit for the reductions which have been made.

SENATOR SMITH OF MAINE RETURNS TO HER SENATE DUTIES

Mr. GRIFFIN. Mr. President, during the past several weeks the Senate has not been the same without the presence and perception of the distinguished senior Senator from Maine.

There is a happy note on the news ticker today. I am pleased to read it to the Senate:

Sen. Margaret Chase Smith, R-Maine, was to return to work today following two weeks of hospitalization in New York City where she underwent right hip surgery.

The senator underwent what doctors termed "total hip replacement" July 8, at the Columbia-Presbyterian Medical Center. She was released from the hospital last Friday and returned to her Washington home.

Doctors prescribed limited activity for Mrs. Smith during the next two weeks. This will permit her to spend a few hours in her office several days each week.

I know that I speak for all of her colleagues on both sides of the aisle when I say that we are delighted and very pleased that the distinguished senior Senator from Maine is back among us after what can only be described as a very remarkable recovery.

We look forward once more to her cheerful presence and her wise contributions to the deliberations of this body.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. GRIFFIN. I yield.

Mr. MANSFIELD. Mr. President, may I say that this is most pleasant and most unexpectedly good news.

I am delighted that in such a short period after such a serious operation, the distinguished senior Senator from Maine is back in her office and doing her job with the dedication, the integrity, and the devotion which are her hallmarks.

The acting minority leader said it rightly when he said that he spoke in behalf of all Members of the Senate, both Democrats and Republicans, concerning our pleasure at the news that MARGARET SMITH has recovered so nicely and is back with us and once again able to perform her functions and duties with the usual skill and aplomb which mark her work.

It is good news indeed.

We are delighted that Senator SMITH of Maine is back on the job again. I am surprised, pleasantly, that she was able to return so soon.

Mr. GRIFFIN. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. GRIFFIN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

COMMUNICATIONS FROM EXECUTIVE DEPARTMENTS, ETC.

The ACTING PRESIDENT pro tempore (Mr. PERCY) laid before the Senate the following letters and communications, which were referred as indicated:

PROPOSED AMENDMENT TO THE BUDGET, 1971, FOR THE INTERSTATE COMMERCE COMMISSION (S. Doc. 91–95)

A communication from the President of the United States, transmitting an amendment to the budget for fiscal year 1971, in the amount of $3,313,500 for the Interstate Commerce Commission; to the Committee on Appropriations, and ordered to be printed.

PROPOSED AMENDMENT TO THE BUDGET, 1971, FOR THE LEGISLATIVE BRANCH (S. Doc. 91–96)

A communication from the President of the United States, transmitting an amendment to the budget for fiscal year 1971, in the amount of $791,634 for the legislative branch; to the Committee on Appropriations, and ordered to be printed.

PUERTO RICAN-VIRGIN ISLANDS TRADE STUDY, A REGULATORY STAFF ANALYSIS

A letter from the Chairman, Federal Maritime Commission, transmitting, for the information of the Senate a study entitled "Puerto Rican-Virgin Islands Trade Study, A Regulatory Staff Analysis" (with an accompanying document); to the Committee on Commerce.

REPORT OF LEWIS AND CLARK TRAIL COMMISSION

A letter from the Chairman, Lewis and Clark Trail Commission, transmitting, pursuant to law, a Report of the Commission dated October 1969 (with an accompanying report); to the Committee on Interior and Insular Affairs.

CENTRAL OREGON IRRIGATION DISTRICT, REDMOND, OREG.

A letter from the Assistant Secretary of the Interior, transmitting, pursuant to law, an application by the Central Oregon Irrigation District of Redmond, Oreg., for a supplemental loan under the Small Reclamation Projects Act (with accompanying papers); to the Committee on Interior and Insular Affairs.

REPORTS OF COMPTROLLER GENERAL

A letter from the Comptroller General of the United States, transmitting, pursuant to law, a report on the need for increased control over local currency made available to the Republic of Vietnam for support of its military and civil budgets, Department of Defense, Department of State, and Agency for International Development, dated July 24, 1970 (with an accompanying report); to the Committee on Government Operations.

A letter from the Comptroller General of the United States, transmitting, pursuant to law, a report on examination of financial statements of the accountability of the Treasurer of the United States, fiscal years 1968 and 1969, Department of the Treasury, dated July 27, 1970 (with an accompanying report); to the Committee on Government Operations.

A letter from the Comptroller General of the United States, transmitting, pursuant to law, a report on problems in approving and paying for nursing home care under the medicaid program in California, Social and Rehabilitation Service, Department of Health, Education, and Welfare, dated July 23, 1970 (with an accompanying report); to the Committee on Government Operations.

REPORT OF CIVIL AIR PATROL

A letter from the National Commander, Civil Air Patrol, transmitting, pursuant to law, the annual report of the CAP for the year 1969 (with an accompanying report); to the Committee on the Judiciary.

REPORT OF THE FEDERAL MEDIATION AND CONCILIATION SERVICE

A letter from the Director, Federal Mediation and Conciliation Service, transmitting, pursuant to law, a report of the Service for the fiscal year ended June 30, 1969 (with an accompanying report); to the Committee on Labor and Public Welfare.

PETITIONS

Petitions were laid before the Senate and referred as indicated:

By the ACTING PRESIDENT pro tempore (Mr. PERCY):

A joint resolution of the Legislature of the State of California; to the Committee on Armed Services:

"ASSEMBLY JOINT RESOLUTION No. 41

"Relative to the public use of beaches on federal military installations in California

"Whereas, Of the 1,072 miles of California coastline only 353 miles are publicly owned and available for recreation, and the demand for public access to the beaches of this state is great; and

"Whereas, Fifty-eight miles of beaches, although publicly owned, are closed to public recreation; and

"Whereas, The federal government now prohibits public access to beaches on approximately 56 miles of California's beach frontage; and

"Whereas, Most of this acreage is located at Camp Pendleton in San Diego County,

Vandenberg Air Base in Santa Barbara County, and at Fort Ord in Monterey County; and

"Whereas, Many of the military operations utilizing these beach areas could be shifted to other areas on the same base and thereby allow California citizens to use these publicly owned beaches; now, therefore, be it

"Resolved by the Assembly and Senate of the State of California, jointly, That the Legislature of the State of California respectfully memorializes the President of the United States to direct the appropriate federal officials to allow public access to California beaches located within military installations; and be it further

"Resolved, That the Chief Clerk of the Assembly transmit copies of this resolution to the President and Vice President of the United States, to the Secretary of Defense, the Chairman of the Federal Council on Environmental Quality, to the Speaker of the House of Representatives, and to each Senator and Representative from California in the Congress of the United States."

A joint resolution of the Legislature of the State of California; to the Committee on Commerce:

"ASSEMBLY JOINT RESOLUTION No. 42

"Relative to the protection and restoration of estuaries and wetlands and federal lands

"Whereas, Ninety percent of California's population lives in the coastal zone of California upon 8 percent of the state's land area; and

"Whereas, The major alterations to California's lands and waters are taking place in the coastal zone; and

"Whereas, This zone contains unique estuarine habitat, including marshes, mudflats, and other wetlands that are in scarce supply and irreplaceable; and

"Whereas, These areas support a great variety of fish and wildlife resources and have other public values of national and statewide significance; and

"Whereas, Many of the remaining estuaries are located on federal military lands; and

"Whereas, Some of these estuaries on federal lands have been dredged or filled by federal authorities and in other estuaries federal authorities have allowed dredging and other alterations by local communities; and

"Whereas, Increasing demands are being placed on the military to alter these lands for other purposes; and

"Whereas, the federal 'Estuaries Inventory Study Act' (Pub. L. 90–454) has as its objective the protection, conservation, and restoration of the nation's estuaries; now, therefore, be it

"Resolved by the Assembly and Senate of the State of California, jointly, That the Legislature of the State of California respectfully memorializes the President and the Congress of the United States to take appropriate action to assure that permanent protection is given to all existing estuaries and wetlands on federal installations in California and to assure that such estuaries and wetlands already damaged will, where feasible, be restored; and be it further

"Resolved, That the Legislature respectfully memorializes the President of the United States to direct the responsible federal officials to advise the Legislature of actions taken to provide permanent protection to these estuaries and wetlands or to restore such estuaries and wetlands which are already damaged; and be it further

"Resolved, That the Chief Clerk of the Assembly transmit copies of this resolution to the President and Vice President of the United States, to the Chairman of the Federal Council on Environmental Quality, to the Speaker of the House of Representatives, and to each Senator and Representative from California in the Congress of the United States.

BILLS INTRODUCED

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. SCOTT:

S. 4124. A bill for the relief of Soccorso M. Tecce; to the Committee on the Judiciary.

By Mr. FONG:

S. 4125. A bill for the relief of Ulrich Paul Kruggel; and

S. 4126. A bill for the relief of Delfina Ranjo Lagasca; to the Committee on the Judiciary.

By Mr. JAVITS:

S. 4127. A bill to provide emergency authority for the guarantee of loans to aid business enterprises to meet temporary and urgent financial needs; to the Committee on Banking and Currency.

(The remarks of Mr. JAVITS when he introduced the bill appear later in the RECORD under the appropriate heading.)

ADDITIONAL COSPONSORS OF BILLS

S. 3960

Mr. BYRD of West Virginia. Mr. President, on behalf of the Senator from Maryland (Mr. TYDINGS), I ask unanimous consent that, at the next printing, the names of the Senator from California (Mr. CRANSTON), the Senator from Minnesota (Mr. MCCARTHY), the Senator from Wisconsin (Mr. NELSON), the Senator from Oregon (Mr. PACKWOOD), and the Senator from Texas (Mr. YARBOROUGH), be added as cosponsors of S. 3960, the Mass Transit Financing Act of 1970, to permit States to use highway trust fund money for mass transit purposes.

The PRESIDING OFFICER (Mr. HUGHES). Without objection, it is so ordered.

S. 4031

Mr. BOGGS. Mr. President, I ask unanimous consent that, at the next printing, the name of the Senator from Texas (Mr. TOWER) be added as a cosponsor of S. 4031, the National Catastrophic Illness Protection Act of 1970.

The PRESIDING OFFICER (Mr. HUGHES). Without objection, it is so ordered.

S. 4079

Mr. BYRD of West Virginia. Mr. President, on behalf of the Senator from Minnesota (Mr. MONDALE), I ask unanimous consent that, at the next printing, the names of the Senator from California (Mr. CRANSTON), the Senator from New York (Mr. GOODELL), the Senator from Oklahoma (Mr. HARRIS), the Senator from Michigan (Mr. HART), the Senator from New York (Mr. JAVITS), the Senator from Minnesota (Mr. MCCARTHY), the Senator from Wisconsin (Mr. NELSON), the Senator from Alaska (Mr. STEVENS), and the Senator from Ohio (Mr. YOUNG) be added as cosponsors of S. 4079, to increase the authorization for annual contributions in aid of low-rent public housing.

The PRESIDING OFFICER (Mr. HUGHES). Without objection, it is so ordered.

S. 4083

Mr. YARBOROUGH. Mr. President, I ask unanimous consent that, at its next printing, the names of the Senator from Colorado (Mr. DOMINICK) and of the Senator from Washington (Mr. MAGNUSON) be added as cosponsor of S. 4083, to modify and enlarge the authority of Gallaudet College to maintain and operate the Kendall School as a demonstration elementary school for the deaf to serve primarily the National Capital region, and for other purposes.

The PRESIDING OFFICER (Mr. NELSON). Without objection, it is so ordered.

AUTHORIZATION OF APPROPRIATIONS FOR MILITARY PROCUREMENT—AMENDMENT

AMENDMENT NO. 793
RESTORATION OF NECESSARY COAST GUARD RESERVE STRENGTH

Mr. WILLIAMS of New Jersey. Mr. President, I submit an amendment to H.R. 17123, the military procurement authorization bill presently before the Senate, and ask that it be printed.

The amendment is a simple one. It changes the Senate Armed Services Committee authorization of 10,000 officers and men for the Coast Guard Selected Reserve by substituting 15,000 officers and men as a personnel ceiling.

I believe this figure to be amply justified by the continuing and growing responsibilities of the Coast Guard in port security and safety, icebreaking, vessel inspection, security patrolling of our coasts, ASW surveillance, marine and air safety, search and rescue, navigational aids, military preparedness, and disaster assistance. I shall have further supportive remarks when the amendment is called up for consideration by the Senate.

It has been brought to my attention that the peacetime role of the Select Reserve is to be substantially increased and that members may be called to active duty in the case of national emergencies and natural disasters. It is also my understanding there will be an increased emphasis on this peacetime role in training these reserves. At this time of increased danger of severe ecological damage it will be of great reassurance to know the Coast Guard and its Reserves are capable of swift response in the event of coastal pollution emergencies and threats to marine life.

I also serve notice, Mr. President, of my intention to offer, if necessary, an amendment to the Department of Transportation appropriations bill not yet reported. I shall argue for funding sufficient to support a reserve program for training and maintaining the personnel authorized by this amendment.

I ask unanimous consent that the text of the amendment be printed at this point in the RECORD.

The PRESIDING OFFICER (Mr. DOLE). The amendment will be received and printed, and will lie on the table;

and, without objection, the amendment will be printed in the RECORD.

The amendment (No. 793) is as follows: "strike out '10,000' and insert in lieu thereof '15,000.'"

STRENGTHENING OF FEDERAL CONTROL OVER PESTICIDES—AMENDMENTS

AMENDMENT NO. 794

Mr. HART. Mr. President, I submit several amendments, intended to be proposed by me, to S. 3866, a bill to strengthen Federal control over pesticides, and request that they be printed in full in the RECORD.

As originally introduced, S. 3866 was designed primarily to confer additional authority over pesticide registration on the Department of Health, Education, and Welfare or, put another way, to provide an independent check on the decisions of the Department of Agriculture regarding such registrations. It was felt that an agency whose primary mission was the promotion of agriculture ought not to be given exclusive control in an area where agricultural and public health considerations often diverge.

In the past months, there have been two significant developments which prompt me today to propose a shift in the bill's major focus. First, the administration has proposed extensive organizational changes in the area of environmental protection. The proposed transfer of ultimate control over pesticide registration from the Department of Agriculture to the new Environmental Protection Agency was obviously inspired by considerations similar to those which prompted S. 3866 and, if approved, most likely will produce somewhat similar results. As a consequence, the need for the reorganizational provisions of S. 3866 has markedly lessened.

The second development has been the demonstration at hearings before the Subcommittee on Energy, Natural Resources, and the Environment of other glaring inadequacies in the pesticide regulatory framework. Several witnesses have testified to the effect that even in the case of the most benign administration of Federal pesticide laws, those laws are destined to permit intolerable practices.

In light of both the diminished need for legislative reorganizational initiatives in the pesticide sphere and the demonstrable inadequacies of substantive pesticide law, it is proposed to change the major function of S. 3866 from reorganization to substantive improvement of the pesticide regulatory scheme. The amendments I introduce today, while scarcely attempting to remedy all the deficiencies of current pesticide legislation, are designed to correct what I believe to be the most significant weaknesses. It may be helpful at this time to enumerate these weaknesses and to summarize what the amendments attempt to do about them.

One of the most serious problems with existing regulatory procedures arises from the almost total absence of legislative criteria for approval or disapproval of any given pesticide. As a result, the principles governing pesticide registration have varied from regulator to regulator, leading to misunderstandings and inconsistent approaches to the problem. The Department of Agriculture testified at our hearings that a reasonable doubt as to the safety of a pesticide is cause for cancellation of its registration. The Department of Health, Education, and Welfare rejects this test, admitting to reasonable doubts about many pesticides it advises should be left on the market. Both departments agree that only in the case of an imminent hazard to the public will suspension of a registration ensue, but they disagree completely on the definition of "imminent."

What is needed is clarification. Guiding principles must be set down so that no matter who is administering the law—the Department of Agriculture, the Department of Health, Education, and Welfare, the Department of the Interior, or the Environmental Protection Agency—Congress mandate to that Administrator will not be misinterpreted.

Yet when we attempt to set down such principles, we become aware of the enormity of the problem which confronts us. As Dr. Jesse Steinfeld, the Surgeon General of the Department of Health, Education, and Welfare points out, there are indeed some doubts as to the safety of virtually all chemical pesticides in common use. To abandon them all because of those doubts would be to choke off much of our food supply and other comforts with which we would not want to part. On the other hand, our reluctance to move against all such chemicals should not shade over into a reluctance to move against any. We cannot, consistent with our responsibilities to ourselves and to future generations, just throw up our hands and ignore the dangers posed by chemical pesticides merely because those dangers are so widespread. What we must do, I feel, is to acknowledge the inconclusiveness of scientific knowledge about these chemicals and, recognizing that certainty is not within our grasp, play the probability game. We must face up to the realization that products now being used conceivably may destroy us one day, and then go on to attempt to maximize our chances for survival.

The criteria which I propose today for the removal of pesticides from the market are in line with this orientation. Under those criteria, continued use of any pesticide would be banned whenever there exists, first, a reasonable doubt as to the safety of the pesticide and, second, other reasonable alternatives about which there are less serious doubts. Underlying this approach, of course, is the recognition that whereas doubts may exist as to the safety of all pesticides, those doubts may vary considerably as to their seriousness. Given this state of affairs, common sense dictates that we do everything we can to minimize the admittedly necessary risks inherent in pesticide use. S. 3866, as amended, is designed to enact this objective into law.

Testimony in our subcommittee hearings suggests that the approach envisioned by S. 3866 is not now being followed within the Departments. According to Dr. Steinfeld, the Department of Health, Education, and Welfare feels the need to be "fairly secure" about the danger of a pesticide before it will advise the Department of Agriculture to suspend its use. Since HEW does not consider the utility of the pesticides it examines, it follows that ordinarily it will not know much about the alternatives which may be available to accomplish similar purposes. The Department of Agriculture is aware of these alternatives, but in the past has not advocated substitution of one pesticide for another unless prodded by HEW's concern for safety.

What is left out of this picture is the possibility of removing pesticide A from the market when there are doubts, although inconclusive, about its safety and when there are fewer doubts about pesticide B, a reasonable alternative. HEW will not act in this situation, assuming the data do not "fairly securely" establish a hazard. USDA will probably not act if HEW does not push them. And yet is not this a situation where we want to move against pesticide A? Are not the risks that we run by using A when B can get the job done just as well, needless risks? It is the conclusion of S. 3866 that they are and that they should be avoided in all cases.

The proposed amendments attempt to provide additional clarification of congressional mandates by defining explicitly the term "imminent hazards." Although the "imminent hazard" test traditionally has served to delineate those hazardous substances which require immediate suspension from the market—as opposed to removal following drawn-out administrative procedures—there has always been considerable dispute as to the term's precise meaning.

At our subcommittee hearings, the Department of Agriculture offered a definition of the term which greatly limits the Department's authority to act. "Imminent" was equated with "immediate" or "threatening to happen now." The problem created by this definition is that it renders the Department powerless to control dangers which arise indirectly from certain pesticide uses. For one, it rules out immediate suspension of use on food crops, since crops treated with even the most deadly of pesticides will not be eaten "immediately" after spraying.

Whereas it seems unthinkable that Congress would ever have intended to so limit the Department, it should be made clear that it is not now its intention to do so. In setting down a clear definition of "imminent hazard," it seems sensible to reflect back to Congress original objective in using the words. They arose, it appears, as a response to the lengthy procedures normally required by Federal law to effect removal of pesticides and other hazardous substances. The Congress recognized that cases would arise under both the Hazardous Substances Act and the Federal Insecticide, Fungicide, and Rodenticide Act in which the continued use of a dangerous substance pending the administration of those procedures would unduly jeopardize the public. In both acts, the contingency to be protected against was described as an "imminent hazard."

In light of this objective, I would argue that "imminent" ought to be defined in terms of the length of time normally consumed by the procedures in question. If the public is to be protected at all times, the administering authority must be permitted to dispense with normal procedures for removal whenever damage may result before those procedures have run their course. By defining an "imminent hazard" as one which "if it damages man or the environment, is likely to do so prior to the time normally required to carry out the procedures" authorized by the act, S. 3866 would insure that an adequate response to danger is always within the capacity of the Government. It would also expressly reject the Department of Agriculture's definition as one which occasionally would rule out any such response.

The amendments which are proposed today are designed also to bolster the effectiveness of suspension and cancellation actions entered into by regulatory authorities. Under existing law, although pesticides which have been suspended by the Department of Agriculture may not be shipped in interstate commerce, those on retail shelves at the time of suspension may continue to be sold without violating any Federal law. At our hearings we have seen that the herbicide 2,4,5–T, which is now suspended for certain uses, is still freely sold for those very uses. Whereas the Department of Agriculture testified that nearly all manufacturers of 2,4,5–T have agreed to recall existing stocks of suspended products, evidence was produced to the effect that at the time of the hearings they had not yet done so. In light of this evidence, it seems unreasonable to continue to rely on voluntary compliance in an area where the risks of non-compliance are so great. It is therefore proposed that the sale of any pesticide which has been suspended or banned be made criminal.

A related problem inherent in existing law arises when stocks are recalled and later relabeled. Since relabeling of suspended products is permitted, products which have been banned for some but not all uses may continue to appear on retail shelves. Moreover, consumers who have used such products in the past and have enjoyed the results may continue to buy them and use them for suspended uses without committing any Federal violation.

S. 3866 attempts to deal with this problem by rendering the misuse of any pesticide illegal. The threat of penalties for misuse, it is thought, is a necessary complement to the control of pesticides through labeling. Although pesticide labels may continue to go unread in spite of such penalties, the pesticide user should be made aware that he ignores those labels at his peril.

To reiterate, the deficiencies in our scheme of pesticide regulation are numerous, and S. 3866 is not designed to cure them all. Yet the original bill and the amendments I introduce today do push in the direction of important, and I believe essential, changes. It is my hope that a sufficient number of my colleagues will find them worthy of their endorsement and support.

The PRESIDING OFFICER (Mr. DOLE). The amendments will be received and printed, and will be appropriately referred; and, without objection, the amendments will be printed in the RECORD.

The amendments (No. 794) were referred to the Committee on Commerce, as follows:

On page 1, line 3, after "section 2(f)(2)", insert "of the Hazardous Substances Act".

On page 1, beginning with line 8, strike out all through line 4 on page 2 and insert in lieu thereof the following:

"(B) any economic poison which the Secretary by regulation classifies as a 'banned hazardous substance', and the Secretary shall so classify an economic poison (i) whenever there is a reasonable doubt as to the safety of the economic poison for man or the environment and there are less serious doubts as to the safety of any reasonable alternative to such poison or (ii) whenever the protection of man or the environment otherwise requires; or (C)".

On page 2, line 19, strike out the quotation marks.

On page 2, between lines 19 and 20, insert the following:

"(s) the term 'imminent hazard' means any hazard or potential hazard referred to in paragraph (q) of section 2 which, if it damages man or the environment, is likely to do so prior to the time normally required to carry out the procedures under subparagraphs (2) or (3) of that paragraph."

On page 2, strike line 5 through line 14, and insert in lieu thereof the following:

"(c)(1) section 2(q)(2) of such Act is amended by striking out "clause (B)" and inserting in lieu thereof "clause (C)".

(2) Section 2(q)(2) is redesignated as section 2(q)(3).

(3) Section 2(q) is amended by inserting immediately after subparagraph (1) the following:

(2) Proceedings for the issuance, amendment, or repeal of regulations pursuant to clause (B) of subparagraph (1) of this paragraph shall be governed by the procedures relating to cancellation as prescribed in section 4 of the Federal Insecticide, Fungicide and Rodenticide Act, which shall be administered by the Secretary: *Provided*, that if he finds that an economic poison presents an imminent hazard to man or the environment, he shall, by order published in the Federal Register, give notice of such findings and thereupon such economic poison shall be deemed to be a "banned hazardous substance" pending the completion of procedures relating to the issuance of such regulation. Whenever the Secretary has not issued a regulation with respect to an economic poison pursuant to clause (B) of subparagraph (1) of this paragraph, the Secretary of Agriculture shall cancel the registration of such poison pursuant to section 4 of the Federal Insecticide, Fungicide and Rodenticide Act whenever he finds that either of the conditions enumerated in such clause are present: *Provided*, that if he finds that an imminent hazard to man or the environment exists, he shall suspend the registration pursuant to section 4 of such Act.'"

On page 2, line 22, strike out "subsection" and insert in lieu thereof "subsections".

On page 2, line 25, strike out the quotation marks.

On page 2, after line 25, insert the following:

"(j) The sale or offer for sale of any economic poison which has been designated a 'banned hazardous substance' and which has moved in interstate commerce.

"(k) The sale or offer for sale of any economic poison which has moved in interstate commerce and for which there is in effect no registration under the Federal Insecticide, Fungicide and Rodenticide Act."

ADDITIONAL COSPONSORS OF AN AMENDMENT

AMENDMENT NO. 774

Mr. YARBOROUGH. Mr. President, I ask unanimous consent that the names of the Senator from Ohio (Mr. YOUNG), the Senator from Tennessee (Mr. GORE), the Senator from Mississippi (Mr. EASTLAND), the Senator from Iowa (Mr. HUGHES), the Senator from Oklahoma (Mr. HARRIS) and the Senator from New Mexico (Mr. MONTOYA) be added as cosponsors of my amendment No. 774 to S. 3619, to create within the office of the President an Office of Disaster Assistance which would authorize the Small Business Administration to make loans to disaster victims to prevent the dispossession or eviction of any person from his residence as a result of the foreclosure of any mortgage or lien, cancellation of any contract of sale, or termination of any lease, oral or written, of the property which is such person's residence.

The PRESIDING OFFICER (Mr. NELSON). Without objection, it is so ordered.

ADDITIONAL STATEMENTS OF SENATORS

THE LOCKHEED C–5A—DEFENSE GIANT

Mr. YOUNG of North Dakota. Mr. President, there has been an unusual amount of publicity, most of it adverse, with respect to Lockheed's C–5A plane being acquired by the Air Force.

The cost overrun has been very sizable, but percentagewise, not by as much as some of the other big procurement programs of the Department of Defense. Few, if any, question the quality of this C–5A. It is a superb plane. Lockheed, its maker, has lost heavily in providing this plane for the Air Force.

Mr. President, one of the most factual articles I have read with respect to the C–5A and cost overrun was written by staff writer Michael Getler, and published in the Washington Post of Sunday, July 26. The information contained in the article is very factual and the kind, I believe, in which Members of Congress and the public generally would be greatly interested.

I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CAN DEFENSE GIANT BE ALLOWED TO FOLD? LOCKHEED: DILEMMA FOR UNITED STATES

(By Michael Getler)

An Agena rocket pushes a Samos satellite into orbit around the earth, enabling its cameras to scan the earth below for signs of new Russian SS–9 missile sites. The Agena is made by Lockheed.

Days later, the Samos ejects its packet of top secret film and a specially equipped C–130 transport plane snares it over the Pacific and heads for home in Hawaii. Lockheed manufactures the C–130.

What Samos misses, high flying SR–71 and U–2 reconnaissance planes often obtain. Those planes, and their world famous designer, C. L. (Kelly) Johnson, are from Lockheed.

Off the Florida coast, Navy technicians are preparing a Poseidon missile for its first un-

derwater test shot on Monday. Lockheed produces the Poseidon missile.

At Charleston (S.C.) Air Force Base, a big C–141 jet transport takes off for Vietnam while ground crews ready the huge C–5A transport for its first European runs next month. Both planes carry the Lockheed trademark.

This scenario is real. What seems unbelievable, however, is that the nation's top defense contractor ($2.07 billion in total sales in 1969), and the archetype of the vaunted American industrial-technological base, is now facing a potentially fatal financial crisis.

As Lockheed's problem unfolds, it sends new shudders through an aerospace industry already shaken by a $3-billion dip in sales last year and the loss of more than 200,000 jobs. Among Lockheed's fellow aerospace giants, there is little smugness. "There, but for the grace of God, go I," is the attitude expressed.

In its broadest terms, the question is whether American defense needs require the government to keep a faltering defense industry afloat as a matter of national security or whether such companies should suffer the classical free enterprise penalty for failure to keep solvent—corporate death or merger with a healthy partner.

The Lockheed case is special, however, because the firm claims the government is at fault through "unrealistic" contracting procedures since abandoned by the Pentagon.

The case is also not without irony. Lockheed's C–5A excesses are not the biggest ones ever to hit a single program. Other defense contractors have had similar problems but have escaped through a system whose principal objective for years has been to get the weapons the country needs and worry about the details later. Yet Lockheed got caught in a new contract and a new era.

Ironically, had the company and the Air Force been less secretive during the early stages of trouble, many Pentagon observers believe the Congress, as it has in the past, would have been understanding.

Instead, the C–5A exploded upon Lockheed and the Air Force as a scandal, and the outcome for the company, the military and the country is still mixed up in the debris.

Pentagon officials privy to Lockheed's critical cash flow problem believe two key questions will determine whether the company that has delivered more than 31,000 airplanes and 1,000 strategic missiles to the armed forces in its 38-year history will face either takeover or bankruptcy in the next several months: 1) Will the Senate go along with the House authorization of $200 million in contingency funds for the C–5A in the military spending bill now on the floor? and 2) Can the firm raise an estimated $250 million from private sources without government guarantees to see it through first deliveries of its commercial L–1011 airbus in the fall of 1971?

Most observers believe that Lockheed could survive failure to get either government authorization for the $200 or the $250 million from private sources, but they think it would be fatal to the company in its present form if it got neither.

On Capitol Hill, some staunch foes of the C–5A and high military spending believe bankruptcy might be a good thing, a catharsis for the industry which would bring more efficiency.

One economist and C–5A critic, Richard Kauffman of the Joint Economic Committee staff says there is no hard evidence that Lockheed's going into bankruptcy would have an adverse effect on the national economy. Unlike Penn Central, with assets of $8.5 billion, Lockheed's assets come to about $1.27 billion.

Others, including Sen. William Proxmire (D-Wisc), a relentless and influential critic, prefer to view the prospect of a government rescue of Lockheed, as "setting a bad precedent," serving notice to aerospace contractors who overextend themselves that the taxpayers will bail them out.

The Pentagon is worried about this too. A comptroller there says, "We don't want companies lining up demanding help on the basis of a government-financed solution to Lockheed's troubles. We can't make our procurement process some idle procedure. It has to be credible."

A. E. Fitzgerald, the Air Force efficiency expert who first disclosed publicly a billion-dollar overrun on C–5A costs before Congress and who has since been fired by the Pentagon and hired for Proxmire's committee staff, sees the forthcoming decisions "as a watershed that will determine whether this company or others like it will remain as free entrepreneurs, taking the risks, or become wards of the state. This is such an important precedent that it might be worth whatever difficulties arise to enforce the contract."

Lockheed employs some 97,000 workers in 12 plants, including 20,000 at Marietta, Ga., home of the C–5A and represented by Sen. Richard B. Russell, the aging but prestigious chairman of the Appropriations Committee. The first also uses thousands of subcontractors.

High officials in the Pentagon, Congress, and probably the White House, look upon the idea of a bankrupt Lockheed with horror. They fear massive disruption of the critical Polaris, Poseidon and Samos programs, splitting up of design teams working on a new super-secret spy satellite and possible successors to Poseidon, both of which could play major roles in any future arms control environment.

Such fears could prove academic, since the Lockheed Missiles & Space Co. that handles all those projects has long been a profitable, well-managed operation and the parent company's prime revenue producer (an estimated $9 billion in sales in the 10 years). Advocates on both sides of the question expected that Lockheed Missiles and Space would survive intact under almost any arrangement.

The issues, however, go beyond giving government aid, even temporarily, to a stricken corporate Goliath.

The government is virtually Lockheed's only customer (89 per cent of sales in 1969) and the firm does have several programs critical to both deterrence and arms control which conceivably could be harmed by a company-wide bankruptcy crisis.

The contracting procedures under which the firm rolled up huge cost overruns have now been officially discredited by a new Secretary of Defense, and the legal status of Lockheed's claims against the government on those contracts remains unresolved. Sen. Russell, in a recent floor speech defending the C–5A and Lockheed's performance in supplying defense needs in the past, questioned "whether it is appropriate for the Senate to sit in judgment on the degree of punishment to be meted out when the legal case is not yet settled.

And Lockheed's Board Chairman Daniel J. Haughton has asked: "Can we find an equitable solution in a climate antipathetic to defense expenditures?"

Of four so-called Total Package Procurement contracts let during the McNamara years, Lockheed won three—the C-5A, the Army's Cheyenne helicopter and a portion of the Sram missile produced by Boeing.

Of some $770 million in claims filed by Lockheed against the government and now in negotiation or litigation, all but $174 million arise from these programs. Under this system a company promised to develop and produce a new piece of equipment for a fixed price. Many complained later that it was really beyond the skills of any manager to bid accurately on a 10-year project with potential engineering unknowns and in an inflationary economy.

"But," as one man says, "they were the only games in town then, and we all bid on them." Even Fitzgerald admits that Lockheed "was extremely unlucky. In the past, bailouts have been handled routinely, though clandestinely, through the change order routine."

Now, new development contracts are being awarded on a cost-plus basis, which the Pentagon hopes will lead to less risk for the manufacturers and better airplanes for the pilots. Fixed-price contracts are used for production.

Should Congress turn down the $200 million contingency fund for the C-5A, the Defense Dept. estimates Lockheed will run out of money at the Marietta Plant in January after 31 of the 81 planes ordered by the Air Force have been built. Some critics assert there isn't enough outsized cargo in the military to justify all of the mammoth transports, but the Pentagon doesn't agree.

Deputy Defense Secretary David Packard told the Senate Armed Services Committee late in May that "our objective is not to preserve the company, but to preserve the capability we need to get our equipment."

If the C-5A production line stops in January, Packard calculates it will have cost the government $3.7 billion to get 31 airplanes, or about $120 million apiece. By spending another $800 million for the remaining 50 airplanes over the next three fiscal years, including the pending authorization, Defense Comptroller Robert C. Moot says, the cost will come down to $55 million each—still, he maintains, at no profit for Lockheed.

A denial of C–5A money may not, by itself, bring Lockheed down, however. There would still be termination costs and litigation pending on its current C–5A claim, estimated at between $435–500 million. Defense officials say that Lockheed could benefit from the fact that the C–5A contract was the first of its kind and, in their view, legally complex. These officials estimate Lockheed might wind up losing some $85 million to $90 million if the project ends in January.

Government officials watching the situation closely say the L–1011 airbus is even more critical. And, aviation experts worry that Lockheed's prospects of obtaining financing be affected by the troubles with the government, plus the assault upon its technical credentials implicit in the Army's cancellation of the Cheyenne—also being appealed. Thus far, 173 airbuses are on order.

Though broad plans for putting the needed money together to save Lockheed have been reported, the company insists that nothing has been agreed to, and the Pentagon says nothing has been submitted yet. The plan is reportedly tied to approval of the $200 million C–5A authorization, yet that authorization specifically restricts that money to the C–5A, and defense comptrollers say they can make sure it doesn't get into the L–1011 till. Lockheed's detractors have questioned that point in the past.

The plan also reportedly calls for a government-backed loan of $100 million from the banks, but here there is a road block in the form of an amendment to the Defense Production Act limiting loans to $20 million and outlawing their use to prevent bankruptcy or insolvency.

Congress has already rebelled against a similar proposal to help Penn Central.

Without financial support for Lockheed from the private sector, Packard told the Senate Armed Services Committee, "there is no solution short of reorganization under Chapter 10 of the bankruptcy laws." Precisely what would happen under those circumstances is hard to predict, except that the government would be certain to protect its programs and probably take control of the Marietta plant.

For its part, Lockheed says: "Any conclusions from the current situation surrounding the company that the result may be bankruptcy or a split-up of operating divisions is highly speculative and also highly unlikely to occur."

When pressed on this point, Lockheed's friends and foes tend to agree. Even Fitzgerald, in his peppery style, says, "I fully expect the Air Force negotiators to take a dive on bailing them out. They'll enforce the contract, but will probably change it first."

A VOLUNTEER ARMED FORCE

Mr. SCOTT. Mr. President, next month the Senate will consider the Hatfield amendment to the military procurement authorization bill, proclaiming an end to the draft next year. As a cosponsor of that amendment, and of previous legislation to end the draft, I reiterate once again my strong support for the initiation of a volunteer army as soon as possible.

As a sign of its good intent, I suggest that the Administration demonstrate its desire to create an all-volunteer armed force by gradually replacing those draftees who are presently serving in Vietnam with volunteers. It is inequitable enough, in my opinion, to be drafted under a hodgepodge of nebulous regulations and unworkable procedures. I do not believe that it would be an overstatement on my part to point out that a good deal of discontent among the young is due to the policy of sending draftees to Vietnam.

I think it entirely possible to begin implementing a volunteer army concept immediately as a way toward ending the draft. By sending only volunteers to Vietnam to replace those soldiers whose tours of duty in Vietnam have ended, the administration can take the lead. It can visibly demonstrate that the volunteer concept is a viable one.

I have been consistent in my belief that we must move to eliminate the draft entirely. Congress has a unique opportunity to demonstrate its sensitivity to one of the greatest and most legitimate gripes of our young. The draft is antiquated, unacceptable, inequitable, and basically unworkable no matter how streamlined a lottery system we develop. A better future standby draft system could be structured. Moving to a volunteer army will present some difficulties. Nevertheless, we must attempt to implement the recommendation of the prestigious Gates Commission Report as quickly as possible. Terminating the policy of sending draftees to Vietnam is the first step to ending, or at least phasing out, the draft system next July when it expires. Its renewal in its present form is hardly desirable. Presidential adviser Daniel Moynihan has called the draft "a way of getting amateurs to do a job for which we should be willing to employ professionals." I believe that by assuring the American people and particularly our young that draftees will not be sent to Vietnam, we will be taking the first step toward ending the draft.

We can raise an effective armed force through voluntary means. Certainly the proposal entails administrative and fiscal problems. The challenges will be great. But the volunteer army concept is not new. It can be made to work.

Certainly if this country wants to remain on an even keel domestically, we must move to end the draft. I would hope that the draft could be ended in Vietnam on a gradual basis within a year. This would really be the first step toward implementing an all-volunteer armed force.

SECRETARY VOLPE PLACES TRANSPORTATION SYSTEM IN PERSPECTIVE

Mr. RANDOLPH. Mr. President, there is a growing awareness in this country of the importance of a sound, balanced transportation system.

Unfortunately, there are a number of popular misconceptions about the development of this system and the Federal Government's role in it. These erroneous impressions frequently result in unnecessary obstables to orderly development of a national transportation system.

Hon. John A. Volpe, who has performed with vigor and imagination since becoming Secretary of Transportation last year, provided new insight into the scope and challenge of American transportation in a letter published yesterday in the Washington Post.

Mr. President, so that this statement can be more widely disseminated, I ask unanimous consent that Secretary Volpe's letter be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

LETTERS TO THE EDITOR: VOLPE ON PRIORITIES

In your July 13 issue, Herblock wielded his drawing pencil against government spending for transportation. In this one his battered "U.S. Taxpayer" had been left in the dust by vehicles labeled "Government Handouts to Aircraft Industries," "Trucking and Highway Lobby," and "Railroads."

Now, hyperbole is the cartoonist's cutting tool and nobody can deny that Herblock uses it well. But just in case some of your readers fail to discount his artistic exaggeration I'd like to present a few facts for the record.

We have in this country more than 200 million people spread across 3½ million square miles of land. Every one of those people, whether he is a taxpayer or not, is a transportation user. Trucks, railroads, aircraft, pipelines, ships, barges move about two trillion ton-miles of freight a year—to house, feed, clothe, educate, medicate, transport, employ, and entertain those millions of Americans. The demand for goods and services grows as our population increases by about 6,000 a day. We conservatively estimate that we will have to double the carrying capacity of our transportation system long before the end of this century unless there is a sharp reversal of growth and distribution trends.

Transportation in the United States is at a point of crisis. We will sink or swim according to what we do in this decade. A viable transportation system—a far cry from what we have today—is absolutely necessary if we are to meet future needs for movement of people and goods. It will cost billions of dollars. We can provide it or we can let traffic come to a halt in our cities, at our airports and on our railways.

President Nixon's new program, effective this month, will put our airport/airways development pretty much on a pay-as-you-go basis, with the users paying the costs. Trucks—through user charges—continue to pay a large share of the cost of a world-envied highway network that ties our nation together. For many years the railroads have provided a substantial share of the national transportation service without any significant government financial assistance. It's vital that we keep them operating—they hauled about 765 billion ton-miles of goods and raw materials in 1969.

One of our big jobs in the relatively new Department of Transportation is to formulate a long-range national transportation policy that will give that poor battered taxpayer a smoother ride while keeping him supplied with the necessities of life. Concurrently, believe me, we're working on myriad short-range programs to give him "the most bang for his buck" (and I'm sure the staff laboring diligently on noise abatement is going to be unhappy with that phrase).

JOHN A. VOLPE,
Secretary of Transportation.

WASHINGTON.

RETIREMENT OF LT. GEN. JOHN SPENCER HARDY

Mr. STENNIS. Mr. President, on August 1, 1970, Lt. Gen. John Spencer Hardy will retire from the U.S. Air Force after over 33 years of dedicated service to his country.

Since 1968, he has been serving as Commandant of the Industrial College of the Armed Forces, engaged in training the future leaders of our Armed Forces in the advanced skills that will be required of them in carrying out their responsibilities. He has done an outstanding job in this assignment, as in all others in the past. Certainly he is preeminently qualified by his experience and personal characteristics to have held this position of leadership.

A graduate of Centenary College, General Hardy was commissioned a second lieutenant in 1937. In World War II he served as A–3 of the 8th Air Force, in England and Italy. He continued to serve in a succession of assignments of steadily increasing responsibility, including commander of the 36th Air Division, of Keesler Air Force Base, of the 3d Air Force in England, and of Allied Air Forces in Southern Europe.

To each assignment he brought all the fine qualities which have made him such a valuable officer—dedication, diligence, intelligence, and integrity. At all times, he has made it a point to become a part of the community in which he was serving, and in his associations with civilians his personality and character made him an outstanding representative of the Armed Forces. Further, those splendid qualities and his activities made him a positive part of the social, civic, and religious activities of the entire community in which he lived. He has been a top level all around professional military man of exceptional ability and achievement, and also an outstanding citizen and civic leader. In all of those endeavors he has been ably assisted as well as inspired and encouraged by his truly wonderful wife, Mrs. Hardy. I am also proud to claim them as personal friends.

His decorations, all richly deserved include the Distinguished Service Medal, the Air Force Distinguished Service Medal, the Legion of Merit with two oak leaf clusters, and many others.

I am sure that Senators join me in congratulating General Hardy on the completion of his distinguished military career, and in extending to him and Mrs. Hardy every good wish for the future.

COMMENCEMENT ADDRESS BY SECRETARY HICKEL

Mr. CASE. Mr. President, Secretary of the Interior Walter J. Hickel recently gave the commencement address at Stevens Institute of Technology in Hoboken, N.J.

In his address, Secretary Hickel stressed the value of youth, and especially of the graduating engineers, directing their capabilities and creativity toward our toughest environmental problems. He urged them to stand up and be heard on these problems even though their views may be unpopular and may make some people uncomfortable.

Mr. President, I believe that the Secretary's message should be of interest to Senators and ask unanimous consent that it be printed in the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

REMARKS OF SECRETARY OF THE INTERIOR WALTER J. HICKEL

I am proud to be at Stevens Institute today.

The honorary degree you have graciously bestowed on me is the symbol of a profession which holds a key to the quality of our future.

The engineers must help save us from ourselves, and I am honored to be included in your ranks.

We have been experiencing an age in which all obstacles were taken as challenges.

Halted by rivers, we built bridges and tunnels.

Pitying the hungry, we developed a powerful agricultural industry.

We built vast cities to house the millions of our fellow men.

In meeting these challenges, we tore minerals from the earth, denuded forests, wasted soil, fouled rivers, and filled the air with stench.

We were *almost* undone by our victories.

But man "the master" is finally learning that the earth will not tolerate a "master race."

Nature has rebelled against our intolerance and our pursuit of just *our* needs without regard for *hers*.

However, we are starting to change this dream of power and to make amends—to contribute to a life in harmony with our environment.

We *need* our cities.

We *need* our tunnels and bridges.

We *need* our farms, our industries and our highways.

But the task before us in 1970 is to harmonize these needs with nature's.

To me, this challenge is an exciting and demanding frontier, and one which could provide a "new commission" for America's engineers.

We are confronted with a new world of questions and a new set of values.

For example, how can we make electric power without polluting the air with fumes or damaging the marine ecology through thermal pollution. . . .

As just one possibility, the Interior Department has been negotiating for a preliminary study of an offshore, *submerged* nuclear power station.

We know that this concept has not been proven.

But the increasing power requirements of the nation and emerging problems relating to thermal pollution demand that we explore every possible approach.

We want to determine the environmental impact of a 1000-megawatt nuclear power plant placed on the seabed at a depth of about 250 feet, several miles offshore.

We will place particular emphasis on the effects that heated power plant cooling water might have on marine ecology.

Of course, when we talk of "thermal pollution," we're talking *only* about heated water—not "radioactive water."

The cooling water used in these plants never contacts anything remotely radioactive because sealed systems are used.

But the plants do create considerable waste heat—and this is carried off in the cooling water.

What we want to do is get far more accurate data on ocean currents and temperatures, which vary widely at different depths and distances.

Then—through skillful discharge of this heated water we can *improve* the fisheries resources in areas where the water may be too cold.

In this way, we do not stop progress. Rather, we enhance both progress and the environment.

We turn a problem into a "plus."

Let's seek the same sort of "pluses" so we can transport ourselves and our goods without smothering our cities in smog. . . .

So we can mine minerals without permanently scarring the earth. . . .

So we can manufacture the millions of products we need, without fouling our rivers with wastes.

Many critics blame our advanced environmental pollution on our advanced technology.

In a sense, they are right.

For example, the automobile, a vital element of the nation's economy and growth, has now reached a point of being counterproductive because of all the pollution it causes.

And as far as automobiles are concerned, anyone who knows me, knows that I have rather strong views about them! . . . And the need to move far more Americans by rapid, mass transit—rather than in automobiles.

We are moving millions of Americans—*but one at a time*—and *single-car-by-single-car*—into our city centers every day.

And we have turned the highways into our cities into such sluggish arteries—and they are so frustrating to drive during rush hours—that they threaten to kill the "patient" they serve: the city itself.

But there are answers . . . if we look for them, including in other nations.

For example, United Press International reports from Moscow, that construction is under way on a *240-mile-per-hour monorail* to the airport in Kiev.

While motorists are taking an *hour* to get to the airport, the monorail will make the trip in *eight minutes*.

. . . And travelers will go there in quiet, clean comfort.

A positive approach to meeting needs—while *improving* the environment, through projects such as these monorails, would *prove* that we do not suffer from *too much* technology, or *too many* engineers.

But instead, we suffer from too much "short-term" technology bred only to the service of man's more *immediate* appetites.

However, in a new spirit of reverence for the planet we have used so badly, this generation of graduates from Stevens can be in the vanguard of a new breed.

Your task is nothing less than the creation of a whole new civilized industrial technology, to replace the brute machine that raised so much ecological hell.

Creating that technology is a challenge that demands the best our nation can produce.

We must "rethink" every machine, every tool, every technique in the light of the needs of the ecology of the earth.

At the same time we must find fresh ways to meet the staggering material demands of the human race in the foreseeable future.

In the Department of the Interior, part of our job is to forecast demand for minerals and mineral fuels—keystones for our industrial society.

The predictions are alarming.

By the year 2000 we will annually consume twice as much petroleum as we do now;

Two thirds again as much iron;

Two and a half times as much copper;

Two and a half times as much silver;

Three times as much phosphorus, and twice as much coal.

During the next 30 years there will be a premium on rapid and economical retrieval of these minerals.

This adds even greater urgency to overhauling our techniques for mineral recovery, if we are to meet our consumer demands without desecrating our natural heritage in the process.

It is an engineering challenge without parallel in history.

I look to your generation.

Youth's great gift is creativity. You possess minds and spirits free enough to view the world without preconceptions.

If you refuse to sell out to security or expediency, you will be more inventive, more flexible, mort responsive more daring than those who are weighed down by decades of "know-how."

I believe that the environmental crisis *can* be solved.

It is a challenge to greatness which will call forth the finest qualities from our people. In a nation beset by grave problems, we cannot turn a deaf ear to those best equipped, in many ways, to save us.

America's young are brimming with new values and approaches, and these must be heard.

For it is you who will have to live with the solutions—good or bad—to our nation's problems long after my generation has gone.

Last month in Tennessee, President Nixon touched on an extremely vital point when he said:

"The younger generation in America is enormously interested—not simply in the pursuit of a good living—but also in those causes that are beyond self."

Speaking at a rally of the Reverend Billy Graham, the President was referring to the deeper values which many of today's youth are reaching for.

And the President made it clear that he believes that the young people of America have something to say.

And I was proud when he continued, "I want them in the high counsels of the government of this country."

The question is, how can you best make sure your ideas and beliefs have an *impact* on national policy?

If you have an idea which you believe has merit, how do you make it heard?

If you dissent, how do you do it?

If you are in government, how do you respond to opposition?

The effectiveness of a democratic society depends upon its ability to accommodate dissent;

To provide an orderly process by which disagreements can be worked out and wrongs righted;

And the structure of the system modified in the face of changing conditions.

The problem is to strike a balance between ability to change and social stability.

Today there are some who maintain that government and its institutions are so vast they can no longer respond to the needs of the people.

And in recent years, increasing numbers of Americans have taken to the streets to express their views on basic issues.

And more and more a few young Americans claim that civil disobedience is a necessary instrument for effecting needed social change.

What they fail to see, is that the challenge in front of us is to make the channels

built into our government system adequate to the task of national renewal.

Today, many Americans are going through a crisis of conscience, and the tactics of a *few* have encountered angry opposition.

Millions of other young Americans, who might sympathize with some or the *goals* of their fellows, cannot accept their *methods* of seeking change.

The difficult problem is to maintain perspective. The issues have reached a stage of polarization.

When all is said and done, civil disobedience tends plainly to impair its operation.

It's too bad—to use an understatement—that men, so often, are hostile to each other.

But this is nothing new, and when man first appeared on this planet two million years ago, he was nearly helpless in a hostile environment.

Self-protection was the primary need.

This drive has remained his overriding concern. Self-defense has escalated from the club to the China Wall to the massive machinery which now stands poised and ready to destroy all life on earth.

The price of protection is high.

Clearly, *some rearranging of this nation's priorities is in order.*

As we make the shift from security to opportunity, our attitude toward dealing with the environmental crisis will change.

If we approach the task reluctantly, it will not be done well.

We must answer this challenge as we took the engineering challenges of the past:

As an opportunity to show that man has the capacity and the will to be a responsible steward of his natural habitat.

Then we will do a job of which future generations can be proud.

For example, we must inventory and catalogue all our public lands—our waters, our continental shelf, our beaches, our forests and prairies.

It is time we decided what is the highest and best use of a forest, for example.

Is it to be cleared for yet more homes and factories? Or would a higher use be as a park?

In the past, our values have been strictly monetary. New criteria are needed which can put an appropriate value on natural beauty and recreation.

But it would be a serious mistake to leave the responsibility for caring for our environment entirely in the hands of government.

Fortunately, this is not the prevailing attitude in the country, and thousands of individuals and scores of industries are beginning to take spontaneous initiative.

I urge you, as engineers, to "link up" with these individuals and industries.

Use your talents to tackle the really tough problems of our times.

And so I say to you: Never be afraid to stand up and say what you think!

Your views may be unpopular. They may make some people uncomfortable.

But, believe me, you have friends—in government, in industry, in the educational establishment.

Don't allow yourselves to be polarized on the issues.

Most of them today are *not* simply "yes or no" . . . "night or day" questions.

Winning people over is a much more mature, and in the long run, a far more effective way to change society than alienating people.

Your Earth Day activities at Stevens, I understand, were an excellent example of this, as you aimed at educating the public to the menace of environmental damage.

You told people what *they* could do about pollution.

Bringing people together in the name of a vital cause which affects all of mankind is the highest science of our times.

It is a science which—I am confident—will be mastered by the engineers who sincerely dedicate themselves to shaping and building the future.

SENATOR RANDOLPH URGES SUPPORT FOR SENATE JOINT RESOLUTION 207—ESTABLISHING A JOINT CONGRESSIONAL COMMITTEE ON THE ENVIRONMENT

Mr. RANDOLPH. Mr. President, evidence of the mounting crisis in the environment is undeniable. It is so pervasive and well documented in the hearing records of the Committee on Public Works and the Subcommittee on Air and Water Pollution and other committees that disagreement occurs only with respect to the degree of its seriousness. Without question, of the many threats to civilization, the continuing deterioration of environmental quality must be placed among the major concerns of civilized man, along with war, hunger, disease, poverty, racial antagonisms, and crime.

The basic conflict is between the long-term environmental goal of preserving and enhancing the quality of the environment and short-term economic interests. This conflict must be minimized. Long-term economic viability and interests may well be contingent on achieving environmental goals. In the short run, environmental controls may be costly, but in the long run they will prove beneficial to industry and the public it serves.

Concern is for the environmental impact of technology as it affects man's thinking, health, work, living habits, and individuality. The objective is management of our waste effluents to produce benefits by design, rather than by accident. Only in this way can we provide for the maintenance of environmental quality.

The complexity and character of environmental problems is reflected in the environmental policies established by the Committee on Public Works in the fields of air and water pollution, solid waste disposal, highway beautification, and economic development, and other areas. These policies that set forth in the Environmental Policy Act, exhibit a concern not only for those environmental elements on which man depends for his subsistence, but also a concern for scientific, esthetic, educational, recreational, and other values.

In formulating these policies, Congress perceived the environment as broader than any single discipline and requiring a coherent and effective public policy. In shaping this policy Congress has tried to dispel any concept of the environment—air, water, or land—as an infinite reservoir with an infinite capacity to assimilate the wastes of society. Our resources are limited, and we have overdrawn our bank account.

Congress has defined three principles for inclusion in a national environmental policy: First, the development of an environmental enhancement program; second, the initial responsibility for carrying out such a program rests with State and local governments; and third, a straightjacket of Federal standards and Federal enforcement ought to be avoided in dealing with environmental quality.

These principles are embodied in numerous Federal statutes. As general principles rather than detailed instruction, they reflect the nature of environmental problems which are not static but ever-changing. Existing statutes permit a flexible, responsive approach to environmental quality and pollution control.

This year Congress provided for the creation of the Council of Environmental Quality and the President's Office of Environmental Quality. These functional organizations can aid significantly in the coordination of the environmental quality programs of this Nation and a greater utilization of existing resources. The proposed Joint Committee on the Environment will bring to the legislative branch a similar effort to achieve a more coordinated and coherent effort.

Mr. President, I ask unanimous consent that excerpts from hearings before the Committee on Public Works concerning environmental quality be printed in the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

EXCERPTS FROM HEARINGS ON ENVIRONMENTAL QUALITY

During the past 6 years, in the course of its work on environmental quality legislation, the Committee on Public Works has become increasingly concerned with the impact of federally aided programs and activities on the environment.

The following quotations from hearings and reports illustrate the extent of the committee's concern.

"During the 88th Congress, the Senate Committee on Public Works found an increasing amount of its activity shifting from the consideration of traditional project legislation to substantive matters. Increased emphasis on the conservation of air and water resources has been answered by means to prevent pollution. Increased concern for lagging economic growth in certain areas of the Nation has produced public works programs designed to aid economic development. Our highway program is being examined for its total community value.

* * * * *

"Rivers and harbors measures, themselves, are less and less simple one-purpose projects. Previous Congresses set the stage we are moving onto now where comprehensive planning and multipurpose developments are required. The interrelationship of water resource development with economic growth is becoming more the rule than the exception as demonstrated by the Appalachia bill reported by the committee.

"The Appalachia bill marks a sharp departure in the responsibilities of the committee which first began with consideration and the passage of the Accelerated Public Works Act.

"Appalachia is the first extensive legislation identifying dams, reservoirs, roads, sewage treatment plants, sewers, buildings, and other public works as the physical requirements for economic growth. Accelerated public works recognized the value of public works as an antidepression measure. Combined with Appalachia the building of public works provides not only immediate employment but the means for longterm general improvement." (Summary of Legislative Activities, Committee on Public Works, U.S. Senate, 88th Cong., p. v.)

AIR AND WATER POLLUTION

The concern of the Committee on Public Works for environmental quality led to the establishment of a special subcommittee on

air and water pollution during the 88th Congress on April 30, 1963.

"The national water pollution control program has for its primary objective the enhancement of the quality and value of the Nation's water resources. This can only be done by preventing, controlling, and abating water pollution.

"The Federal Water Pollution Control Act is the basic statutory authority for Federal participation in the national program. The act authorizes the administration and conduct of programs directed to the achievement of the important national water quality goal. The bill provides for specific expression of the act's purpose to establish a national policy for the prevention, control, and abatement of water pollution through effective administration of its comprehensive authorities." (Federal Water Pollution Control Act Amendments of 1965, S. Rept. 89–10, p. 4.)

"(1) Authorize the initiation and acceleration of a national research and development program for new and improved methods of proper and economic solid waste disposal, reducing the amount of waste and unsalvageable material and recovering and utilizing potential sources of solid waste, and provide technical and financial assistance to State and local governments and interstate agencies in planning, developing, construction, and conduct of solid waste disposal programs.

"(2) Provide that not to exceed 25 percent of funds appropriated for this purpose may be made for grants-in-aid, or to contract with, public or private agencies and institutions and to individuals for research and training.

"(3) Authorize grants to State, municipality, or intermunicipal or interstate agency for the purpose of assisting in the development of any project which will demonstrate a new or improved method of disposing of solid waste. * * *

"(4) Encourage cooperative activities by States and local governments in connection with solid waste disposal programs, encourage planning, and encourage the enactment of improved, and, so far as practicable, uniform State and local laws governing solid waste disposal.

"(5) Authorize up to 10 percent of funds available for the solid waste disposal program to be used in connection with the grants for support of air pollution control programs of the Clean Air Act. Grants would be made in an amount of up to two-thirds of the cost of making surveys of solid waste disposal practices and problems within the jurisdictional areas of appropriate agencies, and development of solid waste disposal plans. * * *" (Clean Air Act Amendments and Solid Waste Disposal Act. S. Rept. 89–192, p. 2–3.)

"Requires that any Federal department or agency having jurisdiction over any building, installation, or other property shall discharge waste only in compliance with standards * * *

"Authorize appropriations to be made to the appropriate Federal departments or agencies for the installation, maintenance, and operation of water pollution control facilities which have been designed to meet standards prescribed * * *

"Authorizes the Secretary of Health, Education, and Welfare, upon request by a department or an agency, to train personnel to operate and maintain water pollution control systems.

"There are provisions in existing law which authorize training in technical matters relating to the cause, prevention, and control of water pollution to personnel of public agencies and other persons of suitable qualifications. However, the committee is concerned that such authority may not be construed or utilized for the purpose of developing skilled personnel to operate and maintain treatment plants, particularly in new facilities.

"Would provide for a system of reporting to the Secretary of Health, Education, and Welfare by the Federal department or agencies which have jurisdiction over buildings, installations, and other property, and which discharge waste. In addition, the Secretary of Health, Education, and Welfare would report to the President and the Congress with respect to effectiveness of actions taken by those Federal departments or agencies in controlling water pollution.

* * * * *

"Requires that all Federal departments and agencies cooperate with the Department of Health, Education, and Welfare, and with air pollution agencies in controlling air pollution discharges from any Federal building, installation, or property. Further, the Secretary of Health, Education, and Welfare is authorized to establish classes of potential pollution sources for which any Federal department or agency would be required to obtain a permit from the Secretary before discharging any matter into the air.

"Authorize appropriations to be made to the appropriate Federal departments or agencies for the installation and maintenance of air pollution control devices as are certified by the Secretary of Health, Education, and Welfare to be adequate to meet the limitations on emissions prescribed by him. In addition, it directs such Federal departments or agencies to request funds to make necessary installations to meet the limitations for allowable emissions.

"Require that, after the effective date of this section, no Federal department or agency shall construct, prepare for use, or expand facilities without the inclusion of air pollution control measures which the Secretary of Health, Education, and Welfare considers to be adequate.

"Authorizes the Secretary of Health, Education, and Welfare, upon request by a department or an agency, to train personnel to operate and maintain devices or other means of preventing or controlling air pollution.

"Provide that Federal departments or agencies keep the Secretary of Health, Education, and Welfare informed of air pollution control practices in effect at buildings, installations, and other property under their jurisdiction. They are also to inform the Secretary of the absence of, or failure to institute, practices necessary and adequate to correct deficiencies and the reasons therefor. In addition, the Secretary is to report each January to the President and the Congress on the status and effectiveness of actions taken." (Federal Installation, Facilities, and Equipment Control Act, S. Rept. 89–128, pp. 10–11.)

"The prime purpose of the proposed legislation is to strengthen the Clean Air Act, to expedite a national program of air quality improvement, and to enhance the quality of the atmosphere to protect the health and welfare of our citizens against long-term hazards and immediate danger. Considerations of technology and economic feasibility, while important in helping to develop alternative plans and schedules for achieving goals of air quality, should not be used to mitigate against protection of the public health and welfare.

"The objective of S. 780 as amended is to achieve clean air, and to do so through the establishment of sound objectives and feasible timetables. The committee's hearings indicated that those who contribute to air pollution share with all Americans the objective of cleaning up the air, and that the differences of opinion expressed were addressed primarily to how that objective best could be accomplished. Through a full understanding of the etiology, the probabilities, and the severity of health and welfare hazards involved and with the strengthening of the technological and economic capabilities for abatement in both the public and private sector of our economy, the needs of public health and welfare without serious or excessive economic dislocation can be met.

"This legislation contains imaginative and far-reaching opportunities for air pollution control and abatement, but the bill is complex, as are the problems of environmental control. The problem of air pollution is neither local nor temporary. It is a universal problem, and, so long as our standard of living continues to increase, it will be a permanent threat to human well-being.

"S. 780, as amended by the committee, will provide a comprehensive, broad-based attack on the Nation's air pollution problem while expanding the potential of control technology and identifying the health and welfare effects of air pollution. Its objective is the enhancement of air quality and the reduction of harmful emissions consistent with maximum utilization of an expanding capacity to deal with them effectively. At the same time, it provides authority to abate any pollution source which is an imminent danger to health, by whatever means necessary." (Air Quality Act of 1967, S. Rept. 90–403, p. 2.)

"The President's Executive order on water pollution and section II of the Federal Water Pollution Control Act are both directed at water pollution control activities by Federal agencies.

"Nuclear powerplants are licensed by a Federal agency and therefore can and should be expected to conform with applicable water quality standards and a concept of water quality enhancement.

"But the committee has found that Federal agencies are not assuming the proper leadership role—that often their activities actually condone pollution rather than encourage water quality enhancement.

"Thermal pollution is only one case. There are numerous Federal agencies which need to exercise more leadership both in their own activities and in the activities over which they are responsible.

"Only in this way can the Federal effort in pollution control appropriately relate to the expanding vigor of the State programs. This expanded Federal role is especially essential, at a time when, because of a serious national budgetary restriction, full Federal funding of construction activities may not be possible." (Opening statement at hearings of the Senate Committee on Public Works on Thermal Pollution, 1968, pt. 1, pp. 1–2.)

"While water quality standards, now set and approved for most interstate waters, will cause installation of such control facilities as are necessary for compliance, serious question has been raised regarding the role of Federal agencies which authorize or assist such activities without requiring compliance with applicable standards.

"In order to ascertain the extent to which Federal agencies are conducting such activities, the committee began, early last year, hearings on the role of the Atomic Energy Commission relative to control of waste heat discharges from federally licensed nuclear powerplants. The hearings indicated several important problems.

"1. The Atomic Energy Commission does not consider its legislative authority sufficient to condition licenses relative to water quality standards for other than radioactive materials;

"2. The AEC regulations specifically prohibit intervention or testimony on the subject of pollution other than radioactive discharges;

"3. State agencies charged with water pollution control responsibility question their ability to require control of nuclear powerplant waste heat discharges once that plant

has been licensed for operation by a Federal agency, believing that the existence of the Federal license might preempt State regulatory authority;

"4. Thermal pollution is of sufficient concern to require consideration prior to final selection of a steam electric powerplant site both because of the potential adverse effect of heated water discharges on the receiving streams and because of the land requirements associated with construction of cooling facilities if required; and

"5. Waste heat discharges can seriously and adversely affect the ecological balance of the receiving waters and, though much remains to be learned about these effects, a sufficient body of evidence exists to establish standards and require control.

"The information received during the hearings suggested a need for the Federal Government to become involved at an early stage in water quality control by entities which receive Federal authorization or assistance.

"On September 16, the subcommittee invited comment on the extent to which the electric utilities industry should consider environmental hazards in selecting powerplant sites. This question resulted from information developed during the hearings pointing out—

"1. Few utilities have considered ecological effects of waste heat discharges either in relation to site location or operation of thermal generating stations;

"2. Little, if any, investigation has been made by most utilities to determine ecological background of receiving waters;

"3. Use of existing cooling technology for other than conservation of water has not been considered by utilities until after intense public pressure has been exercised; and

"4. The general assumption seems to be that any risk of adverse ecological effects associated with thermal pollution be taken by the public rather than the utility.

"However, the correspondence which follows indicates that ecological effects are of significant importance to warrant early consideration in a utility's decision to construct new steam electric generating facilities." (Summary statement on hearings of the Senate Committee on Public Works on Thermal Pollution, 1968, pt. 3, pp. 975–976.)

"What we are talking about is adding something to the environment that is not now added. Now, if it happens to be harmful we may be doing something that is irrevocable. If it happens to be good, so much the better. But by withholding any discharge or any such addition to the environment we are making no impact and that is the ideal situation to maintain until you get the answers. Unfortunately, we do need the additional energy, so we have the problem of how in the period during which we are trying to find the answers we minimize the possibility of harmful effects.

"The fact that in some cases you may get beneficial effects does not necessarily justify taking the risk of harmful effects when you can withhold both until you get the answer.

"* * * * *

"We are going to have an argument in each case as to whether or not we know enough to impose a restriction. Well, I think that increasingly we have to take the point of view that if we don't know enough, then we don't know enough to permit the discharge.

"If the point that we don't know enough justifies not imposing control, then it seems to me it also justifies not permitting the discharge.

"At least I think we ought to take that perspective on every one of these plant location decisions. I don't think we can afford to take a position that until we know specifically what the harmful effects are, we have to assume that there is enough good to build a plant.

"I think that is a wrong perspective. I think that we have to enlarge our area of knowledge as fast as we can so that we won't deprive ourselves of the necessary electrical energy, but I don't think we can just leave it an open door to permit this kind of development to continue without any restriction or restraint simply because we don't know all we ought to know about the harmful effects.

"This is a change of perspective and I think we have to arm the Federal agencies and the State agencies, as we would under this legislation, with enough restraining authority so we just don't plunge headlong into a lot of problems that will plague us once we begin to know the full implication of what we have done." (Comment by Senator Muskie at hearings of the Senate Committee on Public Works on Water Pollution, 1969, pt. 1, pp. 42–43.)

"Legislation has been enacted to deal separately with the control and abatement of air, water, and land pollution. The enhancement of environmental quality has become a major national goal. The committee has now turned its attention to the need for environmental planning. As existing sources are brought under control, management of wastes and environmental quality can become a reality. As this possibility evolves, a policy must be defined relating to the responsibilities and rights in the use of air, water, and land resources.

"The need for a policy relating to use of the air, inland, and coastal waters, and land resources is highlighted when it is realized that any single form of waste can be transformed to another form during handling and disposal. Solid waste, for example, may result in gaseous wastes when incinerated, liquid wastes when ground in garbage grinders, or remain as solid waste materials disposed of in landfills. This is but one example which suggests the need for an integrated policy for all forms of wastes rather than separate policies for solid waste disposal, air pollution control, and sewage disposal.

"A policy of environmental quality management for all forms of wastes is clearly required. Such a policy need not suggest that the administration of these programs be combined, but in the absence of a combined administration, the need for an overall coordinated policy is even more urgent." (Summary of Legislative Activities; Committee on Public Works, U.S. Senate, 90th Congress, p. 45.)

"Environmental Quality

"During the second session, the subcommittee held hearings on "Environmental Quality Management and Waste Management Research." Legislation has been enacted to deal separately with air pollution, water pollution, and solid waste disposal, but a congressional policy directed at their interrelationship is less precise. These hearings provided an initial look at this interrelationship and the need to define a public policy relating to the responsibilities and rights in the use of air, water, and land resources.

"These hearings provided an initial look into two areas. First, is there a need for a policy relating to the use and degradation of the air, inland and coastal waters, and land resources of the United States?

"Second, are the current Federal research management policies and practices in air and water pollution, and solid waste disposal adequate to the problem? Enacted legislation requires the establishment and implementation of air and water quality standards on prescribed time schedules. Current technology will reportedly satisfy many immediate objectives such as municipal waste water treatment of control of airborne particulates. These hearings provided an initial look at long-term needs and the adequacy of control technology to insure compliance with prescribed time schedules. Particular attention was given to improvements in Federal research management practices which might expedite development of control technology." (Summary of Legislative Activities, Committee on Public Works, U.S. Senate, 90th Cong., pp. 61–62.)

"RIVERS AND HARBORS AND FLOOD CONTROL

"Public works for many years has been synonymous with flood control. But recently the simplicity of a flood control project has given way to the necessity of considering much more than a single factor when developing a reservoir program. As a result public works is becoming more and more a matter of water resources programing.

"The Federal civil works program under jurisdiction of the Corps of Engineers, embraces the works for improving rivers, lakes, coastal areas, and harbors of the United States in the interest of navigation, flood control, hydroelectric power development, water supply, pollution abatement, recreation, beach erosion control, and other allied water purposes, which the committee has approved and the Congress authorized for accomplishment by the Corps of Engineers, Department of the Army." (Summary of Legislative Activities, Committee on Public Works, U.S. Senate, 88th Cong., p. 5.)

"It has long been recognized that flood control is only one of the purposes for which our water resources should be developed. Congress has recognized that full consideration should be given to a desirable improvement for the use and control of all the water resources, in the committee, the projects and basin plans included in this bill give full weight to the navigation possibilities; the development of hydroagricultural uses; the utilization or recreation potentialities in connection with reservoirs; and preservation of fish and wildlife; the abatement of stream pollution; the improvement of water quality; and the provision of improved sanitary facilities. The committee feels that a program for flood control and navigation would not be comprehensive or in the best interests of the Nation unless all these factors were considered." (River and harbor, beach erosion control, and flood control projects, S. Rept. 87–2258, pp. 3–6).

"We are no longer just concerned with flood prevention—but with the multiple aspects of reservoir development—including water supply hydropower development, recreation, and other multiple uses made possible by large storage dams.

"Water is a precious commodity. It is becoming more apparent each year—that we cannot afford to waste, pollute, or in any way destroy this natural resource.

"Therefore, it is of paramount importance that in our plans for controlling destructive flood waters, we fully utilize all the waters stored in a manner that will provide releases for conservation purposes—such as power development, industrial and domestic water supply, recreation, and pollution abatement.

"The Congress has asked the Corps of Engineers to look into comprehensive river basin planning, as the best means of fully developing our water resources." (Opening statement at the hearings of the Senate Committee on Public Works, on Public Works Authorizations, 1965, pt. I, pp. 1–2.)

"In this work we are dedicated to the principle of providing the best use, or combination of uses, of these resources in the service of the economic and social welfare of the Nation.

"* * * * *

"The disciplines and techniques of economics, political and social science, and public administration, as well as engineering, bear importantly in the solution of the complex resource development problems of our

present-day society. In our role as public planners we are striving to provide the insight and leadership necessary to bring all the pertinent disciplines and techniques into focus on these problems.

"The test of any planning lies in the soundness of the action programs it defines. In down-to-earth terms this means that in the field of water-oriented planning we must devise effective ways of meeting needs—both immediate and long term—for domestic, municipal, industrial, and agricultural water supply; water quality control; navigation; hydroelectric power; flood control; land and beach stabilization; drainage and salinity control; hurricane and tidal flood damage control; outdoor recreational activity, including that associated with preservation and enjoyment of open space, green space and wild areas of unique natural beauty or special interest; and fish and wildlife conservation and enhancement. These factors all are considered in our project proposals. * * *

"As we approach the borderline between water abundance and water deficiency in many parts of the Nation, and strive to catch up in those areas where we already have crossed this border, it becomes clear that the pace of our planning and development activities must be increased. In addition to the pace imposed by growing demands, there is the added pressure of complexity. With few exceptions the day of single-purpose project planning is a thing of the past. Multiple-purpose planning now is the rule of the day." (Testimony of Maj. Gen. Jackson Graham, hearings of the Senate Committee on Public Works, on Public Works Authorizations, 1965, pp. 15–16.)

"In water development it is not enough to consider measurable market values. We must also look beyond them. Water is related to public health, to outdoor recreation, and to the beauty of the landscape. * * *

"If the assessment of values to be taken into account in project design is difficult, so are the technical engineering aspects. A variety of engineering and natural science specialists are required to design and operate a modern water facility. * * *

"In my opinion the policies and administrative arrangements which evolved out of the earlier period of our history have not yet caught up with the kind of water management task now confronting us. * * *

"I am not suggesting that a Federal agency or combination of Federal agencies should be clothed with this kind of authority nor am I suggesting that all water resources management reponsibilities be turned over to State or regional organizations. But I am indicating that some combination of policies and administrative arrangements that can institute these measures in a coordinated fashion is essential if water resources management is to provide American society with the full potential benefits inherent in the resources with which we have been endowed."

Testimony of Irving Fox, Resources for the Future, hearings of the Senate Committee on Public Works on Public Works Authorizations, 1965, pp. 30–31.)

"HIGHWAY BEAUTIFICATION

"Many millions of us have been disheartened as we have traveled about the country and have seen hillsides stripped of their foliage, roadsides littered with trash, streams polluted. Some citizens, no doubt have felt that "uglification"—this desecration of the land and water—was a necessary price we must pay for industrial progress, and a necessary byproduct of the tremendous growth in our population. Others, fortunately, have not given up so easily and, in fact, have recognized that our growth in population and our economic development are factors which make it absolutely essential that we take positive action to preserve our natural resources. We have come to realize that we do not have unlimited land and water. Of necessity, many of us are going to be crowded in urban places. We must work together to make these places as pleasant and attractive as possible.

"* * * * * *

"Our concern is with damage inflicted unnecessarily, which could be avoided, by consideration of all aspects of the problem, not merely those of the highway engineers." (Testimony of Louis Prentiss, American Roadbuilders Association, hearing of the Senate Committee on Public Works, on Highway Beautification and Scenic Road Program, 1965, pp. 165–173.)

"It might seem to the casual observer that little harm would result in constructing a superhighway along the stream's course or in straightening a curving section of roadway by crossing and culverting, or channelizing and relocating a stream, or dredging a streambed to secure gravel for aggregate or to straighten and speed up the flow of runoff waters. The effect that most folk overlook is the great damage that accrues from violent disruption of the aquatic habitat.

"* * * * * *

"I think engineers, biologists, everyone working with resources of one kind or another, seek public approval, and want to do the best job they can. They often have to persuade some people to look at other values. This is essentially what we are trying to do here, to provide a basic force on the highway engineers and builders to consider these matters seriously so we will have a harmonious balance. (Testimony of Richard Stroud, Sport Fishing Institute, hearings of the Senate Committee on Public Works on the Highway Beautification and Scenic Road Program, 1965, pp. 438–455.)

Soil erosion control

"The Committee on Public Works, through the activities of its Subcommittee on Air and Water Pollution, has become increasingly concerned with siltation as a form of water pollution. Suburban home builders and highway builders are among the worst sources of this form of pollution, and yet government, whether Federal, State, or local, can hardly impose control measures on the private construction industry when it ignores prudent soil erosion control measures within its own area of responsibility. The committee therefore urges the Secretary not only to implement the provisions of the committee amendment, but also to take steps to minimize the time in which unsurfaced highway construction projects are subject to the erosion of wind and water." (Federal-aid Highway Act of 1966, S. Rept. 89–1410, p. 38.)

Preservation of parklands

"[It is] the national policy of the Federal-aid highway programs to preserve Federal, State, and local parklands and historic sites and the beauty and value of such sites. The Secretary is directed not to approve any Federal-aid highway project which requires the use of such lands unless (1) there is no feasible alternative to such use, and (2) the project plans include all possible provisions to minimize harm to affected parkland and historic sites. The committee recommends that this policy be extended to include wildlife refuge areas as well." (Ibid.)

"The committee is firmly committed to the protection of vital parklands, parks, historic sites, and the like. We would emphasize that everything possible should be done to insure their being kept free of damage or destruction, by reason of highway construction. The committee would, however, put equal emphasis on the statutory language which provides that in the event no feasible and prudent alternative exists, that efforts be made to minimize damage. To that end, the amendment contained in section 114 of S. 3418, as reported, which would expand the definition of 'construction costs,' should be helpful.

"The committee would further emphasize that while the areas sought to be protected by section (4) (f) of the Department of Transportation Act and section 138 of title 23 are important, there are other high priority items which must also be weighed in the balance. The committee is extremely concerned that the highway program be carried out in such a manner as to reduce in all instances the harsh impact on people which results from the dislocation and displacement by reason of highway construction. Therefore, the use of park lands properly protected and with damage minimized by the most sophisticated construction techniques is to be preferred to the movement of large numbers of people." (Federal-aid Highway Act of 1968, S. Rept. 90–1340, pp. 18–19.)

Urban Impact of Highways

During 1967 the committee reviewed Federal policy relating to urban highway planning, location, and design.

"Most people realize how important highways are to the continued social and economic development of our Nation. Highways have proven to be one of the great contributors to our system of communication, as well as transportation. When people are able to move freely, safely, and conveniently from place to place, the resulting exchange of information, goods, and services works to the benefit of the entire national community.

"* * * * * *

"We hope through these hearings to come to an understanding of what is being done and what can be done in urban highway construction to make highways a force for improved environment rather than as a factor which accentuates the already existing elements of decay, disruption, and displacement." (Opening statement at hearings of the Senate Committee on Public Works, on Urban Highways, 1967, Pt. 1, pp. 1–5.)

"First, we must apply to all capital improvement programs a full accounting of their social and environmental costs and build into all of these programs the means of meeting these costs;

"And second, we must design all capital improvements to serve more than a single purpose so that full social and environmental benefit is extracted from such public investments.

"The application of these two principles to the highway program, I believe, is clear. The cost accounting applied to urban highways until now has been deficient in that the ledger shows the costs of the program only in terms of acquisition, design, and construction. It does not show such real and tangible costs as the additional street and storage capacity required at points of egress; the taking of land from the tax rolls; the dislocation of the people in the highway's path; the reduction in value of adjacent property, the division and disruption of neighborhoods stemming from insensitive location; and the visual blight resulting from insensitive design.

"* * * * * *

"I believe, and I will return to the point, that the highway program should include all the costs of building an urban highway, including those that I have itemized, and pay a fair share of these costs. To put it another way, I believe that the highway program, and the highway user, should meet the consequences of the powerful and potentially disruptive act of highway building in the city." (Testimony of William Slayton, Urban America, at hearings of the Senate Committee on Public Works, on Urban Highways, 1967, Pt. 1, pp. 5–21.)

"We had to take available published data, much of it very primitive indeed, but I think any examination clearly must include not only factors of physiographic and slopes and so on, bridge crossings points, but really must include social factors and resource values too, and the development I think of a humane and civilized route selection method will concentrate I think not on engineer-

ing considerations but matters of man, institution, and resource values." (Testimony of Ian McHarg, University of Pennsylvania, at hearings of the Senate Committee on Public Works, on Urban Highways, 1967, Pt. 1, p. 61.)

"In the view of the committee, the emphasis of the Federal Highway Administration on the development of multiple land and air rights use, as an integral part of urban highway planning design, is well placed. We encourage the Department of Transportation, the Federal Highway Administration, and individual State highway departments to give continued strong support to this so-called joint development concept.

"The significance of the concept's potential value is impressive in terms of savings to the public, of more productive land use in densely populated or highly concentrated urban areas, and of prevention of haphazard development along the highway right-of-way.

"The public saves from joint development because, on its behalf, the highway department eliminates costly severance damages associated with acquiring a highway right-of-way through partial takings of land. Instead, the parcels are acquired in their entirety for fair price, and the unused portions either developed or sold for development." (Federal-aid Highway Act of 1968, S. Rept. 90–1340, p. 8.)

Urban highway planning

"There is almost universal agreement on the need to approach the complexities of urban highway planning and development with all the professional and scientific expertise available. For too long, highways were designed, located, and constructed as single purpose projects. They were built to serve the needs of traffic and, in many cases, without regard to their disruptive effects on urban environment. Use of joint urban development as well as other techniques has done much to correct the situation. The committee believes that improvement in the overall coordination of highway projects is taking place.

"• • • • • •

"It should produce the basic mechanics needed, to provide a better evaluation of urban transportation needs in terms of social, esthetic, and economic values. It must be pointed out, however, that the approach must be classified as experimental. The committee is also aware that an approach such as this, will tend to prolong the completion of the Interstate System while these extensive studies take place.

"There is no doubt that the knowledge gained in these efforts, will provide a foundation for new methods and techniques to assist in solving our complex urban transportation problems." (Federal-aid Highway Act of 1968, S. Rept. 90–1340, pp. 11–12.)

"ECONOMIC DEVELOPMENT

"Over the years, the steeply sloped Appalachian farms have remained relatively unproductive and have undergone severe erosion. The resulting denuded slopes have marred the scenic beauty of the land, contributed to widespread siltation of its streams, and have thus impeded the development of the great potential for recreation and tourism.

Most of the small crop farming now practiced in Appalachia is on a marginal basis and too frequently provides only a bare subsistence living for the small farmer. It is, however, unrealistic to expect every small Appalachian farmer to give up his farm immediately—an act which would largely result in simply transforming rural poverty into urban poverty. Also, many of the small farmers of the region, especially the elderly ones, are deeply rooted in the land and prefer to live out their years on the farm, rather than become public welfare clients in the towns and cities. Thus, a coherent and equitable Appalachian development program must provide for restoration of the land under its present inhabitants and enable them to realize what benefits the land can furnish." (Appalachian Regional Development Act of 1965, S. Rept. 89–13, p. 11.)

Water resources

"An abundant annual rainfall in Appalachia gives the region a water resource potential that can be found in few other areas of the country. Unfortunately, this potential has never been fully realized, and all too often, water acts as a curse rather than a blessings in Appalachia.

"With proper control and management, Appalachia's water resources can become the region's most precious natural asset, providing almost unlimited opportunities for recreational activities and incentives for industrial development (*18*)." (Appalachian Regional Development Act of 1965, S. Rept. 89–13, p. 15.)

Mine area restoration

"Much of the Appalachian landscape has been ravaged by the mining of coal. Former practices of both strip mining and deep mining operations have eroded the hillsides, polluted the streams, and endangered the lives of thousands of people. Though present enlightened management practices have made great progress over former years, the abuses of past coal mining practices serve as a major deterrent to industrial and recreational development in Appalachia." (Appalachian Regional Development Act of 1965, S. Rept. 89–13, p. 16.)

THE PRESIDENT'S TELEVISION INTERVIEW

Mr. SCOTT. Mr. President, nearly a month ago the President of the United States had a television interview with three of our Nation's top commentators. It was broadcast throughout the country. I am sure that all our citizens listened to the broadcast with the greatest of interest. It bore directly upon our foreign policy and upon matters which for a decade have been at the forefront of our national interest.

The President prefaced the question-and-answer session of the interview, which was the main portion of it, with a very brief announcement in which he named Ambassador David Bruce as chief of the U.S. delegation to the Paris peace talks with North Vietnam. Ambassador Bruce is well known as one of America's top foreign service officers, a gentleman of the highest attainments. He eminently fulfills all the possible criteria which could be suggested for the chief of our delegation.

This appointment is clearly a signal to Hanoi that the United States is continuing to seek initiatives toward a peaceful solution to the war in Southeast Asia.

The main body of the television program, of course, was devoted to the interview with Howard K. Smith, Eric Sevareid, and John Chancellor. By agreement, the subject of the discussion was confined to the Vietnam war and directly associated matters. It was conditioned only by the fact that all participants are sincerely devoted to the improvement and betterment of our country.

There were no holds barred on the questions. The interview was live and unrehearsed. There were no planted questions on the part of the administration and, although it is to be supposed that some prior preparation was individually made by all four parties, it was entirely ad-lib. The public heard from the lips of the President and his interlocutors, without any interpretations or staff intervention, exactly what they asked and how he responded.

It has been commented in several places that the questions were searching, that no punches were pulled. It is also clear that the President was answering them carefully and clearly.

It is also evident that, whatever the political beliefs of the participants were, politics did not enter into this discussion. Perhaps the television interview was a device, as I have heard it called. What is not a "device" these days? The position of the President regarding our policy for Vietnam should be conveyed to the public as often as necessary. A television interview is of course not the only means the President might have used. He could also have given a written or press conference report to the Nation as he has done at other times. Or he might have given a background interview, or caused to be published a State Department or White House policy paper. All of these he has done. The television interview was a good choice, in my opinion, for it captured the attention of the audience and at the same time had the effect—once removed of course—of permitting further questions and discussion as points suggested themselves. I hope he will continue to employ this technique when it is appropriate.

Mr. President, the text of the President's television interview has not previously been printed in the RECORD. I think it belongs there as a permanent record of what he had to say at this time in our history. I therefore ask unanimous consent that the complete text of the President's television interview of July 1, 1970, be printed in the RECORD.

There being no objection, the interview was ordered to be printed in the RECORD, as follows:

"A CONVERSATION WITH THE PRESIDENT ON FOREIGN POLICY"

The PRESIDENT. Good evening. Before turning to our panel for their questions, I have a brief announcement. After consultation with the Secretary of State and other senior advisers, I decided to name Ambassador David Bruce as Chief of our Delegation to the Paris Talks.

Ambassador Bruce, as all of those who have studied our foreign policy know, is one of America's most distinguished diplomats. He is a Democrat, but he has served five Presidents, Democrat and Republican, with great devotion and great ability. He is the only Ambassador in our history who has been Ambassador to Germany, Ambassador to England, and Ambassador to France.

He will meet me in San Clemente along with Ambassador Habib, who is Chief of our Delegation, acting at this time, and the Under Secretary of State Alexis Johnson on Saturday, July 4th.

There along with Dr. Kissinger we will discuss the situation with regard to the talks as they presently exist. Then on July 11th, he will meet with Secretary of State Rogers, in London, as Secretary Rogers completes his Asian trip and will stop briefly in Britain on his way back to the United States.

Ambassador Bruce will have the opportunity then to meet with the National Security Council in the middle of this month, perhaps about the 15th of July, and is arranging his affairs so that he will be able to go to Paris and take over as Chief of the Delega-

tion on the 1st of August or shortly before that time.

We believe that in appointing Ambassador Bruce we have selected a man who is superbly qualified to conduct these negotiations. He will have great flexibility in the conduct of his talks. We hope that this move on our part will be reciprocated by a similar move on the part of the North Vietnamese in attempting to find a peaceful solution to the war in Vietnam.

Now, with that brief announcement we will go to the questions.

QUESTIONS

Mr. SMITH. Mr. President, in your report on the Cambodian operation yesterday, you said you were going to emphasize the route of negotiated settlement again, and I gather this is the first step.

About other steps, (a) have you had any signal from Hanoi that they are more willing to talk than they have been in the past, and (b) do you have any new proposals to put to them to make a negotiated settlement more attractive?

The PRESIDENT. We have had no signals from Hanoi directly or indirectly that their position of intransigence has changed. They still insist that their condition for a negotiated settlement is complete withdrawal of our forces and the throwing out of the government in South Vietnam as we leave.

On the other hand, we believe that they will be interested in the fact that we are appointing a new chief of delegation, because on several occasions not particularly from them, but from third parties who have talked to them, they have indicated that they felt that we should appoint a new chief of delegation.

We have now appointed one and we hope that they act. As far as new proposals are concerned, I think it is important for us to know what our proposals are because we have made some very forthcoming proposals.

First, we have offered to withdraw all of our forces if they withdraw theirs, and to have that withdrawal internationally supervised.

Second, we have offered to have cease-fires throughout the country, and have those cease-fires again internationally supervised.

Third, and most important, we have offered to have free elections throughout the country, internationally supervised. We have offered to have the supervisory bodies be ones in which the Communists can participate as well as those representing the present government in South Vietnam, and we have offered on our part, and the South Vietnamese Government has offered on its part, to accept the results of that election, even though those results might include Communists in some positions, or Communists in some power.

We believe that these offers are very forthcoming, and I should also say that in private channels we have elaborated on these offers.

Finally, I should also point out that we have not made our proposals on a take-it-or-leave-it basis. Ambassador Bruce will be in that position. He will be in a position with his new instructions to tell the opposition that we have laid these proposals out, we believe they are the formula that should provide the basis for a negotiated peace, but that we are willing to see whether we can narrow the gap between their position and ours.

There is only one matter that is not subject to negotiation, and that is the right of the South Vietnamese to determine their own future.

That is one of the reasons, for example, that the speculation with regard to our having changed our position and agreeing possibly to now offer a coalition government, a negotiated settlement, imposing a coalition government, that speculation is not correct.

It is not correct, because if we were to negotiate with the North Vietnamese and decide that we would have a coalition government and impose it on the South Vietnamese, that is a government without their choice.

If the South Vietnamese on the other hand in the free political process should choose Communists as well as non-Communists and out of that should come a government that is mixed, that is up to them.

But we will not impose a coalition government against the will, and without the consent of the people of South Vietnam. But except for those two conditions, Ambassador Bruce will be free to negotiate in a very flexible manner on our proposals or on theirs.

Mr. CHANCELLOR. Mr. President, we are all pleased to be here with you tonight. As you know, the networks have standing requests for interviews of this kind with you. I would like to know why you have chosen this technique at this particular time.

THE PRESIDENT. We have, as you know, Mr. Chancellor, numbers of requests to do everything from press conferences to individual interviews, and the like. I noted, of course, that in the previous administrations this technique was used first by President Kennedy, and I thought very effectively, you remember, after his first year in office. President Johnson used it twice and I thought also in a very interesting and effective way.

I have not yet used this technique. It seemed to me that this would be useful now and incidentally, it is useful for another reason. I have followed some of what has been referred to as the instant commentary and I do know—after my press conferences—and I do know that one of the difficulties with press conferences—and some of you have been very kind in referring to the style of the conferences, not always to the replies—but one of the difficulties is that an individual does not get to follow up a question.

Now this allows that. So by taking the subject of foreign policy, by picking the anchormen of the three networks, by having a chance for a little bit longer answer and a chance to follow up, I thought we could give our television audience a chance really to get to the depths of our foreign policy thinking which you can't do when you are up there trying to, in 28 minutes, answer 24 times.

Mr. SEVAREID. A lot of things have been happening in the last few days and some in the United States Senate.

THE PRESIDENT. Yes, I know.

Mr. SEVAREID. Do you feel that you can give categorical assurances now that we will not send ground troops back into Cambodia no matter what?

THE PRESIDENT. Mr. Sevareid, as you recall, I indicated when this operation was begun 2 months ago—incidentally, it seems much longer, a lot has happened in those 2 months and a very great deal has been achieved, in my opinion—but I indicated then that once we had completed our task successfully of cleaning out the sanctuaries that then it would not be necessary and I would not consider it advisable to send American ground forces back into Cambodia.

I can say now that we have no plans to send American ground forces into Cambodia. We have no plans to send any advisers into Cambodia. We have plans only to maintain the rather limited diplomatic establishment that we have in Phnom Penh and I see nothing that will change that at this time.

Mr. SEVAREID. You can't foreswear in a final way——

THE PRESIDENT. I realize that anybody listening to an answer——

Mr. SEVAREID. That is what the Senate seems to want.

THE PRESIDENT. I think that anybody hearing the answer that I have just given would certainly get the impression and would incidentally be justified in having the impression that the President of the United States has no intention to send ground forces back into Cambodia, and I do not believe that there will be any necessity to do so.

When you say, can I be pinned down to say that under no circumstances would the United States ever do anything, I would not say that, but I will say that our plans do not countenance it, we do not plan on it, and under the circumstances, I believe that the success of the operation which we have undertaken, as well as what the South Vietnamese will be able to do, will make it unnecessary.

Mr. SMITH. Mr. President, one of the things that happened in the Senate last week was the rescinding of the Gulf of Tonkin resolution by the Senate. Mr. Katzenbach, in the previous administration, told the Foreign Relations Committee that resolution was tantamount to a congressional declaration of war. If it is rescinded, what legal justification do you have for continuing to fight a war that is undeclared in Vietnam?

THE PRESIDENT. First, Mr. Smith, as you know, this war, while it was undeclared, was here when I became President of the United States. I do not say that critically. I am simply stating the fact that there were 549,000 Americans in Vietnam under attack when I became President.

The President of the United States has the constitutional right, not only the right, but the responsibility to use his powers to protect American forces when they are engaged in military actions, and under these circumstances, starting at the time I became President, I have that power and I am exercising that power.

Mr. SMITH. Sir, I am not recommending this, but if you don't have a legal authority to wage a war, then presumably you could move troops out. It would be possible to agree with the North Vietnamese. They would be delighted to have us surrender. So you could——

What justification do you have for keeping troops there other than protecting the troops that are there fighting?

The PRESIDENT. A very significant justification. It isn't just a case of seeing that the Americans are moved out in an orderly way. If that were the case, we could move them out more quickly, but it is a case of moving American forces out in a way that we can at the same time win a just peace.

Now, by winning a just peace, what I mean is not victory over North Vietnam—we are not asking for that—but it is simply the right of the people of South Vietnam to determine their own future without having us impose our will upon them, or the North Vietnamese, or anybody else outside impose their will upon them.

When we look at that limited objective, I am sure some would say, "Well, is that really worth it? Is that worth the efforts of all these Americans fighting in Vietnam, the lives that have been lost?"

I suppose it could be said that simply saving 17 million people in South Vietnam from a Communist takeover isn't worth the efforts of the United States. But let's go further. If the United States, after all of this effort, if we were to withdraw immediately, as many Americans would want us to do, and it would be very easy for me to do it and simply blame it on the previous administration, but if we were to do that, I would probably survive through my term, but it would have, in my view, a catastrophic effect on this country and the cause of peace in the years ahead.

Now I know there are those who say the domino theory is obsolete. They haven't talked to the dominos. They should talk to the Thais, to the Malaysians, to the Singaporeans, to the Indonesians, to the Filipinos, to the Japanese, and the rest. And if the United States leaves Vietnam in a way that we are humiliated or defeated, not simply speaking in what is called jingoistic terms, but in very practical terms, this will be immensely discouraging to the 300 million people from Japan clear around to Thailand in free Asia.

and even more important it will be ominously encouraging to the leaders of Communist China and the Soviet Union who are supporting the North Vietnamese. It will encourage them in their expansionist policies in other areas.

The world will be much safer in which to live.

Mr. SMITH. I happen to be one of those who agrees with what you are saying, but do you have a legal justification to follow that policy once the Tonkin Gulf Resolution is dead?

THE PRESIDENT. Yes, sir, Mr. Smith, the legal justification is the one I have given, and that is the right of the President of the United States under the Constitution to protect the lives of American men. That is the legal justification. You may recall, of course, that we went through this same debate at the time of Korea. Korea was also an undeclared war, and then, of course, we justified it on the basis of a U.N. action. I believe we have a legal justification and I intend to use it.

MR. SEVARIED. Mr. President, you have said that self-determination in South Vietnam is really our aim, and all we can ask for. The Vice President says a non-Communist future for Indochina, or Southeast Asia. His statement seems to enlarge the ultimate American aim considerably. Have we misunderstood you or has he or what is the aim?

The PRESIDENT. Mr. Sevareid, when the Vice President refers to a non-Communist Southeast Asia that would mean of course, a non-Communist South Vietnam, Laos, Cambodia, Thailand, Malaysia, Singapore, and Indonesia. That is the area we usually think of as Southeast Asia.

This is certainly something that I think most Americans and most of those in free Asia and most of those in the free world would think would be a desirable goal.

Let me put it another way: I do not think it would be in the interest of the United States and those who want peace in the Pacific if that part of the world should become Communist, because then the peace of the world, the peace in the Pacific, would be in my opinion very greatly jeopardized if the Communist were to go through that area.

However, referring now specifically to what we are doing in Vietnam, our aim there is a very limited one, and it is to provide for the South Vietnamese the right of self-determination. I believe that when they exercise that right, they will choose a non-Communist government. But we are indicating—and incidently, despite what everybody says about the present government in South Vietnam, its inadequacies and the rest, we have to give them credit for the fact that they also have indicated that they will accept the result of an election, what the people choose.

Let us note the fact that the North Vietnamese are in power not as a result of an election, but have refused to indicate that they will accept the result of an election in South Vietnam, which would seem to me to be a pretty good bargaining point on our side.

Mr. CHANCELLOR. Mr. President, I am a little confused at this point because you seem in vivid terms to be describing South Vietnam as the first of the string of dominoes that could topple in that part of the world and turn it into a Communist part of the world, in simple terms.

Are you saying that we cannot survive, we cannot allow a regime or a government in South Vietnam to be constructed that would, say, lean toward the Communist bloc? What about a sort of Yugoslavia? Is there any possibility of that kind of settlement?

THE PRESIDENT. Mr. Chancellor, it depends upon the people of South Vietnam. If the people of South Vietnam after they see what the Vietcong—the Communist Vietcong have done to the villages they have occupied, the 40,000 people that they have murdered, village chiefs and others, the atrocities of Hué—if the people of South Vietnam of which 850,000 of them are Catholic refugees from North Vietnam after a blood bath there when the North Vietnamese took over in North Vietnam—if the people of South Vietnam under those circumstances should choose to move in the direction of a Communist government, that, of course, is their right. I do not think it will happen. But I do emphasize that the American position and the position also of the present government of South Vietnam, it seems to me, is especially strong because we are confident enough that we say to the enemy, "All right, we'll put our case to the people and we'll accept the result." If it happens to be what you describe, a Yugoslav type of government or a mixed government, we will accept it.

Mr. CHANCELLOR. What I am getting at, sir, is, if you say on the one hand that Vietnam—South Vietnam is the first of the row of dominoes which we cannot allow to topple, then can you say equally, at the same time, that we will accept the judgment of the people of South Vietnam if they choose a Communist government?

THE PRESIDENT. The point you make, Mr. Chancellor, is one that we in the free world face every place in the world and it is really what distinguishes us from the Communist world.

Again I know that what is called Cold War rhetoric isn't fashionable these days and I am not engaging in it because I am quite practical, and we must be quite practical, about the world in which we live with all the dangers that we have in the Mideast and other areas that I am sure we will be discussing later in this program.

But let us understand that we in the free world have to live or die by the proposition that the people have a right to choose.

Let it also be noted that in no country in the world today in which the Communists are in power have they come to power as a result of the people choosing them—not in North Vietnam, not in North Korea, not in China, not in Russia, and not in any one of the countries of Eastern Europe, and not in Cuba. In every case, communism has come to power by other than a free election, so I think we are in a pretty safe position on this particular point.

I think you are therefore putting, and I don't say this critically, what is really a hypothetical question. It could happen but if it does happen that way we must assume the consequences and if the people of South Vietnam should choose a Communist government, then we will have to accept the consequences of what would happen as far as the domino theory in the other areas.

Mr. CHANCELLOR. In other words, live with it?

THE PRESIDENT. We would have to live with it, and I would also suggest this: When we talk about the dominoes, I am not saying that automatically if South Vietnam should go the others topple one by one. I am only saying that in talking to every one of the Asian leaders—and I have talked to all of them; I have talked to Lee Kuan Yew (all of you know him from Singapore of course), and to the Tunku from Malaysia, the little countries, and to Soeharto from Indonesia, and of course to Thanom and Thanat Khoman, the two major leaders in Thailand—I have talked to all of these leaders and every one of them to a man recognizes, and Sato of Japan recognizes, and of course the Koreans recognize that if the Communists succeed, not as a result of a free election—they are not thinking of that—but if they succeed as a result of exporting aggression and supporting it in toppling the government, then the message to them is, "Watch out, we might be next."

That's what it really is. So, if they come in as a result of a free election, and I don't think that is going to happen, the domino effect would not be as great.

Mr. SEVAREID. Mr. President, what caused the change in plans about the South Vietnamese troops remaining in Cambodia? On April 30th you said they would come out about when ours came out, and they are apparently building big bases and intend to stay. What happened in the meantime to change this?

THE PRESIDENT. When I spoke on April 30, Mr. Sevareid, I pointed out that we would be out, as you recall, and we kept that promise, despite—there is some speculation to the effect that we would have advisers in, or this, that, and the other. All Americans are out and, answering your earlier questions, we have no plans and have no expectation that any Americans would go back in.

With regard to the South Vietnamese, I pointed out on April 30th that our air support would stop and there would be no advisers with the South Vietnamese, that any activities of the South Vietnamese after we left would have to be on their own.

Now what they are doing in South Vietnam, and I checked this just before the program tonight as to the numbers, there are approximately 40,000 North Vietnamese in Cambodia at the present time. There are approximately 8,000 South Vietnamese. What they are doing is cleaning out some of the sanctuary areas that were not completed when we left.

They are not building substantial bases. What they are really doing is simply providing the basis on which they can stop the North Vietnamese from coming back into the sanctuary areas, and I think that is their responsibility and their right.

Mr. SEVARIED. Mr. President, to what extent are we really committed to preserving this new government in Cambodia, which is a rather shaky one? What would we do, for example, if the capital city of Cambodia is in imminent danger of getting into Communist hands?

THE PRESIDENT. It is well for us to understand exactly what our relationship to Cambodia is. Let me compare it with Thailand.

With Thailand, we have a treaty, and if Thailand comes under attack, that treaty comes into force. The same is true, of course, of Australia, New Zealand, the Philippines. Cambodia is in the same category as Indonesia. It is a neutral country. It is a nonaligned country. We have no treaty with it.

As far as Cambodia is concerned, our only commitment to Cambodia is the commitment that the United States for 190 years has had to the principle of international law that a country that chooses to be neutral should have its neutrality respected.

Now that means that we are furnishing, as you know, small arms to them for their own defense. It means that, in addition to that, we are trying to give them the moral support that we can. We are supporting the initiative of the 11 Asian nations who are attempting to stand with that government in its neutrality, but as far as military support, the United States moving forces into Cambodia for the purpose of helping them defend against enemy attack—that we are not required to do under treaty and that we do not intend to do.

MR. SMITH. Mr. President, also about Cambodia, in your last press conference, I believe you were asked what distinguished this operation from escalations that occurred in past administrations, and you said this is decisive in nature.

Now, when one thinks of a decisive military operation, one thinks of things like the battle of Stalingrad, or D-Day. Do you think that this is really decisive for the Vietnam War, or does it just gain time—what?

THE PRESIDENT. Mr. Smith, I remember your broadcast, as a matter of fact, from

England, as I recall, at the time of Stalingrad and D-Day and the rest, and I think you will agree that as we look at it in the perspective of history, we think Stalingrad was decisive, and also that D-Day was decisive.

However, at the time that they occurred, immediately thereafter, we couldn't be sure. Now, looking at this particular operation, it is in my view the most decisive action in terms of damaging the enemy's ability to wage effective warfare that has occurred in this war to date.

Whether it will be as decisive as Stalingrad was or as D-Day was, I am not prepared to say. Only history will tell.

I do know that any action which captures and destroys over 12 months of the enemy's small arms ammunition supply, over 14 months of their mortars, over 4 months supply of rice, in addition to the very considerable number of enemy personnel that were killed and captured, approximately 15,000 that that is a very effective blow.

How decisive it will be remains to be seen.

I will say it is decisive in a couple of other ways. It does make it possible for us to go ahead with assurance on our withdrawal program of 150,000 more, which will be completed during the spring of next year, and it does give us more assurance that the South Vietnamese now, for the first time tested in battle by themselves against the North Vietnamese, can handle themselves, that Vietnamization can work and will work, and that we can get out, and they can stay in and hold their own.

Mr. CHANCELLOR. Mr. President, can I ask you about the plans for withdrawal far down the road? There are 419,000 American troops now in Vietnam—I believe that is the figure—and 260,000 will be there in the spring of 1971 according to your withdrawal formula.

But what happens after that? Will we find ourselves in the position where we will have to keep a couple of hundred thousand men there logistically for some period of time or, sir, do you believe that we should pose that threat to the North Vietnamese that they might have to wait another 10 years while we had 200,000 men in South Vietnam?

The PRESIDENT. I suppose that question becomes particularly apropos when you think of Korea, because in Korea we still have 50,000 men and it has been 17 years since the Korean war was over.

In terms of South Vietnam, I think we could put it, however, in another way. We are prepared by negotiation to bring out all of our forces and have no forces at all in South Vietnam if the enemy will negotiate, if they will withdraw theirs.

We are confident that the South Vietnamese can defend theselves if there is a mutual withdrawal of outside forces.

Now, if they do not agree to it, then we still have a plan which, as for its long-term goal, is to withdraw all of our forces. However, it will be in stages.

As you know, what we are withdrawing now are primarily our ground combat forces, and the majority of our ground combat forces will be out during the spring of next year. The 265,000 will—that number, of course, will be a majority of our ground combat forces.

Now, when it comes to naval forces and air forces which require more sophisticated training and the rest, it will take a longer time to get them out, but I again come back to this proposition. Our long-term goal is to get them all out, and short-term, if the enemy is willing to negotiate with our new Ambassador, we will get them all out within a year, if they are willing to negotiate.

Mr. SEVAREID. Mr. President, you have always refused to set a definite terminal date for our final withdrawal from Vietnam on the grounds the enemy would just sit and wait and never negotiate at all, as I understand it.

But, your advisers always say to us that it would be better for the North Vietnamese to negotiate while we are still there rather than face Saigon alone later on.

If that is the case, then why not set a definite terminal date to encourage them to negotiate, knowing we will leave?

THE PRESIDENT. I think the argument that if we just set a terminal date as to when we are going to get out that this might, in reverse, encourage them to negotiate, I don't think it will stand up. I think it is a good debating point to make and perhaps we could say that the debating point we have made on the other side is just that, but I don't believe it is.

Let me put it this way: Put yourself in the position of the enemy. Also, put yourself in the position of an historian—and all of you are historians; you study these matters and you write about them, you think about them, and you commentate upon them. You will generally find that negotiations occur, negotiations which end war, only when the balance of power changes significantly, only when one party or the other concludes that as a result of the shift in the military balance they no longer have an opportunity to accomplish their goal militarily and therefore, they had best negotiate.

Now, I think one of the positive benefits of the Cambodian operation is that it has changed the military balance. How much it has changed in the minds of the enemy remains to be seen.

I do not say it has changed it enough so that they will negotiate. I think it might help. Only time will tell. But putting myself—again, looking at the enemy, I am convinced that if we were to tell the enemy now, the North Vietnamese, that within, as for example, the McGovern-Hatfield resolution, that by the end of this year all Americans will be gone, well, I can assure you that the enemy isn't going to negotiate in Paris at all. They are not going to talk. They are going to wait until we get out because they know that at the end of this year the South Vietnamese won't be ready to defend the country by themselves.

But if, on the other hand, the enemy feels that we are going to stay there long enough for the South Vietnamese to be strong enough to handle their own defense, then I think they have a real incentive to negotiate, because if they have to negotiate with a strong, vigorous South Vietnamese Government, the deal they can make with them isn't going to be as good as the deal they might make now.

Mr. SMITH. Sir, talking about troop withdrawals, American troop withdrawals, on June 3d you said that if the other side took advantage of our troop withdrawals and intensified their attacks, you would be prepared to take strong effective measures to meet that situation.

Now, in view of the explosions of wrath on the campus at the Cambodian affair, do you think you could re-escalate even temporarily the fighting as you seem to say you might if you had to?

The PRESIDENT. Well, Mr. Smith, when we talk about re-escalating the fighting, I think we have to be precise about what we mean. First, I have already indicated in answer to Mr. Sevareid's first question that we have no plans to go back into Cambodia.

And, incidentally, I am not as bearish as some commentators have been about the future of Cambodia. If I could digress a moment, I think this is a question that our listeners would be interested in—Cambodia's chances of surviving as a neutral country are infinitely better now than they were on April 30th. And they are better, first, because the North Vietnamese have a 600-mile supply line rather than a 40-mile supply line back to the sanctuaries which we have destroyed.

They are better, also, because the Cambodian Government has far more support among the people, and the reporters from Phnom Penh generally have reported that. They are better, too, because the Cambodian Government also has support from the 11 Asian nations, representing 300 million people, and I think also they are better for the reason that the South Vietnamese have been very effective when they have taken on the North Vietnamese in the Cambodian area.

They have posed a rather considerable threat to them. I do not suggest that it is still not a fragile situation. It is difficult. But it is possible for them to survive.

Now coming back to your question, first, when you talk about re-escalation, we do not plan to go back into Cambodia. We do plan, however, and I will use the power—I am going to use, as I should, the air power of the United States to interdict all flows of men and supplies which I consider are directed toward South Vietnam.

That is in my role of defending American men.

Now let's look at the other possibilities of the escalation. For example, we have a bombing pause in the north, as you note. As you also note, one of what was called the understandings when that bombing pause was entered into was that American reconnaissance flights could take place over North Vietnam so that we could determine whether or not they were planning a new attack, and those reconnaissance flights were supposed to be immune from attack.

Now consistently the North Vietnamese have been shooting at those planes. In fact at the time we embarked on the April 30th operation, I ordered some attacks on some sites in North Vietnam which had been shooting our planes.

If those attacks should now develop again, I will, of course, use our American air power against North Vietnam sites that attack our planes.

That is my responsibility, to defend American boys—American men, our boys when they do come under attack.

Now when you talk about re-escalation in other terms, I do not see that presently as a possibility, presently in terms of what the North Vietnamese may be able to do and what we would do in action to it.

But I want to leave no doubt on one score: I am concerned, as all you gentlemen have been concerned, about the dissent on the campuses, and among a great many thoughtful Americans that are for peace, as I am sure all of you are, and as I am. Sometimes people say, "Well, was it really worth it?" Right after I made this report, one of the members of the press said, "Do you think it was all worth it?"

And my answer quite candidly is this: There are no easy choices in the position I hold, as you well know, particularly when it is one like this. I knew there was a risk, the risk of dissent, and I knew that a barrage of criticism would come not only from the campus but from many others as well.

So I had to weigh that risk. I had to weigh the risk of dissent from those who would object if I did act, against the risks to 435,000 American lives who would be in jeopardy if I did not act, and as Commander in Chief, I had no choice but to act to defend those men. And as Commander in Chief, if I am faced with that decision again, I will exercise that power to defend those men.

It will be done, and I believe that the majority of the American people will support me then, as a majority of the American people, even in this difficult period, have seemed to support me.

Mr. CHANCELLOR. Mr. President, in your report on the Cambodian incursions you described again in vivid terms the dangers of a Communist-controlled Cambodia with its long frontier along South Vietnam and the ability that the enemy would have if the Communists controlled it, to wreck our program of Vietnamization and many other

things in South Vietnam. But some of us I think are more apprehensive than you seem to be this evening about the chances for survival of the Lon Nol government. I surely don't question your information, sir, but people do worry that that government may topple, that Sihanouk may come back, that there are an awful lot of Communists troops in that country.

What will we do then if we have this hundreds of miles of open frontier? Would you then think that we could mount an international rescue operation or would we have to be drawn in again?

THE PRESIDENT. Mr. Chancellor, the hypothetical question that you have posed, shows, it seems to me, very clearly why as Commander in Chief I had no choice but to move in the sanctuary area. Just think what the situation would be that we would confront if the Communists were to take Cambodia and if they had—they, rather than we, had the 14 million rounds of small ammunition and the 190,000 rounds of mortars and recoilless rifles, and all the rest. It would mean that the position that we would be in, and our troops would be in, extremely difficult and more difficult than was previously the case because they not only would have the sanctuaries but they would have the back country to back it up and they would also have the Port of Sihanoukville open and over 50 percent of the material in the sanctuaries came in through that port. Now you come to the second point. Now that we have cleaned out the sanctuaries, let us suppose—and what you are putting is a hypothetical question and a hypothesis I do not accept, although it is a possibility, because nobody can be sure, it is a fragile situation—if the Communists despite the support that the present government in Cambodia gets for its neutrality, if they should nevertheless topple it, what do we do? The answer is that we continue in our course in South Vietnam to defeat the enemy there, and the South Vietnamese, who are now a very formidable fighting force, will certainly see to it that the sanctuary areas are not again occupied. That is a very real threat to whatever Communist activities might be engaged in in Phnom Penh.

Mr. SEVAREID. Mr. President, in view of the Cooper-Church Amendment passed yesterday in the Senate, do you feel now obliged to suspend the negotiations with Thialand about our paying and equipping their troops that they were going to send into Cambodia? I think this is forbidden as far as the Senators are concerned.

THE PRESIDENT. Fortunately, our Founding Fathers had great wisdom when they set up two Houses of Congress.

Mr. SEVAREID. So, you're going to wait and see what——

THE PRESIDENT. Oh, yes. Let me say with all due respect to both the House and the Senate—and as you know, I started in the House and also served in the Senate, and I have great respect for the Senate, I served there 2 years as a Senator and presided over the body for 8 years as Vice President—but I think the performance of the Senate over the past seven weeks, going up and down the hill on Cooper-Church, has not particularly distinguished that august body, and the Cooper-Church that came out was not a particularly precise document, and was somewhat ambiguous.

Now, fortunately, it now goes to the House and the House will work its will on that amendment, and then it goes to conference and, of course, the conference, which most of our viewers don't think of as being a very important body, that is probably the most important legislative entity that we have in our Government. Because there they take the differences between a House and a Senate bill, things that were done, for example, that went too far in one direction or too far in another, and they work them out. And I believe that the conference of the Senate and the House, when they consider all of these factors, will first be sure that the power of the President of the United States to protect American forces whenever they come into attack is in no way jeopardized. Even Cooper-Church recognizes that to an extent. And second, that they will recognize that the Nixon Doctrine, which provides that the United States rather than sending men will send arms when we consider it is in our interest to do so, arms to help other countries defend themselves. I believe that the conference will modify Cooper-Church.

MR. SEVAREID. How do you take it yourself, this action of yesterday? The Senate majority. Do you take it as a rebuke, a warning, an expression of mistrust in your word as to what you are going to do in Cambodia? How did it hit you?

THE PRESIDENT. The action of the Senate is one that I respect. I respect, I know the men in the Senate. Take the two authors, Cooper and Church. They are good men. They are very dedicated to peace. So am I.

There is one difference between us. I have responsibility for 440,000 men. They don't.

And I intend to do what is necessary to protect those men, and I believe that as far as the Senate is concerned that, while I will listen to them, I will pay attention to what they have said, I am going to wait until the House acts, until the conference acts, and I believe that the action, the joint action of the House and Senate, will be more responsible, I will say respectfully, than the action of the Senate was.

I don't consider it a rebuke, and I am not angry at the Senate. It won't pay. They have the last word sometimes—or many words.

MR. CHANCELLOR. Sir, you said in your report that you had unambiguous knowledge of enemy intentions in Cambodia just after April 20, April 21, 22, 23. It has been asked, and I think it is valid to raise it here, could you, in these early days in that week, before you decided to move on the 30th of April, have consulted with certain key Members of Congress?

THE PRESIDENT. Well, as a matter of fact, when we talk about consultation, you can do it formally or you can do it informally, and I can assure you, Mr. Chancellor, I consulted with a great number of people between April 20th and April 30th, including Members of the Senate and Members of the House.

Now, let's come to perhaps really the thrust of your question, and I think this is perhaps something that many of our viewers and listeners would ask: Well, in ordering American men to join with the South Vietnamese, and incidentally, this was 60 percent South Vietnamese, 40 percent Americans, but we carried a very important part of the load—in ordering that kind of an action, why didn't I go to the Senate, for example, and the House and ask for their approval?

Well, now let us suppose we had done that. It took them 7 weeks for Cooper-Church. Let's suppose it had taken 7 weeks. What would have happened? Well, first, all of this year's supply of ammunition that we have acquired would have been gone out of the sanctuaries, or even worse, what might have happened is that the rather fearsome defensive barricades that they had in these sanctuaries would have been ready for us, and we would have lost not just 330 men—that is too many to lose in two months, and that is all we lost in Cambodia—we would have lost 3,000 or 4,000.

As far as I am concerned, I had to think of what was right, what was necessary, what would save American men, and the element of surprise was important.

Now let me also add this. If this had been what some thought it was, an attempt to expand the war into Cambodia, to launch a war into Cambodia, then of course, I would have gone to the Senate. You can be sure that in my administration we are not going to get involved in any more Vietnams where we do not get the approval of the Congress. I will not do this because I think we need Congressional support for our actions, and I trust we do not have to go to the Congress for that kind of support.

But when we have this limited, very precise action which was limited in terms of the time, limited in terms of 21 miles as far as we were going to go, and which had for its purpose the protecting of American lives, I had to take the action when I did, and I did not think it was wise to give the enemy the advance notice, the strategic warning, which would have taken away the surprise and would have cost us lives.

MR. CHANCELLOR. Sir, aren't we at the crux of the argument now that is going now in the country that the Executive Branch, according to the Legislative Branch, or at least one body of it, ought to be limited, they say on the Hill, in what it can do in ordering American troops to be used in many different ways around the world? I think we would all benefit, sir, if we could explore your views in a general way on that.

Do you feel that in the modern world there are situations when the President must respond against the very tight deadline or for reasons of security in using American troops crossing a border with them when he cannot, under reasons you yourself have described, consult with the Legislative Branch?

The Constitution says they declare war and you, sir, run it.

THE PRESIDENT. Another good example of course is the Cuban missile crisis. President Kennedy had a very difficult decision there and two hours and a quarter before he ordered—and I thought with great justification and great courage—before he ordered the blockade, the use of American men to blockade Cuba, he told the Senate and the Congressional leaders. Now, why didn't he give them more time? For a very good reason he did not give them more time.

It was imperative to move soon with some surprise and some impact or the possibility of a nuclear confrontation might have been greater. That is one example. I trust we don't have another situation like Cambodia, but I do know that in the modern world, there are times when the Commander-in-Chief, the President of the United States, will have to act quickly. I can assure the American people that this President is going to bend over backwards to consult the Senate and consult the House whenever he feels it can be done without jeopardizing the lives of American men.

But when it is a question of the lives of American men or the attitudes of people in the Senate, I am coming down hard on the side of defending the lives of American men.

MR. SMITH. I can see a clock on the wall which indicates we haven't got a lot of minutes left. I want to ask you about the Middle East.

Mr. George Ball wrote an article in last Sunday's New York Times Magazine section in which he suggested that the Russians were bold enough to move into the Middle East because we were bogged down in Indochina.

Do you accept that concatenation of the two events?

THE PRESIDENT. As a matter of fact, Mr. Smith, Mr. Ball should know something about that because he was there when he got bogged down in Indochina as you recall, as Under Secretary of State. I did not hear his comments at that time indicating that that was the problem.

Now, the second point that I would make is that if the United States, after this long struggle in Vietnam, if we do what Mr. Ball and some others apparently want us to do—just get out, without regard to the consequences—I do not see the American people and the American Congress then saying that

if we couldn't do what was necessary where the lives of American men were involved in Vietnam, that we will do what is necessary because we are concerned about Israel or some other state in the Mideast.

You cannot separate what happens to America in Vietnam from the Mideast or from Europe or any place else. That is why European leaders—some of them don't say it publicly, but privately they all know how much rides on the United States coming out of Vietnam, not with a victory over North Vietnam, but with a just peace because if the United States is humiliated or defeated in Vietnam, the effect on the United States is what I am concerned about, the people of the United States. And I think we'll see a rampant isolationism in this country in which we will not do what we should do in other parts of the world.

If I can turn to the Middle East briefly, because I think we should spend a moment on it, if you other gentlemen would like. I think, and I say this respectfully, that some of the columnists and commentators—and I read them and listen to them both with respect—and some of us in political life have a tendency to look at the Middle East too much in terms of the Israeli-Arab struggle. We look at Israel, a strong free nation in the Middle East and we look at its neighbors, its aggressive neighbors, the UAR and Syria, and we see this struggle and we say, "Are we going to give planes to Israel and are the Russians going to give them to the UAR? And how are we going to have a settlement between Israel and the Arab states?"

If that is all there was to it, it would not be as difficult a problem as I am going to put it. I think the Middle East now is terribly dangerous. It is like the Balkans before World War I where the two super powers, the United States and the Soviet Union, could be drawn into a confrontation that neither of them wants because of the differences there.

MR. SEVAREID. Mr. President, I believe the Russians today at the U.N. are circulating some new ideas about approaching peace negotiations in the Mideast. Is there anything you can tell us about this?

THE PRESIDENT. I haven't had a chance to study them yet, but I will say this, that any propositions that the Russians or anybody else circulate that would offer a chance to cool it in the Middle East would be helpful, because when you look at the Middle East, it is not just a case of, as I say, Israel versus the Arab states, but the Soviet Union is now moving into the Eastern Mediterranean.

The Mideast is important. We all know that 80 percent of Europe's oil and 90 percent of Japan's oil comes from the Mideast. We know that the Mideast, this area, this is the gateway to Africa, it's the gateway to the Mediterranean, it's the hinge of NATO, and it is also the gateway through the Suez Canal down into the Indian Ocean.

Now, under these circumstances, when we then look at it in terms of Israelis versus Arabs, moderate Arabs versus radical Arabs, and whoever would think that there would be somebody more radical than the Syrians, within the radical Arab states, Fedayeen that are more radical, the super-radicals—when we think of all these factors, we can see what a very difficult situation it is. Now what should U.S. policy be? I will summarize it in a word. One, our interest is peace and the integrity of every country in the area.

Two, we recognize that Israel is not desirous of driving any of the other countries into the sea. The other countries do want to drive Israel into the sea.

Three, then, once the balance of power shifts where Israel is weaker than its neighbors, there will be a war. Therefore, it is in U.S. interests to maintain the balance of power, and we will maintain that balance of power. That is why as the Soviet Union moves in to support the UAR, it makes it necessary for the United States to evaluate what the Soviet Union does, and once that balance of power is upset, we will do what is necessary to maintain Israel's strength vis-a-vis its neighbors, not because we want Israel to be in a position to wage war—that is not it—but because that is what will deter its neighbors from attacking it.

And then we get to the diplomacy. The diplomacy is terribly difficult, because Israel's neighbors, of course, have to recognize Israel's right to exist.

Israel must withdraw to borders, borders that are defensible, and when we consider all those factors and then put into the equation the fact that the Russians seem to have an interest in moving into the Mediterranean, it shows you why this subject is so complex and so difficult.

But we are going to continue to work on it, and I can assure you the fact that we are in Vietnam does not mean that the United States is not going to give every bit of its diplomatic and other energies to this subject as well.

MR. CHANCELLOR. Very briefly, Mr. President, would you say that the situation in the Middle East is as dangerous to the United States as the situation in Vietnam?

THE PRESIDENT. Yes. The situation in Vietnam, fortunately, has reached the point where we are embarked on a plan which will get the United States out, and which will bring a just peace.

It will succeed. That I know.

Second, the situation in the Mideast is more dangerous, more dangerous because it involves, and this is not the case in Vietnam, a collision of the super powers.

Neither Communist China, in my view, nor the Soviet Union will have a confrontation with the United States about Vietnam, although many have feared that. But it has not happened, and it will not happen, in my opinion.

But in the Mideast, because of the things that I have mentioned earlier, this tremendous power complex, it is not only the cradle of civilization, but it also, as we have already indicated, this is the area that controls so much of the world's people and the world's resources.

The Mideast, being what it is, is a potentially dangerous spot, and that is why it is in the interests of the United States and the Soviet Union to work together to bring this particular danger spot under control.

MR. CHANCELLOR. Mr. President, I want to thank you very much for being with us tonight.

Thank you.

THE PRESIDENT. Thank you. I wish we had more time.

BUSINESSLIKE PROCEDURES IN THE POST OFFICE

Mr. McGEE. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial published in the Greybull, Wyo., Standard and Tribune concerning the businesslike procedure of the Post Office Department which seems to be finding more and more ways to save less and less money by reducing postal services to the American people.

From time to time I have been asked why I insisted, as chairman of the Committee on Post Office and Civil Service, on the retention of a strong role for the Congress in postal operations. The present administration's position, ironically though nevertheless accurately described in the attached editorial, is a part of my answer: When the people's chosen representatives in Congress no longer have the legislative power to insure that the Post Office remains a true public service, the businesslike activities described in this newspaper would be but a glimpse of what changes could be wrought in the Post Office.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHO NEEDS A CORPORATION?

The Post Office has announced it is eliminating Sunday service in second class post offices like Greybull and Basin in an effort to reduce operating costs. In doing so, the Post Office is following the lead of most of the businesses in the world who don't pay help and who turn off the lights at least one day a week if not two. So the decision is based on sound business practices. And the influence of the corporation idea for post offices may already be here.

The new air conditioning the Greybull post office is getting (see front page story) won't have to run on Sunday now and if you project those savings over the next 25 years you can see that an idle air conditioner on Sunday for six months out of the year will prolong the air conditioner life by 14.2 per cent. So before they ever put this in, the post office has saved money on it!

It seems to us, though, that if the post office department is giving up the philosophy of through rain and snow and gloom of night, there are a few other labor and time saving ideas they could put into effect to go along with the no-Sunday-service idea.

How about only putting the mail halfway in the boxes for instance? Thus, we who pull out the mail would be doing at least half the work.

Or leave a six inch strip of snow on the sidewalk during the winter. Don't shovel it off at all and thereby save the life of the mechanical snowplow by some 18 percent. If you alternated the strip one year on one side and one year on the other, it would also spread out the wear and tear on the concrete and that ought to be worth something.

Or let's drop off one of those zip code digits and have only four numbers instead of five. That automatically eliminates 20 per cent of all the work connected with zip codes since there would only be four numbers to write or read. The amount of postal effort saved in this simple dropping of one zip code number would be staggering! And I'm surprised the post office hasn't thought of it.

This is the same principle as that clever innovation on abbreviating states that the post office is using now like "Wy." for Wyo. and "Co." for Colo.

And if the post office carried this further so only one-half as many lines on the post mark would be used now it would result in substantial savings in ink and metal wear.

Or maybe the size of the stamps should be reduced by one-seventh or the number of those little holes on the perforation cut down to every other one.

Who needs a corporation to run the post office when all this efficiency could be working for us right now!

SENATOR COOPER ADDRESSES THE COMMITTEE OF 39

Mr. BOGGS. Mr. President, the distinguished senior Senator from Kentucky (Mr. COOPER) recently visited my State to speak at the annual dinner of the Committee of 39.

The Committee of 39 is an organization of citizens in the State of Delaware dedicated to the goal of good government. Their bipartisan efforts to foster public interest in State and local government have had a beneficial effect in our State.

The message that Senator COOPER

brought to them in his remarks was most provocative. He discussed the Nation's involvement in Southeast Asia, particularly as it relates to the broader question of America's constitutional response to its treaty commitments.

In order to permit Senators an opportunity to read Senator COOPER's observations, I ask unanimous consent that his speech to the Committee of 39 be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR JOHN SHERMAN COOPER, REPUBLICAN OF KENTUCKY, AT THE ANNUAL DINNER OF THE COMMITTEE OF 39, WILMINGTON, DEL.

It is a great honor to be invited to speak to the Committee of 39 and your guests. Your continued efforts in the cause of good government are well known, have accomplished much and have encouraged other citizens throughout the nation.

I am honored also to be in the company of my colleagues, Senator Williams and Senator Boggs.

John Williams was the first Senator I met when I came to the Senate in 1947 for a two year term. He is one of three Republicans and nine Democrats remaining in the Senate of the 98 I met at that time. Acknowledged as the foremost fiscal authority in the Senate, he has saved untold billions of dollars for our country. Without vindictiveness, he has brought to the attention of the Senate, wrong doing in both the Congress and the Executive branch and he has been faithful to the high standards he has set for himself. I sit next to him, I admire him and the best I can say is that he will be sorely missed by the Senate and the people of our country.

Hale Boggs has continued for the country his fine work as your Governor. His ability, judgment and integrity were quickly recognized and today he serves on three important committees: Appropriations, Post Office and Civil Service and Public Works. In the last Committee, he is the ranking Republican of the Subcommittee dealing with Pollution Control.

Six years ago, before pollution, environment, and ecology had become household words, Senator Boggs began his work in this field. He had played a leading role in the development and approval of major bills dealing with air and water pollution, the protection of our territorial and inland waterways against the discharge of oil and other pollutants, and now he is working on a solid waste control bill. He works with patience, with reason, and with good judgment and an openness of mind, which mark him as outstanding in the Senate.

It is difficult to know what I should talk about this evening. There are so many issues of concern to all of us, the state of the economy, the contradictions of affluence and poverty, the hostility within our society between generations and between races—all are troubling and difficult of solution. The threat of war in Southeast Asia and in the Middle East is constantly before us.

The war in Vietnam remains the chief concern of our country. The length of American involvement, its casualties—323,000 of whom 50,000 are the dead—extricating the United States from the war despite the endeavors of Presidents Johnson and Nixon, and now its extension into Cambodia have deepened its uncertainities.

It is not my purpose this evening to repeat the arguments of the past about Vietnam. Rather I would like to introduce for your consideration a problem which the lesson of Vietnam has fastened upon the Congress and one which deserves the consideration of the people of our country.

It is the problem of determining whether the involvement of the United States in war, in a particular situation, is necessary for the security of the United States and its people. It is the problem of whether a determination to enter war should be made by the President alone or by the President and the Congress. They are issues which have troubled the Congress and the people during the life of the Republic.

The Constitution provides that the Congress has the authority to declare war, to raise and support Armies and a Navy, to suppress insurrections and repel invasions. It provides that the President shall be Commander-in-Chief of the Army and Navy of the United States and of the Militia of the States, when called into service of the United States.

The notes of members of the Constitutional Convention distinguished the power of the President from that of the King of England, who had the power to declare war, and to raise armies and make war. But throughout our history, the exact war powers of the President and the Congress have not been determined and probably cannot be determined with exactitude.

In cases of sudden attack upon the territory of the United States or upon any considerable body of U.S. forces, the President has, without doubt, the authority and the duty to repel the attack.

But a new situation has evolved since World War II which makes the determination of whether war is necessary for our security and who shall make the determination much more difficult, and it is to this issue I speak this evening.

To illustrate this new situation, I believe it will be helpful to review briefly the progressive involvement of the United States in Indo-China.

The United States has been involved in Vietnam since World War II. During World War II we gave assistance, through Nationalist China, to Ho Chi Minh in support of Vietnamese resistance to the Japanese. After the war, we contributed about $2 billion to the French, as they stubbornly insisted on imposing again their colonial rule in Vietnam.

The United States did not subscribe to the Geneva Accords of 1954. But it began in that year a program of economic assistance and limited military training to the Government of South Vietnam. In 1962, the United States expanded its forces in South Vietnam as the Viet Cong and North Vietnamese enlarged their war against the Government of South Vietnam. Gradually our forces grew from 650 in 1960 to about 17,000 in 1963, to a peak of 513,000 in 1969. Our forces were fired upon, the Congress approved in August 1964 the Tonkin Bay Resolution, and the United States had become fully engaged in the war.

I do not believe that our actions were immoral, as some have charged. The purposes of our country were good—to assist in the protection of South Vietnam against aggression from the North, and to support self-determination. But I do not believe the war was, or is, necessary to protect the security of the United States. I doubt that any of the four Presidents of this era, or the Congress, or the people, foresaw or desired that the United States would become involved in a large-scale war on the land mass of Asia. But the fact stands out that progressive series of decisions and actions over a period of nearly twenty years had forestalled a clear-cut decision by the President, or by the President and the Congress, that the defense of South Vietnam and our engagement in a great war were necessary to the security and best interests of the United States.

This process of progressive involvement to a point of engagement in war, without any express prior commitment by our government, can occur again, and in situations where our national security and interests are not actually threatened.

I would like to indicate two areas in which such a situation could develop.

The first area will be found in our obligations under the collective security arrangements to which the United States is a party—and I may say the essential party—since our chief wartime allies, Great Britain and France, are disengaging themselves from their responsibilities under the treaties.

The period following World War II, viewed by the United States and the West as an opportunity for world stability, was considered by Stalin's Soviet Union as another stage in its struggle with the Western democratic nations.

The collapse of Nazi Germany brought the Soviet armies into Eastern Europe. The fall of Nationalist China, the attack upon South Korea and the possibility of a thrust from Communist China toward Southeast Asia, caused the United States to enter a wide range of bi-lateral and multi-lateral mutual defense agreements designed to contain the Soviet Union and Communist China. They are eight in number and include 43 nations. Among them are the NATO, SEATO and ANZUS and Inter-American multi-lateral treaties with Japan, Korea, the Philippines and Nationalist China.

While these treaties differ in certain respects—particularly NATO, which recites that an attack upon a tremendous area designated by the treaty shall be considered an attack upon all the parties—they are similar in substance.

In essence, the treaties state that an aggression, by armed attack against *any party* to the treaty would endanger the safety of all, and that each party—including of course the United States—would act to meet the danger "in accordance with its constitutional processes."

The term "constitutional processes" is not defined or spelled out in the treaties. And the reports of the committees and the debates in the Congress on its meaning show marked disagreement. Does "constitutional processes" mean that the President, acting as Commander-in-Chief, could commit the forces of the United States to the military assistance of another treaty country? Or does it mean that the President shall consult with the Congress, to determine whether the dispatch of American forces is essential to the security of the United States as well as the other country, and that he will not commit forces until the Congress has given its approval, either by a declaration of war or by a joint resolution of the Congress?

In fact, as the situation exists today, it may be too late to come to the Congress. For in addition to Vietnam, American troops are stationed in Korea, Thailand, Japan, Nationalist China, the Philippiness, and, of course, in Western Europe. If our troops in any of these countries should be attacked, the President, as Commander-in-Chief, has the constitutional authority, and the duty to protect them. This could expand into war, without the "constitutional process" ever being exercised by the joint action of the President and the Congress.

I have raised questions. Now, we must consider if there are ways, imperfect of course, by which we can help avoid a progressive involvement in the affairs of another country to the point where, locked in by prior action and statements, the United States may find itself in war even though our national security is not at stake.

The presence of our armed forces in another country obviously presents the greatest danger of engagement in war. Senator Symington's subcommittee of the Senate Committee on Foreign Relations has been making a very thorough examination of the status of our armed forces around the world and the necessity of their presence in for-

eign countries. The Administration is making the same sort of examination. Both branches are beginning to consider the orderly reduction or withdrawal of our forces from other countries consistent with the protection of our security.

There are disagreements about the areas from which forces should be withdrawn, and I must admit I have my exceptions. I do not believe there should be a drastic reduction in our forces in Europe at the time when the SALT talks with the Soviet Union and talks between West and East Germany are going forward, and when talks between the NATO and Warsaw Pact countries upon mutual reduction of armed forces in Europe are in prospect, and while the danger in the Middle East exists.

The size of our forces in other countries is a significant factor. Our involvement in war in Vietnam began in 1963 with the introduction of substantial American forces. The Congress should insist that no substantial forces, even as military advisors, should be deployed in another country without its approval. Welcomed at first, they become the focus of nationalist opposition—as, similarly, foreign troops would be in the United States.

My examples thus war, other than Viet Nam, have dealt chiefly with situations where we are not yet involved in war. As I have stated, I believe there are few situations, other than nuclear attack, where the President does not have ample time to come to the Congress for its approval of a war decision.

It is much more difficult to determine the constitutional powers of the Congress and the President, when we are in war. In war, the President as Commander-in-Chief, has wide powers to conduct the war, to direct the armed forces and, of course, to protect their security. Congress may disagree with his decisions, but there is little that it can do to challenge his decisions except by the denial of funds to the armed forces. This is a very difficult course to follow, for one must think of the security of those who fight, those who are patriotically obeying the orders of their government.

The United States Senate in several initiatives last year made an effort to assert its constitutional power to join in war-making decisions. By a nearly unanimous vote, it approved the "National Commitments Resolution". In brief, the resolution states that the use of the armed forces of the United States, or the promise of their use, to another country, upon the territory of another country, shall not be deemed a national commitment of the United States unless explicitly agreed to by the President and the Congress through a treaty, statute or joint resolution.

Again, in 1969, an amendment to the Defense Authorization Bill, denying funds for the use of American forces in support of Laos or Thailand, was adopted by the unanimous vote in the Senate, but was not accepted by the House. Later, in December, an amendment to the Defense Appropriations Bill was adopted by both the Senate and House denying the use of funds for American ground forces in Laos. The intended effect of the amendments was to insure that before American forces could be committed to the defense of these countries in war, the President must secure the approval of the Congress.

As I said at the outset of my talk, I am not here to argue the merits or demerits of the war decisions that have been made in Vietnam in the past, but rather to suggest ways to avoid such wars. I have supported the Vietnamization policy of President Nixon as it represented a clear change from past policies. And, whatever our intentions may have been about becoming involved in the war, I think it reasonable to say that the Government of South Vietnam and at least a part of its people must have considered that twenty years of support and promises of support by our leaders and the approval of the Tonkin Bay Resolution indicated a purpose to assist in their defense.

Now the Vietnam War has extended into Cambodia, and this leads me to a difficult issue we face in the Senate today, and which will be repeated during this session of the Congress.

The operation in Cambodia if considered standing alone is probably a classic military operation. It is one which may fall within the authority of the President as Commander-in-Chief to protect our armed forces. The President has stated that he does not intend to become involved in a war for Cambodia and that it is his purpose to withdraw our forces within a time period of seven weeks. I respect his statement but as the lesson of Vietnam informs us, even beyond the control of the President—such as a change in government in Cambodia or the introduction of larger Vietnamese forces or "volunteer" forces of other countries—may alter our position in Cambodia.

In this situation, where no obligation of any kind to Cambodia exists, I believe that the Congress has the authority to ask that no war for Cambodia or any longer war in Cambodia shall be undertaken without the approval of both Houses of Congress.

This position is embodied in an amendment to the Military Sales Act upon which the Senate will vote within a week. It probably will present a constitutional clash between the powers of the President and those of the Congress. And I do not know what the outcome will be. The possibility of such a clash has been examined by many distinguished constitutional scholars during this century and all have agreed that there is no definitive answer expect that the Congress and the President must consult fully with each other, must respect each other, and must make accommodations in the national interest.

I will end on this note because it seems to me that it is the only response to many of the serious problems and conditions which trouble our country today. There are divisions and very serious ones between our people about the war in Vietnam, between the poor and the well-to-do, between the white and nonwhite citizens, between the young and the older generation. There is need for communication, for understanding, for action to meet the needs of our people, there is need for tolerance and respect for each other.

There are difficult problems and dangers in the world, as there are at home. Southeast Asia, the Middle East and the nuclear arms race, which unless halted, threatens the destruction of civilization as we know it.

The people of the United States from the beginning have organized the rule of law and justice in our country. Its preservation, its strengthening, are the objectives we pursue as the only sane alternatives to violence at home and power and war in the world. Over 50 years ago, Justice Holmes said in a speech:

"I have no belief in panacea and almost none in sudden ruin. I believe with Montesquieu that if the chance of battle has ruined a state, there was a general cause at work that made the state ready to perish by a single battle."

I believe that most of our people believe, as your work has expressed, that some first principles exist beneath our framework of law—call them spiritual, moral or ethical as you choose. If in times of stress they do not seem to prevail, it is the continued effort to make them effective that gives purpose to our lives and sustains the hope of peace and justice.

THE FITZGERALD CASE: 8 MONTHS OF INACTION AT THE JUSTICE DEPARTMENT

Mr. PROXMIRE. Mr. President, on November 22, 1969, I wrote to the Justice Department asking them to investigate the intimidation and firing of A. Ernest Fitzgerald, the former Air Force cost efficiency expert. On November 28, just 6 days later, the Justice Department responded that—

> After we review the transcript, a determination will be made as to whether the evidence presented justifies further action by the Department. We will let you know when our review and appraisal of the case is completed.

On December 30, 1969, I received a further letter of reply from the Justice Department. In that letter I was assured that—

> When all available evidence is received and reviewed, a definite conclusion will be made as to whether the facts show a violation of the Federal criminal code.

Mr. President, 246 days have now passed since my original letter to Attorney General Mitchell. How long does it take the Justice Department to receive and review—all available evidence? Exactly when will the promised "determination be made as to whether the evidence presented justifies further action by the Department"?

It appears clearly on the basis of the facts that A. Ernest Fitzgerald was fired because he testified as to the truth before a congressional committee. It seems to me it should not take the Department of Justice 8 months or the great amount of time it has taken them to determine if they have a case against an official in the Department of Defense.

When the Department of Justice wants to, it can act in the matter of weeks, or even days. What is taking it so long to make up its mind in this case?

FEDERAL REVENUE SHARING

Mr. SCOTT. Mr. President, it is time once again to invite the attention of Senators to the administration's proposed legislation enacting the Federal revenue-sharing principle.

The President recently indicated a "strong desire" to secure enactment of such legislation this year.

Since the strength of our local governments rests largely with their fiscal capability and capacity, we in Congress must contribute to improving that capability. We should enact, immediately, a system of Federal revenue sharing with the State and local governments.

Revenue sharing simply is a means of federalizing the Federal income tax base—sharing it directly with hard-pressed local governments. We now have a fiscal mismatch, and the revenue capacity of local government is severely strained.

I cannot think of an objective more fundamental to the Nation's interests than insuring that we have strong local government.

Our federal system has served us well, but we need to design better systems for delivering Federal program assistance. As our domestic problems grow more complex, the solutions do not lie in a single Central Government in Washington. The solutions lie in renewing the capacities of the other levels of government to make the most effective use of our resources and to provide machinery that can respond effectively and directly to problems as they arise. Americans are not only frustrated with the performance of governmental institutions, but also with the unresponsiveness to local concerns.

I see little letup in future needs of State and local governments in this decade. The demands on local governments and the rising costs of government services are severely straining local budgets. We are facing a local government fiscal crisis which threatens the domestic problem solving fiber of our Nation.

True and meaningful help to these hard-pressed local governments can come through Federal revenue sharing. We can use revenue sharing as a pressure valve to relieve fiscal imbalance among local governments and to provide an injection of fresh funds to those governments which are closest to the people.

I believe it is time now that this Democratic Congress get on with the business of establishing Federal revenue sharing as President Nixon has proposed and as I have called for many times before.

I ask unanimous consent to have printed in the RECORD a statement entitled "Questions and Answers on Revenue Sharing Proposals."

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

QUESTIONS AND ANSWERS ON REVENUE-SHARING PROPOSAL

1. Q. *What is the purpose of this proposed legislation?*

A. The ultimate purposes are:

To restore to the States their proper rights and roles in the Federal system with a new emphasis on local initiative and discretion;

To provide both the encouragement and the necessary resources for local and State officials to exercise leadership in solving their own problems;

To restore strength and vigor to local and State governments;

To achieve a better allocation of total public resources.

2. Q. *Why do State and local governments need revenue sharing?*

A. One reason is due to what Senator Scott calls the "fiscal mismatch." Federal tax receipts, based largely on incomes, tend to grow faster than the economy. At the local level, the reverse is true. State and local revenues, based heavily on sales and property taxes, do not keep pace with economic growth, while expenditure requirements for education, health, welfare, and other local services tend to exceed such growth.

3. Q. *But doesn't the Federal Government provide aid to State and local governments already?*

A. Yes. Federal grants to State and local governments will amount to $24 billion during fiscal year 1970 and an estimated $28 billion in 1971. But this assistance is being distributed through a confusing array of nearly 500 separate program authorizations. A basic objective of revenue sharing is to supplement the existing Federal aid effort with broader and less conditional fiscal assistance. In this manner, both funds and the responsibility for their proper allocation will be transferred to the States and localities.

4. Q. *But if some "surplus" revenue develops at the Federal level, why not reduce the Federal tax take—leaving the field open for States and localities?*

A. This is not a matter of sending back to the States "excess" Federal revenues left over from Federal program requirements. Revenue sharing should be viewed as an *expenditure* for a basic national purpose—strengthening the financial base of our Federal system of government. It shouold be evaluated with other expenditure programs and assured delivery to State and local governments.

5. Q. *How much money is to be shared?*

A. The size of the total fund to be shared will be a stated percentage of personal taxable income—the base on which Federal individual income taxes are levied. To provide for an orderly phase-in of this program, the FY 1971 percentage will involve new obligational authority of $275 million for the last quarter of the year—or $1 billion on a full-year basis; subsequently fiscal year percentages will be increased annually up to a permanent one percent for fiscal year 1976 and thereafter. On this basis, we estimate an appropriation for fiscal 1976 of about $5 billion.

6. Q. *The initial amount of revenue sharing does not sound like much, particularly when it is split up among 50 States and thousands of cities and counties. Wouldn't this just be a drop in the bucket for most communities?*

A. Given the current and near-term budget outlook, there were, realistically, two alternatives for introducing revenue sharing: (1) either delay introducing the plan until funds are available to begin a full-scale program, or (2) establish the plan now and provide for phased increases as budget resources permit. The second course of action is clearly preferable. With all the competing claims for limited Federal revenues, it is important to establish the principle of revenue sharing as soon as practicable.

7. Q. *Can the States and localities depend on this flow of funds to be regularly appropriated?*

A. In order to provide for the assured flow of Federal funds, a permanent and indefinite appropriation will be authorized and established for the Department of the Treasury, from which money will be automatically disbursed each fiscal year, as required by the revenue sharing act.

8. Q. *How will the funds be distributed?*

A. The funds will be distributed from the Federal Treasury to the 50 States and the District of Columbia. Each State will receive an amount based on its share of national population, adjusted for the State's revenue effort. The revenue effort factor provides the States with some incentive to maintain (and even expand) their efforts to use their own tax resources to meet their needs. Revenue effort is the ratio of total general revenues collected by State and local governments in a given year to the total personal income of that State.

9. Q. *Will the States be required to share some of this distribution with their local governments?*

A. Yes. The allocation of a State's share among its general units of local government will be established by prescribed formula. The proportion which an individual local government will receive corresponds to the ratio of its own revenues to total State and local government revenues in the State.

10. Q. *Why are these particular distribution formulas used?*

A. Distributions based on revenues raised have several important advantages:

They make allowance for State-by-State variations in preferences; they tend to be neutral with respect to the current relative fiscal importance of State and local governments in each State; they provide a method for allocation among government units with overlapping jurisdictions.

11. Q. *By sharing revenues with every city, county, and town, is the effectiveness of this plan diluted too much?*

A. We are unable to find an acceptable or logical point at which revenue sharing funds should be denied a local government. Some proposals would exclude all cities and counties of less than 50,000. All local governments are faced with fiscal pressures, often especially acute for small communities, and all deserve specific inclusion in the revenue-sharing program.

12. Q. *What restrictions or qualifications will be imposed on the use of these funds?*

A. There will be no program or project restrictions on the use of these funds. One purpose of revenue sharing is to permit local authorities the programming flexibility to make their own budget allocation decisions. Each State will be required to meet minimum reporting and accounting requirements.

13. Q. *Are State and local governments able to establish proper social priorities for the allocation of their revenue sharing funds?*

A. The answer can be obtained by examining the pattern of State and local spending. From their own revenue, they have consistently spent the lion's share on education, health and hospitals, and public welfare.

14. Q. *How do the various State, county, city and other local officials view this revenue-sharing proposal?*

A. Senator Scott has had numerous discussions with Governor Shafer, Lt. Governor Broderick, mayors, and county officials on this proposal. There has developed a remarkable degree of approval. Revenue sharing has now been enthusiastically backed by the national associations of governors, mayors, county commissioners, and other State and local leaders.

15. Q. *How much of a new administrative apparatus will be required to administer revenue sharing?*

A. None. The plan has been designed to operate almost automatically, avoiding any requirement for the establishment of any new Federal bureau or agency. The whole purpose is to avoid Federal controls and to increase the fiscal discretion available to State and local governments.

RUTGERS JOURNAL OF COMPUTERS AND THE LAW

Mr. CASE. Mr. President, I wish to commend the initiative of a group of students in Rutgers University Law School who have compiled a series of articles and published a book entitled "Rutgers Journal of Computers and the Law."

I am told that the Journal, published this spring, is the first of its kind.

The Journal is in the form of a forum for the presentation of outstanding articles that treat subjects involving computers, automation, and the electronic data processing industry, in their interaction with the law and law making. Such topics as computers in legal research, data processing, law office management, computer utilities, and time sharing are given extensive exposure.

An article of particular interest to Members of Congress is entitled "Congress: The Three Dimensional Chessboard," written by Robert L. Chartrand. Chartrand points out ways in which, in the midst of today's information explosion, Congress could effectively use computers to systemize data.

The systemization, Chartrand explains, could be broken down into categories such as delineation of the problem, summaries of existing programs, related written commentary, and listing of legislation.

Computers are currently being used by the House Committee on Banking and Currency, which reports that they are extremely helpful to its work. The committee notes that the use of computers has saved its members and staff a great deal of time and effort. It believes that as soon as Members of Congress become aware of the potential benefits of computers, computer usage will become widespread.

The editors of the Rutgers Journal of Computers and the Law, who intend to publish similar editions twice each year, deserve congratulations for an important contribution in a field too often neglected.

FULL FUNDING FOR HEALTH MANPOWER PROGRAMS

Mr. PELL. Mr. President, much has been said about the health crisis which faces our country today. Yet while much is being said, as usual, not enough is being done. It is for this reason that the health appropriations bill now pending in committee is of such importance.

Contrary to the traditional explanation of the cause of inflation, inflation in health costs is due to a lack of money rather than an excess of money. That is, unless increased funds are committed to health manpower, the inflation in our health system, which is due to a lack of adequate health manpower, will continue to exist.

Extra dollars for health manpower is an anti-inflationary step. I would urge that health manpower programs be fully funded.

I ask unanimous consent that an editorial regarding health manpower funds, published in a recent newsletter of the American Medical Association, be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HEALTH FUNDS

Congress' eagerness to override President Nixon's veto of the Hill-Burton hospital construction bill may prove to be an indicator of things to come.

It is heartening to see Congressmen express concern about health appropriations. They will have a chance soon to express themselves on legislation of far more importance to the nation's health care system than the Hill-Burton measure.

Now pending before Congress is appropriation legislation to expand medical education facilities and increase the number of physicians. The American Medical Association has asked Congress to appropriate:

The full $225 million authorized under the Health Professions Educational Assistance Act. The Administration's request was for $118 million. The AMA has pointed out that there already is a backlog of approximately $400 million in medical school construction applications.

$30 million for health research facilities and $11 million for medical libraries—the full amounts already authorized by Congress, although the Administration has not requested any appropriations in either category. Said AMA: "Construction of educational facilities is very closely related to construction of facilities for research and medical libraries. Failure to meet the need will inevitably restrict efforts to increase enrollments."

All of the $168 million already authorized for institutional grants, special improvement grants, and the physician augmentation program. The Administration has requested appropriations totaling $133.65 million.

The shortage of health manpower is acknowledged by almost everyone. Figures—most commonly alluding to a shortage of 50,000 physicians—are frequently bandied about, and most experts feel the manpower problem is one of the most important factors in the nation's health care delivery problem.

The importance of the appropriations described above, as the AMA told Congress, is that these funds could mean the salvation of some medical schools which are "in precarious financial balance" and are having problems maintaining their present enrollments. The general institutional and special improvement grants are particularly important because the money involved can be applied directly to the medical schools' educational programs.

With all the public attention directed toward health care, it is to be hoped that Congress will consider medical education and research as important as hospital construction. Sen. Warren Magnuson (D., Wash.), the chairman of the Senate Health Appropriations Subcommittee, put it well when his group opened hearings on the budget of the Health, Education, and Welfare Dept.:

"No crisis, either at home or abroad, deserves higher priority than this. . . . The budget requests of the Administration this year simply are not adequate to cope with the crisis" and "represent a tragic neglect of the true needs of the American people."

The AMA has urged Congress to give health care primary consideration in the budget for the next fiscal year. The lawmakers must act to meet the nation's crisis in health manpower.

SENATOR JAVITS ARGUES FOR THE GENOCIDE CONVENTION—II

Mr. PROXMIRE. Mr. President, I turn again to the cogent arguments for Senate ratification of the United Nations convention against genocide that were made by the distinguished Senator from New York (Mr. JAVITS). In his rebuttal to various arguments against ratification, Senator JAVITS addressed himself to the meaning and overtones of the term "genocide."

Many critics of the Genocide Convention believe the term "genocide" is not sufficiently defined in the treaty. Some have suggested that for genocide to be committed an entire group must be wiped out. But Senator JAVITS points out that it is entirely legitimate that the term "genocide" be defined in terms of the overall purposes of the convention. "Genocide" was a new term in 1948 and the definition in the convention represented the international consensus on its meaning.

Senator JAVITS asks:

(Do many of our critics) really believe that an entire group must be wiped out before it is fair to say that genocide has occurred? This view would seem extreme.

An additional argument that Senator JAVITS refuted during the Foreign Relations Committee hearings on genocide was that which dealt with sovereignty of the States. For instance, some have argued that this international treaty would supersede all State laws and practices inconsistent with them and thereby deprive the States of the power to prosecute and punish in their courts acts condemned by articles II and III of the convention. But Senator JAVITS demonstrates that the convention is not self-executing:

The Convention is clearly non-self-executing in view of the requirement of article V to enact the necessary implementing legislation. This administration intends to await enactment of such legislation by the Congress before depositing our ratification and thus becoming a party to the Convention. If there is supersession of any inconsistent State laws, it will be by the Federal legislation, not by the convention. It is difficult to imagine in what way any existing State law or practice could be inconsistent with the Convention.

The enactment of implementing legislation for the Genocide Convention by the Congress need not automatically preclude the States from prosecuting the acts proscribed by the Convention. Whether or not a congressional act preempts an area of law depends on the intent of Congress. If, as could be reasonably argued, Congress did not intend completely to fill this area of law, States would be free to continue to act in this area. To ensure that States would still have such freedom, the Congress could provide in its implementing legislation that nothing in that legislation should be construed as indicating an intent on the part of Congress to occupy, to the exclusion of State or local laws on the same subject matter, the field in which the provisions of the legislation operate.

DEATH OF HERMAN D. KENIN, PRESIDENT, AMERICAN FEDERATION OF MUSICIANS

Mr. PELL. Mr. President, it is my sad task to bring to the attention of the Senate the death of Herman D. Kenin, president of the American Federation of Musicians. As both president of the union for 12 years and vice president of the AFL-CIO, Mr. Kenin was tireless in his efforts to bring to the musicians and other entertainers in our country needed job security and benefits. I personally held the highest regard for Mr. Kenin.

He was an initial and continuing supporter of the legislation of which I was the sponsor, together with the senior Senator from New York (Mr. JAVITS), which brought about the eventual establishment of the National Endowment for the Arts. Indeed, his work in this area through the years was recognized when he was appointed to the Council of the Endowment. I would also be remiss if I did not recognize Mr. Kenin's other efforts in support of the various pieces of social legislation which came before the Committee on Labor and Public Welfare.

Mr. President, those who knew Herman Kenin valued him as a friend and a loyal supporter. To his family and to his union my sincerest sympathy. I ask unanimous consent that two obituaries be printed in the RECORD.

There being no objection, the obituaries were ordered to be printed in the RECORD, as follows:

[From the New York Times, July 22, 1970]

HERMAN D. KENIN, MUSICIANS' CHIEF—UNION PRESIDENT SINCE 1958 DIES—WON TV PACTS

Herman D. Kenin, president of the American Federation of Musicians for the last 12

years, and a vice president of the A.F.L.–C.I.O., died yesterday in his room at the Hotel Lombardy here, apparently of a heart attack. He was 69 years old and lived at 14 Northfield Drive, Westport, Conn.

Mr. Kenin, a slim, dapper man with a hairline moustache and a thin crop of gray hair, guided the 300,000-member union through one of its most difficult periods. He was largely responsible for negotiating agreements with the major television networks and film studios, which over the years became the musicians' major employer and major source of unemployment.

Movies, television, radio and the recording business during the years from 1958 on spread music nationwide in a flood of melodies. At the same time, producing the music called for fewer and fewer musicians.

UNION MAN BY BIRTH

Mr. Kenin was born in Vineland, N.J. His father was a member of Samuel Gompers' Cigar Makers Union, the union that formed the core of the American Federation of Labor years later.

The younger Mr. Kenin attended Reed College in Portland, Oreg., and after three years as a night student at Northwestern College of Law, was admitted to the Oregon Bar.

During his college years he played the violin with the George Olsen orchestra. Later he headed his own band. During the twenties and into the Depression his band played hotel, radio and club dates on the West Coast.

Years later he acknowledged that his violin playing was not outstanding.

"I was so bad I had to become a band leader," he said.

After passing his bar examination, Mr. Kenin kept up his membership in the Local 99 of the musicians' union, and in 1936 he was elected its president.

He was invited to fill an interim post in the Federation's International Executive Board in 1943, and was subsequently re-elected to regular terms on the board.

ELECTED BY ACCLAMATION

In June of 1958 he was unanimously elected head of the union upon the recommendation of James C. Petrillo, who retired after 18 years in the union presidency.

One of Mr. Kenin's first acts upon taking the $45,000 a year job was to push through an amendment to the union's constitution that abolished the president's dictatorial powers to annul any by-law or provision of the constitution at will.

At his death, Mr. Kenin was a member of the executive council of the A.F.L.-C.I.O., international secretary of the Entertainment Trade Unions organization, and treasurer of the A.F.L.-C.I.O. Council for Scientific, Professional and Cultural Employees.

During his tenure in office, the federation became a major force in efforts to establish the National Endowments for the Arts and Humanities, won a long battle in Congress to reduce the 20 per cent cabaret tax, established pension funds for musicians, persuaded television networks to eliminate foreign music in their programs, and set up scholarship programs.

Back in 1936 a friend in New York wrote to Mr. Kenin in Portland, asking him to advise a young woman who was coming to Oregon to open a dance studio. Three months later Mr. Kenin wrote back that he had advised the young woman, Maxine Bennett, to marry him.

He leaves his wife, two sons, Herman David Jr., and James Bennett, a brother, Frank K., and a sister, Mrs. Fanny Kenin Friedman.

Funeral arrangements were incomplete last night.

[From the AFL–CIO News, July 25, 1970]

MUSICIANS' PRESIDENT HERMAN D. KENIN DIES

NEW YORK.—AFL–CIO Vice Pres. Herman D. Kenin, who guided the Musicians to new heights in membership and program, died in his sleep at a hotel here. He was 69 and had been AFM president since 1958.

A message of sympathy from Federation Pres. George Meany and Sec.-Treas. Lane Kirkland expresed "deep sadness . . . at the tragic death of our colleague and warm friend."

His years of service to the AFM, they said, were matched "by his service to the entire trade union movement." The message recalled that "to every assignment he brought calm and thoughtful competence, and deep compassion for his fellow man."

Kenin was "a true trade unionist and a fine gentleman, and we shall miss him," the federation officers said. They conveyed "our sincere regret" to AFM officers and members and the family. Survivors include his wife, Mrs. V. Maxine Kenin, sons David and James, brother Frank K. and sister Fanny Friedman, Portland, Oreg.

The family asked that instead of flowers, memorial tributes be sent in Kenin's name to Reed College, Portland, Oreg 97202.

To meet the emergency caused by Kenin's death, Sec.-Treas. Stanley Ballard and the officers called a special board meeting for July 29.

In his lifetime Kenin combined a career as violinist, orchestra leader and practicing attorney to become an influential labor leader. He had been an AFM officer since 1943.

Born in Vineland, N.J., he was the son of a member of the Cigar Makers when it was headed by Sam Gompers. He went to school in Portland, attended Reed College, and in 1930, following three years as a night student at Northwestern College of Law, was admitted to the Oregon bar.

During his college and law school days, Kenin played with the George Olsen Orchestra, then led his own band on hotel, radio, theater and club dates on the West Coast. He practiced law starting in 1931 but kept up his membership in AFM Local 99, and in 1936 was elected its president.

Kenin gave up his law practice at the request of AFM Pres. James C. Petrillo in 1943 to become a board member of the union. He was elected president in 1958 succeeding Petrillo and helped guide the 300,000-member union during its period of greatest growth.

Under his leadership the union became a major force in efforts to establish the National Endowments for the Arts and Humanities. Also it won a long battle in Congress to reduce the 20 percent cabaret tax, established pension trust funds for musicians, persuaded television networks to eliminate foreign-produced music from their programing in favor of "live" domestic music, achieved major gains in salaries and conditions for symphony musicians, and set up scholarship and student-aid programs like the world-renowned Congress of Strings.

He was largely responsible for negotiating agreements with the major television networks and film studios, and with recording firms that fortified the role of the musician in those industries.

Kenin's death brought messages of sympathy from several world labor groups. Sec.-Gen. Arturo Jauregui of the Inter-American Regional Organization of Workers—ORIT—cabled "heartfelt condolence on the death of a great leader and devoted trade unionist, also . . . a valued friend."

Kenin played a leading role in founding the Inter-American Federation of Entertainment Workers and the International Secretariat of Entertainment Trade Unions. He was past president and, at his death, treasurer of the AFL–CIO Council for Scientific, Professional & Cultural Employes.

SLEEPING BEAR DUNES NATIONAL LAKESHORE

Mr. HART. Mr. President, this is the year for Sleeping Bear Dunes National Lakeshore to become a reality. It is a testament to the conscientious work and cooperation of many public-spirited people—citizens and officials—that the controversy once involved has been so well reconciled. It has been a long effort, but one in which all who contributed can take deep satisfaction.

Recently the Legislature of the State of Michigan memorialized Congress, urging the enactment of the Sleeping Bear Dunes bill this year. As the legislators said:

Early action to save this area for enjoyment of future generations has been recognized as desirable by the President of the United States, the Governor of Michigan, the Michigan Natural Resources Commission, the Michigan Tourist Council and numerous non-governmental organizations and individuals.

Such action would clearly be in the interests of the State of Michigan, its citizens and its economy.

The great dunes and associated landscape are a treasure of national value. If we can make the lakeshore a reality and continue to broaden the cooperative involvement of all concerned in its realization, we can secure for the future this imposing yet intimate legacy of the Great Lakes landscape and shoreline.

I ask unanimous consent that the concurrent resolution of the Michigan Legislature be printed in the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

HOUSE CONCURRENT RESOLUTION NO. 390

(A concurrent resolution memorializing the Congress relative to the establishment of the Sleeping Bear Dunes National Lakeshore)

Whereas, A survey of the vanishing Great Lakes shoreline was made by the United States Department of Interior during 1957 and 1958; and

Whereas, This survey revealed three outstanding areas, all of them in Michigan, worthy of incorporation and protection in the National Park system; and

Whereas, One of these areas and the one nearest our population centers is at Sleeping Bear Dunes in Leelanau and Benzie counties; and

Whereas, This beautiful area is deserving of national recognition and preservation for the benefit of future generations in the rapidly growing lake states region; and

Whereas, Legislation to this effect, modified to safeguard the property rights of homeowners, has been before the Congress for ten years, and is now sponsored by all nineteen Congressmen from the State of Michigan; and

Whereas, Early action to save this area for enjoyment of future generations has been recognized as desirable by the President of the United States, the Governor of Michigan, the Michigan Natural Resources Commission, the Michigan Tourist Council and numerous nongovernmental organizations and individuals; and

Whereas, Such action would clearly be in the interest of the State of Michigan, its citizens and its economy; and

Whereas, The legislature is aware of Act No. 168 of the Public Acts of 1966 of the State of Michigan which requires the state to reimburse certain counties for lands which will be purchased by the federal government for use of the Sleeping Bear Dunes National Lakeshore and the legislature will take appropriate action to nullify the provisions of the act relative to the necessity of the federal government purchasing the necessary lands for the project; now, therefore be it

Resolved by the House of Representatives (the Senate concurring) That the Congress is hereby respectfully urged to authorize the establishment of the Sleeping Bear Dunes National Lakeshore in Michigan; and be it further

Resolved, That copies of this resolution be transmitted to the President of the United States, the President of the Senate, the Speaker of the House of Representatives, and to each member of the Michigan delegation to the Congress.

DEATH OF FORMER PRIME MINISTER ANTONIO SALAZAR OF PORTUGAL

Mr. PELL. Mr. President, I have just read with very real sadness of the death of former Prime Minister Antonio Salazar of Portugal.

He was a man of tremendous principle. To me, he epitomized the Portuguese qualities of honesty and fidelity. Although occupying the highest positions in his nation for almost 40 years, he followed a personal and frugal life. Whether one agreed or disagreed with all of Salazar's policies, one admired him as a great human being.

During the years of World War II, when neighboring Spain was acting as unofficial Axis ally and permitting German submarines to base out of Vigo, Salazar kept Portugal scrupulously neutral.

I well remember how I was permitted to be appointed a delegate of the Portuguese Red Cross in order to try to get supplies across the Iberian Peninsula and France to British prisoners of war in Germany. The Portuguese did all they could to help. But the Spaniards arrested me twice on my way across their territory.

Finally, I remember the admiration and regard my father, the then American Minister to Portugal, had for Salazar in those years prior to and at the beginning of World War II.

Salazar was a man who once spurned his job and returned to Coimbra University when he felt he was not adequately supported. He considered his job as a trust and carried it out as such.

Few men of as noble character have lived in recent years.

ADMINISTRATION STALLS ON WOMEN'S RIGHTS

Mr. BAYH. Mr. President, on May 5, 6, and 7 the Subcommittee on Constitutional Amendments, of which I serve as chairman, held extensive hearings on Senate Joint Resolution 61, the equal rights amendment. The amendment would provide that "equality of rights under the law shall not be denied or abridged by the United States or any State on account of sex."

For 47 years the amendment has been pending in the U.S. Congress. Indeed, the hearings we conducted last month were the first time the amendment has received congressional hearings in 14 years. Generations of American women—and men—have suffered untold discrimination because we have failed to extend the benefits of the 14th amendment to those who suffer not because of race or religion or national origin but because of their sex. I am glad to say that we are moving now in this important area, and I hope that we will be able to enact the equal rights amendments in this Congress.

Mr. President, we heard support during our recent hearings from a very wide range of witnesses. We heard support from some of the groups who have been fighting discrimination since before the passage of the 19th amendment—for example, the National Women's Party. We heard support from some of the newer activist organizations such as the National Organization for Women and the Women's Liberation Movement. And while some members of organized labor still oppose the equal rights amendment, we heard that some labor organizations have for the first time endorsed the amendment.

But one expected source of support was missing from our hearings. One voice was strangely silent—the voice of the executive branch of the U.S. Government.

Our subcommittee repeatedly asked the administration to testify in support of the amendment. We repeatedly asked the President to send us a witness who could tell us where he stands on this important question, or at least to send us a statement of his position. We were unable to obtain a witness from the administration. And we have still been given no clear statement of the President's position. I do not understand why President Nixon has been so reluctant to endorse this amendment and to support an effort to move against discrimination so fundamental.

Mr. President, in addition to the administration's failure to take a position on the equal rights amendment, our hearings disclosed another matter in which the President has stalled on the question of women's rights. After his election, President Nixon appointed a Task Force on Women's Rights and Responsibilities. On December 15, 1969, the Task Force completed and forwarded to the President its final report. After repeated criticism for their delay, the White House finally released this report in June of this year, almost 6 months later—and thoughtfully dated it "April 1970."

The Task Force report contains a series of well-thought-out recommendations. It recommends the establishment of an Office of Women's Rights and Responsibilities, with a director reporting directly to the President. It recommends a White House conference on women's rights on the appropriate occasion of the 50th anniversary of the ratification of the suffrage amendment and the establishment of the Women's Bureau in 1920. It recommends an increase in the appointment of women to high Federal positions and specific instructions for Cabinet officials and agency heads to enforce this policy.

The report also recommends a series of six specific Cabinet level sections by the executive branch. And finally, the report recommends that the President endorse and support 11 specific items of Federal legislation—beginning with the equal rights amendment.

These recommendations constitute as careful and well-thought-out a program of affirmative action to secure women's rights as I have ever seen. But the great tragedy, Mr. President, is that the administration has dragged its heels in implementing the report's major recommendations. Indeed, the President has still failed to give us a plain endorsement of the equal rights amendment. And this weekend brings us new reports of the refusal of the Secretary of Labor to extend affirmative action guidelines for Federal contractors so as to apply to discrimination on account of sex as well as racial, religious, and other forms of discrimination.

As Anne Crutcher wrote recently in the Washington Daily News, the White House effort on women's rights adds up to "more task than force." And as to the President's position on the Task Force recommendations:

On these tender subjects, the President doesn't say yes and he doesn't say no. White House spokesmen said yesterday that he's been on record for years in favor of women's rights. Presumably, only a politician's desire to have it both ways keep him from saying he hasn't changed his mind.

Women make up more than half of our population today. And I am convinced that today's American women will no longer be content with the kinds of petty slights and major institutional discrimination that have too often characterized our country in the past. When we deny any citizen equal educational opportunity, when we limit any person's property rights, when we inhibit anyone seeking the most rewarding employment for which he or she is qualified, we do so at great expense to America. These limitations are an insult to fundamental human dignity. And they are a waste of the most valuble natural resource our country has—the energy and skills of its people. These are basic principles that have been recognized and enthusiastically endorsed by many Members of the House and Senate—Republicans as well as Democrats. I hope that the President will soon realize that we cannot afford to stall any longer in eliminating discrimination on account of sex from American life.

Mr. President, I ask unanimous consent that the text of the Task Force report, entitled "A Matter of Simple Justice," be printed in the RECORD, along with five recent newspaper articles criticizing the administration's position on women's rights.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

A MATTER OF SIMPLE JUSTICE

(The Report of The President's Task Force on Women's Rights and Responsibilities, April 1970)

PRESIDENTIAL TASK FORCE ON WOMEN'S RIGHTS AND RESPONSIBILITIES

Washington, D.C., December 15, 1969.

The PRESIDENT,
The White House, Washington, D.C.

DEAR MR. PRESIDENT: As President of the United States, committed to the principle of equal rights for all, your leadership can be crucial to the more than half our citizens who are women and who are now denied their full constitutional and legal rights.

The quality of life to which we aspire and the questioning at home and abroad of our commitment to the democratic ideal make it imperative that our nation utilize to the fullest the potential of all citizens.

Yet the research and deliberation of this Task Force reveal that the United States, as it approaches its 200th anniversary, lags behind other enlightened, and indeed some newly emerging, countries in the role ascribed to women.

Social attitudes are slow to change. So widespread and pervasive are discriminatory practices against women they have come to be regarded, more often than not, as normal. Unless there is clear indication of Administration concern at the highest level, it is unlikely that significant progress can be made in correcting ancient, entrenched injustices.

American women are increasingly aware and restive over the denial of equal opportunity, equal responsibility, even equal protection of the law. An abiding concern for home and children should not, in their view, cut them off from the freedom to choose the role in society to which their interest, education, and training entitle them.

Women do not seek special privileges. They do seek equal rights. They do wish to assume their full responsibilities.

Equality for women is unalterably linked to many broader questions of social justice. Inequities within our society serve to restrict the contributtion of both sexes. We have witnessed a decade of rebellion during which black Americans fought for true equality. The battle still rages. Nothing could demonstrate more dramatically the explosive potential of denying fulfillment as human beings to any segment of our society.

What this Task Force recommends is a national commitment to basic changes that will bring women into the mainstream of American life. Such a commitment, we believe, is necessary to healthy psychological, social and economic growth of our society.

The leader who makes possible a fairer and fuller contribution by women to the nation's destiny will reap dividends of productivity measurable in billions of dollars. He will command respect and loyalty beyond measure from those freed from second-class citizenship. He will reaffirm, at a time of renewed worldwide emphasis on human rights, America's fitness for leadership in the community of nations.

His task will not be easy, for he must inspire and persuade government and the private sector to abandon outmoded attitudes based on false premises.

Without such leadership there is danger of accelerating militancy or the kind of deadening apathy that stills progress and inhibits creativity.

Therefore, this Task Force recommends that the President:

1. Establish an Office of Women's Rights and Responsibilities, whose director would serve as a special assistant reporting directly to the President.

2. Call a White House conference on women's rights and responsibilities in 1970, the fiftieth anniversary of the ratification of the suffrage amendment and establishment of the Women's Bureau.

3. Send a message to the Congress citing the widespread discriminations against women, proposing legislation to remedy these inequities, asserting Federal leadership, recommending prompt State action as a corollary, and calling upon the private sector to follow suit.

The message should recommend the following legislation necessary to ensure full legal equality for women:

a. Passage of a joint resolution proposing the equal rights amendment to the Constitution.

b. Amendment of Title VII of the Civil Rights Act of 1964 to (1) remove the burden of enforcement from the aggrieved individual by empowering the Equal Employment Opportunity Commission to enforce the law, and (2) extend coverage to State and local governments and to teachers.

c. Amendment to Titles IV and IX of the Civil Rights Act of 1964 to authorize the Attorney General to aid women and parents of minor girls in suits seeking equal access to public education, and to require the Office of Education to make a survey concerning the lack of equal educational opportunities for individuals by reason of sex.

d. Amendment of Title II of the Civil Rights Act of 1964 to prohibit discrimination because of sex in public accommodations.

e. Amendment of the Civil Rights Act of 1957 to extend the jurisdiction of the Civil Rights Commission to include denial of civil rights because of sex.

f. Amendment of the Fair Labor Standards Act to extend coverage of its equal pay provisions to executive, administrative, and professional employees.

g. Amendment of the Social Security Act to (1) provide benefits to husbands and widowers of disabled and deceased women workers under the same conditions as they are provided to wives and widows of men workers, and (2) provide more equitable retirement benefits for families with working wives.

h. Adoption of the liberalized provisions for child care in the family assistance plan and authorization of Federal aid for child care for families not covered by the family assistance plan.

i. Enactment of legislation to guarantee husbands and children of women employees of the Federal government the same fringe benefits provided for wives and children of male employees in those few areas where inequities still remain.

j. Amendment of the Internal Revenue Code to permit families in which both spouses are employed, families in which one spouse is disabled and the other employed, and families headed by single persons, to deduct from gross income as a business expense some reasonable amounts paid to a housekeeper, nurse, or institution for care of children or disabled dependents.

k. Enactment of legislation authorizing Federal grants on a matching basis for financing State commissions on the status of women.

4. The executive branch of the Federal government should be as seriously concerned with sex discrimination as with race discrimination, and with women in poverty as with men in poverty. Implementation of such a policy will require the following Cabinet-level actions:

a. Immediate issuance by the Secretary of Labor of guidelines to carry out the prohibition against sex discrimination by government contractors, which was added to Executive Order 11246 in October 1967, became effective October 1968, but remains unimplemented.

b. Establishment by the Secretary of Labor of priorities, as sensitive to sex discrimination as to race discrimination, for manpower training programs and in referral to training and employment.

c. Initiation by the Attorney General of legal actions in cases of sex discrimination under section 706(e) and 707 of the Civil Rights Act of 1964, and intervention or filing of amicus curiae briefs by the Attorney General in pending cases challenging the validity under the 5th and 14th amendments of laws involving disparities based on sex.

d. Establishment of a women's unit in the Office of Education to lead efforts to end discrimination in education because of sex.

e. Collection, tabulation, and publication of all economic and social data collected by the Federal government by sex as well as race.

f. Establishment of a high priority for training for household employment by the Secretary of Labor and the Secretary of Health, Education, and Welfare.

5. The President should appoint more women to positions of top responsibility in all branches of the Federal government, to achieve a more equitable ratio of men and women. Cabinet and agency heads should be directed to issue firm instructions that qualified women receive equal consideration in hiring and promotions.

Respectfully submitted,

VIRGINIA R. ALLAN,
Chairman.

Elizabeth Athanasakos, Ann R. Blackham, P. Dee Boersma, Evelyn Cunningham, Ann Ida Gannon, B.V.M., Vera Glaser, Dorothy Haener, Patricia Hutar, Katherine B. Massenburg, William C. Mercer, Alan Simpson, Evelyn E. Whitlow.

The President today announced the establishment of the Task Force on Women's Rights and Responsibilities, with Miss Virginia R. Allan, former President of the National Federation of Business & Professional Women's Clubs as the Chairman. The task force will review the present status of women in our society and recommend what might be done in the future to further advance their opportunities.

The members of the Task Force on Women's Rights and Responsibilities are:

Miss Virginia R. Allan, Executive Vice President, Cahalan Drug Stores, Inc., Wyandotte, Michigan.

Hon. Elizabeth Athanasakos, Municipal Court Judge and Practicing Attorney, Fort Lauderdale, Florida.

Mrs. Ann R. Blackham, President, Ann R. Blackham & Company, Winchester, Massachusetts.

Miss P. Dee Boersma, Student Govt. Leader, Graduate Student, Ohio State University, Columbus, Ohio.

Miss Evelyn Cunningham, Director, Women's Unit, Office of the Governor, New York, New York.

Sister Ann Ida Gannon, B.V.M., President, Mundelein College, Chicago, Illinois.

Mrs. Vera Glaser, Correspondent, Knight Newspapers, Washington, D.C.

Miss Dorothy Haener, International Representative, Women's Department, UAW, Detroit, Michigan.

Mrs. Laddie F. Hutar, President, Public Affairs Service Associates, Inc., Chicago, Illinois.

Mrs. Katherine B. Massenburg, Chairman, Maryland Commission on the Status of Women, Baltimore, Maryland.

Mr. William C. Mercer, Vice President, Personnel Relations, American Telephone & Telegraph Co., New York, New York.

Dr. Alan Simpson, President, Vassar College, Poughkeepsie, New York.

Miss Evelyn E. Whitlow, Attorney at Law, Los Angeles, California.

OFFICE OF WOMEN'S RIGHTS AND RESPONSIBILITIES

It is recommended that the President establish an Office of Women's Rights and Responsibilities, whose director would also serve as a special assistant reporting directly to the President.

The goal of equality for women is tied to that of a better world for all. The Task Force strongly urges that this objective be given the visibility and priority of entrusting it to an official at the President's right hand.

There has been no individual or office at a sufficiently high level to assume effective overall responsibility for Federal legislative and executive action in the area of equal rights and responsibilities for women, or to set an example for State and local governments.

Establishment of this office in the White House with an adequate staff would offer concrete evidence that the President of the United States is committed to the urgent need for action and is assuming leadership.

The Director of the Office of Women's Rights and Responsibilities would coordinate recruitment and urge consideration of qualified women for policy-level Federal positions.

She would seek new ways to utilize the female sector for the national benefit and to engage women in the hard tasks, challenges, decisions, and experiences through which capabilities are stretched and leadership is developed.

As the President's representative she would seek to inform leaders of business, labor, education, religion, State and local governments, and the communications media on the nature and scope of the problem of sex discrimination, striving to enlist their support in working toward improvement.

She would chair the interdepartmental committee comprised of top level representatives of those departments and agencies with programs and functions significantly affecting women's rights and responsibilities.

The Interdepartmental Committee would review and coordinate Federal programs for the purpose of assessing their impact on women and girls and would recommend policies and programs to Federal agencies and to the President. It would oversee implementation of the President's program for equal opportunity in the Federal service.

She would serve as executive secretary of the advisory council on women's rights and responsibilities, which serves as a link and a clearinghouse between government and interested private groups. The Council should be comprised of men and women broadly representative of business, labor, education, women's organizations (youth and adult), and State commissions on the status of women.

The Task Force commends to this Office for early consideration a number of important problems, on which the task force did not make recommendations for lack of time or lack of jurisdiction. They are listed in Appendix A.

WHITE HOUSE CONFERENCE ON WOMEN'S RIGHTS AND RESPONSIBILITIES

It is recommended that the President call a White House Conference on Women's Rights and Responsibilities in 1970, the fiftieth anniversary of the ratification of the suffrage amendment and establishment of the Women's Bureau

Major objectives would be to bring together a representative group of the Nation's men and women

To encourage American women to participate more fully in American life and leadership; to create an awareness of their responsibilities as citizens;

To examine present laws and mores that influence or determine the status of women;

To educate women on a positive course of action for achieving equal rights and responsibilities.

The Director of the Office of Women's Rights and Responsibilities, with the advice of the Presidential Advisory Council referred to in Recommendation 1, would plan the structure and program of the conference.

Topics for discussion would include among others: education (including continuing education), counseling, abortion, childhood education and care, women in politics, employment, legal discrimination, volunteer careers, the creative women, women in tomorrow's world, consumer protection, and women as catalysts for peace.

A plan of this nature emphasizes positive action by the President and demonstrates a genuine awareness of the problems facing women. Coupled with corrective legislative action, it would be a deterrent to the radical liberation movements preaching revolution.

MESSAGE TO CONGRESS PROPOSING LEGISLATION

It is recommended that the President urge passage of the equal rights amendment to the Constitution

The proposed Equal Rights Amendment reads as follows: "Equality of rights under the law shall not be denied or abridged by the United States or by any State on account of sex."

Passage of the so-called "Equal Rights Amendment" would impose upon women as many responsibilities as it would confer rights. The task force views this objective as desirable.

It is ironic that the basic rights women seek through this amendment are guaranteed all citizens under the Constitution. The applicability of the 5th and 14th amendments in parallel cases involving racial bias has been repeatedly tested and sustained, a process which has taken years and has cost millions of dollars.

The Supreme Court, however, has thus far not accorded the protection of those amendments to female citizens. It has upheld or refused to review laws and practices making discriminatory distinctions based on sex.

These include the practice of excluding women from State universities, a law requiring longer prison sentences for women than for men for the same offense, and a law prohibiting women from working as bartenders (but not in the less lucrative jobs as waitresses in bars).

At the State level there are numerous laws regulating marriage, guardianship, dependents, property ownership, independent business ownership, dower rights, and domicile, which clearly discriminate against women as autonomous, mature persons.

A number of discriminatory State laws have in the past four years been declared unconstitutional by the lower courts, but no case has reached the Supreme Court.

A constitutional amendment is needed to secure justice expeditiously and to avoid the time, expense, uncertainties, and practical difficulties of a case-by-case, State-by-State procedure.

Some effects of passage of the equal rights amendment:

It would guarantee women and girls admission to publicly supported educational institutions under the same standards as men and boys, but it would also require women to assume equal responsibility for alimony and support of children (within their means, as is the standard applied to men). Women presently bear these responsibilities in some States, but not in all.

It would require that women not be given automatic preference for custody of children in divorce suits. The welfare of the child would become the primary criterion in determining custody.

It would require Federal, State, and local governments to grant women equal opportunity in employment.

It would render invalid any current State laws providing longer prison sentences for women than for men for the same offense.

It would impose on women an obligation for military service. They would not be required to serve in functions for which they are not fitted, any more than men are so required.

Once the equal rights amendment is ratified, the burden of proving the reasonableness of disparate treatment on the basis of sex would shift to the United States or the State. Presently the burden is on the aggrieved individuals to show unreasonableness.

The mere passing of the Amendment will not make unconstitutional any law which has as its basis a differential based on facts other than sex. It will, in the broad field of rights, eliminate discrimination. It would make unconstitutional legislation with disparate treatment based wholly or arbtrarily on sex.

Past opposition to the Equal Rights Amendment has been based to a considerable extent on the fact that it would invalidate State laws regulating the employment of women only. Since these laws are disappearing under the impact of Title VII of the Civil Rights Act of 1964 and State fair employment laws, opposition will be much less and may evaporate in the light of information developed at hearings.

The Equal Rights Amendment has been endorsed by Presidents Eisenhower, Kennedy, Johnson, and Nixon.

Title VII of the Civil Rights Act of 1964 Should Be Amended To.—Remove the burden of enforcement from the aggrieved individual by empowering the Equal Employment Opportunity Commission to enforce the law, and extend coverage to State and local governments and to teachers.

Title VII of the Civil Rights Act of 1964 has made significant gains in promoting nondiscriminatory practices in industry in hiring and promotions. However, the enforcement provision of Title VII are inadequate. They place the main burden of enforcement on the individual complainant. The Equal Employment Opportunity Commission's authority is limited to conciliation efforts.

Less cooperation can be anticipated in arriving at a satisfactory resolution of a discrimination complaint when there is knowledge that the Commission's power is merely exhortative. Conciliation efforts have been unsuccessful in more than half the cases in which the Commission found that discrimination had occurred.

In addition, the Commission should be budgeted to provide an adequate staff of investigators, field officers, and other professionals to carry out its responsibilities.

Two bills in Congress would give the Commission enforcement powers. Both would relieve the individual complainant of the burden he now bears in most cases. The Administration bill (S. 2806) would confer upon the Commission the authority to institute enforcement actions in the Federal district courts. S. 2453 also removes the burden of enforcement from the complainant by providing an interim administration proceeding before it or an employer would have recourse to court action.

While the Task Force agreed that the Commission should have enforcement authority, most members were not prepared to choose between the two methods.

With respect to part 2 of the recommendation, Title VII exempts from coverage States and their political subdivisions [see subsection 701 (a), (b), (c), and (h)].

Section 702 exempts educational institutions with respect to the employment of individuals to perform work connected with the educational activities of such institutions.

There seems no reason to exempt State and local governments. As representatives of all the people, they are under an obligation to provide equal employment opportunities.

There is gross discrimination against women in education. For example, few women are named school principals. In the school year 1966–67 75% of elementary school principals were men. In 1964–65 men held 96% of the junior high school principal positions while a survey of high schol principals for the academic year 1963–64 showed 90% to be men.[1] There is a growing body of evidence of discrimination against women faculty in higher education.

Title IV and Title IX of the Civil Rights Act of 1964 should be amended to authorize the Attorney General to aid women and parents of minor girls in suits seeking equal access to public education, and to require the Office of Education to make a survey concerning the lack of equal educational opportunities for individuals by reason of sex

Discrimination in education is one of the most damaging injustics women suffer. It denies them equal education and equal employment opportunity, contributing to a second class self image.

There have been enough individual instances and limited surveys publicized recently to make it apparent that substantial discrimination does exist. For example, until forced to do so by legal action, the New York City Board of Education did not admit girls to Stuyvesant High School,[2] a specialized high school for science with a national reputation for excellence. Legal action recently has forced the State of Virginia to admit women to the University College of Arts and Sciences at Charlottesville.[3]

Higher admission standards for women than for men are widespread in undergraduate schools and are even more discriminatory in graduate and professional schools. For this reason counselors and parents frequently guide young women into the "feminine" occupations without regard to interests, aptitudes and qualifications.

Only 5.9 percent of our law students and 8.3 percent of our medical students are women,[4] although according to the Office of Education women tend to do better than men on tests for admission to law and medical school.

Section 402 of Title IV, passed in 1964, required the Commissioner of Education to conduct a survey of the extent of discrimination because of race, religion, color, or national origin. Title IV should be amended to require a similar survey of discrimination because of sex, not only in practices with respect to students but also in employment of faculty and administration members.

Section 407 of Title IV authorizes the Attorney General to bring suits in behalf of persons denied equal protection of the laws by public school officials. It grants no new rights. While no case relating to sex discrimination in public education has yet reached the Supreme Court, discrimination based on sex in public education should be prohibited by the 14th amendment. The President's Commission on the Status of Women took this position in its 1963 report to the President.[5] Section 902 of the Civil Rights Act authorizes the Attorney General to intervene in cases of this kind after a suit is brought by private parties. Both section 407 and section 902 should be amended to add sex, and section 410 should be similarly amended.

Title II of the Civil Rights Act should be amended to prohibit discrimination because of sex in public accommodations

Title II of the Civil Rights Act of 1964 provides that "All persons shall be entitled to the full and equal enjoyment of the goods, services, facilities, privileges, advantages, and accommodations of any place of public accommodations, as defined in this section, without discrimination or segregation on the ground of race, color, religion, or national origin."

Injunctive relief is provided for persons whose rights are violated, and the Attorney General is authorized to initiate suits in patterns or practice cases and to intervene in suits filed by individuals.

Discrimination because of sex is practiced primarily in restaurants and bars. While the Task Force does not consider this the most injurious discrimination against women today, it is wrong in principle.

The State of Pennsylvania and the City of Pittsburgh have amended their human rights legislation to prohibit discrimination because of sex in public accommodations.

The Task Force recommends amendment of sections 201(a) and 202 by adding "sex," between "religion" and "or."

The Civil Rights Act of 1957 should be amended to extend the jurisdiction of the Civil Rights Commission to include denial of civil rights because of sex

The Civil Rights Commission is authorized by section 104 of the Civil Rights Act of 1957, as amended (42 U.S.C. 1975c) to

study and collect information concerning legal developments which constitute a deniel of equal protection of the laws under the Constitution because of race, color, religion, or national origin or in the administration of justice;

appraise the laws and policies of the Federal government with respect to equal protection of the laws under the Constitution because of race, color, religion, or national origin or in the administration of justice;

Serve as a national clearinghouse for civil rights information.

The Commission is also authorized to investigate deprivation of voting rights because of race, color, religion, or national origin; but this function is of little concern in sex discrimination since there is apparently no concerted effort to deprve women of their voting rights.

Deprivation of equal educational opportunity and enforcement of laws prohibiting sex discrimination in employment are of great concern, however. The hearings and reports of the Civil Rights Commission would help draw public attention to the extent to which equal protection of the laws is denied because of sex. A clearinghouse for civil rights information is also needed.

Perhaps the greatest deterrent to securing improvement in the legal status of women is the lack of public knowledge of the facts and the lack of a central information bank.

For example, laws in Connecticut and Pennsylvania requiring longer prison sentences for women than for men for the same offense were declared unconstitutional in 1968.[6] There is now no Federal organization with responsibility for exploring and publicizing the extent to which this and other inequalities in the criminal law and practice, such as those involving abortion, exist in the United States.

"Sex" should be inserted after "religion" wherever the word appears in section 104(a) of the Civil Rights Act of 1957, as amended, including paragraph (1) relating to voting rights. While there may be no problem with respect to voting rights, an overall pattern of prohibiting discrimination based on sex should be consistently sought.

The Fair Labor Standards Act should be amended to extend coverage of its equal pay provisions (i.e., the Equal Pay Act of 1963) to executive, administrative, and professional employees

The original legislative proposal for an equal pay law, as drafted by the Labor Department, did not exempt executive, professional, and administrative employees. At no point in the legislative process was it proposed to make such an exemption.

When the Congress decided that the equal pay requirement should be administered by the Wage and Hour and Public Contracts Divisions of the Labor Department, the equal pay bill was made an amendment to the Fair Labor Standards Act which the Department administers. The exemptions of the Fair Labor Standards Act then automatically applied to the equal pay provisions. One exempt category covers executive, administrative, and professional employees.

Women in professional, executive, and administrative positions have the protection of Title VII of the Civil Rights Act of 1964, which prohibits discrimination in employment because of sex, as well as because of race, color, religion, or national origin. Title VII, however, does not permit a complainant's identity to be withheld from the employer, as it can be under the Fair Labor Standards Act.

This is particularly important to women who have achieved professional, executive, and administrative positions, which they are very reluctant to endanger. Such women do not have the protection against reprisal provided by union contracts. Furthermore, Title VII at present includes no enforcement authority for the administering agency.

Thirty-six thousand other women (and a few men) have been awarded $12.6 million in wages since the law went into effect in 1964, including $4.6 million awarded 16,000 employees in the 1969 fiscal year.[7]

It would be necessary to amend section 13 of the Fair Labor Standards Act (29 U.S.C. 213) so that this exemption of section 13 does not apply to section 6(d).

The Social Security Act Should Be Amended To.—Provide benefits to husbands and widowers of disabled and deceased women workers under the same conditions as they are provided to wives and widows of men workers, and provide more equitable retirement benefits for families with working wives.

The emergence of a new pattern of family economic interdependence has been accompanied by an awareness of inequities in the social security program as they apply to families where the wife works.

Under current law a wife or widow receives a benefit based on her husband's earnings without meeting any test of dependency. A husband or widower of a woman worker is entitled to a benefit only if he proves he receives one-half or more of his support from his wife.

The family protection provisions of the social security program were based on the sociological conditions and climate of the 1930's. In 1940, 14.7 percent of married women were in the labor force; in 1968 the percentage had increased to 38.3 percent. In these families the wives contributed on the average 26.6 percent of the family income. In 25.6 percent of such families, the wives contributed 40 percent or more of the family income. In most of the families where the wife was in the labor force, the husband's yearly income was below $7,000.[8] The percentage of two-income families is increasing and more and more frequently the family standard of living is based on two incomes.

The death or disablement of a wife in a two-income family will leave the husband with increased responsibility for the children and less income with which to meet the needs. With almost two-fifths of all husband-wife families following a new pattern of economic interdependence, it is time for the social security program to adapt to the new sociological conditions and climate. Changes to recognize the new-type family began with a series of amendments in 1950 which provide benefits to children of working women under the same conditions as for children of working men.

Social Security Act provisions for automatic benefits for wives of retiring male workers lead to a second type of inequity. In

Footnotes at end of article.

1939, a benefit was provided for the wives of retiring men workers—on the assumption that the wives were dependent and it cost more for a family to live than for a single person. If the wife is entitled to a benefit based on her own earnings, she has to choose between the two. In 1950 this benefit was provided for dependent husbands of women workers. The benefit for wife or dependent husband is 50 percent of the worker's benefit with a maximum of $105 per month.

Thus a wife who has worked for many years and contributed to the social security system may receive no larger benefit than if she had never worked. For example, a wife who never worked under social security would get a wife's benefit of $105 at age 65 if her husband had the maximum average monthly earnings of $650. If the same wife had worked and paid contributions on average monthly earnings of $120, she would be entitled at age 65 to a benefit of $81.10, plus an additional wife's benefit of $23.90, for a total benefit of $105—the same as if she had not contributed to the social security system.[9]

The present provisions also result in situations where a retired couple who have both worked receive less in benefits than a couple where only the husband worked and had the same earnings as the combined earnings of the working couple. If, for example, only the husband had worked and had average earnings of $650 a month—$7,800 a year—the benefits paid to the couple at age 65 would be $323 ($218 to the husband and $105 to the wife). By contrast, if the husband and wife each had average earnings of $325 a month, or $3,900 a year—combined annual earnings of $7,800—their benefits will be lower—$134.30 each, or a total of $268.60.[10]

Proposals for giving greater recognition to working wives' social security contributions have been made by the Social Insurance and Taxes Committee of the President's Commission on the Status of Women[11]; by the Citizens' Advisory Council on the Status of Women[12]; and by Congresswoman Martha Griffiths in H.R. 841.

The administration should urge Congress to adopt the liberalized provisions for child care proposed in S. 2986 for inclusion in the Social Security Act (section 437 of title IV). The administration should also support authorization of Federal aid for child care for families not covered under the family assistance plan, with at least a modest appropriation in 1970

Lack of adequate child care facilities has been found to be a major deterrent to solution or even significant progress in providing greater education opportunities for children, reducing the welfare burden, giving greater dignity and self-respect to mothers on welfare, filling critical manpower needs in shortage occupations and providing real freedom of choice in life style for women.

Every Federal and State study of the status of women has referred to the necessity for expanding child care facilities.

Department of Labor manpower experts cite lack of child care as the most serious single barrier to job training of employment for low-income mothers.

Our national goal should be:

1. A system of well-run child care centers available to all pre-school children. Athough priority would be given the needs of low-income working mothers, the facilities should be available to middle income mothers who wish to use them.

2. After-school activities for school-age children at all economic levels who require them.

The National Advisory Council on Economic Opportunity estimated this year that 700,000 migrant children need day care. Only 13,000 spaces are available.

The Council found that 1,373,000 economically deprived children could have benefited from participation in full-time Head Start programs. Only 213,000 spaces were funded this year.[13]

The Task Force endorses the Administration's plan for increasing facilities for care of pre-school and school age children, with priority for low-income and welfare families.

In addition, we recommend that the Administration support legislation to authorize Federal grants for developing child care facilities for families at all income levels, with at east a modest appropriation.

The funds would be used to construct child care centers, expand existing care programs, renovate facilities, assist States in improving their licensing standards, train professional and sub-profressional staff, research, food programs, and a comprehensive study of existing child care programs at Federal, State, and local levels.

H.R. 469 and H.R. 466 should be enacted to guarantee husbands and children of women employees of the Federal government the same fringe benefits provided for wives and children of male employees in those few areas where inequities still remain

A number of the laws and regulations governing fringe benefits of Federal employees are, like the social security program, based on the assumption that a wife is dependent on her husband except in those few cases where he is unable to work when it is recogized that he may be dependent on her. The facts demonstrate that in the 38.3 percent[14] of all husband-wife families where the wife works, there is interdependency, and the dependency concepts applicable to the traditional family are not viable (see recommendation 3(g) for additional relevant facts).

Under the civil service and foreign service retirement systems, for example, the surviving husband of a deceased woman employee is not eligible for an annuity unless he is incapable of self-support because of physical or mental disability and has received more than half his support from the deceased woman[15] employee. The surviving spouse of a deceased male employee is automatically eligible for an annuity.

There are inequities in quarters' allowances for employees serving overseas and in eligibility freed attendance at dependents' schools.

There are similar differences in treatment of military personnel.

To correct these inequities the Interdepartmental Committee on the Status of Women considered and endorsed H.R. 643 introduced by Congresswoman Griffiths in the 90th Congress. This bill had been drafted by the Civil Service Commission at the request of the Congresswoman.

H.R. 469 of the 91st Congress is identical to H.R. 643, and H.R. 466 would correct the same problems in the military personnel systems.

The Internal Revenue code should be amended to permit families in which both spouses are employed, families in which one spouse is disabled and the other employed, and families headed by single persons, to deduct from gross income as a business expense some reasonable amount paid to a housekeeper, nurse, or institution for care of children or disabled dependents

This proposal differs from present provisions of law in the following respects:

The present deduction is a personal deduction from taxable income. It is of no benefit to the taxpayer for whom the standard deduction (now generally 10 percent of gross income up to a maximum of $1,000) is more advantageous than itemizing allowable deductions for charitable contributions, interest on mortgages and loans, medical expenses, taxes, and casualty losses. Taxpayers who are not homeowners are not likely to have enough personal deductions to exceed the standard allowance; therefore, they receive no, or a very reduced, benefit from a personal deduction. The Task Force believes it would be more equitable and more rational to deduct the expenses from gross income as a business expense.

Under present law a husband-wife family benefit from the deduction only if their income does not exceed $6,600 with one dependent or $6,900 with two or more dependents. The Task Force proposal eliminates this limitation on income. There is no income limitation on the single head of household, and there seems to be no good reason for limiting the deduction to low-income husband-wife families.

The present law does not permit single men with disabled dependents in their care (such as parents) to take this deduction although single women in the same situation are covered. The Task Force believes both should be covered.

The present law does not allow men or women with disabled spouses requiring care at home or in an institution to benefit from this deduction. Such a couple can deduct only expenses for care of "dependents," which by definition does not include spouses. This also seems irrational and inequitable and the Task Force believes that if care of the disabled spouse is necessary to enable the other spouse to be gainfully employed, the expenses of such care typically should be deductible to the same exteut that expenses for care of "dependents" is deductible.

The existing law limits the deduction to $600 for one dependent and $900 for two or more. The Task Force finds that corrective action is needed, but additional economic data would be required to establish the level of deduction.

Legislation should be proposed authorizing Federal grants on a matching basis for financing State commissions on the status of women

Since 1962 every State, the District of Columbia, Puerto Rico, the Virgin Islands, and several cities have established commissions on the status of women. Although most were unfunded or inadequately funded, 38 commissions or successor bodies are still functioning. These 38 do not include women's divisions created by statute in Louisiana and New Jersey, which are not yet operational. The Governor of Ohio also has recently issued an executive order establishing a yet to be staffed women's unit in the State government. Other governors are committed to reactivating their State commissions.

In most of the States the commissions are still independent bodies. In a few States, a women's unit, usually with a citizens' advisory committee, has been established in a permanent part of the State structure—in the Governor's office, the Department of Human Rights, the Department of Community Affairs, the Employment Security Department, or the Labor Department.

Few commissions have received sufficient staff assistance or funds to carry out their programs as recommended in the *Handbook for State and City Commissions on the Status of Women*, prepared by members of the 1967 Midwest Regional Conference of State Commissions.[16] The need cited there include: a headquarters office with funds for a chairman or executive secretary, phone, files, postage, office supplies and equipment, transportation to meetings and conferences, surveys and pilot projects, and publication of reports.

Only seven of the commissions receive any regular State appropriations—Alaska, $5,000; California, $44,210; Illinois, $5,000; Kentucky, $25,000 (plus $15,000 grant for a research project); Maine, $2,000; Michigan,

Footnotes at end of article.

$11,500; and North Carolina, $3,000. The New York Women's Unit in the Office of the Governor is best staffed, having 11 salaried employees.

The many positive contributions of the commissions in a variety of fields are documented in progress reports of the Federal Interdepartmental Committee on the Status of Women and in reports of conferences of the commissions, all available from the U.S. Department of Labor, Women's Bureau.

Their durability under adverse circumstances and through changes in State administration further demonstrates that they are needed and useful. With the growth of commissions on university campuses, the State groups will have another function—to give technical assistance to the younger women and to see to it that the concerns of university commissions are effectively brought to the attention of the Governors and State legislatures.

The Task Force recommends that one of the first assignments of the Office of Women's Rights and Responsibilities be to develop a legislative proposal for Federal grants to State commissions and to State government units having the same functions. The grants should be made under standards that will encourage growth of university commissions.

POLICY OF EXECUTIVE BRANCH RESPECTING SEX DISCRIMINATION

The executive branch of the Federal Government should be as seriously concerned with sex discrimination as race discrimination and with women in poverty as men in poverty

The testimony and published data received by the Task Force indicate that long-established policies of Federal agencies base their efforts to alleviate poverty and discrimination on the assumption that race discrimination is more inflammatory than sex discrimination.

Sex bias takes a greater economic toll than racial bias. The median earnings of white men employed year-round full-time is $7,396, of Negro men $4,777, of white women $4,279, of Negro women $3,194. Women with some college education both white and Negro, earn less than Negro men with 8 years of education.[17]

Women head 1,723,000 impoverished families, Negro males head 820,000. One-quarter of all families headed by white women are in poverty. More than half of all headed by Negro women are in poverty. Less than a quarter of those headed by Negro males are in poverty. Seven percent of those headed by white males are in poverty.[18]

The unemployment rate is higher among women than men, among girls than boys. More Negro women are unemployed than Negro men, and almost as many white women as white men are unemployed (most women on welfare are not included in the unemployment figures—only those actually seeking employment.) [19]

Unrest, particularly among poor women and college girls, is mounting. Studies show that 39 percent of the rioters in Detroit were women and in Los Angeles 50 percent were women. The proportion of women among the arrestees was 10 and 13 percent, respectively.[20] Welfare mothers are using disruptive tactics to demand greater welfare payments. Radical women's groups, some with a philosophy similar to that of the Students for a Democratic Society are mushrooming on college campuses.

Essential justice requires the Federal government to give much greater attention to the elimination of sex discrimination and to the needs of women in poverty. The following specifications are recommended as a beginning.

The Secretary of Labor should immediately issue guidelines to carry out the prohibition against sex discrimination in employment by Government contractors, which was added to Executive Order 11246 in October 1967, became effective October 1968, but remains unimplemented

The first Presidential executive order prohibiting discrimination in employment by employers operating under Government contracts was issued in 1941. Each Administration has continued its existence in various ways. Organizations and women's groups have been on record supporting the inclusion of the word "sex" in this order since its inception. This pressure was persistent and it grew in numbers over the years.

The 1963 report of the President's Commission on the Status of Women took cognizance of this problem but recommended its correction by a separate executive order stating the principle of nondiscrimination but without the enforcement possible under the executive order covering other phases of discrimination.[21] A minority report was issued by a member of the Committee on Private Employment of the President's Commission on this recommendation.[22] The President never acted upon the recommendation.

The Commission also recommended:

Appropriate Federal, State, and local officials in all branches of government should be urged to scrutinize carefully those laws, regulations, and practices which distinguish on the basis of sex to determine whether they are justifiable in the light of contemporary conditions and to the end of removing archaic standards which today operate as discriminatory.[23]

After Title VII of the Civil Rights Act of 1964 clearly established that sex discrimination in employment was contrary to public policy, the executive order on government contracts was revised and reissued on September 24, 1965, as Executive Order 11246 without prohibiting sex discrimination.

Not until two years later, after extensive concern had been expressed by women's groups and other organizations, was the order amended to prohibit sex bias. The effective date was October 17, 1968, one year after the date of issue, to permit the Labor Department adequate time for developing policy.

It was not until January 17, 1969, that *proposed* guidelines were issued, with interested persons allowed 30 days in which to comment. Many women's groups and organizations responded with impatient requests for immediate issuance. After some time oral hearings were scheduled for August 4, 5, and 6, 1969. Women's groups and organizations, ranging from radical to conservative, testified. All urged immediate implementation of the sex discrimination provision of Executive Order 11246.

It is imperative that revised and updated guidelines be issued immediately and the Executive Order vigorously enforced.

The Secretary of Labor should establish priorities as sensitive to sex discrimination as to race discrimination in manpower training programs and in referrals to training and employment

A disadvantaged individual for manpower program purposes, "is a poor person who does not have suitable employment and who is either (1) a school dropout, (2) a member of a minority, (3) under 22 years of age, (4) 45 years of age or over, or (5) handicapped." [24]

Being female is not considered to be as much of a handicap as belonging to a minority group, despite economic data clearly indicating the contrary (see the economic data with recommendation 4).

The definition of "disadvantaged individual" would not include a white woman on welfare unless she were a school dropout, under 22 years of age, 45 years of age or over, or handicapped. This definition clearly needs to be revised to include all women who are poor and who do not have suitable employment.

In the on-the-job training programs conducted under the Manpower Development and Training Act only 31.7 percent of the 125,000 trainees in fiscal year 1968 were women. The on-the-job training is particularly important because the placement rate is higher than for institutional training programs.[25]

In the JOBS (Job Opportunities in the Business Sector) program, only 24 percent of those hired were female. This program is for the disadvantaged only. As of November 1968, 54,000 employee-trainees were in projects funded by the Labor Department.[26]

Of the 33,000 enrollees in the Job Corps in June 1968, only 29 percent were female.[27]

Young men have the additional advantage of military training, with 100,000 below-standard young men receiving training every year, in addition to the training the military provides for poor young men who meet the normal standards.[28]

The Government's failure to accord a higher priority to training of women either in civilian or military programs is unjust and is socially very costly.

The number of unemployed young women, age 16 to 24, has risen from 268,000 in 1947 to 697,000 in 1968. (The unemployment rate for young women has increased while decreasing for young men in this age range.[29])

Without any question the growing number of families on Aid to Families with Dependent Children is related to the increase in unemployed young women. For many girls living in very poor or disorganized families, the inability to find a job means turning to prostitution or other crime—or having a child to get on welfare. Potential husbands do not earn enough to support an unemployed wife.

The stability of the low income family depends as much on training women for employment as it does on training men. Only through employment of both partners can such families move into the middle class.

The task force expects welfare rolls will continue to rise unless society takes more seriously the needs of disadvantaged girls and young women.

The Attorney General should initiate legal actions in cases of sex discrimination under section 706(e) and 707 of the Civil Rights Act of 1964, and intervention or filing of amicus curiae briefs in pending cases challenging the validity under the 5th and 14th amendments of laws involving disparity based on sex

Although the Justice Department has participated in more than 40 cases of racial bias, it has not intervened in behalf of an individual discriminated against because of sex, except in one case on a procedural point.

The Justice Department, likewise has not given aid in any case in which women are challenging the constitutionality of State laws discriminating on the basis of sex—with one exception *White V. Crook,*[30] in which race discrimination was also a factor.

A former Attorney General, who was a member of the 1963 President's Commission on the Status of Women, not only signed the commission's report but sponsored the following recommendation:

"Early and definitive court pronouncement, particularly by the U.S. Supreme Court, is urgently needed with regard to the validity under the 5th and 14th amendments of laws and official practices discriminating against women, to the end that the principle of equality becomes firmly established in constitutional doctrine.

Footnotes at end of article.

"Accordingly, interested groups should give high priority to bringing under court review cases involving laws and practices which discriminate against women.[31]

Women will be skeptical of the Administration's commitment to equality as long as the Justice Department refuses to act.

The Commissioner of Education should establish a women's unit in his office to lead efforts to end discrimination in education because of sex

Discrimination in education is so widespread that we believe a special unit in the Office of the Commissioner is needed to focus public and agency attention on the facts and effects of discrimination against women in education.

The percentage of graduate degrees awarded women is lower than in 1930, when women received 40 percent of all masters degrees. They received 34 percent in 1966. Fifteen percent of doctors degrees in 1930 went to women, but only 12 percent in 1966.[32] University commissions on the status of women organized by women students are surveying the numbers of women students and faculty members and finding strong evidence to support their personal observations. Other evidences of discrimination are stated under recommendation 3(c).

Functions of the unit should include the following:

To collect data now available on the status of women and girls as students and as faculty and administration in secondary schools and schools of higher education and to plan and coordinate a survey to fill the gaps;

To give technical assistance to State and university commissions on the status of women and to other organizations actively concerned with status of women in education;

To invite such organizations as the Association of American University Professors, American Council on Education, Association of American Colleges, and the Association of Governing Boards of Colleges and Universities to cooperate in identifying and securing corrective action on discrimination against women as members of faculty and administration;

To work with Federal, State, and local officials, with professional organizations, and with the Parent-Teachers Association to improve the quality of counseling of girls and women;

To become a clearinghouse of information on women in education and counseling needs of women;

To speak for the needs of disadvantaged girls within the educational community; to lead efforts to break down the legal and attitudinal barriers to all types of vocational training for girls; to encourage establishment of vocational training in household skills;

To see to it that counseling institutes sponsored by the Office of Education include a substantial segment on the special counseling needs of women, needs growing out of societal attitudes and institutions that constrict the aspiration of girls and keep from them knowledge of the great choice of roles open to them;

To find means of assuring that the financial needs of part-time students are given appropriate priority in allocation of money available for financial assistance.

As a result of the testimony of numerous witnesses, which provided convincing evidence of discrimination against women as students and as faculty and which included many specific suggestions for governmental leadership action, the Task Force concluded that the Office of Education should have a women's unit, whose director would report to the Commissioner, to give leadership to public and private efforts to eliminate discrimination in education.

All agencies of the Federal Government that collect economic or social data about persons should collect, tabulate, and publish results by sex as well as race

Government studies, publications and press releases frequently obscure the degree of economic handicap women suffer and its consequences. Sometimes results of studies are published for males only or for males and females combined. Sometimes the data are structured so as to ignore gross differences by sex.

For example, the Bureau of the Census published a summary of major highlights of the March 1969 Current Population Survey.[33] The following tables do not include data by sex: "Median Earnings in 1968 and 1967 by Occupation of Longest Job During Year—Civilian Males 14 Years Old and Over with Earnings" (page 5), "Persons Below the Poverty Level by Color: 1959–1968" (page 6), and "Percent Distribution by Years of School Completed for Persons 20 Years Old and Over" (page 9). A table on page 4, "Median Family Income of Negroes as a Percent of White Family Income" should have included median family income by race of families headed by women and families headed by men.

While later detailed publications will include data by sex and race, the summary will be the publication most useful to the general public. When its tables do not include sex breakdowns, one has to dig into a number of detailed publications in order to get the most basic kinds of data relating to sex discrimination.

Another example of ignoring the economic situation of women is "Welfare Reform Charts: 1969 Legislative Recommendations" published by the Department of Health, Education, and Welfare.[34] Although almost two-thirds of the adult poor are women and although a much higher proportion of those adults on welfare are women, the publication never mentions this fact or even uses the word "women."

One item in this publication reads "There are over one million families headed by fathers who are working full time and earning less than the average AFDC–UF payment for families without other income." The number of such families with women heads should have been given as well.

Although one of the key features of the proposed family assistance plan is a great expansion in day care centers to make it possible for mothers to get training and employment, there is no chart on day care and none relating to training and employment of women.

The Equal Employment Opportunity Commission, the agency charged with enforcement of legislation forbidding discrimination in employment, has published a three-volume report[35] based on a survey of numbers of persons employed in the private sector by industry, occupation, sex, and race. One can examine this whole report and never find a table or narrative statement that compares the employment situation for white men, Negro men, white women, Negro women. There are not even any tables comparing white women with white men or Negro women with Negro men.

The tables are all based on comparisons of minority men with white men, minority women with white women. The underlying assumption of this appears to be that sex differences in industry and occupational distribution of white men and white women are insignificant or perhaps that these differences do not result from discrimination. It is submitted that this assumption begs the question, because it is only from such facts that the discrimination if any can be spotted and then analyzed.

An analysis of the data by Princeton University, under a grant from the Commission and the Department of Labor, used an extraordinarily sophisticated and confusing methodology, which obscured sex discrimination in employment. Much emphasis is given this analysis in the report.

The Princeton group constructed "an index to show the relative standing of each racial group based on how many were employed in low- or high-paying occupations".[36] Actually they constructed two indexes—one for males and one for females. The "standing" of Anglo males was arbitrarily given a value of 100 and minority males were compared. In separate tables Anglo females were assigned an index of 100 and minority group females were compared with the Anglo females. This methodology avoids acknowledging that in all earnings information, whether overall, by occupation, or by education, white women rank below Negro men and way below white men. For the report to be a proper foundation upon which to base an opinion the standing of Anglo females to Anglo males and minority males and of minority females to Anglo males and minority males should be set forth.

All statistics on employment published by any Federal agency should show breakdowns by race and sex for every factor analyzed. Study designs should be based on the principle that sex discrimination is illegal and immoral.

The Secretary of Labor and the Secretary of Health, Education, and Welfare, should give training for household employment a high priority in manpower training

Through the leadership of the Women's Bureau, a National Committee on Household Employment was established in 1965. Seven experimental and demonstration training programs have been funded in Alexandria, Virginia; Boston, Massachusetts; Chicago, Illinois; Manhattan, Kansas; Philadelphia, Pennsylvania; Pittsburgh, Pennsylvania; and New York, New York.

The following results are reported: improvement in the attitude and performance of workers and the regularity of their employment, increased wage potential, and better employee and employer attitudes and satisfaction. Employer training has been included in some programs and it is recommended for inclusion in all programs.

The Task Force recommends making such programs widely available under the Manpower Development and Training Act and the Vocational Education Act.

Funds shoud be earmarked by the Secretary of Labor from the national account (unallocated reserve) of the Manpower Development and Training Act budget.

The Committee establishing guidelines under the Cooperative Area Manpower Planning System (CAMPS) should be directed to give a high priority to such training.

State employment service offices should be required to give more attention to placement of household workers and determining manpower needs for household employment.

The Commissioner of Education should encourage the States to provide for training in household employment and home-related arts in their secondary and post-secondary training programs.

We recommend that consideration be given by curriculum planners in the Departments of Labor and Health, Education, and Welfare to including training in driving and home maintenance and upkeep, outside and inside. Elderly couples and individuals are an increasing market for household services, and need services of this kind, as do families with working mothers. Training in such skills would enable the employee to earn higher wages.

Footnotes at end of article.

EQUALIZATION OF POLICY-MAKING RESPONSIBILITY IN THE FEDERAL GOVERNMENT

The President should appoint more women to positions of top responsibility in all branches of the Federal Government, to achieve a more equitable ratio of men and women—Cabinet and agency heads should be directed to issue firm instructions that qualified women receive equal consideration in hiring and promotions.

Wise utilization of the Nation's human resources dictates that the responsibilities of leadership in America be distributed more equitably between our men and women citizens.

The United States has not capitalized fully on the skills, abilities, and special insights of women, particularly at the leadership level. When half the population is rendered virtually non-contributory in fashioning policy, the loss of balance and perspective is self-evident, tragic, and wasteful.

Shutting out any group stifles its urge to contribute, depresses its concept of self worth, and ultimately discourages the striving for excellence.

Where so large a proportion of citizens is involved, the damage to national pride and achievement can be far reaching and can call into question the Administration's basic fairness.

The present pace of appointments of women to high Federal positions should be accelerated, to reflect their numerical strength more realistically, and as an incentive and symbol of the Administration's commitment.

To do so, the President and his Cabinet should place stronger emphasis on appointments based on merit rather than sex, and whenever possible urge the private sector to follow suit.

In making appointments the "showcase" approach or tokenism should be avoided. Women should not be confined to the so-called distaff area but brought into the dynamics of policy development.

The existing bank of qualified women economists, lawyers, politicians, jurists, educators, scientists, physicians, writers, and administrators has the intellectual capacity to meet the most exacting demands.

Under present social and economic attitudies, relatively few of these professionals have been accorded the same public recognition as similarly qualified men, but they can and should be located.

The direction of a program staffed by volunteers often develops administrative and managerial skills of a high order.

For this reason standards and assumptions regarding the qualifications of women for high office should be reassessed with a view to capitalizing on these assets.

When the other recommendations in this report are implemented hopefully they will serve to reduce roadblocks now hampering women at lower levels, thus speeding an upward flow of talent and offering more choice to government talent scouts when women are sought for leadership roles.

MINORITY VIEWS OF DOROTHY HAENER ON EXTENSION OF FAIR LABOR STANDARDS ACT

I am strongly of the opinion that this Task Force should have adopted the following recommendation:

The Fair Labor Standards Act should be amended to extend its coverage, without exceptions, to every job within the reach of Federal authority. In particular, household workers and all other low-paid workers in the United States should be paid not less than the Federal minimum wage.

As recently as February 1968, an estimated 10 million workers in this country earned less than $1.60 an hour. Most of these workers were in agriculture, retail trade, and the services—particularly domestic service. Of the estimated 2.2 million employees in domestic service—the overwhelming majority of whom are women—86 percent, or more than 4 out of every 5 workers earned less than $1.00 an hour.

In considering the plight of these low-paid workers, it should be kept in mind that even in the case of persons covered by the Federal minimum wage of $1.60 an hour, an individual working full time, on the basis of a 40-hour week, earns only $3,328 a year.

These figures are well below the present poverty income level of $3,600 per year for a family of four as defined by the Department of Agriculture for "emergency or temporary use when funds are low." It would appear reasonable that the employer through adequate wages rather than the taxpayer should be expected to support the estimated 10,000,000 *working poor* who make less than $1.60 an hour. Even $1.60 an hour ($3,328 per year) is far below the $5,550 guaranteed income recommended for a family of four by President Nixon's recent White House Conference on Food, Nutrition, and Health.

The efforts of the Women's Bureau to give proper status and dignity to household employees through training and better working conditions would be aided greatly by coverage of employees under the Federal Fair Labor Standards Act. The lack of coverage under this and other labor standards legislation is one of the factors denying household employment appropriate dignity and status, as well as better pay and working conditions.

The Task Force cannot justify failure to take action on "lack of time or jurisdiction." The Task Force discussed on several occasions the question of Federal minimum wage. At least two recommendations were presented to the Task Force dealing with this question. A number of speakers in their presentations discussed minimum wage, and one speaker was specifically invited to speak to the Task Force on this subject.

The recommendations of the Task Force dealing with poverty make it self evident that the Task Force could not have made those recommendations without considering the problem of minimum wage. On a task force dealing with women's rights and responsibilities, it would seem one of the basic responsibilities is to speak for those who don't have a voice to speak for themselves.

I am of the firm opinion that the knowledge brought by the speakers, the discussions the Task Force had, and the knowledge generally available was fully sufficient for the task force to have taken a position.

In an effort to be reasonable in my proposed recommendation I did not include an increase in the minimum wage of $2.00 an hour.

Had I any anticipation at all that the Task Force would not adopt the recommendation, I would have included an increase in the minimum.

COMMENT OF THE CHAIRMAN REGARDING MINORITY STATEMENT

At many points in its deliberations, the Task Force did consider the massive problems of the "working poor". Several of the recommendations made in the report specifically attack certain of these problems. Extension of the Federal minimum wage to all workers is a complex matter of such pervasive effects throughout the national economy that the Task Force did not feel it was ready to make a specific recommendation without further intensive study.

APPENDIX A

Problems commended for early consideration to Director, Office of Women's Rights and Responsibilities

1. Extension of Federal Fair Labor Standards Act, particularly to household employees.
2. Methods of changing attitudes.
3. Abortion.
4. Social security benefits for women divorced after fewer than 20 years of marriage, for dependents of single persons, and for aged widows and widowers.
5. Civil service classification standards for "women's" occupations in the Federal service.
6. Deterrents to training of women employees of the Federal government.
7. Inequities in the unemployment insurance system.
8. Reemployment after childbirth and insurance against medical expenses and lack of income.

MORE TASK THAN FORCE: NIXON AND WOMEN'S RIGHTS

(By Anne Crutcher)

After months of unofficial needling and official hesitation, the report of the President's Task Force on Women's Rights and Responsibilities is out. So are the Labor Department's guidelines for keeping sex discrimination out of government contract work.

What does it all add up to? Not much, really, in the absence of strong backing from the White House.

The Task Force, made up of 11 women and two men (assorted college presidents, government officials, and business people, a lawyer, a judge, a journalist, and one representative each of organized labor and youth) agrees that American women don't have equal rights and that they ought to.

To help give women equality, the Task Force wants the President to set up an Office of Women's Rights, to call a conference, and to press for new laws and surveys designed to locate discriminatory practices and put a stop to them. The Task Force Report also calls on the President to appoint more women to high government jobs. It asks a bigger Federal investment in day care centers and training of household help.

The Labor Department's guidelines spell out a few of the discriminatory practices to be banned in any firm with government contracts—His and Her want ads, separate seniority lists, different retirement rules, unequal wages and hours. The guidelines also specify that women must not be denied jobs because of their martial status or the ages of their children.

On these tender subjects, the President doesn't say yes and he doesn't say no. White House spokesmen said yesterday that he's been on record for years in favor of women's rights. Presumably, only a politician's desire to have it both ways keeps him from saying he hasn't changed his mind.

Meanwhile, everybody knows that without a specific word from the seat of power, Task Force pieties about Democratic Commitments and Great Untapped Human Resources mean very little.

Even with a strong Presidential indorsement, it is hard to see how anti-discrimination measures can do much more than drive discrimination underground. Employers may stop being so frank about how they don't hire women for the executive suite or the weight-lifting department, but there still may not be many openings.

[From the Washington Post, June 14, 1970]

PRESIDENT IS CRITICIZED BY WOMEN

A small group of militant women yesterday accused President Nixon of "abdication of responsibility as the leader of our country" for his failure to meet with delegates to the 50th anniversary conference of the Labor Department's Women's Bureau.

The conference had invited Mr. Nixon to address its 800 delegates at their banquet Friday. The President, who is in Florida, sent a telegram of regrets and best wishes to the Bureau's director, Elizabeth Duncan Koontz.

Instead the conferees were invited by Mrs. Nixon to an 11 a.m. reception on the White House lawn. This infuriated some members of the National Organization for Women (NOW). They made their feelings known to the press but not to the First Lady, who posed for pictures with delegates and signed autographs during the hour-long reception.

"The President saw the Boy Scouts yesterday, but all we got was a tea party," commented NOW Chairman Wilma Scott Heide of Pennsylvania.

[From the Washington Evening Star, June 15, 1970]

TEA INSTEAD OF TALK

(By Toni House)

To many of the 800 women who came here last week to get action on equal rights, ending up with tea and sympathy at the White House was a big disappointment.

The women, delegates to the Women's Bureau 50th anniversary conference, were annoyed they were offered light refreshments on the mansion South Lawn and a chat with First Lady Pat Nixon, when what they wanted was a nitty-gritty talk with the President.

Some, of course, were delighted to be serenaded by the Marine Band, sip punch, and shake hands with Mrs. Nixon.

But others expressed their displeasure to members of the press and each other, saying they were "insulted," "disappointed," "frustrated."

INSULTED

Lucy Komisar, vice president of the National Organization for Women (NOW), said she was "insulted and outraged," that the President, who was in Florida, had declined to address the group when he had "met with the Boy Scouts yesterday (Friday) and they're not even voters."

"This is a major American problem and it is frightening to us that he thinks so little of use," she continued.

Glorida Muzeurza of Washington, said she thought the President should have seen them, especially since they paid their own expenses for the conference.

Mrs. Edna Richards, president of the North Carolina Association of Class Room Teachers, said she was "disappointed" the President was not present and would "only forgive" him if "he is working on Vietnam or poverty."

Wilma Scott Heide, national NOW board chairman, circulated a petition, signed by a large number of delegates, calling on Mrs. Nixon to become women's "representative in the White House."

About 200 conference delegates even stayed away from the White House reception in protest, and others did not go through the receiving line.

Some who did shake hands with Mrs. Nixon voiced their unhappiness over the President's absence. "He's a very busy man," said the First Lady. He works 18 hours a day. Both of us have always supported equal rights."

And, although she did not mention it in her opening remarks, Mrs. Nixon instructed Women's Bureau Director Elizabeth Koontz to inform the conference both she and the President are in favor of the Equal Rights Amendment, support of which has been in the Republican platform since 1940, she said.

Support of the Equal Rights Amendment was the hottest topic on the floor once the delegates returned to the Washington Hilton to conclude their conference.

A minority statement, signed largely by AFL–CIO unions and a few students, was offered, objecting to "the obvious effort to use this conference to win support" for the amendment "without providing adequate opportunity" for discussion.

The statement objected to the amendment because it would knock out so-called "protective" labor legislation (limits on women's working hours, weight lifting and such).

Despite the dissent, a motion by Margurite Rawalt to endorse passage of the amendment was passed overwhelmingly.

Other final conference action called for the repeal of "all laws restricting the right to abortion"; the establishment of a national system of child day care centers; the immediate implementation of the President's Task Force on Women's Rights and Responsibilities recommendations; and the elevation of the Women's Bureau director to assistant secretary of labor for women's resources.

The conference also called for the administration to establish the elimination of racism and sexism as top priorities and endorsed the National Welfare Rights Organization's $5,500 minimum income campaign.

[From the Washington Post, June 21, 1970]

WOMEN CHARGE PROMOTION BIAS

Women attending a conference of Federally Employed Women here yesterday contended that the government continually discriminates against them in promotions.

They charged also that the Civil Service Administration is not doing all it can to secure better opportunities for them.

Federally Employed Women, a 2-year-old organization of women working for the government, asserts that only 1 per cent of all women in government employment hold a Civil Service grade of 13 or higher and that 80 per cent are in grades 1 to 6.

In comments directed at James E. Johnson, vice chairman of the Civil Service Commission, several women claimed that federal supervisors preselect people for promotion and sometimes bypass merit system procedures.

Johnson, who was invited to the conference as a panelist, said he did not believe proper procedures were being by-passed and asked that any such cases be reported to his office.

Johnson did not explicitly deny there was discrimination against women in the government. But he countered the charges by saying that, as a Negro, he had undoubtedly suffered discrimination and was sympathetic to their problems.

The conference also heard that a gap in the comparative earnings of men and women is widening. A 1968 Department of Labor study was cited to show that in 1955 women earned 64 per cent of the salaries earned by men and that in 1968 they earned only 58 per cent.

The keynote speaker at the two-day conference, Sen. Marlow W. Cook (R-Ky.) told the women that he doubted that a bill calling for an equal rights for women amendment to the Constitution would be passed by this Congress.

Similar bills had been in Congress since 1923, he said.

The organization has grown from the 16 members who began it here in 1968 to more than 1,000, according to Daisey Fields, national president.

Dr. Bernice Sandler, a psychologist at the Department of Health, Education and Welfare, said she believes the women's movement was growing because women have learned from the struggles of the Negro.

"Like the Negro stereotypes," she said, "women are supposed to be childlike, lack ambition, be happy in our places—either on the plantation or at home.

"We are called 'girls' even at 60 years of age, the way Negro men were referred to as "boys'."

[From the Washington Post, July 27, 1970]

WOMEN CHARGE FEDERAL RUNAROUND

(By Elizabeth Shelton)

Secretary of Labor James D. Hodgson turned down a request Saturday that measures to combat job discrimination among minorities immediately be applied to women.

Hodgson told a delegation of 10 women representing organizations as diverse as the National Association of Women Lawyers, Zero Population Growth and the Women's Liberation Movement that he will have to take "a much closer look" before he makes a commitment.

He questioned whether the same standards can be applied to women workers as to minority groups.

Hodgson barred the press from the confrontation but sent them a statement later that he is in "full accord" with the women's rights organizations' job objectives. "It is just the method of achieving them," according to Pat Gannon, deputy information officer who briefed the press.

However, members of the group who took notes during the meeting quoted Hodgson's remarks as follows:

"We have no intention of applying literally exactly the same approach to women in Order 4, which was designed for racial minorities."

The Labor Department directive, known as Order 4, published in the Federal Register in February, requires federal contractors and subcontractors to take affirmative action to recruit and train minority members for jobs. It requires them to notify the government of their goals and to set timetables for compliance.

Women's organizations have been insisting that the word "sex" be included in the order's listing of "race, religion, color and national origin" as conditions for affirmative action programs.

Hodgson, according to his spokesman, agrees that "in some instances they (women workers) are a minority."

Gannon said Hodgson will have a position paper ready for the women's organizations next week.

The women emerged from the conference charging a "runaround." They suggested that the secretary instead prepare a position paper for the guidance of federal contractors, firmly barring discrimination.

"We feel the guidelines (which Order 4 seeks to implement) are weaker than either the Equal Pay Act or Title VII of the Civil Rights Act of 1964," Dorothy Haener, representative of the United Automobile Workers Union, also said.

Miss Haener said after the meeting, "We made it clear that a position paper issued to us is useless. The position paper should be made to all government contractors. We want the affirmative action program to include 'sex.'

"We feel the secretary's refusal is a repeal of Executive Order 11735," she added. That executive order prohibits companies performing contracts at taxpayers' expense from discriminating in hiring and employment policies against women as well as members of ethnic minority groups.

Dr. Ann Scott, federal compliance co-ordinator for the National Organization for Women, called Hodgson's approach "naive, uninformed and frankly stupid."

"This unwillingness to listen to women is part and parcel of this administration's attitude toward women," she said.

The spokeswomen for the group said that it is impossible to disassociate race from sex in discriminatory hiring practices. There is a higher rate of unemployment among white women than among black men, according to the recent report of the Presidential Task Force on Women's Rights and Responsibilities. The group lowest on the ladder where jobs, wages and unemployment are concerned is comprised of black young men and girls.

Most of the women who are discriminated against are members of other minorities, so they are "doubly discriminated against," Miss Haener said.

Miss Haener told Women's Bureau Director Elizabeth Duncan Koontz, who happened into the Labor Department lobby as the group was departing: "We told him we were interested in working within the system but that reactions like his were making it increasingly difficult."

TO BRING THE FEDERAL GOVERNMENT HOME TO THE PEOPLE—HEALTH DELIVERY AND COSTS

Mr. HARRIS. I have been conducting a series of public hearings in Oklahoma to bring the Federal Government home to the people. I have particularly concentrated upon those issues which hit the average taxpayer, the working man and woman of my State, hardest.

On July 8, 1970, I held a very important public hearing in Tulsa, Okla., on the subject of delivery of health services and rising medical costs.

These hearings were exceptionally well attended, and the testimony which I heard was well prepared and useful.

It is obvious, Mr. President, that we must improve considerably the health delivery system of America, and that we must inaugurate a new system for assisting our people with medical costs.

Lately, the President has indicated that he will recommend next year the enactment of a national health insurance program for people of low income. I support this concept but, once again, if we do only that, we will leave out the man in the middle, the person who is too well off to be eligible for special programs, such as health programs, but not well enough off to be able to fully assume all of the burden of health care expenses by himself.

It is obvious, too, from the hearings which I held in Oklahoma that the enactment of a national health insurance program, alone, which I support, will not be sufficient to meet the mounting health crisis in this country, unless we also greatly increase the medical and paramedical personnel available and expand health facilities.

I intend to have the full transcript of this hearing printed in the RECORD and see that it is delivered to the chairmen of the Senate Finance Committee, the Senate Appropriations Committee, the House Ways and Means Committee, the House Appropriations Committee and each member of the Senate Finance Committee, as well as to bring it to the attention of others who will be making important decisions in regard to this vital subject.

Today, Mr. President, I ask that the first portion of the testimony received at the Tulsa hearing, which has now been transcribed, be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

PUBLIC HEARING ON HEALTH DELIVERY AND COSTS, TULSA, OKLA., JULY 21, 1970

OPENING STATEMENT BY SENATOR FRED R. HARRIS

Let me say that I am impressed very much by the overflow crowd here this morning. I appreciate that a great deal because it shows your immense interest in the subject of these hearings.

This hearing is a continuation of my efforts to bring the federal government home to the people. I have received letters from hundreds of Oklahomans telling me of the financial problems caused them by the costs of medical care.

Those without health insurance or without enough, and who are unable for one reason or another to qualify for Medicare or Medicaid, often suffer near financial ruin. Those with health insurance policies sometimes learn, to their sorrow, that their coverage falls short of increased medical costs.

I am particularly interested in the average working man and woman and the difficulty they are having making ends meet in regard to medical costs.

Many wage earners are having a tough time right now because of high prices and a shorter work week, and rising hospital and medical costs hit them especially hard.

Also, they and other people of average income always have hanging over them the possibility that a major illness can completely wipe them out financially.

These are particular problems which you all know about very well. Many of you are directly involved in the medical profession, in hospitals, or in other aspects of the medical problems that we're going to be talking about today.

The Senate Finance Committee, on which I serve, has jurisdiction over government programs of financing health care and we will be considering legislation in this field very soon this session.

This record will be transcribed, and I will personally get it to the Chairmen of the House Ways and Means Committee, the House Appropriations Committee, the Senate Finance Committee and the Senate Appropriations Committee, and each member of the Senate Finance Committee, as well as present it on the floor of the Senate so that what you say here and what other Oklahomans say here will be taken to those who can make the decisions.

It is imperative that more and more people feel that somebody is listening—that the federal government, that the Congress, that those who make decisions at the federal level are interested in what you have to say. This is the purpose of this hearing.

Fred Gipson, here, is my Legislative Assistant working particularly in this field and with the Senate Finance Committee.

Again, I will say how grateful I am that so many of you are here to speak about our joint desire to provide solutions to these problems. This is a positive kind of hearing. What we are interested in is finding solutions, what we can do together to solve the problems that Oklahomans and others are experiencing in regard to health costs.

I appreciate those who helped set up these hearings. Let me thank in particular the Executive Director of the Tulsa Area Health and Hospital Planning Council, and I would like to ask him, Mr. Schlezinger, to get our hearings started with whatever statement he cares to make.

TESTIMONY OF IRA H. SCHLEZINGER, EXECUTIVE DIRECTOR OF THE TULSA AREA HEALTH AND HOSPITAL PLANNING COUNCIL

Thank you Senator. Before I make any formal comments, I would like to express a sincere and real gratitude on the part of Oklahomans for the opportunity to express some of our concerns and commitments to the provision of health care on a statewide, national, and regional basis. I think, as the size of the crowd indicates, there is an obvious commitment to a better—though we obviously have a good degree of health care being provided now—but to a better and more effective delivery. I have an idea that the testimony given today will assist you as Senator to develop the type of legislation that we will be

needing down the road to reach this type of system.

Without question, the 1970's will continue to see what is often alluded to as a "crisis" in the provision of medical care. The adequacy, availability, acceptability, and expense of health services are now considered by both providers and consumers of care to be of highest national priority. If one is to believe but one-tenth of what is published both nationally and locally, one must assume that by 1975 there will be a clearly defined national policy on the provision of health care. Such a policy may well result in a program comparable to that of Medicare and Medicaid, but all-encompassing in scope and flying under the banner of National Health Insurance. A number of approaches and programs have already been proposed and, in some instances, have been implemented on a limited-scale demonstration basis. Some of these approaches, in my opinion, do no more than support the status quo, while others advocate an almost totally socialized system of medical care.

It is not the intent of my testimony to make judgments as to the validity of the various approaches, or to propose alternative schemes. It is the intent, however, to make some general comments and raise some questions that should be resolved before any Congressional action on national health policy is taken.

It is recommended that any statement of national policy on cost and availability of health care meet the following objectives:

1. National health policy should first and foremost place emphasis on detection and prevention. No individual should be placed in a situation where they hesitate to seek medical care because of fiscal or philosophical restraints. Any policy that has the effect of forcing individuals to seek medical care at only critical or acute stages in order to assure proper entry into the system and payment for services, is not in the best interest of either the consumer or the provider.

2. National health policy should be responsive to changes in public preference regarding the method of delivery of care. Providers of health care can no longer stand in isolation is making the determination of where national and local resources should be directed as it affects personal health services. Emphasis on ambulatory care, home care, medical education, rehabilitation and other related programs as determined by the public must be considered and hopefully incorporated into any developed policy statements.

3. National health policy should be as comprehensive as is fiscally and administratively feasible without placing impossible demands on existing resources. Policy should not encourage limits and exclusions in coverage that will make the cost of health care an excessive financial burden on any individual or family. This does not imply that there should not be charges for medical care, but simply that no family should be forced to spend more than a pre-determined percentage of its income in order to obtain quality health services on a regular basis.

4. National health policy when formulated should encourage efficiency, economy, coordination, and cooperation in the actual delivery of services between the public and private sectors. The financing system should include incentives to maximize efficient and effective use of hard-pressed health resources. Incentives should be developed that emphasize and motivate locally initiated services of a regional nature where appropriate rather than duplication of facilities, services and manpower. The financing method should also encourage cost consciousness in the planning and programming of services by physicians, patients, and provider personnel on a local, state and national basis.

5. National health policy when developed must be easily administered. A policy that requires complex administrative procedures or encourages arbitrary decision-making at either the National or regional level will not accommodate or satisfy either the consumers or the providers of care, and thus becomes a luxury we can ill afford.

A number of questions in addition to the concerns and objectives already outlined must be resolved before a policy of National scope can be effectuated.

For example, if government is to become the major purchaser of care what are the ramifications for privately owned, privately operated hospitals and long-term care facilities? What will the role of the voluntary health agency be?

How will public accountability be assured under an expanded national policy, and to what extent will governmental ownership, actual or implied become either necessary or inevitable?

How will balance be obtained between the increased demand for medical services under an expanded national health policy and the availability of services in terms of manpower and facilities?

Will there of necessity be restraints placed on demand and if so, how will these be determined? If constraints become necessary, will they favor acute care over long-term care, catastrophic medical needs over preventive medical care, self care vs. rehabilitative care, and how will the priorities be established?

How effective will co-insurance, co-payments, or deductibles be in terms of continuing demand?

What will the role of the private sector be in terms of administration in the increasingly governmentally subsidized health care economy? What can and will be the appropriate role of the private agency in a publicly mandated program?

Can there, should there, and will there be an effective marriage between the private and public sectors in terms of economic support of the health care system?

These are just some of the questions that must be considered and eventually answered before national policy can be formulated. Because of the complex nature of the issue, with particular emphasis on the fiscal, social, and economic implications, the question must be given careful and continuous thought and study before a policy is formulated. Most people will agree that the ultimate national health policy will establish both public and private patterns of care that will affect the delivery system for at least the next decade.

Once again, on behalf of planning agencies in general, and the Tulsa Area Health and Hospital Planning Council in particular, may I express our appreciation for this opportunity to make our concerns known.

Senator, we have on a number of occasions through interested consumers and providers of health care noticed the tremendous gaps in the delivery almost from a fiscal standpoint. A lot of people in Oklahoma and other areas of the nation are just not receiving medical care because of a personal hesitancy to seek out medical care based on an inability to pay. There have to be some changes based on the economic aspects of health care delivery. I'm hoping and I am optimistic that as a result of these hearings today we will see some of these changes.

Senator HARRIS. What is your present situation in regard to hospital space in Tulsa now and what would you project in regard to the future?

Mr. SCHLEZINGER. Hospital space, I think, is manifested in a number of different ways. If you are talking about acute-care beds, we're probably in fairly decent shape for now and the immediate future. If you're talking about specialized types of services, there is a tremendous need in the Tulsa area for a diversity of services. We have one institution now which is in the process of developing rehabilitation and extended care facilities. We have another institution that's talking about the development of self-care units. These are the types of services that the Tulsa community, the Tulsa region, definitely needs in order to develop a continuum of care which is the type of care which is in fact needed for a region of one-half million people.

Senator HARRIS. I appreciate very much your counsel.

Next, I would like to call on Dr. Tony Puckett, who is Chairman of the Health Council of the Central Oklahoma Economic Development District. Dr. Puckett, I understand that you have a number of people with you, and we'd appreciate your introducing them and being sure that we know that they're here, and, then, we'd like to have your statement.

TESTIMONY OF TONY PUCKETT, M.D. OF SHAWNEE, OKLA.

Senator Harris, I thought we would introduce these people just before their presentation if this is satisfactory.

I am presently serving as Chairman of the COEDD Health Commission and I am a practicing physician in Shawnee; I practice obstetrics and gynecology. I think it might be beneficial if we told you a little bit about the Health Commission of the Central Oklahoma Economic Development District (COEDD).

The Health Commission of the Central Oklahoma Economic Development District, or C.O.E.D.D., was organized in 1966 under the Inter-local Cooperation Act that was designated and funded by the Economic Development Administration of the Department of Commerce. By the criteria established by the U.S. Department of Labor, the C.O.E.D.D. area has continuously qualified as an economically depressed area due to the high unemployment, low per capita income, and/or out-migration of population. C.O.E.D.D. is predominantly a rural area located between two metropolitan cities, Tulsa and Oklahoma City. It contains 40 towns in eight counties which have a population of approximately 215,000 people. C.O.E.D.D. was initially funded in 1968 by the Department of H.E.W., as an area-wide comprehensive health planning agency. During these past two years, considerable time has been spent in organizing the proper mix of providers and consumers of health services, representing both the private and public segments of health care. This organizational process involves the active participation of 200 residents in the C.O.E.D.D. area who have participated in 13 grass-roots health planning task forces, or local health planning task forces.

From the task forces, elections were carried out which brought about the organization of a 38-member Health Commission. We feel that the partnerships have helped the program carried on through C.O.E.D.D. as a dynamic process. Through our cooperative effort, we have succeeded in documenting our health needs and we have succeeded in documenting our needs in terms of health facilities, service and manpower. We recognize that our area has health problems that are similar to other rural areas, that the health needs, *at times*, going unmet and that our other resources, both human and financial, are limited and difficult to expand. We are aware, as is your committee, that simply more money into the current program is not the solution.

We have documented many areas of overlapping services between both the private and governmental segments of medical care in our area and have come to realize that unless a comprehensive and unduplicated system of health care is developed, that the

cost will continue to be greater than necessary to provide service and meet the health needs in our area. The C.O.E.DD. Health Commission was happy to accept the invitation to present testimony before this committee for consideration, in hopes that as the Senate and Congress labor over the legislation that directs the delivery and financing of health care for many Americans, the needs of the particular residents of C.O.E.D.D. will be met.

We will present testimony to the two points to which we were requested to address ourselves; one, the subject of National Health Insurance and, two, a delivery system which would be adequate and compatible to meet the needs of people living in rural areas, which is essentially the C.O.E.D.D. area. The Commission feels that National Health Insurance is an inevitable development.

We hope National Health Insurance will bring about some reasonable order and adequate health care for all disadvantaged Americans.

A summary of a survey taken in our area regarding National Health Insurance is attached to our submitted printed document for your perusal. The sentiment of the area is socio-economically classed within the C.O.E.D.D. area by the Health Commission. We would hope the development of a program of National Health Insurance that would eliminate the multiple areas of reduplication of many federal programs for providing care for those disadvantaged Americans, including the Indian, the Veteran, and Medicare recipients.

It is our impression from our work in the C.O.E.D.D. area, as well as representation in the National Health Forum in February and in multiple other health commissions from other rural areas, that a delivery system must be one designed in the area and from the area to meet the needs of the people and not be a system taken from larger metropolitan, high population density areas which, at the present, do not seem to be adaptable in overall form to our area. In other words, the delivery system should be flexible and designed by the areas which will use the system.

We have been interested and worked with and for the Indian segment of our population for sometime and have asked Mr. Arthur Rolette, a member of the Absentee Shawnee Indian Tribe, who serves on our Health Commission, to make some brief statements about the Indian Health Care problem. He is immediate Past-Chief of the Absentee Shawnee Tribe and is a member of the Advisory Council for the Shawnee Unit of the Indian Health Service. He is on the Board of OIO and CAP. Mr. Rolette owns and operates a Grade A Dairy and has been a most active member on our Commission. Mr. Rollette.

TESTIMONY OF ARTHUR E. ROLETTE, ABSENTEE SHAWNEE INDIAN

There are many things the Indians of this area are in need of. But, the most important to me is a hospital to serve the Indians. It has been pointed out more than once, to the Public Health Service Department of Indian Health Service, that Indian hospitals in the state are all, more or less, 100 miles away for the Indians living in Central Oklahoma. This distance becomes an important factor to us, the Indians, when we are seeking health improvement or care by hospitalization.

Indians feel a hospital is a great need in Central Oklahoma and make this hospital their one request. This request should be supported by the representatives of the people in Congress.

Public Hospitals are available to Indians, but money problems present some difficulty and most Indians rely on the Indian hospital for inpatient care.

As Dr. Puckett says, I am a member of the Health Commission and along about the last quarter we get short in money at Public Health. We send our patients to a public hospital or they go themselves. Sometimes they cannot pay their hospital bill and it creates a problem for us. I don't think it's the hospital's fault or the doctor's that they don't accept these patients because sometimes they get paid for their care and sometimes they don't. So that's one of the problems we have.

I have a list of the Indian population in our area. As the Senator said, we only had short notice. Running a dairy you don't moonlight, so I didn't have much time to prepare anything.

Right now we have three doctors at the Shawnee Indian clinic, and we need four. We have three small clinics also. But they are gaining 100 patients a month at our clinic and the doctors say they are not going to be able to take care of all of them. What we do need are two more RN's, some office workers and another dentist. The dentist is about three months behind and he only treats the children, though he will pull a tooth for adults. But other than that he just takes care of children.

In my opinion, I think we should have some sort of a change. We have government doctors and I think they should work with the doctors in town. They used to take their turns on weekends, but now they don't. They are on duty, or are supposed to be on duty 24 hours a day, but they only work five days a week. Now I think if they would cooperate with the doctors in Shawnee, they'd get along better. Work right in the hospitals with them. I'm sure that Dr. Puckett and all would work with them.

INDIAN POPULATION—CENTRAL OKLAHOMA ECONOMIC DEVELOPMENT DISTRICT APRIL, 1960

County	Number Indians	Percent total
Creek	1,137	2.8
Hughes	1,397	9.2
Lincoln	184	1.0
Okfuskee	1,067	9.1
Pawnee	565	5.2
Payne	310	.7
Pottawatomie	1,742	4.2
Seminol	2,343	8.4

District total, 8,743. Oklahoma total, 64,689. District percent of State population, 13.5 percent.
Source: Oklahoma Employment Security Commission "Indians in Oklahoma", September 1966.

Senator HARRIS. Thank you very much. We were successful in getting the Senate to adopt an amendment to the appropriations for the Department of the Interior which added $3,776,000 to the appropriation that had been recommended by the Senate committee for Indian health. Part of that $3,776,000 that we added in the Senate is for increased personnel and for drugs and supplies, which are short, as you know, in many of the Indian hospitals of our state and of the country. So, I hope that we will be able to keep that amount, or at least part of it, in conference with the House of Representatives. I think that you have made a strong case here which will be helpful to us in trying to get these funds. I appreciate your being here. Thank you.

Dr. PUCKETT. The next person I would like to introduce to bring testimony is Mrs. Mabel Ashley. She's a housewife; she's an active member of our Health Commission; she's the secretary-treasurer of the Creek Farmers Federal Credit Union; she's been active in the Eastside Youth Center at Bristow; and she is quite active in multiple youth activities in the Bristow area.

TESTIMONY OF MRS. MABEL ASHLEY OF BRISTOW, OKLAHOMA

Senator Harris, Dr. Puckett, and others here. I am here to talk about the health needs of the poor. Health education is really what we need most. Even with access to the Health Department, many people just won't go to the Health Department. We have clinics, but the vast majority of them stay at home. I remember when we had the rubella program and we had to go out and almost go to each door and find out if the children had had their immunization shots. Then we had to make provisions to get these children to the clinic.

Family planning plays an awfully important part in the health needs of the poor because a very large family suffers more if any disaster comes.

Family counselling would be a great advantage among the poor because the majority of them don't know how to use what they have. They can't take their natural resources and provide for a month until their next welfare check comes. They need proper counselling from the Welfare Department or the case worker or whoever could help these people in managing their money. The check comes on the first of the month and by the fifth of the month the money is gone. They get surplus foods but many just do not know how to prepare them so they are edible.

Also, it would be good for welfare people or low-income people if they could make extra money without this being taken from their welfare check. With no reflection on the Welfare Department, I think the Welfare Department and all these other agencies have a tendency to make liars out of people because they tell them they are going to get $100 a month and have a specified number of things for them to spend this $100 for. If the $100 doesn't go where it should go, the recipient goes out and gets a job and everything that he makes he is supposed to report—nobody is going to report that because they think it is going to be taken away from them, and they're just not going to do it. If it were specified that they could work and this money be taken for the needs that they have, I think that this would be a good thing.

We have a dentist in our county and a number of our health departments have dentists but they can only do emergency work and we need dental care among the poor.

Glasses are one of the greatest needs for the poor—both children and adults. And in order to find out how many of the welfare recipients or low-income people need these you almost have to go from house to house to find out because they don't have the confidence to come and say they need this.

A means should be provided for drugs for persons discharged from mental institutions. The cost of medication is so high that recipients can't pay the money and so this ends up costing the state more because these people have to be recommitted.

Also for people on Medicare and welfare there is a ten-day stay in hospitals and when the ten days are up many of the patients are not ready to be discharged. Before he can go into the hospital he has to have the $50 deductible that has to be paid. There are many families who don't have this. Working for the Credit Union, I find out that some of our members are welfare recipients and they have to borrow the $50 so they can go into the hospital, and they don't really have the money to pay it back, and if they are ill for a long time they are completely ignored. They have no way of paying this back, so we need to have something done about that if there is anyway possible.

We need a recreational place for our low-income people because "all work and no play makes Jack a dull boy." The children and even older people need recreation. Everybody needs some form of recreation. Our young people are on the streets. They are dropouts. We don't have anyway to cope with this.

Also we need money to see if we can do anything about the low-income people who still don't have sewers and their outdoor privies are inadequate. Some of them don't have water where it is available. Many peo-

ple are too shy to talk about things like this. There was a survey made and our worker in our County Health Service went from door to door to see how many outdoor toilets there were. I don't know what the evaluation was, but I think it was kind of high. It would be good for the government to know about these things and maybe we could get something done. I thank you.

Senator HARRIS. I appreciate your statement very much.

Dr. PUCKETT. I would like to introduce Mr. Leon Noss, hospital administrator and member of our Facilities Committee who serves in reviewing proposed facilities for our COEDD area. He is going to present a statement relative to the hospital's problem in a rural setting.

TESTIMONY OF MR. LEON NOSS, ADMINISTRATOR, SHAWNEE MEDICAL CENTER HOSPITAL

The nineteen hospitals of this eight county area share the concern of Rolette and Mrs. Ashley and the problems that they have mentioned as well as the many other problem areas of health delivery and the receipt of health services that we do face in our area. Certainly we and the hospitals and our physicians want to develop a delivery system that can meet many of these needs. We believe that the hospitals and the physicians in our area have the ability to contribute to the solution.

These hospitals and physicians are located near the homes of these people, in the various towns in our area. They are already in the physical location which will permit these people to receive their many health needs faster and at less expense. Thus the hospitals and the private physicians can serve as the front line of attack on these health needs. But governmental health programs have so split our delivery system, and penalized these small hospitals through the reimbursement methods, that we are in a severe struggle for financial existence. Our ability to provide charity or other services for which we do not receive full payment is severely limited by the large per cent of services we already provide under Medicare and Medicaid contracts at less than cost.

Indian Health Service, VA, and Military programs do not permit most of these people to utilize their local hospital or physician as covered health services. The people are segregated into groups and sent off to a facility which is financed to provide services to their particular group. Government thus creates a duplication of facilities as well as a hardship for these people if they are to receive needed health services. The vast majority of these needed services could be met by the local hospital and local physician at much less cost. Why not let the Indian, VA, and Military hospitals and physicians compete with us under a unified health insurance plan. The quality of care will soar, and more needs will be met at less cost

Under the present Medicare and Medicaid programs, where health services are covered for another segregated group of citizens, the hospitals in our area are providing a large per cent of their services. But these hospitals are not being adequately paid for these services. We not only are not paid our billed charges, we are not even paid for all of our costs. No business can long exist if its costs are not even paid.

Perhaps the philosophy of government is the most difficult part for the health providers, hospitals, doctors, etc., to understand. Large investor owned companies lobby and fight to receive government contracts because these produce large profits to be shared by the investors. Apparently government feels that these companies should receive a profit for producing such items as airplanes, helicopters, guns, etc. But the philosophy changes when government wants to buy health services. For these they are unwilling to even pay cost. In either case the government is purchasing services or products for the public well-being. Surely health care is as important as guns.

If the current financing methods under Medicare and Medicaid are also used for National Health Insurance, then a number of the community hospitals in our area will be forced to close, and the local physicians driven into the urban centers.

These hospitals serve a population where a large percent of the people are presently covered by Medicare or Medicaid. Up to 88% of the services are utilized by these people. But the hospitals do not receive 100% payment for these services. Instead they receive only about 88% from both Medicare and Medicaid. Thus there is a large loss to be made up by the private paying patients.

For the physician, he can live in one of our rural communities and receive $350.00 for a particular surgical procedure. But this same physician can move to an urban center such as Oklahoma City, and receive $550.00 for that same surgical procedure. Can you then understand why physicians do not want to go to the rural communities?

I have tried to say two things. First, government, through its programs, is splitting our health delivery system and penalizing our people while it says it wants to eliminate duplication and provide better personal health care to all citizens.

Second, government needs to apply a similar philosophy to its health care purchases that it uses for other purchases for the public, at least to the extent of paying its full share of costs.

I urge you, on behalf of the health and welfare of the people of our 8-county area, to give consideration to our needs in your future deliberations.

Senator HARRIS. I will.

Dr. PUCKETT. I would like to touch on just three points. Mr. Noss has pretty well, I think, made the case for the hospitals. We are including a survey from the various hospitals regarding their reimbursable costs under Blue Cross-Blue Shield, Medicare, Medicaid, and private plans and you can peruse that at your leisure. I think it will certainly document completely the statements which Mr. Noss has made regarding reimbursement problems the small hospitals are having, and this is based on the number of beds and is statistically valid.

Number two, I think Mrs. Ashley touched on one point which we haven't said a lot about. Any type of national health insurance is not going to be of value if the recipients are not able to have the drugs in order to cure the ailments. So we feel that there must be some financing by some means at least for payment for drugs for the people.

Mr. Rolette has presented the Indians' case; in our area in order to get health care the Indians are segregated in a separate facility. We at the Health Commission feel that if he were able to choose, because he were adequately financed through some type of insurance or otherwise, if he could choose either the Indian service, private service or any other service, or even set up his own, based on the fact that he could fund it by utilization, that the Indian would receive a continuum of excellent care. And so we would suggest that either a hospital, or funding these people where they could go where they want to go is a solution to that particular problem.

Let me thank you for the opportunity to present testimony and we are available to answer questions at any time or to expand upon any of the points which we have made, should your committee desire this.

Senator HARRIS. I appreciate very much your excellent statement on behalf of the Health Commission of the Central Oklahoma Economic Development District.

ADDITIONAL TESTIMONY PRESENTED BY THE COEDD HEALTH COMMISSION TO THE U.S. SENATE COMMITTEE ON FINANCE

The COEDD Health Commission is honored in presenting testimony before the U.S. Senate Committee on Finance and expresses its gratitude to Senator Fred Harris for making this democratic process possible. The Central Oklahoma Economic Development District, hereafter referred to as COEDD, was organized in 1966 through the provisions of the Internationel Cooperation Act. The initial motivating forces behind this organization, were the local problems of high unemployment, poverty, and out-migration of population. Through monies, administered through the Economic Development Administration of U.S. Department of Commerce, assistance has been provided in planning and action to alleviate these above described problems. However, it soon became apparent to the 215,000 citizens living in the rural area and in the 40 cities and towns within this eight-county area that more jobs were not necessarily the solution to all of the needs identified in the planning process. It becomes further apparent that a *comprehensive process,* involving planning for total development of the region including functional areas of physical, social, and economic needs, must be implemented immediately if the planning process is to be responsive to the problems of the local people.

In 1968, COEDD was funded through the provisions of P.L. 89–749, referred to as the "Partnership For Health" legislation. During the past two years, the COEDD Health Commission has been organized, consisting of 38 members, who have been elected by 13 "grassroots" Health Planning Task Forces. This Commission has, by working with the public and private segments of health care and consumer, as well as provider interests, studied and documented many of the health needs of the area. COEDD, being a rural, depressed area, recognizes the likelihood of a "health crisis" in the near future. Our health needs are many, our problems are critical and limited human and financial resources demand that a comprehensive process be developed, whereby maximum utilization of health resources, facilities, services and manpower, may be attained

Some areas of concern documented by the Commission include:

1. Fragmentation and duplication among segments of the health service delivery system

2. Differences in health status of population in accordance with socioeconomical standing

3. Out-dated and improperly utilized health facilities

4. Increased cost of health care

5. Increasing shortages of Health Manpower—medical and paramedical

Many parties are increasingly advocating a Universal National Health Insurance program as one solution to the health care crisis. A recent survey conducted throughout COEDD [1] indicated that over 12% of the low income families are neither covered by government health programs nor participate in a prepayment plan with a private health insurance company. Furthermore, the quality of coverage varies among many area prepaid programs and does not, in many cases, meet the health needs of the individuals and families. Due to increased financial burdens being created by the health crises, a large number of area households now favour National Health Insurance. The Health Interview Survey conducted throughout COEDD, shows the present level of support and opposition for a universal insurance program by socioeconomic strata. It also indicated that

[1] Exhibit A.

a significant number of households were undecided.

If Congress, with all of its wisdom, decides that Universal National Health Insurance is in the best interest of America, then the COEDD Health Commission volunteers its assistance in expressing areas that we are most concerned with, particularly our level of expertise regarding present health problems and about a workable health delivery model for rural America.

Today, health is not a basic right in COEDD. Many discrepancies exist in availability and accessibility to health services among our people. Gaps exist within and between the many fragments of the health system. Significant differences exist in the health status in accordance with socioeconomic standing, culture, and race. The people of COEDD feel that hospital charges are too high, while another study recently conducted [2] indicates that major discrepancies exist today in the cost items allowable by major third-party payment plans, and significant differences exist in their levels of reimbursement. Unless corrective action is taken by Congress, programs, such as the Medicare and Medcaid program, will bankrupt and force the small, rural hospital to close its doors. The hospitals in rural areas such as COEDD, because of the high numbers of persons over 65 and the Medicaid-Welfare load, depend upon Titles 18 and 19 for the majority of their total annual budget.

The Indian citizen is denied access to adequate levels of care because of inconveniently located facilities and shortages of health personnel. Continuity of service is nonexistent for Indians living in COEDD. Why does the Federal Government continue to duplicate facilities and services and to operate a completely segregated system of health care for Indians?

The COEDD Health Commission recommends that in communities, such as Pawnee, Oklahoma, that future consideration be given toward building and equipping a joint community health facility that will meet the needs of all area citizens and that the different levels of government discard any plans for continued duplication of facilities and/or services for the Indian and Non-Indian populations. We also recommend payment for services rendered, whether they provided by the private segment or public, be made to all levels of government or to the private segment through such a National Health Insurance Plan.

In summary, the COEDD Health Commission maintains that an effective and workable "Partnership" must be developed between the public and private segments of health care. It is important that both partners, as well as consumers of health services, have an equal voice in shaping the destiny of America's Health Care System. It is possible to preserve the patient-physician relationship and to provide for free choice by all people of physician, institution or agency rendering health care as cherished in our democratic society, and still; to develop a comprehensive delivery system that will promote the qualities of life, including health care wanted to all people. This is a great undertaking. Together, let's start now to build this "Partnership"; one that is economically responsive to the various needs of the patient.

[2] Exhibit B.

EXHIBIT A—TABLE OF RESULTS, COEDD HEALTH INTERVIEW SURVEY [1]—JUNE 1970

Socioeconomic stratum	Percent of households with health insurance				Opinions of household respondent regarding national health insurance (percent)		
	Private	Government	Both	None	Favor	Oppose	Undecided
High	58	24	13	5	24	48	28
Middle	51	32	12	5	42	32	26
Low	37	40	11	12	57	24	19
Rural	55	24	13	9	46	36	18

[1] Sample population selected at random from households among rural and urban areas of COEDD. All communities above 1,000 population were stratified into socioeconomic frames in accordance with a precise, valid methodology developed by NCDC, U.S.P.H.S., DHEW. Collection of data was a door-to-door process by teams of experts formally trained in proper interviewing techniques.

I. Size of COEDD Survey Population	2,500 households.
II. Composition of sample:	
A. Urban:	
1. High socioeconomic stratum	348 households.
2. Middle socioeconomic stratum	348 households.
3. Low socioeconomic stratum	768 households.
B. Rural	1,036 households.

EXHIBIT B—SUMMARY OF THIRD PARTY REIMBURSEMENT EXPERIENCES AMONG COEDD HOSPITALS, JULY 1, 1970 [1]

	Under 30 beds	30 to 50 beds	50 to 100 beds	100 to 150 beds

Senator HARRIS. Mr. Reid Hutchens, Jr., who is President of the Southern Oklahoma Development Association Health Advisory Council, is with us. Reid, we appreciate your coming up here and will be glad to hear from you at this time.

TESTIMONY OF MR. REID HUTCHENS, JR. OF TISHOMINGO, OKLA.

Thank you Senator. My report will be divided into two parts. The first is the health care system and the second will be on the high cost or the reason for the high cost of hospitalization.

The Southern Oklahoma Development Association and the Health Advisory Council appreciate the opportunity to express the following concerns regarding the health care system.

Congress, in consort with the U.S. citizens, must guide by law and economic incentive, the health care system toward a balance between maintenance of individual health through preventive care as opposed to the present single focus on disease, treatment, rehabilitation and exotic services as related to hospital confinement.

To achieve this balance, the health care system must provide a continuity of health supervision from birth to death as defined by a health planning process for a given geographical area and/or population density.

Recent experience with health programs promulgated by Congress and interpreted by Washington standards have proven that rural Oklahoma may not be able to take advantage of well-meaning laws and in some cases find the programs in conflict with the area's best interest.

Example (1) Hospital reimbursement comparison attached. Hospitals in south-central Oklahoma have a Medicare occupancy of 53%—79%—42%—62%—51%—56%, etc. Medicare pays 85%—72%—83%—76%—71%—75% of the billed charges.

These hospitals in a rural poverty area are going broke by the imbalance of Medicare patients. If, however, the reverse were true, a situation which does exist in the more densely populated areas, so that Medicare occupancy was 30% or less, the hospitals could afford to care for the Medicare patient.

Example (2) Comprehensive Health Planning. P.L. 89-749, written in 1966, was a creative piece of legislation suggesting that there should be a partnership for health which would recognize the local input into the planning process. Today all programming still comes from Washington down, telling us how to plan and what to plan.

Congress, in consort with the U.S. citizens, can make personal health care more feasible and more accessible by striving for a coordinated health care system, giving all U.S. citizens the right to choose their health provider and facility.

At the present time we have segregated health care systems. We have health care systems for:

The American Indian.
The Veteran.
The military personnel and dependents.
The poor.
The aged.

If Congress determines that a national health care system is in the best interest of all citizens, then all citizens should be equal under the law and not be forced to seek health care in a manner prescribed by law due to his background.

In the development of Medicare the Congress should be commended for passing into law this outstanding piece of legislation. They provided hospital care to millions of Americans that were unable to obtain needed hospitalization.

However, the Congress failed to pick up its fair share of the bill.

As a result of Medicare you are seeing hospitals in Oklahoma getting into serious financial difficulty and the cost of hospital care skyrocketing. Medicare can certainly be blamed for a major part of this high cost of hospital care. I was told a while ago that—I don't know how accurate the information is—that as a result already of Medicare, thirty-five hospitals in Oklahoma have closed their doors and soon thirty-five more will.

The Congress passed the law and said that they would pay for hospital care for the patients on a reasonable cost basis. The first two years two percent was added to the reasonable cost figure. This was dropped by law July 1, 1969. Congress also said that bad debts would not be considered as a part of cost. The Social Security Administration said that out-patient service, nursery, obstetrics, pediatrics and accelerated depreciation would not be considered as reasonable cost. When you take all these items out you take out the biggest expense items in normal hospital operation.

In the Tishomingo Hospital we had to hire extra help as a direct result of Medicare. This was additional professional nursing people, medical records personnel, office personnel and auditing expense. In the last fiscal year we ran 53 percent Medicare patients. This is the normal average for Eastern Oklahoma hospitals.

Senator HARRIS. How were those handled before Medicare? Did those people get care before, or do you know?

Mr. HUTCHENS. Well I would say that a lot of people got some care that they were not getting under Medicare. Some of them maybe had welfare, some of them had other kinds of insurance, some of them were able to pay their own—take for example my mother. She is not a wealthy person by any means but she is financially independent. She has been in the hospital the last two years with Medicare picking up the bill. She could pay for it herself, she has the money, but the government picks it up.

Senator HARRIS. The insurance program under Medicare?

Mr. HUTCHENS. Medicare picks up her bill. She could pay it out of her pocket. She has the money.

Senator HARRIS. There are a good many people I trust that could not.

Mr. HUTCHENS. Yes, there are several. Medicare has served a purpose but let me see where they're wrong. When we ran 53% Medicare patients you only picked up 53% of the costs of this extra help. What I'm saying here, if we had to hire this lady here to keep records as a direct result of Medicare, and we ran as an average 53% Medicare patients, the government only pays 53% of her salary.

In our hospital we charged Medicare patients $268,708 but you only recognized $227,690 as expenses. This difference of $41,000 had to be transferred to the remaining 43% of our patients. I might stop here and say in comparison of bills, Medicare paid us $35.21 to take care of their patients a day, Medicaid or welfare paid us $41.77, and Blue Cross paid us $47.43. Welfare patients accounted for 16% so this only leaves 31% to absorb the cost you refuse to recognize. Blue Cross patients accounted for 8% of our business and they paid us 100% of our bill charges. In simple terms here is what has happened. We had to shift the expenses that Medicare failed to recognize to 31% of our patients causing us to raise our prices at an unusually high rate. Also the Congress put us under wage and hour and this also caused additional hospital expense.

The *Daily Oklahoman* quoted you yesterday as saying, "Every day I receive letters from Oklahomans telling me of the disastrous financial problems brought about by the high cost of medical care." The people are right in advising you of this matter. This is where a major part of the blame lays and this is with the Congress.

If the Congress creates a National Health Insurance Program with the same attitude as Medicare you will see either hospitals closing their doors or increasing their bill charges at a far greater rate than either of us could imagine.

Most hospitals are non-profit community serving organizations.

If we hold down our bills we either go broke, or discontinue giving service to Medicare patients. If we do this we are failing in our purpose in the community. If we don't raise our rates and try to exist we must go to the ad valorem taxpayers for relief. This would be disastrous as we are eight to nine times larger than county government. We

had no choice but to shift the burden of cost to this small percent.

Senator, I would urge every effort be made on your part to remove the administration of Medicare from the bureaucrats in Washington to either the state or area level. This would also apply to say future Health Plans or government health programs.

The administration of any program from the bureaucrats in Washington removes the one most important thing—the local problem.

On December 1, 1969, I visited with John Veneman, Under Secretary of H.E.W., discussing the reimbursement formula and asking for help. He was most understanding, and even said that he could see where Modesto, California, his home town, would have different problems than the greater Los Angeles area. He also understood our area as having different problems from the highly industrial states where Medicare patients may be as low as 20 percent versus our 53 percent, and Blue Cross running as high as 55–60 percent versus our 8 percent. If we had 20 percent Medicare we too could make it and absorb it.

Mr. Veneman could also see and understand this problem. But he said there was no way to write a program for different areas. He also promised some relief, some came but not enough. We had to increase our rate again on February 1, 1970 because of Wage and Hour. If unemployment compensation is passed it will be necessary again to increase our rates.

I think you will agree with me that metropolitan and rural areas have different situations. This is why I advocate either state, area or local level administration of Medicare or any other government health field. Under Medicare we are required to hire our own auditor. This is good. We are also audited by a firm from Ada, a Medicare auditor. We are audited again from Tulsa, a Medicare auditor. We are audited again in Baltimore, and subject to audit from G.S.A. which answers only to Congress with no statute of limitation. It is estimated that auditing expense has already exceeded $1 billion for Medicare.

Here is why we are on top of the problem in Oklahoma and we are further advanced than most other states. In 1967, Oklahoma hospitals had completed 100% of their audits and with a 99% settlement. The regional area was only 92% with 74% settlement; the national average was 89% with 60% settlement. In 1968, Oklahoma again had completed 100% of their audits with 97% settlement versus regional 74% audits with 28% settlement and a national average of 66% of the audits with only 26% settlement. In 1969, already Oklahoma as of December had completed 47% of their audits with 31% settlement; regional areas only 21% had completed audit with 7% settlement; and the national area 20% had completed their audits with 4% settlement. Your colleagues in Congress will soon be catching hell—just as soon as the audits are completed.

Senator HARRIS. That won't be anything new. (laughter)

Mr. HUTCHENS. I would like very much to come to Washington and appear before the subcommittee or full committee to discuss how they are breaking all hospitals in the nation where we have a high percentage of retirement personnel or people of the rural areas.

I wrote you last week asking for your support of a "Cost Containment Program in Oklahoma Hospitals" that was presented yesterday to the Social Security Administration in Baltimore by the Oklahoma Hospital Association in cooperation with the welfare program and Blue Cross. Again I would like to urge that you go all out and support that program so we can survive a little longer.

Also, on behalf of the Southern Oklahoma Development Association, I want to thank you for your help in overriding the President's veto of the Hill-Burton funds. Do you have any questions?

Senator HARRIS. That's it. Thank you very much. I appreciate that very much and I think that you made some awfully good points. We obviously have to have programs to provide for people who couldn't otherwise get medical care. I think we ought to be fair about the basis on which we pay. Furthermore, I don't believe that we ought to pay people less than an adequate wage whether they work in a hospital or laundry or wherever. But we ought to recognize that when people are paid proper wages that that increases cost to some degree. So I appreciate what you've had to say and I think it will be very helpful to me and to the committee.

ADDITIONAL TESTIMONY PRESENTED BY THE SOUTHERN OKLAHOMA DEVELOPMENT ASSOCIATION

Description of area

110 miles East to West; 85 miles North to South; 6,883 square miles.

Total population of entire District: 170,000 (Source: 1960 U.S. Census.)

Three largest communities: (10 counties) Ardmore—20,679; Ada—14,311; Durant—10,920. (Source: (Population) U.S. Census, preliminary release, May 22, 1970.)

Historically, economic base dependent on farming and ranching.

Income levels: 44% of population derive a total annual income of $3,000 or less; 67% are under $4,999.

Per Capita Personal Income: SODA Average—$2,407; Okla. Average—$3,328. Source: 1960 U.S. Census.

Education: Median education level for entire area is 8.8 years.

Minority groups: 8.9% of total population (District) consist of American, Indian, and Negro.

Age: U.S. Average—29.5; median age of SODA area—34.7 years old.

Counties with the younger population are: Garvin, Carter, Pontotoc.

Description of health manpower

Physician providing patient care/100,000 population: U.S.—132/100,000 population, Okla.—106/100,000 population, SODA—74/100,000 population.

Total—123 MD & DO in the SODA area.

Dentist providing patient care/100,000 population: U.S.—47/100,000; Okla.—*35*/100,000; SODA—24/100,000.

Professional Nurses providing patient care/100,000 population: U.S.—313/100,000 population; Okla.—188/100,000 population; SODA—100/100,000 population.

Total—169 active Registered Nurses.

Age—4% under 25 years old, 20% 25–34, *22% 35–44, *36% 45–64.

Education—81% Diploma.

Active—78%.

Inactive—22% (½ of inactive are retired due to age or family).

Field of Employment—63%—Hospitals, 14%—Public Health, 7%—Nursing Home.

Description of health facilities

General Hospitals: 13 institutions with total of 811 (plus) hospital beds in 9 counties (Note: This excludes recently completed and planned facilities.)

Hospital size range from 20–150 beds.

Accessibility—Evenly distributed within the area.

Long-term Facilities: (Nursing Homes) 55 institutes with total of *2000* (*plus*) beds in 10 counties.

Nursing Home size range from 30–100 beds.

Other: (State facilities) Okla. State Veterans Hospital—Sulphur—231 beds, Okla. School for Deaf—Sulphur—enrollment fluctuates around 220, Pauls Valley State School—600 (Plus).

County Health Department: 10 units, one in each county staffed with varying levels of personnel, such as: nurses, home health aides, sanitarians, and physicians.

Limited voluntary agency services.

Description of health services

Limited to basic institutional care and minimal safe water and sewer systems and housing facilities.

Local colleges and educational facilities have limited curriculum and programs to develop or promote health manpower for the area.

Local public school curriculum have limited curriculum to develop and promote an optional level of health knowledge which could promote and improve health status in the area.

Out-patient services for acute illness and early detection of disease are limited to private physician practices during office-hours and to hospital emergency rooms facilities and personnel after hours.

There is limited to no available care for mental health problems in the area.

COMPARISON OF 3D PARTY PAYMENTS TO HOSPITALS IN SODA AREA, HOSPITAL SIZE, FROM 30 TO 150 BEDS

Hospital	A	B	C	D	E	F
Gross billed charges	$49,242	$57,219	$263,203	$27,437	$24,379	$50,954
Expenses recognized by Blue Cross	$49,242	$56,138	$237,049	$27,437	$24,379	$50,954
Paid by Blue Cross per patient day	$47.43	$59.03	$63.86	$57.13	$28.99	$49.09
Occupancy (percent)	8	7.6	13.52	10.0	7.9	9.7
Paid percent of billed charges	100	98	90	100	100	100
Medicaid:						
Gross billed charges	$102,362	$84,645	$114,704	$31,704	$95,890	$70,859
Expenses recognized by Medicaid	$81,779	$68,884	$99,002	$25,470	$68,537	$67,355
Paid by Medicaid per patient day	$41.77	$41.84	$55.96	$40.68	$26.79	$46.70
Occupancy (percent)	16	13.1	6.13	13.3	24.9	13.5
Paid percent billed charges	80	81	86	79	71	95
Medicare:						
Gross billed charges	$268,708	$553,324	$741,414	$171,315	$207,948	$295,973
Expenses recognized by medicare	$227,690	$403,404	$613,917	$131,159	$148,529	$222,782
Paid by medicare per patient-day	$35.21	$40.34	$53.17	$47.38	$28.06	$36.98
Occupancy (percent)	53	79.3	42.05	62.4	51.6	56.4
Paid percent billed charges	85	72	83	76	71	75

Note: Average percent of billed charges paid by Blue Cross, 98 percent; average percent of billed charges paid by medicaid, 82 percent; average percent of billed charges paid by medicare, 77 percent.

Senator HARRIS. Has Gary Theilan from the Oklahoma City Planning Council come in yet? No?

Gene Pace is here representing Jack Boyd, Director of the Oklahoma State Health Planning Agency, who will be filing a statement later on. Gene, do you want to add anything at this time?

Mr. PACE. Not at this time, thank you.

Senator HARRIS. All right. I appreciate very much your being here.

I would next like to call on Mr. William Roderick, Director of the Pipeline Industry Benefit Fund.

TESTIMONY OF MR. WILLIAM RODERICK, DIRECTOR OF THE PIPELINE INDUSTRY BENEFIT FUND

Senator Harris and ladies and gentlemen. I'd like to preface my remarks here this morning to say that I wear a number of hats as I stand before you. I am the administrator of a National Health and Welfare Plan, which covers Pipeline employees doing work under the United Association of Journeymen, Plumbers and Pipefitters across the country. We have eligible members in all the states. We pay hospital bills and medical bills in all the states. I'm also the President of the Tulsa Labor Council. Of course, the official position of the AFL–CIO, as well as of the independent unions throughout the country, is for the preservation of the health and the well-being of our people. We in the labor movement have, in most cases, adequate health care. We find ourselves having to negotiate further, though, to keep abreast of the inflationary trend of hospital costs. I'm also a member of the Tulsa Area Health and Hospital Planning Council. I do not speak for them this morning but I am a member, and I am aware of some of the problems we have locally. As administrator of the Fund for the last four years, of course I have firsthand knowledge of the rising health costs and care costs that we have. We have some 6,000 members and their families who are eligible for benefits and we pay claims in each state in the Union. We see quite a difference in the inflationary trend and rise in costs of health care.

Our actuary just completed a report for fiscal year ending February 28, and we found that to provide the benefits that we do for our members—and we are a self-insured entity and we do not have anyone under writing us and we pay out of our own reserves, our Taft-Hartley trust—if we were to go to a carrier to underwrite the coverage we provide for our people, which we feel in great part is better than most places, it would cost in the neighborhood of $900 a year to purchase this type of coverage. This includes a vision plan; a dental plan; complete out-patient benefits; hospitalization (we pay the semi-private room rate); we pay unlimited miscellaneous expenses while they are in the hospital; we have a disability benefit in connection with this. We pay according to a schedule on dental benefits. But to purchase this and to provide the coverage that we do for our members, it would cost in the neighborhood of $900 a year premium for each of these people. And we feel like we are doing a very good job for our members. However, the position that organized labor has taken down through the years is that an investment in human resources—which is education and health—is an important investment. Even though we are real fortunate in being able to provide as well as we do for our people, many people across this country of ours do not have adequate health care.

The point was made in regard to the employees of hospitals going under the minimum wage. It's noted that if a person on the minimum wage worked 52 weeks a year and earned around $3,700 he would still be in the poverty group in our country. I can see the problems that he would have in trying to provide adequate health care for himself and family. I pulled two folders from our claim files yesterday. There was a maternity claim incurred in December of 1968 and a maternity claim which was incurred in May of this year—some 16½ months later—in a local hospital here in Tulsa. I noticed that the room and board charges had increased 15%; the miscellaneous fees while in the hospital increased over 30%. Realizing that probably both confinements were not equal, they were equal in the number of days that they were in the hospital, seven days in each of these cases. But there was a 30% increase in miscellaneous fees and a 15% increase in room and board. I realize the problems Medicare and Medicaid are creating, and I don't overlook that we have been doing a very good job in providing health care for elderly people, the indigent and the people who cannot provide, the disabled. So I don't think we can be critical of the program for what we have done. I also feel that those people, regardless of their financial standing in our country today, should have the best health care that our medical people and our scientific people can provide.

I feel that there are many problems that we have throughout the nation and that those assembled here are trying to deal with these problems in an effective way. It is the feeling of the AFL–CIO, people in organized labor, that there are slipshod methods and methods that are not coordinated; economies that we could practice; people who are not receiving optimal care as far as medical services are concerned; that all of these are problems that we have. Controls on hospitals and economy, even on the physician in some cases, should be put into effect and a national plan should be instituted in the United States to assure that every citizen, regardless of his race, his creed, his color, is entitled to the best health care available. Thank you.

Senator HARRIS. Thank you very much, Bill, for a very good statement.

Next, we have Jack McGee, who is President of the Communications Workers of America, here in Tulsa.

TESTIMONY OF MR. JACK M'GEE, PRESIDENT LOCAL 6012, COMMUNICATIONS WORKERS OF AMERICA, TULSA, OKLA.

Thank you, Senator. I am trying to present the consumers side of National Health Insurance.

My name is Jack D. McGee, and I am the President of Local 6012 of the Communications Workers of America, here in Tulsa.

I appreciate this opportunity, both as a citizen and a Unionist, to give you my views on National Health Insurance.

We have needed National Health Insurance in this country for a long time, we need it now, and we need it badly.

There is no way to avoid the fact that our system for delivering health care to the people is so grossly inadequate that we ought to be ashamed of ourselves.

I can only speak as a patient—a consumer of health care—and as someone whose work as President of a Union Local keeps him informed of the problems of other workers who are consumers of health care. So I feel that I should back up my views on how inadequate the health care system is with statements for some authorities.

The first authority I would like to quote to you recently said:

"We face a massive crisis in this area and, unless action is taken both administratively and legislatively to meet that crisis within the next two years, we will have a breakdown in our medical care system which could have consequences affecting millions of people throughout this country."

That was President Nixon speaking, after he had read a report prepared by then Secretary Robert Finch of HEW, and Assistant Secretary Roger Egeberg.

Another authority said 60 percent of the American people were getting good health care, and the problem was getting it to the other 40 percent. That was President Gerald Dorman of the AMA.

President Dorman may have been trying to make a positive point by saying 60 percent get good care, but we have to look at the negative side—at the 40 percent—and that is an awfully large percent—who are not getting good care.

I would also like to mention to you that there are several strong forces at work in our society today which should be taken into account when National Health Insurance is discussed.

One is consumerism. The other is environment. Both are dominant in the 1970s. Both are strongly linked to health care delivery. We all are consumers of health care and we all have discovered—I hope not too late—that we have tampered too much with our environment and nature is reacting in a way that greatly affects our very existence, let alone our health.

There is one more aspect to this.

An attitude is growing among many Americans to rise up and protest whenever they feel that an injustice is taking place. Just a couple of weeks ago thousands and thousands of Italian-Americans from the Eastern United States marched on FBI headquarters in New York, claiming the FBI was picking on them. For better or for worse, we are in an era of protest.

Now, when you tie together the consumer movement, the environment movement, and the tendency to protest, it isn't hard to visualize thousands of Americans marching on the AMA if they feel that will get them some of the improvements and benefits they feel an American citizen should have.

The people know that technological advancements in health care have been chalked up beyond anyone's dreams.

Polio has been eradicated, organs have been transplanted, machines keep the heart working at a proper pace, hospitals have dozens of devices that didn't exist only a few years ago.

The people have read about this, and seen it on television.

It created expectations—simple expectations, such as not having to sit in a waiting room for half a day just to get an overpriced prescription, and not having to mortgage everything you own to cover some catastrophic illness in addition to your insurance.

Those expectations have not been fulfilled.

You have the details, and the statistics, so I will not repeat them.

But we all know that health care costs are rising faster than anything else.

We all know that some Americans have never seen a doctor or a dentist.

We all know that millions of Americans are not protected or are underprotected by health insurance.

And we all know that when we get sick most of us are going to have to spend hours sitting in a doctor's waiting room until he gives us a fast five minutes and that overpriced prescription.

The statistics and the facts are all in the Finch-Egeberg Report, and the January issue of Fortune articles in "Our Ailing Medical System," also give the sorry details.

There is a solution to this problem. It is National Health Insurance.

There is a bill before the House Ways and Means Committee—HR 15779, introduced by Rep. Martha Griffiths of Michigan—which does the job working people are interested in, not just for themselves, but for all Americans.

If that bill is passed, we will have in this country a health care delivery system that covers everybody for everything they need in health care. We won't have it over-

night, because there is a lot of rebuilding to do on the system, but we will have it.

I am sure that you are familiar with HR 15779, so I will not go into its details. I would rather talk about its objectives.

It would provide universal protection.

It would provide the full spectrum of benefits, from spectacles to psychiatry.

And, it would stop the rise on costs of health care at the terrible rate they are going up now.

A fully functioning system under the Griffiths bill would see the replacement of the fee for service system—or the piecework system as some call it—for a contract system of payment. This would come about through the great growth of pre-paid comprehensive group practice plans, which the bill makes no bones about encouraging. And, wherever we have pre-pay group practice we have preventive medicine—which is an important cost cutting factor.

A few years ago the President of my Union, Joseph A. Beirne, served on the President's Commission on Health Manpower.

I would like to recall to you a comment he made in the Commission Report of 1967, regarding comprehensive pre-pay, group practice plans. He said:

"The overwhelming evidence produced by the panel study . . . as well as the discussion of the members of the Health Manpower Commission suggest the properness of recommending favorably the extension of comprehensive pre-paid group health care plans.

"In addition, the discussions and study of the Health Insurance Plan of Greater New York as well as the three years of experience of the Federal Health Benefit Program show quite clearly the compelling evidence supporting the view that group practice plans bring about the most economic delivery of medical services. The Commission should take a forthright stand in support of group practice plans."

Early this year, the Nixon Administration started moving toward this view.

At least part of the movement was caused by the doubling of Medicare and Medicaid costs in the last four years, but the major incentive was the demonstrated ability of pre-pay group practice to provide more and better health care at less cost than fee-for-service solo practice.

The Administration program is called Medicare Part C.

Under Medicare Part C, as the Administration envisions it, groups of health care dispensers would contract with the government, on an annual fixed fee per person basis, to provide both preventive and curative care to Medicare and Medicaid enrollees.

We know that it's a long haul from a proposal to action, but the significance is the Administration's recognition that more care, for more people, can cost less under pre-pay group practice.

My view is that if pre-pay group practice is going to do a better health care job for Medicare and Medicaid recipients, won't it also do a better job for every individual in this country?

I would like to mention a few additional general principles involving National Health Insurance.

I think no physician should *have* to participate. Patients should be free to choose any health care system they want. There should be no interference with clinical practice. The Griffiths Bill ensures that practitioners should be able to participate—to contract with the program—on an individual basis, part-time, full-time, and of course, in groups. The Griffiths Bill ensures that because this would be so new in so many areas of the country, the program should provide funds for planning efficient comprehensive health care delivery and it should provide funds for initial staffing of projects. The Griffiths Bill ensures that benefits should include physical exams, surgery, office visits, hospital calls, house calls, eye care, prescription drugs, rehabilitation and physical therapy, hospitalization and skilled nursing home care. There should be no limit on hospitalization and skilled nursing home care. Children should receive complete dental care until they are 16.

The national health insurance program should be administered by a board which represents all of the interests involved—health care, labor, management, government. That board would set the per capita rate.

The board should have a health care advisory council made up of people in health, and a consumer advisory council, made up of people who know health care needs.

The Griffiths Bill ensures all of these points.

A few minutes ago I mentioned the part the national mood plays in this matter, and there is another point under that topic that I want to submit to you as pertinent.

This country is bedeviled with some massive problems.

There is the war in Vietnam. There is a diminishing economy, there is urban blight, there is bitterness between the races.

As a consequence of all this, many people have developed the feeling that government as we know it, and want to preserve it—representative government—won't work any more.

If the health professions, along with the other segments of society who care, can develop a real health delivery system, we will have shown that at least in this area representative government will work.

We will have shown that divergent views can be brought into agreement.

I believe that representative government in a pluralistic society can work.

Labor has also believed in national health insurance for a long time. It is nothing new in many European countries, which, as you knows, often come up with better health statistics than our country.

The first bill to establish national health insurance here that I know of was introduced by Senator Robert Wagner in 1939. It was introduced again in 1943, 1945, 1947, and 1949.

It's time had just not come. Medicare was actually a stopgap.

We have all heard the quote from Shakespeare's Julius Caesar, which tells us:

"There is a tide in the affairs of men, which, taken at the flood, leads on to fortune; Omitted, all of the voyage of their life is bound in shallows and in miseries."

I hope the Congress will not bind itself in the "shallows and miseries" of worn out objections to National Health Insurance.

I am aware of some of those "shallows and miseries" because an assistant to President Beirne, Louis B. Knecht, has made several speeches to medical groups on National Health Insurance, and he has collected the questions from the audiences. Some of them revive the old "socialized medicine" theme song that the AMA harped on for so long in opposition to Medicare. Some are cogent, but others are equally inane, but I think it would benefit everyone interested in better health care for all people to see them, and some answers which have been prepared to them.

I would like to submit them as part of my remarks.

Thank you again for this opportunity to present a consumer's side of National Health Insurance.

Q. Would an individual be able to select a particular doctor in group practice under your concept of National Health Insurance?

A. Yes. The freedom of an individual to select a doctor is preserved. The National Health Insurance program I envision would ensure that any individual could select his or her own physician, just as they do now. No one would be assigned to a particular physician. In group practice programs which now exist a patient selects a physician in the program as the personal physician, and deals with that physician. If the patient needs the services of a specialist his own physician would refer him to one in the group, but that would only be parallel to the present system—not different from it.

Q. You said that within your scheme of National Health Insurance that it would provide the patient free choice of physicians and that the physician could participate as much or as little as he chooses in the system. If the physician chooses not to participate what other alternatives would be available to him or to the consumer?

A. Any physician who chose to remain completely aloof from the National Health Insurance program could do so. He would attract his patients from those who wish to remain his patients regardless of the program. Obviously, the degree of participation by physicians cannot be predicted. Hopefully, it will be very high. And probably a very high percentage of people who are health care consumers will want to participate. That would generate high participation by physicians.

Q. Would labor object to complete socialization of medical care a la Great Britain?

A. Labor supports the National Health Insurance program currently in Congress (Griffiths' bill) which preserves free enterprise. Labor considers itself the major force preserving the free enterprise system in the United States now, despite management's anti-consumer and anti-labor attitudes, which generate antipathy toward the system on the part of many working people.

Q. How can National Health Insurance, which would add to the demand without increasing the resources of an already overburdened system, be expected to contain costs? Without tremendous investments in facilities and manpower to make more services available, is it realistic to believe that those who pay the premiums, taxes and dues will be anxious to share the scarce resources which will be in greater demand under National Health Insurance?

A. The National Health Insurance program recognizes all of these pertinent points. Take them one at a time. First, we know that many Americans are not receiving the health care they need and so we may expect them to seek it under a National Health Insurance program. The "overburdened system" described by the questioner would get an additional burden, and he asks how costs could be contained with this happening. The answer is that costs would be contained in several ways. A National Health Insurance program would encourage preventive care—keeping the patient healthy rather than waiting until the patient becomes ill and then curing him. It would reward efficient quality care and penalize unneeded surgery and hospitalization. It would encourage the general development of pre-pay group practice plans which for the past 20 years have shown, as the President's Commission on Health Manpower concluded, that health care can be delivered under group practice at savings of 20 to 30 percent. The system of "usual and customary" payments for care would be superseded by a system under which groups of doctors would contract to provide care for people under a per capita budget. This budget would not be developed by government decree, but by the determination of health dispensers on what is fair compensation. The physicians and the hospitals participating would then be responsible for delivering care, on a quality basis, within the budget.

Q. In view of your position in favor of fixed fees for physicians, is your union in favor of wage controls by the federal government?

A. The issue of wage controls and price controls is often debated within organized

labor as a means of reversing inflation, but the situation usually resolves itself into the general acceptance of the fact that there would be a lot more wage control than price control. On the pertinent aspect of the question—"Fixed fees for physicians"—the questioner is in error. National Health Insurance does not contemplate a fixed fee for physicians. What would be fixed would be the per capita fee which each contractor with the program would agree to accept to provide total care for those covered in the contract. If X County Medical Society agreed to cover everyone in X county then the members of the X County Medical Society would receive the per capita for everyone covered, and decide how to divide up their revenue among themselves. Some of the members of the society might be paid on a fee basis, others might be paid on an hourly basis, others might be paid on a different basis. The important point is that reimbursement would be up to the contractors—per capita would be set by a board which would include health service dispensers.

Q. What is a good living? Salary, hours worked per week for the physician?

A. A good living is that income which provides a worker with the resources to purchase essentials, with the resources which enable him to give his family the amenities which make their lives comfortable and interesting, and with the resources which make their lives secure. The labor movement has been fighting for these elements since its inception. Certainly anyone who works should feel safe under standards of living which labor set as ideal.

Q. Basic need for good health is availability for equal opportunity in the labor field. Is labor going to fight for this with equal vigor as it is for fee on case (fee for service) in medicine?

A. Labor believes that it has led the fight, that it is leading the fight for equal opportunity, and it will continue to fight for equal opportunity.

Q. Can you expand on the better European Health Statistics, i.e., number of hospitals built in Great Britain since 1945?

A. There are generally accepted statistics which show the most industrial nations have better infant mortality rates and other health rates than the United States. Just taking infant mortality, we were sixth in the world in 1950, 11th in 1960, and by 1969 we had dropped to 18th. A comparison of hospital beds added, not just hospitals built, would be a more accurate statistic, but since England was desolated by bombing during World War II, that figure would not be an accurate indicator of comparative health care.

Q. What happens to the solo practitioner with your proposed comprehensive plan? How much would your all-inclusive National Health Insurance plan cover? Where would you get the physicians to participate on a voluntary basis?

A. The solo practitioner would have many choices—to remain in solo practice, to participate in the program part-time, to participate in the program full-time as an individual, or to participate in a group either full-time or part-time. The program would cover every conceivable type of health need, including dental care up to the age of 16. It would not include custodial care. Hopefully, many practitioners would want to participate, but the program also provides funds for planning efficient health care delivery, expanding medical education and stepping up construction of needed facilities.

Q. Why do you think the total number of subscribers has declined in the HIP of New York? The lack of growth of the Detroit health foundation of the auto workers? The lack of significant growth in the health care concept?

A. All impartial studies show that people favor the group practice concept and that it is the best, least costly way to get more and better health care delivered to the greatest number of people. If membership is declining in a major group practice program, or if one is not growing, certainly the reasons should be explored. The pre-pay group practice concept has been held back for several reasons, one being that in some states political pressure has made it illegal. Another reason is that many people have never heard of it.

Q. In your speech you mentioned the recent report of the Senate Finance Committee. Would you care to comment on the technical respectability of this report? Have you considered the implications of making such statements out of context?

A. The Senate Finance Committee would not have issued its report, condemning some doctors for making huge profits in medicare and medicaid, without being absolutely certain that it could back up every charge it made. It would be foolish for the Committee, one of the major Committees of Congress, and the Senate's tax authority, to make these charges without being able to document them. But just as important as that is whether or not the comments in the speech were out of context. The speech said clearly, "we have all read that hundreds of doctors have made exorbitant profits out of medicare and medicaid. Of course, thousands did not.

"Doctors, like labor leaders, don't get written up for being honest."

The statement clearly said that hundreds of doctors made unconscionable profits, but thousands charged fair fees and did not. That would seem to be as firmly in context as this controversial matter could be placed.

Q. When we have national prepaid group health insurance and all doctors are on salaries, will the CWA guarantee the doctors the right to strike for legitimate grievances, or will we be grouped with teachers and letter carriers? Will the right to strike be restricted to the AFL–CIO?

A. Organized labor considers the right to strike a universal right of all workers, but also considers it a course of action which is taken only as a last resort. For instance, police officers are considering affiliating their associations with the AFL–CIO, and while there is no formed policy at this writing it is the general opinion that an entire police department should not go out on strike. The matter of public safety is involved. But with letter carriers, it is a matter of public comfort. It is also a matter of public comfort with teachers. So each instance must be judged on the merits of the situation. Hopefully some day the doctors of the nation will want to participate in the national labor movement as part of the AFL–CIO, so they may deliberate their strike role from within organized labor.

Q. After pointing out the shortcomings of the Senate Finance Committee report, you then proceeded to parrot the atypical, sometimes erroneous features of the report, and used this evidence as support for compulsory national health insurance. The Philadelphia Inquirer, in a recent anti-medicine series of articles, calculated that if all MD fees were cut by 50 percent, this would result in lowering of national expenditures for health by only .8 percent. How would national health insurance solve the problems of manpower shortage, distribution, etc.? Wouldn't your proposal further aggravate these problems?

A. The reference to the Senate Finance Committee report has been discussed in answer to a previous question. Every available piece of evidence shows that comprehensive pre-pay group practice cuts medical costs considerably more than the figure quoted from the newspaper series. The problems cited by the questioner would be solved because health care delivery for the first time would be put on an efficient basis—something which does not exist now. The program recognizes the shortages of health manpower, and the numbers of people who now have no access to health services, and recognizes that these factors must be built into planning the overall program. The proposed legislation specifically provides for additional health manpower and additional facilities, and also provides for research into establishing efficient methods of delivery.

Q. Aside from infant mortality statistics (which are controversial), what other indicators are there which demonstrate health care is better in certain European countries than in the United States? Significant differences?

A. From 1950 to 1965, the United States dropped from thirteenth to twenty-second place in life expectancy for males. The life expectancy for females dropped from seventh to tenth place.

Q. What methods do you suggest be utilized to provide the enormous sums of capital needed to provide the facilities which would be required to fill the demand created by a national health insurance program?

A. Presently, the Hill-Burton Act is the major federal source of funds for Health care facility construction. It has been mainly used in rural areas and smaller cities. If necessary, it should be modernized and augmented to provide the facilities that are needed. If an additional source of revenue is required the abolition of mineral depletion allowances, with other tax reforms, could provide the funds needed for health care.

Q. Do you feel that the medical professions should be organized as unions with the same rights?

A. All working people should have the same rights, and if the medical professionals should determine that they want to participate in organized labor, along with many other professionals, they would certainly be welcome into the AFL–CIO.

Q. Who would, in fact, who could, administer a National Health Insurance program? What about its great cost?

A. The National Health Insurance program should be administered by a board which represents all of the interests involved—health care, labor, management, government. It should have two major advisory councils, a health care advisory council made up of people in health, and a consumer advisory council made up of people who know health care needs. Costs for health care now run $60 billion plus a year. The suggested program would be financed through contributions in Social Security form by employees and employers, and by Treasury revenue. In the long run, national health insurance will be more efficient than the present inefficient system.

Q. A National Health Insurance system would aggravate an already staggering demand for health care services What do you suggest to meet this problem?

A. The program recognizes that many people are not now receiving health care, and built into it are measures to develop answers to this problem, such as expanded training of health practitioners, added facilities, and better systems of delivering care. But in the long run National Health Insurance would decrease the average number of hospital days per patient, and other current health waste through its basically more efficient methods.

Q. Two problems of highest priority to the medical profession are health care manpower shortage and health care costs. These were not created unilaterally by the medical profession and they will not be solved in a unilateral manner. I would like to hear more of an expression from the nonprofessional consumer and labor as to their responsibilities in these areas.

A. Certainly the non-medical profession member of society has an obligation to make sure that adequate sources of professionals are available, and that all segments of society are contributing to keeping the costs of health care down. Pre-pay group practice would do this by providing for training, and by operating more efficiently than solo practice with fee for service.

Q. If there has been this great demand for group practice health insurance coverage, why it is that only 5 percent of the people have purchased this coverage when offered?

A. Most people do not know there is such a thing as pre-pay group practice, and in some states it is illegal to even establish it. The latest really comprehensive program has been set up in the new community of Columbia, Md., and, under the aegis of Johns Hopkins in Baltimore, it is tremendously well received.

Q. How can you blame the medical profession for the high cost of Medicaid-Medicare when our fees have been set and frozen as of January 1969? What would have been the reaction of organized labor to such an action being taken without right of arbitration?

A. Impartial analysis have shown that under Medicare and Medicaid there has been a high incidence of unneeded hospitalization and treatment, so that regardless of the fee, it is the unnecessary use of these two programs which has created high costs. But it must also be remembered that some physicians have made inordinately high incomes from the programs. Whenever organized labor participates in a government program it does under the conditions set by legislation or administratively.

Q. How many physicians are members of your executive Board to protect the public from labor's selfsh dominance?

A. There are no physicians on the Executive Board of the Communications Workers of America—only communications workers elected by their fellow members. For a parallel the governing body of the American Medical Assn. is a good example. It has no members of organized labor—only physicians chosen by their fellow members. Regarding "selfish dominance"—if seeking decent wages and working conditions and job security through unions is selfish dominance, then how else are working people to secure those justifiable goals?

Q. Under pre-paid programs do you feel the delivery of health care will be improved, if at the present people demand attention on a fee for service basis beyond the capacity of the individual or group? Will not the facilities be under a greater strain?

A. This point has been covered in answer to a previous question. Basically, the development of a health care delivery system based on pre-pay group practice would, when fully operational, provide the care the citizens of the nation need.

Q. Under National Health Insurance you advocate "free choice" by patients, and "participation" or "non-participation" by physicians. How could a physician possibly have any practice at all if he did not "participate" in a National Health Insurance program?

A. Physicians could participate solo, in groups, part-time, or full time. A nonparticipating physician would have to draw his patients from those people who do not want to take advantage of its benefits. The questioner raises an interesting point—he obviously believes the National Health Insurance program would be so popular with the public everyone would want to utilize it.

Q. Since a major problem in expanding wide spectrum health care to all people is the marked lack of available services, what will be the effect of a dramatic change in the delivery system without subsequent increase in actual delivery of services?

Just what percentage of increase in available services can be expected through improved efficiency, recruitment, etc., in the 70s?

A. This point has been covered in answer to a previous question. Basically, the development of a health care delivery system based on pre-pay group practice would, when fully operational, provide the care the citizens of the nation need.

Q. How would you propose Group Practice Coverage of communities of 3,000 isolated from large cities by distance?

A. Small communities which do not have enough people to keep more than one or two physicians busy of course could not support a pre-pay group. But a doctor could still participate in the program in these towns, as a solo contractor. The problems of economically depressed communities would be alleviated, because the program would provide revenue for physician compensation in those communities.

Q. What do you think is the cause of breakdown in medical delivery care?

A. The basic cause is the continuation of a system which just developed without planning—without taking into account population growth, technological advances, and rising expectations by the people.

Q. Have you considered the possibility that "your" *solution* is chiefly the *problem?*

A. The National Health Insurance program may be "the problem," to some, but to those who today are denied the benefits of health technology it will not be the problem, and to those who are beset with bills and high insurance costs for medical coverage it will not be the problem.

Q. How can you ignore the problems encountered in government health service in other countries—namely, Britain, Canada, etc.—1. Loss of physicians to "free enterprise" countries; 2. No new hospital construction for 12 years despite need for more beds; 3. Abuse of plan by recipients resulting in: a. long waiting in offices; b. up to 2 yrs. wait for elective surgery; c. actual lowering of medical standards for a large number of persons; 4. High cost for administration and bureaucratic featherbedding.

A. There is no relationship between the health care plans of Great Britain and other countries which have socialized medical systems, and the American proposal for National Health Insurance. The American proposal is a method of financing medical care while maintaining free enterprise. In England the government owns the hospitals and pays the hospital staff salaries, which would not be so under the American proposal. The British system pays private physicians on a per capita basis, but under the American proposal organized groups of societies would contract with the government on a per capita basis, and the members of the group would decide themselves how to divide up their revenue. They could decide to pay themselves on a fee for service basis out of the revenue of the group, or on a salary basis, or on a per capita basis. It would be entirely up to them. Individual physicians practicing solo could contract on a per capita basis.

Q. The plan for National Health Insurance as proposed by Mr. Knecht is identical to the British N.H.I. The British plan has resulted in a poor and a deteriorating standard of medical care. The care is inferior to the American system. What changes are being proposed to avoid the failures of the British system if we have N.H.I..?

A. There is no relationship between the health care plans of Great Britain and other countries which have socialized medical systems, and the American proposal for National Health Insurance. The American proposal is a method of financing medical care while maintaining free enterprise. In England the government owns the hospitals and pays the hospital staff salaries, which would not be so under the American proposal. The British system pays private physicians on a per capita basis, but under the American proposal organized groups of societies would contract with the government on a per capita basis, and the members of the group would decide themselves how to divide up their revenue. They could decide to pay themselves on a fee for service basis out of the revenue of the group, or on a salary basis, or on a per capita basis. It would be entirely up to them. Individual physicians practicing solo could contract on a per capita basis.

Q. Cost estimates—Re: National Health Insurance?

A. A study is now underway to determine projected costs. Presently Americans are spending more than $60 billion a year for health care, and a significant portion of the population does not receive adequate care. The study would have to reflect all of the factors involved, such as the part of the costs which would go to providing care to those who are not now receiving it.

CONCLUSION OF MORNING BUSINESS

Mr. GRIFFIN. Mr. President, is there further morning business?

The PRESIDING OFFICER. Is there further morning business? If not, morning business is concluded.

AUTHORIZATION OF APPROPRIATIONS FOR MILITARY PROCUREMENT AND OTHER PURPOSES

The PRESIDING OFFICER (Mr. BOGGS). The Chair lays before the Senate the unfinished business which will be stated by title.

The BILL CLERK. A bill (H.R. 17123) to authorize appropriations during the fiscal year 1971 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and other weapons, and research, development, test, and evaluation for the Armed Forces, and to prescribe the authorized personnel strength of the selected reserve of each reserve component of the Armed Forces, and for other purposes.

The Senate resumed the consideration of the bill.

CALL OF THE ROLL

Mr. GRIFFIN. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

Mr. FULBRIGHT. I object.

The PRESIDING OFFICER. Objection is heard.

The bill clerk resumed and concluded the call of the roll, and the following Senators answered to their names:

[No. 249 Leg.]

Boggs	Fulbright	Percy
Byrd, W. Va.	Griffin	Proxmire
Dole	Mansfield	Stennis
Ervin	Pell	

Mr. BYRD of West Virginia. I announce that the Senator from Nevada (Mr. CANNON), the Senator from California (Mr. CRANSTON), the Senator from Connecticut (Mr. DODD), the Senator from Missouri (Mr. EAGLETON), the Senator from Mississippi (Mr. EASTLAND), the Senator from Tennessee (Mr. GORE), the Senator from Indiana (Mr. HARTKE), the Senator from Washington (Mr. JACKSON), the Senator from Massachusetts (Mr. KENNEDY), the Senator from Arkansas (Mr. MCCLELLAN), the Senator from New Mexico (Mr. MONTOYA), the Senator from Utah (Mr. MOSS), the Sen-

ator from Connecticut (Mr. RIBICOFF), and the Senator from Maryland (Mr. TYDINGS) are necessarily absent.

Mr. GRIFFIN. I announce that the Senator from Massachusetts (Mr. BROOKE), the Senator from Arizona (Mr. FANNIN), the Senators from New York (Mr. GOODELL and Mr. JAVITS), the Senator from Florida (Mr. GURNEY), the Senator from Maryland (Mr. MATHIAS), the Senator from California (Mr. MURPHY), and the Senator from Alaska (Mr. STEVENS) are necessarily absent.

The Senator from Kentucky (Mr. COOPER) is necessarily absent attending the funeral of a friend.

The Senator from Oregon (Mr. HATFIELD) and the Senator from Idaho (Mr. JORDAN) are absent on official business.

The Senator from South Dakota (Mr. MUNDT) and the Senator from Maine (Mrs. SMITH) are absent because of illness.

The PRESIDING OFFICER. A quorum is not present.

Mr. BYRD of West Virginia. Mr. President, I move that the Sergeant at Arms be directed to request the attendance of absent Senators.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from West Virginia.

The motion was agreed to.

The PRESIDING OFFICER. The Sergeant at Arms will execute the order of the Senate.

After some delay the following Senators entered the Chamber and answered to their names:

Aiken	Hansen	Pastore
Allen	Harris	Pearson
Allott	Hart	Prouty
Anderson	Holland	Randolph
Baker	Hollings	Russell
Bayh	Hruska	Saxbe
Bellmon	Hughes	Schweiker
Bennett	Inouye	Scott
Bible	Jordan, N.C.	Smith, Ill.
Burdick	Long	Sparkman
Byrd, Va.	Magnuson	Spong
Case	McCarthy	Symington
Church	McGee	Talmadge
Cook	McGovern	Thurmond
Cotton	McIntyre	Tower
Curtis	Metcalf	Williams, N.J.
Dominick	Miller	Williams, Del.
Ellender	Mondale	Yarborough
Fong	Muskie	Young, N. Dak.
Goldwater	Nelson	Young, Ohio
Gravel	Packwood	

The PRESIDING OFFICER. A quorum is present.

AUTHORIZATION OF APPROPRIATIONS FOR MILITARY PROCUREMENT AND OTHER PURPOSES

The Senate continued with the consideration of the bill (H.R. 17123) to authorize appropriations during the fiscal year 1971 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and other weapons, and research, development, test, and evaluation for the Armed Forces, and to prescribe the authorized personnel strength of the selected reserve of each reserve component of the Armed Forces, and for other purposes.

Mr. PROXMIRE. Mr. President, on Thursday the distinguished Senator from Mississippi (Mr. STENNIS) made some comments in response to a speech I gave on the floor of the Senate on July 20, 1970, concerning cost increases of certain major weapons systems.

In my speech, I pointed out that the costs of 38 selected major weapons systems are now $23.8 billion above the planning estimates for those programs. Moreover, the total represents a $3.6 billion net increase for the same weapons just between June 30, 1969, and March 31, 1970—in other words, a $3.6 billion increase in only 9 months.

The Senator from Mississippi does not quarrel with my figures, which he readily concedes to be true. The point that he makes is that the question of cost growth "is a complex, difficult, and demanding function." He goes on to say that a simplistic approach to the problem of why the costs of weapons increase is not adequate. For example, it is necessary to take into account "changes in quantities, scope of the work, and performance characteristics."

My distinguished colleague also states that comparisons of a current "hard" estimate of cost to completion with the "initial planning estimate" can be misleading.

My purpose today is to discuss each of these matters, for apparently the Senator from Mississippi believes that my earlier statement was both simplistic and misleading.

First, it needs to be recalled that in the past 2 years, Congress has begun to scrutinize weapons procurement and military spending in a way and to a degree that has not been done for a long time. For more than a decade, the Pentagon has been getting what amounts to little more than a blank check from the legislative branch. Weapons have been developed and produced that turned out to be dismal failures. Funds have been spent that should never have been spent. Mismanagement, waste, and inefficiency in defense procurement and defense production have been conspicuous and rampant.

Yet, only a few years ago and until recently, there was an illusion of maximum efficiency and unlimited need in this area. A curtain of national security completely separated the Pentagon from the public and from most of us in Congress, and military procurement was almost completely insulated from scrutiny or criticism. Thanks to the work of the efforts in Congress over the past 2 years, the curtain has been raised somewhat. No one has illusions about military procurement any longer.

The facts are that nearly every major weapons system held up for close examination has been shown to be ridden with cost overruns, or technical performance failures, or delivery slippages, and some programs are plagued with two or all three of these problems. They cost far more than they were supposed to cost. They perform well below the standards which were established for them when they were originally authorized, and they were delivered late. Defects and breakdowns in the procurement system can no longer be characterized as exceptional. They are the rule.

As a result of investigations of such fiascos as the C–5A aircraft, the Defense Department has finally been required to provide to Congress on a quarterly basis information about its weapons purchases. I must point out, however, that this information is provided in classified form only to the four appropriations and authorizations committees of the Senate and the Houpse with jurisdiction over the armed services. If one is not a member of one of these committees, he does not get this information from the Pentagon.

Mr. FULBRIGHT. Mr. President, will the Senator yield?

Mr. PROXMIRE. I yield.

Mr. FULBRIGHT. I thought the Senator and the Joint Economic Committee had such reports available. Is that not so?

Mr. PROXMIRE. This was not to be the case. The GAO was following the law that we passed last year, when we acted on this bill, and it was to be made available only to those four committees. We did get at my special request however, in unclassified form, the information we put in the RECORD 10 days ago.

Mr. FULBRIGHT. I say to the Senator that this is the same sort of thing we run into in the Committee on Foreign Relations—all the failures of the Government and of the State Department and of the Pentagon, and of course they are many, are classified.

While the newspapers and other media get some of the information around, it is unofficial and always subject to question by the officials. So doubts are created about whether or not the information is accurate.

This is becoming a scandal. Senate committees cannot have hearings and publish them any more without their being gone over by the Executive for any kind of supposed classified material. Classification—making things secret—now means concealing the delinquencies of our own Government primarily from the American people. These things are not secrets from our enemies.

Mr. PROXMIRE. Certainly, there should not be any secrecy as to the actual costs. I can see why troop deployment and perhaps the performance of a weapons system might be classified. But when you get down to costs, which is what I was asking about, it should be unclassified and should be released promptly to the public—the taxpayer—and to Congress. We have to have that information if we are going to act intelligently on it.

Mr. FULBRIGHT. Exactly. That is one of the great obstacles to discussion and action on the part of the Senate—the lack of clear official and positive information.

I hope the Senator will pursue that matter further.

While I am on my feet, I want to say, with reference to studies as to the cost overrun of the C–5A, the Senator from Wisconsin is primarily responsible for those studies. Of course, he knows that that has been said before, but it cannot be said too often that he and the committee of which he is the distinguished chairman have contributed more than anyone else to the enlightenment of the Senate and the country on these matters.

Mr. PROXMIRE. I appreciate that. Dick Kaufmann, the staff member on

that committee, has done a marvelous job, as has Ernest Fitzgerald, who was with the Pentagon and is now working for the committee. He has also helped greatly.

Mr. President, for this reason, I have urged the General Accounting Office to provide to Congress the same information in unclassified form on a regular basis. Frankly, I had assumed last year that the procurement data would be forthcoming from the GAO on a quarterly basis and that it would be provided to every Member of the Congress and that it would be made available to the public. Earlier this year, I learned that this was not to be the case, and that although GAO had made one report on "The Status of the Acquisition of Selected Major Weapon Systems," based on information dating back to June 1969, in February 1970, another such report would not be made until much later in the year. I, therefore, asked Elmer Staats, the Comptroller General, to provide me with the cost information so that the previous report could be brought up to date. The GAO did provide me with the information and I immediately made it available to the public.

It came as no surprise that in only 9 months the costs of the 38 weapons systems had increased substantially, for one reason or another. In those instances where the increase was due to an increase in the quantity of the item being procurred, I made that clear. In those instances where a change in quantity was not a factor or was not the sole factor, I also made that clear.

The Senator from Mississippi makes the point that most of the increase in the cost of the Minuteman II program is attributed to military construction costs that were not in the earlier reports provided by the Pentagon and that "one of the areas where we have improved the reporting system is requiring the inclusion of total program costs." I say to the Senator from Mississippi—whom I told about this speech I am making and gave him a copy of it and he has it and expects to come into the Chamber shortly—that for years the Pentagon has systematically minimized the costs of military procurement by failing to include all the costs properly chargeable to each program. The fact that the Air Force now admits that $356 million for construction should be considered part of the Minuteman II program is little consolation to the American taxpayer who has had to support that construction or will support that construction regardless of the Air Force's bookkeeping system.

I would also point out to the Senator that the Pentagon continues to obscure the true costs of its weapons by concealing the fact that major items of cost have been excluded from its reports. To cite only one other example, the Navy until recently reported only nominal cost increases or cost overruns on the DE–1052 destroyer escort program. Last June it reported a mere $1 million increase. After I pointed out the omission from the Navy's cost breakdown for this program, it modified the totals so that it now shows a $184 million increase. But what the Navy still fails to do is include in the cost of that destroyer program the antisubmarine helicopters which had been developed and produced for it. This helicopter program, called DASH, has cost at least $275 million. It has, however, been canceled because of poor performance and cost overruns. It so happens that 411 of the 750 helicopters purchased were lost before the program was canceled.

I might also point out that last year the Subcommittee on Economy in Government heard testimony on the Minuteman program.

That testimony revealed the same pattern of cost overruns and other problems which are apparently the hallmarks of all major weapons procurement. The attention of the Senator from Mississippi is invited to the testimony on Minuteman contained in the hearings of the Subcommittee on Economy in Government on "The Military Budget and National Economic Priorities," part 2. In my judgment, the Minuteman program has one of the highest cost overruns, and is one of the most poorly managed of our major weapons programs. Minuteman II and Minuteman III alone show increases in cost from approximately $6 billion from the original planning estimates to over $10 billion as of the current estimates through program completion, or a net cost increase of $4 billion. There is abundant evidence of waste and mismanagement on this program.

The Senator from Mississippi, in his remarks on my initial disclosures, mentioned the F–111 and the C–5A in his speech. Of course, these are two of the best known disasters in the recent history of military procurement. The cost overruns in both cases have been so ridiculously high that the Air Force has had to reduce the quantity of its purchases lest it run out of funds for other programs. Despite the reduction in quantity of the F–111 and the C–5A, both programs will cost the American taxpayer vastly more than was originally estimated or bargained for. Think of that. Here is a situation in which both programs are reduced sharply as to quantity and, in spite of that, the overall cost will be more than was estimated originally for the much higher quantity. Both programs will fail to meet original technical performance specifications. Both programs suffer delivery delays. So on every important criteria, they are failures.

The distinguished Senator asks whether the cost decreases in the most recent report for the F–111 and the C–5A, decreases accounted for by the most recent quantity cutback, should be considered "cost underruns." That question, I respectfully submit, rubs salt in the wounds of the taxpayers who have had to put up with both disasters. The fact of the matter is, as I pointed out in my earlier statement, the Pentagon has taken credit for cost reductions due to quantity cutbacks on both of these programs in its cost reports to the General Accounting Office. The F–111 program was decreased by over $1 billion, and the C–5A program was decreased by $521.9 million, both decreases due to quantity reductions. There is no question that we can always decrease a program by merely producing less. But when we talk about reducing costs, that is not exactly what we have in mind.

I pointed out in my original statement that the net cost overruns for the 38 programs reported on would have been almost $3 billion higher but for the reductions that the Defense Department took into account because of such quantity cutbacks.

A question has also been raised about the alleged cost overruns on the Safeguard ABM program. It is asserted that the costs of Safeguard have increased because a third site has been added. The implication, I suppose, is that adding a site or enlarging the scope of a program should not be considered a cost overrun. I would point out, however, that getting the nose of the camel into the tent, prior to moving it all in, is one of the oldest techniques of weapons salesmanship used. Only last year, the Secretary of Defense was testifying to the Senate Armed Services Committee that the way to find out whether Safeguard would work would be to go forward with phase 1, that is, the first two sites. It was clearly implied, in my opinion, that there would be no phase 2 or a third site, until phase 1 was deployed.

Here is what Secretary Laird said on May 22, 1969, a little more than a year ago, just before we began debate on the military procurement bill to decide whether we would go through with Safeguard:

> So to those who are concerned about whether the Safeguard system will work, I would say let us deploy phase 1 and find out. Only in this way can we be sure to uncover all of the operating problems that are bound to arise when a major weapons system is first deployed. Since it will take five years to deploy the first two sites, we will have ample time to find the solutions through our continuing R&D effort to any operational problem that may arise. And only then will we be in a position to move forward promptly, and with confidence, in the event the threat develops to a point where deployment of the entire system becomes necessary.

Thus, on May 22, 1969, Secretary Laird was saying:

> Let us deploy Phase 1. Let us complete it. Let us finish it. Let us see how it works and after that decide whether to go ahead.

That is the argument for deploying phase 1, that we need to get this in operation to really test and determine whether further deployment of ABM's would be wise.

Now, I interpret this statement to mean that the Pentagon would go forward with only the first two sites and that it would not ask for a third site for some time. The Secretary mentioned 5 years, and he also indicated that evidence of a new threat would be required before the system was expanded. But that, it now seems clear, was to get the nose of the Safeguard camel into the taxpayer's tent.

Of course, this year we are being asked to proceed in the pending bill with the taxpaper's tent. Of course, this year we are being asked to proceed in the pending bill with the Safeguard.

Moreover, evidence has now been brought to light of cost increases on the Safeguard program that have nothing

to do with the addition of a third site and that can only be considered as a cost overrun. The Pentagon has already conceded that the full program costs of Safeguard have gone up from the $9.1 billion estimate given to Congress last year to $10.7 billion this year. This increase is explained by the Pentagon as a result of inflation, the "stretch-out" in the time until deployment can be completed, and design changes and more detailed estimates.

In other words, Safeguard is increasing by more than $100 million per month. These facts were developed in the April hearings before the House Subcommittee on Department of Defense Appropriations, and they are indisputable. As Chairman GEORGE H. MAHON stated in those hearings:

> With this recent cost increase history, how can Congress have any confidence in the Safeguard cost estimates?

The Senator from Mississippi refers to the initial planning estimate as only an original "guess." In his words, "It cannot be any more than a guess." The guess, it is stated, occurs at a stage when there is just a concept of a need that is coming up or is going to appear on the horizon.

Thus, it is said, the current estimates to completion should not be compared with the initial planning estimates.

If the initial planning estimate is indeed nothing more than a guess, then I am happy to know this fact, and I hope everyone else in the Senate will take note of it next time that a Pentagon spokesman testifies in support of a newly proposed weapons program. I would also hope that when one of these spokesmen comes forward with nothing more than a guess to justify a request for millions of dollars to initiate a new program, that the Members of the Senate will refuse to authorize or appropriate such funds until the Pentagon can back up its proposal with something better than a mere guess as to its future costs. It is incredible, and I can think of nothing more simplistic, for the United States Senate to accept guesswork when it comes to the cost implications of new weapons systems. That is the way we have been authorizing weapons systems, and once we authorize several million dollars, we are told that we do not want to waste that and that we had better authorize more or everything we have already spent will be gone. Perhaps, in the future, all planning estimates of the Department of Defense should be clearly labeled as "guesses" in the posture statement of the Secretary of Defense, in the testimony of the representatives of the Defense Department before the committees of Congress, and in the Pentagon's selected acquisition reports.

The difficulty, of course, with the guesswork thesis is that initial planning estimates are very often presented to Congress not in terms of guesses, but in terms of certainty and not doubt. They are put forward to elicit congressional and public support for new weapons programs. They are offered for the purpose of obtaining public funds to support military projects, and they are often a variation of the camel's nose technique. The idea is to get a program started with public funds, and frequently this means minimizing or intentionally underestimating its future costs.

Mr. SYMINGTON. Mr. President, will the Senator yield?

Mr. PROXMIRE. I yield.

Mr. SYMINGTON. Mr. President, I again congratulate the able senior Senator from Wisconsin for the service he has rendered the American people in analyzing the great and growing costs of defense.

In my opinion, our national security depends on three major items.

First is the physical capacity to destroy any enemy that attacks us; and certainly that he knows we have that capacity.

Second is a viable economy together with a sound currency.

Third is the moral fiber of the people because of their faith in their Government.

I have mentioned that before. An outstanding publisher in the middle of the State editorialized that there was a fourth major item, the will, the determination of the people to defend. I think that will goes along with the moral fiber that the two go together.

I had printed in the RECORD last year the fact that tens of billions of dollars had gone down the drain as a result of all services, corporations, and universities falling in love with the missile business, one might say; and seeing it as a new way to create work—in some cases work on weaponry badly needed; in some cases work on which, in my opinion, there was argument as to whether it was really needed or not; and in some cases work which, to me, seemed to be unnecessary.

As the able Senator from Wisconsin knows, I am a member of his committee, the Joint Economic Committee, and proud of that fact. It is a bipartisan committee which has attacked these problems of waste most intelligently over recent years. It has rendered a great service to the people. Without getting into it this afternoon, I intend to make a talk tomorrow about another aspect of this backbreaking overall budget.

May I ask the Senator who, along with his able staff, has been working hard on these matters for some time, whether there is any reason why the cost accounting aspect of national defense should be different in the procurement of military weapons, or military activities, than that of other Government departments?

Mr. PROXMIRE. There should be no difference. As the Senator will recall, the Senate passed the Defense Procurement Act with an amendment providing for uniform cost accounting standards to be applied throughout the defense industry, which Admiral Rickover estimated would result in a savings of $2 billion. There are differences in the estimate of the amount that may be saved. However, this is something that we need and need very badly.

Let me comment on what the Senator has said with respect to what we need in terms of national defense. I think it is so important.

I completely agree with the Senator from Missouri, a former Secretary of the Air Force, and a man with enormous experience in business as well as in the top echelons of Government, when he says that it is essential that we have the military capacity to defend this Nation. I agree that no Senator would vote for any reduction which would endanger that capacity.

In addition, we have to recognize that we need a viable economy that would make it possible for us to have in the future the kind of military strength which is essential.

It could be that, if we were to make very unwise and foolish decisions in the military area, we could hurt our economy badly.

There is not any question that the actions of the Government, both in the way of acting on military expenditures and military actions abroad, could have a profound effect on our people, the young people, and split and divide and embitter our people and weaken our country far more than the failure to have a particular weapons system.

Mr. SYMINGTON. Mr. President, I am sure the Senator has read the testimony of the Nation's largest banker, Mr. Lundburg; also Mr. Watson, head of IBM, whose brother Mr. Nixon recently sent as our Ambassador to Paris and whose testimony agrees with that statement of the Senator from Wisconsin.

When a businessman, I soon found that the first thing to do is find out the facts, and costs are facts under sound accounting principles.

We have found difficulty in obtaining information on overseas commitments from the General Accounting Office.

They find difficulty in obtaining information as to just what it is we do with the over $100 million a day we put out, counting Europe and all other places abroad. That is $1,100 a second for every second the Senator and I have been talking on this floor.

We know we have serious problems in such areas as housing, education, pollution, and so forth; and I refer not only to my State but also to the Senator's State and other States. It seems incredible we could go into a program to build 20,000 houses for military families in a foreign country, when in my town of St. Louis last year we built 14 single-unit homes.

It is correct, is it not, that the Comptroller General, nominated by the President for 15 years and can only be removed by impeachment, is considered the watchdog of the Congress? Based on the Senator's knowledge as the head of the Joint Economic Committee and ranking member of the Committee on Banking and Currency, I ask if there is not some obligation on the part of the executive branch to submit facts and figures, costs, at the request of the General Accounting Office. Is that not standard practice under our system?

Mr. PROXMIRE. The Senator is correct. I am appalled by this disclosure, which has been made by the Senator from Missouri, that the General Accounting Office was not able to get information from the Department of Defense regarding the cost of overseas bases.

Mr. SYMINGTON. Primarily the fact that information was wanted with respect to what was done with the taxpayers' money, planned payment of money to other people, which did not get to those people.

We have a letter of protest from the General Accounting Office stating their report could not be made in the way it should be made because of their inability to get information they considered necessary; information any banker or businessman would consider essential to a proper report.

Mr. PROXMIRE. The Constitution gives Congress the authority over expenditures. We cannot escape that responsibility, and we cannot discharge it intelligently, realistically, or responsibly unless we have the information.

Mr. SYMINGTON. Where along the line did we lose it—the authority with the responsibility?

Mr. PROXMIRE. As far as the Department of Defense is concerned we lost the authority over the years. Of course, in wartime it is difficult. There are classified expenditures that have to be concealed, as they were in World War II.

The Senator from Missouri has been here for a long time and has greater wisdom than I but it seems to me we were awfully slipshod in the late fifties and early sixties in not insisting on an accounting in detail from the Department of Defense and insisting that if they did not give it to us, we were not going to spend the money; and until they gave it to us, they would not have the money.

Mr. SYMINGTON. I am glad the Senator has brought up that point. This is something that has been going on a long time.

Once we had the bomb, and no one else did, and most all the gold. It did not make much difference how much money we wasted. No one worried too much about it. But now we have serious financial problems, and it would seem we must get our house in order if we are not going to enter into some form of economic chaos.

Mr. PROXMIRE. I certainly do agree.

Mr. SYMINGTON. I thank the Senator for making a fine contribution to the security and prosperity of our country.

Mr. PROXMIRE. I thank the Senator.

Once many millions of dollars have been spent on the program, however, the Congress and the public are hooked, and it becomes too late to terminate the program.

My own view is that so long as the Department of Defense persists in using initial planning estimates in order to create support for any weapons programs, it ought to be held accountable for every dollar increase over those initial planning estimates. If the Senator from Mississippi sees fit to accept the excuses of the Pentagon that its original planning estimates are only guesses, and do not form a basis of comparison with current estimates or final costs, that is OK with me. Possibly he would prefer to use the contract definition cost estimates as the basis for comparison. Possibly he would prefer the estimates adjusted for quantity changes as the basis for comparison. If he wishes either of those two measures, then we can speak of increases or overruns of from $15 to $16 billion on the 38 weapons programs, rather than an increase of $23.8 billion.

But I believe we are deluding ourselves and deceiving the public by providing excuses and escape hatches for the Defense Department to crawl out of. It ought to be held accountable for the money it wastes, no less than any other Government agency.

Mr. FULBRIGHT. Mr. President, will the Senator yield?

Mr. PROXMIRE. I yield.

Mr. FULBRIGHT. The last sentence intrigues me. How would the Senator propose that the Department of Defense be held accountable for the money it wastes?

Mr. PROXMIRE. How do I propose that they be held accountable for the money they waste?

Mr. FULBRIGHT. The Senator stated: "It ought to be held accountable for the money it wastes." This has puzzled me. In what way does the Senator propose to hold them accountable?

Mr. PROXMIRE. The only effective way to hold them accountable would be to make it a condition of our appropriation that there be disclosure on their part as to how much money they are spending for what and with what results. If they do not do that they are not accountable to us.

Mr. FULBRIGHT. When you are confronted with the answer that, "These are only guesses," I do not see how to do it except not to give them the money until they come up with something better than guesses.

Mr. PROXMIRE. I would think most American citizens with good commonsense would argue that if someone would say, "I guess this will cost you $1 billion or $500 million," they would feel it would not be intelligent for Congress to go ahead. We should insist that they give us more than a guess. They should say, "This is what we estimate to the very best of our ability. We are standing by this and if changes occur we will keep you apprised. We are responsible for this estimate."

When a weapons system is authorized for, let us say, $1 billion, and later it develops the cost will be $1.5 billion or $2 billion, perhaps in the first case we would not have appropriated any money at all, or authorized any money for the program, if they realized what the cost would be. It seems to me we would have insisted on more than a guess, but we should have a very firm estimate.

Mr. FULBRIGHT. In the case of the ABM it is not only a guess as to what it would cost, but there is a wilder guess as to whether or not it will work. In all of the testimony last year and again this year practically every scientist of any consequence not employed by the Pentagon stated that he did not believe Safeguard would work even the present state of the art. They were willing to acknowledge that if you had far longer and more efficient research, possibly some usefulness could be found for it, but under the present state of the art they did not believe it would work. The Russians have apparently had the same experience with their own system.

Under such circumstances I do not see how you can hold the Pentagon accountable, unless you do not give them the money. If you do it in the face of that kind of testimony, you do so on the wildest kind of guess. There is no way to hold them accountable when they admit they are guessing about it. They will then come back next year, tell you it is twice as much, and say, "You authorized it in the first place in the face of the statement it was a guess."

Mr. PROXMIRE. First, I think that when the Senator from Arkansas says it may work or not, that is one issue. Any Senator who thinks it would not work should not vote for it.

Mr. FULBRIGHT. I say we should not go on guesses.

Mr. PROXMIRE. If they are guessing on cost, that is another consideration. If it is a guess we should insist on a responsible estimate.

Mr. ULBRIGHT. There is only one way to do that and that is not to give the money until the evidence is conclusive, until the Senator and others are no longer in doubt, and until they go further and say, "This is not a guess."

Mr. PROXMIRE. I would agree almost entirely. I do not think the evidence has to be conclusive, because sometimes it cannot be absolutely conclusive; but it ought to be clear that it is a responsible, carefully thought out, detailed estimate. The Pentagon has ample staff to make that kind of estimate, not a guess, but based on a careful cost study, with the kind of increases that can be anticipated, and not a guess.

Mr. STENNIS. Mr. President, will the Senator yield on that point?

Mr. PROXMIRE. I yield.

Mr. STENNIS. I thank the Senator for yielding. I shall be brief on this. The Senator used the words, on page 10 of his speech, "if the Senator from Mississippi sees fit to accept the excuses of the Pentagon that its original planning estimates are only guesses." That is a quotation. The Senator from Arkansas, as I understand it, has referred to the word "guesses" as if they were guesses that the Pentagon used, or that these figures originally were only guesses. Let me point out for the record, and for the benefit of Senators, that nothing I said was anything about the Pentagon's guessing or the Pentagon's saying they were guesses.

The Senator from Mississippi said the original figures did not have the firmness or dignity of estimates; that it was a misnomer; and that they were, in my opinion, more guesses, or a little more than guesses, or that it was guessing. I say that based on years of sitting around the table, hearing testimony over and over again, about various new concepts of weapons of the future. As I pointed out the other day, it is more of an imaginative concept to start with, in the fertile mind of someone, trying to anticipate the needs 10 years hence, and he conceives ideas for a weapon. That is the beginning. I have had them tell me that they could not give a figure at that stage that would be an estimate. Someone around

that same table might insist on their giving some kind of figure, because we wanted to get at the thing the best way we could. Someone has to make a start on a weapon—the militarists or scientists—and then someone on a Senate committee or somewhere else has to have enough faith to say, "I think we had better start. We do not know whether it will count yet, but we have to start."

Mr. PROXMIRE. I think the Senator from Mississippi makes a very good point. Of course, we have to have a start. There has to be the initial phase, where experts are required to imagine a program, or engage in research. I do not object to that. But I say when we come to the point where we authorize a certain quantity for a certain weapon, it is at that point that they must make a responsible estimate, not a guess. At that point, it must be more than a guess. It was that which I understood the Senator from Mississippi to call a guess.

Mr. STENNIS. No. I am glad the Senator has made that remark. I was addressing myself to the initial figures that appear in the records, and that was when it was largely an imaginative thing based mainly on the concept of the weapon. When we move away from that point to where we are ready to enter production they can be far more accurate. We are having overruns even on those figures. But my point is that it is unsound, or certainly unfair, to go back to the figure on the original concept. I remember a time when there was insistence on a figure, when it proved to be highly inaccurate, without anyone being at fault.

Let me go further. Who could put in an estimate, or who did put in an estimate, on what the atomic bomb that was dropped on Hiroshima was going to cost? Who made an estimate way back in the early days about what the Polaris missile was going to cost? I do not know what the record would show, but no one had vision enough to know to make an accurate estimate on that. It is a case of a ship or bomb or plane at that point being largely imaginative.

Mr. PROXMIRE. We provide millions and millions of dollars, and in fact billions of dollars, for military research. At that point they are not line items, it is simply money to be expended in research to find out whether a plane is feasible, for example, whether it will work, and what it will cost. It is after that when they come to us for planning and at that point, when they ask us to commit the Congress to a weapons systems development program that they should tell us in what quantity, and give us a reasonable sound and firm estimate not a guess. We have 38 major weapons systems, $23 billion in excess of the initial planning estimates. As the Pentagon pointed out, this is more than a 60 percent overrun. It was 50, but it is now 60. Every major weapon system is in an overrun condition. It seems to me we have a situation in which we should insist on accurate, responsible estimates, to begin with; the time has come for us to stop authorizing program after program, which is permitting the spending of billions of dollars without the kind of reliable estimates we should insist on.

Mr. STENNIS. If the Senator will yield to me briefly, there is a study panel, headed by a very eminent businessman, Mr. Fitzhugh, whose report may be out soon. I have had only slight conversations with him, but I think the report takes up and discusses the very matter we are debating. The Senator will find it is virtually impossible to get any figure in those early stages that will in any way stand up. I do not know what the recommendation of the report is going to be, but I hope he hits this very hard, because he is an outstanding businessman and he can help us.

This very matter worries me, and I think it worried Mr. McNamara, and I referred to him as one of the brightest minds I have known, a vigorous and active mind. All of this will come out in the report.

Mr. PROXMIRE. I will be interested in finding out what the Fitzhugh panel reports. Mr. Fitzhugh, chairman of the panel, is head of one of the largest companies in the country, the Metropolitan Life Insurance Co., which has loaned over $1 billion to defense contractors and owns stock of tens of millions in defense contractors. Eight of the fifteen members of the panel are deeply involved in defense contracts. In fact the average involvement is over $100 million. Of the remaining seven members of the panel, they have qualifications which are somewhat questionable. One, Buddy Young, was a great football player at the University of Illinois. There are several very fine ladies on the commission. It is not the kind of commission that would inspire confidence that it make an objective, competent study of our procurement policies. Furthermore, the staff of that commission is power loaded. Its chief is Mr. Buzhardt, who is staff assistant for the Assistant Secretary of Defense. He is paid by the Pentagon. So I do not think that we are going to get a report that is very critical of defense procurement from the Fitzhugh panel.

Mr. STENNIS. I was addressing myself to one specific point: I think he has been concerned about this very thing that we are all concerned about.

I thank the Senator very much for yielding to me. I want to point out that these things are not easy. I know when I first came here, a man who was pointed out to me as a very eminent man, an adviser to the President—it was told me that he knows more about the ICBM concept of things than anyone around here—that gentleman later told me it was an impossibility, that it cannot be done, no such thing, it cannot happen, neither can the H-bomb.

Well, he is a very eminent man, but he was mistaken.

I want to make clear, in conclusion, that it was not the Pentagon that used the word "guess." I was the man.

Mr. PROXMIRE. The Senator might very well be accurate. I do not disagree. That is the trouble with it, however; it is a guess. At this stage, when you get your planning estimate, it should be more than a guess. We have spent billions on research. When they tell us they want a certain number of planes, tanks, or missiles at this point, that estimate ought to be reasonably accurate. But we have found out, again and again and again, that it is an underestimate, and that we have been persuaded to go along with a weapons system and authorize enormous sums for it, only to find out that it will cost enormous sums more than the amount we authorize.

Mr. STENNIS. Will the Senator yield to me once more to illustrate one thing?

Mr. PROXMIRE. I yield.

Mr. STENNIS. These things come up in different ways. For years, we had the old Navy version of the TFX. They would not work properly, but still the Defense Department was asking for a great many. Secretary McNamara approved it.

Finally, we called in the naval officers and said, "What have you got on a new plane as a substitute?"

They did not have much, but we thought it was well to go on and recommend to the Senate what has become the F–14. That was purely a congressional action, but we felt like we ought to act.

That plane has been accepted, and now the F–14, as the Senator knows, will be the most modern thing in the world, if it works out. There will doubtless be some overruns, but we had to go on and act.

So that illustrates somewhat the other side of the picture, where Congress was getting ahead of the Pentagon, so to speak.

I thank the Senator.

Mr. FULBRIGHT. Mr. President, will the Senator yield to me for a moment?

Mr. PROXMIRE. Yes, indeed.

Mr. FULBRIGHT. I think the analogy of the atomic bomb example is a sound one. The atomic bomb did not cost very much in the first place. In the second place, the research on the atomic bomb had been going on for 50 years or longer. Einstein had foreseen the development of atomic energy in his theoretical calculations. He and a number of other eminent scientists thought it was feasible. It was not just something thought up by the Pentagon and put out as a guess—by whoever calls it that. I think it is very sound reasoning—the atomic bomb was developed from nothing.

The ABM is a horse of quite a different color. There is no scientist or no group of scientists comparable to those who were engaged on the atomic bomb who believe there is, even at the present time, a chance of success with the present design. We had all this last year; it is in the RECORD. Dr. Panofsky, one of the leading authorities, came and testified, and we had a number of others. There is no need to call off the entire list. Kistiakowski, York, and others—practically every eminent scientist not employed by the Pentagon testified that it would not work. There is no division of opinion about it, outside of the employees of the Pentagon.

So we are not saying that the Pentagon should not continue research on this matter. We are saying they should not spend all this money on deployment when they have no more than a wild guess as to whether it will work or not.

Other things lend credence to this point of view. When we have Dr. Foster, the head of research and engineering at the Pentagon, being less than candid with the committee, and when we then have two eminent scientists testifying that what Dr. Foster said was not true, it does not help our confidence much. And many of these schemes seem to have originated with Dr. Foster and his colleagues at the Pentagon.

So I think it is exceedingly wasteful to proceed with phase 2 or 3, of Safeguard when it is no better developed than it is, especially in view of the statement by the Secretary of Defense quoted by the Senator from Wisconsin. Last year the Secretary of Defense assured us we would not go on with the second phase until we had the results of experience with phase 1. The Senator read the statement; it is on page 7.

So it appears that from 1 year to the next, we cannot rely on anything they say about it. This seems to me to be a terrible state of things. Of course—it was over my objection—the Senate just barely authorized phase I. Now they come in with phase II despite as the Senator well points out, what the Secretary said.

I would say that quotation constituted an assurance that they were not going to try to proceed with the next phase before they had proven the first. Many of us believed last year that they did not need the first phase; they could use the facilities already at Eniwetok for further development.

The ABM involves many times more money than was spent on the atomic bomb. The difference in the two situations in that the atomic bomb had real, genuine, first-class scientific research behind it, and with first-rate, independent scientific minds saying that it had a very good basis for working.

Mr. PROXMIRE. Would not the Senator from Arkansas construe this remark by the Secretary of Defense on May 22 to mean that he felt we should not go ahead until we have proved it? Let me read that once more:

> So to those who are concerned about whether the Safeguard system will work, I would say let us deploy phase 1 and find out. Only in this way can we be sure to uncover all of the operating problems that are bound to arise when a major weapons system is first deployed. Since it will take five years to deploy the first two sites, we will have ample time to find the solutions through our continuing R&D effort to any operational problem that may arise. And only then will we be in a position to move forward promptly, and with confidence, in the event the threat develops to a point where deployment of the entire system becomes necessary.

What else can he mean?

Mr. FULBRIGHT. I think a fair sense of the meaning would be, "Give us this phase and we will not even ask for the next one until we have proved it will work."

Mr. PROXMIRE. And certainly, with the close vote last year, or a tie vote, I think it was this kind of assurance by the Secretary of Defense that resulted in their getting this deployment.

Mr. FULBRIGHT. Let me point out another thing about this kind of system as opposed, for example, to the Minuteman, or some of the helicopters, or a gun like the M–16. Such things are subject to being tested in such a way that you can tell whether they work. In other words, you can fire a Minuteman from point X, and if it hits point Y, 5,000 miles away, you can be pretty sure it is accurate.

But there is no possible way to test the ABM under operating conditions. Its operating conditions exist only in wartime, that is, against incoming missiles loaded with nuclear weapons, and some of which are exploding.

These are some of the questions that experts like Panofsky raise. They point out that there is really no feasible way to test the Safeguard systems by setting up a base in North Dakota or Montana.

A more feasible place, if there is any, of approximating Safeguard's real operating conditions would be at a testing ground such as Eniwetok. There one might possibly detonate some kind of explosion more closely akin to those which might occur in actual conditions. But even that is very dubious.

Mr. PROXMIRE. The Senator is correct. The Secretary of Defense was telling us that deployment would give us some information, but we do not now seem to be even waiting for that.

Mr. FULBRIGHT. Yes. But the information would be very limited. This seems to me like the worst kind of deception, to come in and make a plea like he did last year, get his first phase, and then, within a year, come back.

This program has been plagued with this same thing throughout. It started out as the Sentinel, and when it became obvious under the Sentinel label that it was no good, they changed its name, and thus apparently hoped to change the whole thing. They have changed its mission back and forth—general area defense, the hard point defense of the Minuteman, thin systems and thick systems, so that every time a Senator or anyone else brings up a convincing argument that whatever immediate concept they are considering is worthless, and they are afraid they will lose the vote in the Senate, they change the concept, and we start all over again. This year they changed it. They change it a couple of times a year. It is an utterly fantastic concept.

This has never been applicable to any other weapons systems of which I know. The nearest thing I can think of is the TFX, to which the Senator has referred. That was the point of a long and exhaustive hearing on the part of the Committee on Government Operations. I think almost everything the Committee on Government Operations alleged about the TFX proved to be true. I think that most of them are still grounded; perhaps a few of them are flying.

Incidentally, on the TFX, I want to tell the Senator from Wisconsin something. Recently, an official from the Australian Government was here. We sat in the rear of the Chamber, talking about the TFX. He said that the Australian Government had ordered some TFX's.

I think it was quite a number. They had ordered perhaps 50 or 100 and had made a downpayment of part of the cost, some $150 to $200 million, I believe it was.

He said:

> Your government is going to take my government for $150 million.

I said:

> What do you mean?

He said:

> They are refusing to refund the downpayment to us. We don't want those planes anymore.

For various reasons—the same reasons the Senator knows and we all know—the Australians want to cancel the order for the TFX's.

It is now called the F–111. They changed the name. Whenever anything goes wrong, they change the name. When an F–111 goes down—the wings fall off—they change it to the F–14, and it is a new concept with a new name—just as the Sentinel became Safeguard, and next year it will be something more euphonious than Safeguard.

This is a terrible way to do business, especially on guesses. That is what is happening with the ABM. They have no idea what the real mission is even today. Most recently, the Armed Services Committee, if I understand correctly, says that none of this money is to be authorized for an area defense against China. They say—I think it is in the RECORD—that this money is to be only for hard point defense for missile sites for Minuteman; and the very same day, in a different context, you have Dr. Kissinger, the principal adviser to and spokesman for the President, saying, "We are considering restricting ABM to the defense of Washington if the Russians only want it for the defense of Moscow."

The Russians are apparently considering or talking about a proposition that would amount to only an area defense of Washington versus an area defense of Moscow. Since neither our system nor the Russian system is workable, and nobody really trusts them, it does not make any difference. But so goes the argument. As we are considering this authorization, the Soviets are apparently ready to give up the hard point defense. Yet the committee says the United States should have only the hard point defense. They seem to believe that has greater appeal at the moment. This is how vague and indefinite the whole concept is.

I conclude by saying that the Senator from Wisconsin is absolutely right. This whole thing ought to be confined to research until we get to a point where the Pentagon can do more than guess. I congratulate the Senator. I think that what he is doing is a great service to our country.

Mr. PROXMIRE. I thank the Senator.

Mr. President, how can Congress have any confidence in any of the Pentagon's cost estimates? The answer is, not until we find out much more of the truth about military procurement, not until we rid ourselves of the simplistic notion that national security and military spending are too sacred to be scrutinized, and not until we refuse to be misled by the techniques of concealment and confusion practiced so well in this area.

Mr. President, I yield the floor.

Mr. STENNIS. Mr. President, will the Senator yield?

Mr. PROXMIRE. I yield.

Mr. STENNIS. Mr. President, I express regret that the word "deception" was used here with reference to the testimony of Secretary of Defense Laird. I do not believe the Senator from Arkansas really intended to accuse him of outright deception.

The Senator from Wisconsin has correctly quoted on page 7 of his speech that the Secretary used the words "5 years." But the whole import of his testimony of last year with reference to the ABM was that this was approximately a 5- to 7-year program, in terms of total deployment, as then estimated generally by the witnesses—not only the Secretary but others as well—that a possible completion date for the system would be from 1974 to 1976. I know that in debate I usually use the year 1975. At that time it was 6 years.

So even though one interpretation of the word here, in the quoted paragraph, is for 5 years, and then we will go into another site, it is possible to interpret it that way. But I submit that from a reading of all of the Secretary's testimony and that of the other witnesses, and our debates here, we understood that this was going to be a program of 6 to 7 years and would complete the whole system of 12 sites as then contemplated. I know I understood it that way, and I want the record to show it.

Mr. PROXMIRE. Let me read this language of the Secretary:

> So to those who are concerned about whether the Safeguard system will work, I would say let us deploy phase 1 and find out. Only in this way can we be sure to uncover all of the operating problems that are bound to arise when a major weapons system is first deployed.

Further on:

> And only then will we be in a position to move forward promptly, and with confidence . . .

I do not know how I could interpret that anyway except that the Defense Department would complete phase 1 and then, on the basis of their experience with the completion of the deployment of phase 1, be in a position to assure Congress that they could proceed responsibly or not proceed. So that if we proceed this year to authorize the second phase, site 3, then it seems to me that we are acting without getting the full value of the experience they have had in deploying phase 1 to sites 1 and 2.

Mr. FULBRIGHT. I certainly do not see how it possibly could be read any other way.

Mr. PROXMIRE. What have we found out so far?

Mr. FULBRIGHT. We have not found out anything so far.

Mr. STENNIS. We have found out that it works so far—1 year.

Mr. PROXMIRE. It works in what way?

Mr. STENNIS. In the research and the development.

Mr. FULBRIGHT. They have not deployed it and found out that it works.

I want to say, with regard to deception, that I made reference to Dr. Foster. Dr. Foster made a flat statement before the Committee on Foreign Relations that a certain panel of experts had stated that Safeguard would do what—I cannot remember the exact language—the import was that it will do what the Pentagon expects of it. He was pressed for the names of those on the panel, and he named two men. Both, as it turned out, were deeply offended that he had left the impression that they, being reputable, first-class scientists, had made any such findings.

If that is not deliberate deception, I do not know what it is; because he told the committee—under great pressure, I will admit—we were asking him to cite some people not in the employ of the Pentagon who had given any support to his theory about the ABM's reliability. After all, it is not popular to take issue with the Pentagon. At least one of them, I know, was in a university which received vast sums of money for research. It is a courageous thing to take issue with the Pentagon on such a matter. Most professors, or anyone else for that matter, would rather remain silent and just let it go by. But these experts, themselves, were very eager to put the record straight, and I commend them for it.

I do not know of a better word one can use. In fact, deception is the most polite one I can think of. There are many other words that may be more expressive and should be used.

Mr. STENNIS. If the Senator will yield for one sentence, I know nothing about that testimony. I was not familiar with it. The Senator was referring to Secretary Laird——

Mr. FULBRIGHT. That is correct.

Mr. STENNIS. When he used the word deception?

Mr. FULBRIGHT. I referred to both. I do not consider this a deliberate deception, such as Dr. Foster's testimony, as I read his language, would seem to involve. I was not going to inquire whether he takes full and sole responsibility for asking for phase two—maybe he opposed it, I do not know—I do not know enough about it; but this statement, I would say, is inconsistent with the request for phase two. In that sense it is. Last year I did not believe, as the Senator stated a moment ago, that he understood we were agreeing to authorize this whole program up to 1975, including 12 sites. I do not think the Senate believed that when it voted on it last year by a majority of one.

Mr. STENNIS. I merely said it was contemplated last year, and all the debate and testimony was that this program would go through in 5, 6, or 7 years, if it was continued, showing that it was inconsistent with the 5-year waiting period.

I think the Senator from Wisconsin has given a possible, reasonable interpretation. It was an isolated paragraph of the Secretary's statement. I think I said that at the beginning, that I said overall I share the Senator's concern about trying to get a fairly active figure as soon as we can, with allowances for inflation and increased wages, and so forth, with reference to these expensive programs. But if we are not going to have it, not going to proceed at all until we can get one that is fairly correct, then we will not have any more new weapons, because that would kill them in their tracks.

Mr. PROXMIRE. What I was referring to was the fact that we had testimony from top naval officials that the Pentagon and defense contractors are playing games with Congress and deliberately underestimating weapons systems, knowing full well that they will cost more.

Gordon Rule, one of the top procurement officials, said that, and I asked him, "You mean they are lying?" And he said they are being disingenuous. Whether it is disingenuous or calculated prevarication, there is an understandable effort on the part of defense contractors on the one hand, and the champions of a particular weapons system on the other, to make a deliberately low estimate. They buy in. That is what we are concerned with. We want the taxpayer and the Congress to be treated honestly, so that we must criticize these overruns and insist that this system that lures the Congress into weapons systems at phony bargains, perks it up.

Mr. STENNIS. I have said that we have got to get a better way to get at this matter and I think we are making some headway. The Senator from Wisconsin has helped us make some headway.

One reference, if I may, to the ABM, because Dr. Panofsky said it would work. I have very great respect for Dr. Panofsky and the many other fine and foremost scientists that we have. They are very valuable to us. But, at the same time, I am told by knowledgeable people that those scientists, some of them who were at Los Alamos the very day the atomic bomb was first tested, believed and so stated the very morning of the test, "I do not think it will work." They did not believe it was worth a continental.

Mr. PROXMIRE. I thank the Senator. Mr. President, I yield the floor.

REORGANIZATION OF MILITARY FOOD SERVICES

Mr. PERCY. Mr. President, as we open debate today on the military procurement authorization bill, there is much concern about the level of spending for military purposes and the heavy costs of new weapons systems recommended by the Department of Defense and about the relative requirements for both defense and domestic matters.

The administration has certainly pointed out, and I believe absolutely correctly, that it has made a switch in our national priorities, has reevaluated where the country is going, and what the needs of the country are, and has deemphasized military spending as related to the gross national product and the percentage of our national budget as against our domestic needs. The pendulum is swinging toward nation building at home, and I think rightly so.

Excruciatingly painful decisions that have to be made, however, as to what priorities to switch in the budget, bring to mind the great necessity to face a critical analysis of what we are spending in the military.

I think also, as we look at the size of the military appropriation bill, we must take into account that recent reports have indicated this Nation may be facing a Federal budget deficit as great as $10 billion in fiscal 1971. No extensive educa-

tion in the field of economics is needed to realize that this adds up to more financial troubles for our already struggling economy. A deficit of this magnitude would be added fuel for the rampaging fire of inflation to feed upon.

President Nixon has been trying to control inflation, but it is not his fight alone. Each of us must do as much as possible to control this unhealthy trend of Government deficit spending.

It was for this reason that I announced that I was undertaking a campaign to identify areas of excess fat in our budget where we can save money. My goal is to find areas where we can save at least $4 billion in fiscal 1971. Toward this goal I have already called for cuts amounting to $989 million. Each of us has a direct responsibility to do that which is necessary to hold our budget in line. The President is doing what he can, and we in the Senate must share the responsibility in this task.

The President rightly stated in his message of July 18:

> This is a time when the taxpayers of the United States will not tolerate irresponsible spending.

There is a need today for all parts of our Government, plus the private sector to join in our attempt to keep our budget as low as possible. Today, I would like to direct my remarks to the several military services.

Last December, the White House Conference on Food, Nutrition, and Health, made many very worthwhile recommendations. Four of their recommendations dealt directly with the military food services. One pointed out that traditionally, going back at least to the days of Custer, companies of soldiers would eat together and fight together in that size unit. This tradition has been carried on to today. By far the majority of messhalls in the services can only accommodate 200 men. An example of the resultant inefficiency is Fort Bragg which has 110 messhalls, each with its own staff and its own equipment. The White House conference, as one of its recommendations, recommended that messhalls be consolidated.

The other recommendations of the conference included consolidation of all food production facilities on each military base; studying the feasibility of purchasing foods now processed on military bases such as pastries and meats; and studying the feasibility of replacing some military personnel with civilian workers.

Now, Mr. President, admittedly, it is not very exciting to talk about messhalls and other aspects of the military subsistence programs. Usually, we can talk about weapons systems that are far more interesting and far more controversial. However, this subject of food in the military becomes far more interesting when one considers the amounts of money involved.

If the four recommendations of the White House conference were carried out, they could result in a yearly savings of possibly as much as $1 billion, which would amount to 14 percent of the annual cost of $7 billion to feed our armed services.

Mr. PROXMIRE. Mr. President, will the Senator from Illinois yield at that point?

Mr. PERCY. I yield.

Mr. PROXMIRE. That is a very impressive estimate. I want to be sure that I understand that the Senator said if we put into effect the four recommendations of the White House Conference on Food and Nutrition, the savings could be as high as 14 percent or $1 billion.

Mr. PERCY. That is correct. The conservative estimate would be one-half billion dollars but the potential of one billion dollars is certainly there. I know that the distinguished Senator, from his own experience, recognizes that when one goes after reductions and economies and consolidations, and tries to eliminate duplication and overlapping, to get away from some of the old practices of the past, that 14 percent is a modest figure, or one billion dollars.

Mr. PROXMIRE. I do not mean to be facetious but the Senator talks about cutting the excess "fat" out of the military. I think the cut the Senator discusses in the food budget of the military by 14 percent or one billion dollars could be construed as one way of cutting the fat from some of those who eat in the military mess halls. I am sure he is serious about that, but I wanted to be sure that he is not misunderstood, that we can have the same amount of food without any diminution in cost or in food value, or in any other way, and still reduce spending by the military on food by one-half a billion to one billion dollars.

Mr. PERCY. That is absolutely correct. As I pointed out earlier, one of the recommendations was to get away from the tradition in the military that goes back to the days of Custer of having soldiers of a company eating together. In these days of new type warfare and the new way of organizing our personnel, we should get away from having a majority of the messhalls in all of our services that can only accommodate 200 men. That is certainly inefficient. We can set up facilities to feed men on a mass basis.

Mr. PROXMIRE. Mr. President, I think that is a very good example. Some people would criticize this proposal on the grounds that one of the things we have in abundance is food. We have a surplus of food and store it in surplus with the Commodity Credit Corporation.

As the Senator from Illinois has pointed out, this would be a more efficient way of providing the same quantity of food but economizing on personnel, and facilities, with the overall result of saving hundreds of millions of dollars.

Mr. PERCY. Mr. President, it is essentially in the area of organization. But this does get to the procedures.

We know that the Army, the Navy, and the Air Force operate separate bakeries and separate facilities of all types. We know that they ran a dairy farm out of Annapolis, I think. The need for our having cows maintained by the military and milking the cows is long since gone.

Mr. PROXMIRE. I think the dairy farmers of Wisconsin would agree with the Senator from Illinois on that.

Mr. PERCY. It would be far more efficient to do it in Illinois and in Wisconsin than to have the military services able to have the luxury of having their own dairy farms. We cannot be competitive when we have an inplant operation. Having been in manufacturing, I had a principle on manufacturing that the budget director of our company was required to get competitive bids from outside in addition to procuring bids from internal operations. In other words, if we had a casting plant, he had to get competitive bids from other competitors rather than always placing the business with an inplant operation.

We drove out of business the inefficient operations inside the plant. What we have to do in military procurement is to be competitive. We cannot be competitive when we place orders always with our own internal operations.

We have probably the most sophisticated and most modern military machine in the world. And we have probably one of the most inefficient, antiquated and wasteful military food distribution systems. There is no reason military food service should not be as efficient as the military service it serves.

This is not a controversial issue. We are not debating our national strategic priorities, or our military deterrent. We are only talking about bringing the military feeding system into the 20th century, and applying cost-effective methods.

One would think that because of the mundane character of this issue, it would be accomplished with comparative ease. And one would think that at a time when we must try to cut our expenditures in every area possible as quickly as possible, that this would be accomplished with speed. But it has not been and so we ask the question, "why not?"

Mr. President, the answer to that question disturbs me quite deeply, as it should disturb every Member of this Chamber, and every person concerned about holding our budget line.

The reason that there has been no progress in this area is due to tradition and what is called "command prerogatives." In civilian terms, it is due to petty jealousies between the various military services.

Although I know, and I know that the distinguished Senator from Wisconsin knows, a herculean effort has been made in the reorganization of the Defense Department with one Secretary of Defense overseeing the operations of our various service agencies, there is still a tremendous amount of in-service rivalry. That is something which in the spirit of gamesmanship is commendable. But when it occurs because each department has to have its own facility, that is a disservice to the country.

I was procurement officer for aviation fire equipment for the U.S. Navy and its Air Corps. I was literally shocked at the parochial attitude maintained within the military service in an effort to keep equipment away from another service that might be competitive. They would

say, "Don't let them have our equipment. Let them develop their own. Let them get it in some other way." Who was the "them?" We were in the midst of a war. I kept thinking that the "them" ought to be the enemy. But the enemy many times turned out to be the other branch of the service which, when one fights them on the football field is understandable, but when one is in the same war and on the same battlefield is not understandable.

So I say regretfully that petty jealousies between the various military services is impeding efficiency in this area.

When we are talking about finding the money and spending a billion dollars, I point out that it is a lot easier to save a billion dollars than to raise the additional revenue to get a billion dollars for some new program.

The services are used to operating their own subsistence programs the same way they did a hundred years ago. They balk at any suggestion to modernize. It is for this reason that there has been no progress in implementing the recommendations of the White House conference. The different departments within the Department of Defense have pushed and cajoled to get the Services going, but they have been stymied by a lack of cooperation.

They have finally succeeded in getting the services to sit down and talk with each other starting July 27 at Fort Lee, Va. How much will come out of this meeting no one can say.

Mr. President, the time has long passed when we can stand idly by and watch the services squabble at a cost of $500 million to $1 billion to the American taxpayers each year. Secretary Laird should issue the necessary orders as soon as possible, and the various armed services should get the starch out and lean over backwards, if necessary, to carry out the recommendations as swiftly and as efficiently as possible.

We must not allow petty jealousies to be one of the reasons that we face a deficit as large as $10 billion. We should start now in this area to save at least $500 million of the $1 billion potential that could be saved annually by simple modernization and cooperation by the military.

Mr. President, with this $500 million item today, I have now identified $1,489,000,000 that could be saved in fiscal 1971. I pledge that I will continue to go over our budget with a fine-tooth comb to point out those areas where we can cut down on our expenditures by as much as $4 billion. The task of stopping inflation is one that each individual and each segment of society must share along with our President.

I agree with the distinguished Senator from Wisconsin that our responsibility does not begin when we just tax people and appropriate the money and say to the Executive, "You go spend it."

We have an overseeing responsibility which is not working in conflict with the administration, whether it be Democratic or Republican. We have an overseeing responsibility for seeing that there is a cooperative effort among the agencies.

I just assume that every single member of the administration is interested in having as efficient and effective a way of doing business as possible. I hope that the Secretary of Defense will feel that we realize that in this body when we say to him, "Let's put the heat on the services." Because this means that with the heat on the Department, he can say, "Look, the Congress wants this money spent more efficiently and effectively. Get rid of the jealousies and the petty differences. Let us have an effective and efficient spending of the money. That means overcoming some of the oldtime practices and modernizing every aspect of the armed services and not just the aspects of advanced technology and military assistance."

Mr. PROXMIRE. Mr. President, I congratulate the distinguished Senator from Illinois on an excellent speech. I think it is especially timely because many of us have criticized the military for spending too much money concentrated in the procurement area and not in the operations area.

Here is a fine example of how we can save in that area. It would be hard to develop an amendment to this bill to get at what the Senator is after in connection with a cut in the food operation. I think that would not be the best way to go about it. The overall reduction of several billions in funds available to the Pentagon is designed to get at this problem. If we could justify our cuts here and in other areas, where other Senators will bring up waste and unjustified spending, it seems to me we would be able to make a responsible reduction in the overall budget.

Mr. PERCY. In reply to the distinguished Senator I must prefer to try to identify specific areas and then, if possible, put in amendments to cover those areas.

Mr. PROXMIRE. The Senator has identified an area and identified it very well. The Senator said the administration is beginning to do something about it. That would be today, because today is July 27.

Mr. PERCY. That is today. That meeting should be going on now.

Mr. PROXMIRE. The administration is working on it, and, as the Senator said, we should work with the administration on this sort of thing.

If there is an amendment in this area I shall support it but I think the overall approach would be best for this particular problem.

Mr. PERCY. I thank the Senator for his comments.

Mr. PROXMIRE. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. PERCY. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER OF BUSINESS

Mr. PERCY. Mr. President, I ask unanimous consent that I may be permitted to proceed for a period of not to exceed 6 minutes on a subject somewhat related to the current bill but which I would consider to be, in the strictest sense, nongermane.

The PRESIDING OFFICER. Without objection, it is so ordered.

MEANINGFUL NEGOTIATIONS ON INDOCHINA

Mr. PERCY. Mr. President, as I commented earlier, as we proceed in the debate on the military procurement authorization bill, there is a great deal of concern about the level of spending for military purposes, about the heavy costs of new weapons systems recommended by the Department of Defense, and about the relative requirements for both defense and domestic needs.

Fundamental to the problem of gigantic appropriations for defense is the immense cost of the Indochina war and the high cost of maintaining our military contribution to the North Atlantic Treaty Organization.

For several years I have contended that the nations of Western Europe should share the burden of America's huge military commitment to NATO. Now, 25 years after the end of World War II, 300,000 American troops are still stationed in Europe, 220,000 of them in West Germany alone. In addition, there are 242,000 American dependents and 14,000 American civilian employees in Europe. The total cost to the American taxpayer is $14 billion a year, and there is a balance-of-payments deficit of $1.5 billion a year.

Fortunately, it now appears that the nations of Western Europe have agreed in principle to make budgetary contributions in support of American forces stationed on the Continent. The terms are to be worked out and implemented by July 1, 1971, I believe as a start the United States should receive reimbursement of about $1½ billion annually—the balance-of-payments deficit we now sustain.

The other major consumer of defense money is the Vietnam war, the cost of which has gone as high as $30 billion in a single year. Since the advent of the Nixon administration, this cost has declined, thanks to troop reductions. But the war still costs nearly $20 billion a year. The war drains our Treasury, distorts our national priorities, alienates our youth, divides the Nation. Most important of all, it costs more American lives every day and it delays the repatriation of the American men held captive in North Vietnam.

The United States has already lost nearly 50,000 killed and suffered a half million wounded in 9 years of fighting. The people of Vietnam have suffered many times more casualties.

In view of this tremendous cost in lives and treasure, and at a time when the war is accelerating throughout Indo-

china, I believe we need a bold move to stop the fighting and to start meaningful negotiating. Since every war ends by surrender or negotiation and, since there will be no surrender in Indochina, I urge that we initiate real negotiation now, rather than thousands of casualties later.

Therefore, I suggest that the United States should now propose the appointment of a United Nations representative to meet with all parties to the Indochina war in an effort to arrange a 90-day truce and to reach an agreement on the form of an international peace conference. In making this suggestion, I am drawing on the example of President Nixon's Middle East peace proposals by emphasizing truce and negotiation with United Nations help. Whatever the ultimate result of the administration's Middle East proposals, I believe that the President and Secretary of State Rogers deserve immense credit for seeking to arrest the deterioration of conditions in the Middle East at a very dangerous time. Every day it appears that the wisdom of these proposals is going to be borne out by the overwhelmingly response they have received.

During a truce in Indochina, it would have to be understood that the belligerents would not take advantage of the cease-fire to improve their military positions. I would expect, too, that in this period all prisoners of war, both Vietnamese and American, could be repatriated.

I firmly believe that a political settlement in Indochina is vastly preferable to a legislated, fixed-time withdrawal, because it would end the war, not just end American participation in the war.

I have been deeply committed to the accomplishment of a negotiated solution of the war since mid-1966 when I proposed an all-Asian peace conference on the problem of Vietnam.

In the past, North Vietnam has rejected peace initiatives emanating from the United Nations. But this is a different situation since the initiative I propose would not come from the United Nations. It would come from the United States. United Nations involvement would be as an instrumentality assisting the belligerents to find the basis for ending the conflict.

Should the North Vietnamese find any United Nations role unacceptable, the proposal could be altered to provide for representatives of the International Control Commission—from India, Canada, and Poland—to make the initial overtures toward arranging the truce and the form for an international conference.

At an international conference on Indochina, the United States could propose that all foreign troops, including American and North Vietnamese, should be withdrawn from South Vietnam on a fixed schedule starting as soon as agreement could be reached on mutual withdrawals. Similarly, it could be proposed that foreign forces be withdrawn from Cambodia and Laos under the same conditions. The International Control Commission or the United Nations could supervise and substantiate the withdrawals. Hopefully, it could be agreed that withdrawals would be completed within 6 months.

I have no preconceived notions about the form an international conference on Indochina should take, although an all-Asian conference or a reconvened Geneva Conference would have to be considered. A U.N. representative, or ICC representatives, in consultation with Asian non-Communist and Communist leaders, and with England, France, the United States, and the Soviet Union, would be able to determine what type of conference might be generally acceptable.

Recently, President Nixon made an excellent move in appointing Ambassador David K. E. Bruce to the U.S. chief negotiator in Paris. Ambassador Bruce is known for his intelligence, tact, understanding, and diplomatic skill, characteristics which should be immensely helpful in dealing with the North Vietnamese and the National Liberation Front. In making my proposal for an enlarged international conference on Indochina, I in no way mean to cast doubt on his ability to make the Paris talks more substantive and meaningful. In fact, I would assume that Ambassador Bruce would represent the United States in such a conference. However, the Paris talks now bear the burden of 2 years of failure and it is possible that a new forum with broader participation would have a better chance for success. Moreover, an enlarged conference would be better equipped to achieve a solution for the whole of Indochina.

Before concluding, let me reiterate the substance of my proposal today. I am recommending that the United States should propose the appointment of a United Nations representative to meet with all parties to the Indochina war in an effort to arrange a 90-day truce and to reach an agreement on the form of an international conference.

I invite the consideration of this proposal by my colleagues, by the administration, and from opinion leaders in the country. I would welcome other suggestions and proposals as well, so that new thinking may be brought to bear on the question of how to end the war in Indochina.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. PERCY. Mr. President, I ask unanimous consent to have 1 additional minute.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. PERCY. I might add, Mr. President, in accordance with a custom I have always tried to follow in any matter affecting our foreign policy or military posture, I discussed this matter with the administration. I first discussed it with Ambassador Habib in Paris several weeks ago, and then, some week or 10 days ago, I wrote a letter directly to Secretary Rogers on this matter. I have every indication from the administration that they do not object to my making this proposal at this time.

ORDER OF BUSINESS

Mr. BYRD of West Virginia. Mr. President, let the RECORD show that had I been present, I would have objected to the request of the able Senator from Illinois to transact routine morning business, because it violated the Pastore rule concerning germaneness.

Mr. PERCY. Mr. President, may I reply to the distinguished acting majority leader?

Mr. BYRD of West Virginia. I yield.

Mr. PERCY. Mr. President, in the interest of facilitating the work of the Senate today, I do want to indicate that there was an indication that my remarks were not germane. I spoke to the Senator from Mississippi (Mr. STENNIS) earlier and I spoke to the Senator from Wisconsin (Mr. PROXMIRE) as to their advice in the matter. They indicated that apparently there were no more speeches to be made on the pending bill, and that they were sending for the Senator from New York (Mr. JAVITS), and that it was customary, under those conditions, to request unanimous consent. We could not locate the majority leader; therefore, to facilitate the work of the Senate, we asked unanimous consent and got it. But I understand the reason for the germaneness rule.

Mr. BYRD of West Virginia. I thank the able Senator. I was not aware that all other Senators had made their speeches and that no other Senator wanted to speak today on the pending business. On that basis, I would not have objected, but would have asked that the pending business be temporarily laid aside. I merely make this statement so that the RECORD may be clear. I again thank the Senator.

Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR TRANSACTION OF ROUTINE MORNING BUSINESS

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the pending business be temporarily laid aside and that there be a period for the transaction of routine morning business, with statements therein limited to 3 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR ADJOURNMENT UNTIL TOMORROW AT 10 A.M.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that when the Senate completes its business today, it stand in adjournment until 10 o'clock tomorrow morning.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR CONSIDERATION OF CONFERENCE REPORT ON EDUCATION APPROPRIATION BILL TOMORROW

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that, at the close of morning business on tomorrow, the conference report on the education appropriation bill be laid before the Senate.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. JAVITS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

S. 4127—INTRODUCTION OF THE PROPOSED EMERGENCY LOAN GUARANTY ACT OF 1970

Mr. JAVITS. Mr. President, a short while ago the financial markets of this Nation and the world were rocked by the bankruptcy of Penn Central, one of the largest corporations in the world. This bankruptcy has been preceded by widespread reports of financial difficulties being faced by leading corporations in the aerospace field, by major automobile manufacturers, and by various brokerage houses. These developments, having already received widespread publicity, are but the tip of an iceberg which is the "liquidity crisis."

We see press reports that there is a frantic maneuvering for short-term money at Lockheed, that McDonnell Douglas has deferred a $100 million public offering of 4-year notes, because of high interest rates; that American Airlines cut to $47.9 million from $79 million a public offering of 18-year certificates and had to pay 11-percent interest—a tremendous tax on the airline and the people who fly the airlines; and that Pittsburgh-Fort Wayne omitted a dividend because of the uncertainty of rental payments from Penn Central. Analysts for Salomon Brothers and Hutzler have described the market for medium and lower-rated securities as "quite thin"; Business Week reports that "newcomers to the market now have trouble floating their issues"; and Newsweek wonders after "Penn Central, Who Next?"

It would be inaccurate and simplistic to blame this "liquidity crisis" solely on poor management, as some have attempted to do. Even as to the U.S. Government, did not a Treasury debt refinancing almost go down the drain in the midst of the Cambodian invasion, to be saved only by a massive rescue operation by the Federal Reserve? The Federal Government as well as private corporations can have problems rolling over indebtedness in the uncertainties of the present economic climate. Many basically sound corporations with good management are facing this problem, having been caught in the squeeze of repressively tight money and costlier labor, raw materials and other operating costs at the very time when sales and profits are declining and taxes are increasing—because of the repeal of the investment tax credit. As a result of these factors—most of which are totally beyond the control of individual corporations—the credit standing of many corporations has deteriorated. Debt re-financing, in turn, has become increasingly difficult, particularly because—as Secretary Kennedy stated last Tuesday—corporate management has been relying on "less liquidity and more ability to borrow short-term funds."

Yet, because of a deteriorated credit availability—and despite the fact that the Federal Reserve under the wise leadership of Dr. Arthur Burns is pumping dollars into the banking system—many corporations cannot get the short-term credit they need at any price. They are suddenly considered to be credit risks. Smaller, less established corporations face a widening yield spread between the highly rated bonds being floated by large corporations, and lower rated bonds they are attempting to float. In other words, those corporations that are less able to borrow have to pay more for their money.

It is clear that the continued ability of certain large businesses to operate is very much in the national interest. It would have been tragic for our economy and for the national security of the United States if the Penn Central bankruptcy had seriously disrupted the essential commercial paper market—and paralyzed companies dependent on it for operations. We are fortunate that this did not happen, but what worries me is that it could have happened. What worries me more is that this Nation did not—and still does not—have an emergency economic "war power" to insure that steps can be taken to prevent the economically unthinkable from happening during a time of economic emergency.

It is also clear that continued essential operations of many small corporations is in the national interest and that widespread small business failures could have macroeconomic implications—that is, implications for the health of the entire economy.

My recent conversations with financial leaders have convinced me that the economy has just skirted the edges of economic disaster and that for some days it was a matter of touch and go. The immediate crises may well be behind us, although it is still too early to know for sure. We should now take the necessary legislative steps—to ensure it does not again descend upon us and again catch us unprepared either 3 months or 3 years from now. It would be most unwise to leave the Federal Government unarmed without the economic "war power" needed to combat a liquidity crises. And, I am convinced that a full-blown liquidity crises cannot be ruled out so long as the present unstable economic conditions remain in effect.

That this possibility is a clear and present danger was reinforced when Dr. Arthur Burns, Chairman of the Federal Reserve System, felt it necessary to state publicly before the Joint Economic Committee only last Thursday that—

> In the highly unlikely event that a liquidity scramble developed, the Federal Reserve would use all the authority at its command to ensure that unusual demands for liquidity were satisfied.

While Dr. Burns expressed confidence in the workings of the financial system, he stated:

> Prudence requires that we consider what additional precautionary measures might be advisable.

He continued:

> The Congress might also give consideration to the feasibility of establishing a Federal program to guarantee loans to necessitous borrowers. This possibility should, of course, be explored very cautiously. It would be a disastrous mistake to use Federal monies to keep unsound firms from failing or to substitute public for private tests of creditworthiness, or to convey the impression that the Federal Government will bail out loosely-managed or speculative enterprises. But there may be a role for Federal guarantees in helping basically sound firms that experience temporary financial distress to find access to funds, where the alternative might be a degree of financial dislocation inimical to the national interest.

I ask that we consider the implications of the fact that Penn Central could have brought down the commercial credit market like a house of cards and that the Federal Government lacked the necessary emergency powers to shore it up.

A snowballing liquidity crisis is a national concern. It could wreak havoc in Sioux City, Iowa, or Macon, Ga., as well as in the great financial centers of New York, Chicago, Atlanta, Dallas, and San Francisco. We must insure that it does not happen.

Mr. President, pursuant to this situation, and in view of the fact that we have no RFC now, as we did in the depression of the 1930's, I introduce a bill in the Senate which will provide the administration with the economic war power needed in times of economic emergency. I urge all Members of the Congress to consult with the administration and with the Federal Reserve on the need for such a bill. I urge them to talk to the businessmen—large and small—in their districts concerning the liquidity squeeze and the implications this squeeze can have for their constituents.

Basically, the bill would authorize the Secretary of the Treasury to guarantee loans made to certain businesses which are in necessitous circumstances, the continuance of whose operations is vital to the national interest. This guarantee authority would have a life of 1 year, by which time the Secretary must submit to Congress a report together with recommendations on the need for establishing a permanent Emergency Loan Guarantee Corporation. That Corporation, if recommended, and not vetoed by either House of Congress, would succeed to the Secretary's loan guarantee authority.

The Secretary cannot act indiscriminately under the provisions of the bill. He would be bound by a number of safeguards.

First. No guarantee could be made under my bill unless the Secretary certifies

in writing that the loan to be guaranteed is necessary, considering the purposes of the bill; that the loan cannot otherwise be obtained on reasonable terms and conditions; that there is reasonable assurance of repayment, and that failure to provide a guarantee would in effect shut down the business seeking the loan.

Mr. President, I believe this is critically important, because I believe in wringing the water out of corporations which have extended themselves, made unwise decisions, or had bad management, under bankruptcy or any other proceeding.

But, Mr. President, there are some companies—and Penn Central is one of them—where we cannot afford, as a nation, to allow them to stop operating. Yet that is exactly what Penn Central faced, with a $20 million payroll coming due every week, and no means to meet it when the trustees in bankruptcy stepped in.

The Secretary would also be required to certify that the purposes of the loan to be guaranteed must further the economic health and welfare of the Nation or a region thereof, and that the business of the enterprise to be assisted is of a nature which makes assistance appropriate in furtherance of the purposes of this bill. What these two conditions mean is that the business must be imbued with the public interest, and one whose failure would seriously affect the economy of our country or the well-being of a particular area such as a city or a populous county; it could conceivably be a business undergoing reorganization under the Bankruptcy Act, so long as all the necessary conditions are met. They further mean that the purposes to which the guaranteed loan would be put must be carefully scrutinized before any guarantee is made; that these purposes must be productive and must be such as to help restore or maintain the economy of the Nation or the region.

Second. Before making a guarantee the Secretary would consult with the chairman and the ranking minority members of the Committees on Banking and Currency of the Senate and the House of Representatives. An appropriate analogy here is the consultations which the Federal Reserve Board carries on with the FDIC and the Federal Home Loan Bank Board before making changes in interest ceilings under regulation Q.

Third. The Secretary would be subject to ceilings on the amount he can guarantee. He must justify to Congress any guarantees—or series of guarantees to one borrower—which exceed $20 million in any 1 year, and such guarantees are subject to congressional veto; also, the maximum aggregate amount outstanding of guaranteed loans cannot exceed $5 billion.

Fourth. The Secretary could impose any conditions on the borrower he deems to be appropriate. This safeguard is intended to prevent the loan from merely enabling the borrower to siphon funds out of its productive enterprises for use in such activities as mergers and acquisitions, increased dividend payments, debt repayment, and so forth.

Fifth. The Secretary would be bound by the policy directives of a Loan Guarantee Policy Board, which also would be established by my bill. My intent in setting up this Board is to have some fully independent authority exercise overall supervision of the guarantee program. The Board would be directed in the bill to establish the general policies which shall govern who is eligible and who is ineligible for guarantees. These policies would be published and, of course, subject to public scrutiny. In particular, the Board would have to define the national or regional economic interest involved in granting or denying a guarantee. The membership of the Board would consist of a Chairman to be appointed by the President, the Chairman of the Federal Reserve Board, and the Secretary of the Treasury.

Sixth. The Secretary of the Treasury is given visitation powers sufficient for him to insure that any guaranteed loan was being used for the purposes for which it was made.

To summarize, the bill contains two guarantee authorities: the first, in the Secretary of the Treasury, would start immediately upon passage of the bill and last for 1 year. The second, if sent to the Congress by the Secretary, would permanently reside in the loan guarantee corporation. The circumstances I have described require an immediate guarantee authority, with appropriate safeguards, and this is why this authority is temporarily vested in the Secretary of the Treasury. I believe that the question of whether we need a permanent guarantee authority is one that can be deferred for the present time. It needs more study, and even if a permanent authority is called for, the details of the permanent guarantee corporation would require some months of planning. This is the reason for the 1-year period given the Secretary to come up with his report and recommendations.

While the safeguards which surround the Secretary's guarantee authority certainly suggest some of the details which he must specify in recommending a permanent emergency loan guarantee corporation, the bill purposefully does not bind the Secretary to any particular design in setting up this corporation. Obviously, the Secretary's work in this regard would get careful scrutiny, since Congress will have veto power over a proposal to establish a corporation. Also, I would expect the Secretary to consult with appropriate Members of Congress as his work on the corporation proceeds.

Considering the urgent and present need, the bill is, I believe, a modest one. It is, in effect, a limited liability program, and contains safeguards sufficient to prevent the guarantee authority from becoming a giveaway. It would act to supplement the many guarantee programs already on the books in such a way as to restore confidence at the time of a severe liquidity crisis.

In effect, Mr. President, this is an RFC in a modern sense, for today's conditions, and should deal adequately with the problem of an absence of liquidity, where the continued operation of individual enterprises is essential in the national interest.

Mr. President, there was great fear in the financial community, and justifiably so, of a chain reaction which would be set in motion by the inability of even the best corporation to get the necessary short-term funds with which to operate, and there was a great slow-down in payments of accounts receivable, which indicated a hoarding by individual concerns of dollars which they needed in order to operate temporarily when they could not borrow, and hence could not pay their bills on time.

Such a chain reaction, Mr. President, can bring down the economy, solely because of an erosion of confidence, and because we do not know how to help ourselves. Hence this guarantee authority, Mr. President, is a very critically important standby facility to help tide us over such moments of the gravest peril to this country.

Mr. President, I am very much honored that the Chairman of the Federal Reserve Board, for whom I, and I know many other Senators have the greatest respect, has endorsed this approach, and I very much hope it may have early consideration, as an important element for strengthening the economic vertebrae of the United States, by the appropriate subcommittee of the Committee on Banking and Currency.

I send the bill to the desk and ask that the text of the bill be printed in the RECORD in addition to my introductory remarks which also explain the terms of the bill.

The PRESIDING OFFICER (Mr. DOLE). The bill will be received and appropriately referred, and, without objection, the bill and the explanation will be printed in the RECORD, in accordance with the Senator's request.

The bill (S. 4127) to provide emergency authority for the guarantee of loans to aid business enterprises to meet temporary and urgent financial needs, introduced by Mr. JAVITS, was received, read twice by its title, referred to the Committee on Banking and Currency, and ordered to be printed in the RECORD, as follows:

S. 4127

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

FINDINGS AND PURPOSE

SECTION 1. (a) The Congress finds—

(1) that the liquidity necessary to keep the nation's economic system operating and productive continues to grow rapidly and that the effective functioning of the capital markets is a prerequisite to meeting these liquidity needs;

(2) that the capital markets have been unable to satisfy such needs on reasonable terms and this inability leads in given cases to severe regional or national economic disruption and liquidity crises; and

(3) that the existence of a loan guarantee authority in the Government is necessary to the national interest to stabilize capital markets during those times when, like the present, urgent and temporary financing cannot generally be acquired on reasonable terms.

(b) It is the purpose of this Act to provide authority for emergency financial assistance in the form of loan guarantees to

aid business enterprises to meet temporary and urgent financial requirements which, if not met, might seriously impair the ability of such enterprises to produce goods and services, and might seriously affect the economy of the nation or a region thereof.

EMERGENCY LOAN GUARANTEE AUTHORITY

SEC. 2. (a) In furtherance of the purpose of this Act, the Secretary of the Treasury (hereinafter in this Act referred to as the "Secretary") is authorized upon terms and conditions prescribed by him, and after consulting with the chairmen and ranking minority members of the Committees on Banking and Currency of the Senate and the House of Representatives, respectively, to make commitments to guarantee and to guarantee any financing institution against loss of principal or interest on any loan to a business enterprise for the purpose of assisting that enterprise to meet temporary and urgent financial needs which if not met (1) could seriously impair the ability of the enterprise to produce goods or services for the public, and (2) could adversely and seriously affect the economy of the nation or a region thereof.

(b) No guarantee of a loan shall be made under this section unless the Secretary finds and appropriately certifies that—

(1) the loan is necessary to carry out the purposes of this Act;

(2) the loan is not otherwise available on reasonable terms and conditions;

(3) there is reasonable assurance of repayment of the loan;

(4) a failure to provide a guarantee of the loan under the authority of this section would seriously impair the ability to produce the goods and services of the enterprise in behalf of which the guarantee is to be made;

(5) the business of the enterprise to be assisted is of a nature which makes assistance under this section appropriate in furtherance of the purposes of this Act; and

(6) the loan to be guaranteed will be applied to productive purposes which are necessary to the economic health and welfare of the nation or a region thereof.

(c) The Secretary shall require such security for guarantees and such agreements regarding management of the components of the tnterprise to be assisted as he may deem appropriate. An enterprise in reorganization pursuant to the Bankruptcy Act is not ineligible to receive a loan guaranteed under this section if the Secretary makes the findings and certifications required by subsection (b).

(d) The Secretary shall consult, as necessary, with any business enterprise which has received a loan guaranteed under this section concerning any matter which may bear upon the ability of such enterprise to repay the loan within the time fixed therefore and reasonable protection to the United States; and otherwise to assure that the purpose of this Act is being carried out.

(e) (1) The maximum obligation of the Secretary under any loan or loans made to any one borrower within any one year which is guaranteed under this section shall not exceed $20,000,000 unless—

(A) prior to making such guarantee the Secretary submits to the Congress a full and detailed report of the circumstances requiring the guarantee in the case of the particular enterprise and the justification therefor in furtherance of the purposes of this Act; and

(B) a period of thirty calendar days of continuous session of the Congress following the date on which such report is submitted to the Congress elapses, and during such period there is not passed by either the Senate or the House of Representatives a resolution stating in substance that the Senate or the House of Representatives, as the case may be, does not approve the proposed guarantee.

For the purposes of paragraph (B), in the computation of the thirty-day period there shall be excluded the days on which either the Senate or the House of Representatives is not in session because of adjournment of more than three days to a day certain or an adjournment of the Congress sine die.

(2) The maximum obligation of the Secretary under all outstanding loans guaranteed under this section shall not exceed at any time $5,000,000,000.

(f) (1) Payments required to be made as a consequence of any guarantee under this section shall be made by the Secretary from the loan guarantee fund established pursuant to subsection (f).

(2) In the event of any default on any loan guaranteed under this section and payment in accordance with the guarantee is made by the Secretary, the Attorney General shall take such action as may be appropriate to recover the amount paid by the Secretary, with interest, from the defaulting borrower or other persons liable therefor.

(3) The Secretary shall prescribe and collect a guarantee fee in connection with each loan guaranteed under this Act. Sums realized from such fees shall be deposited in the loan guarantee fund established pursuant to subsection (f).

(g) (1) There is established in the Treasury a loan guarantee fund to be administered by the Secretary. The fund shall be used only for the purpose of the guarantee program authorized by this section, including the payment of administrative expenses. All fees paid in connection with such program shall be credited to the fund. Moneys in the fund not needed for current operations may be invested in bonds or other obligations of, or guaranteed by, the United States.

(2) There are authorized to be appropriated to the loan guarantee fund such amounts as may be necessary to provide requisite capital. In the event there are insufficient moneys in the fund to meet obligations of the fund, the Secretary shall transfer to the fund such sums as may be necessary to fulfill such obligations. The Secretary may use, for the purpose of making any such transfer, the proceeds from the sale of any securities issued under the Second Liberty Bond Act are extended to include such transfers to the fund. There are authorized to be appropriated to the Secretary of the Treasury such sums as may be necessary to repay such transfers. Interest on sums so transferred shall be paid from time to time, at a rate determined by the Secretary, from fees credited to the fund.

(h) There is created a Loan Guarantee Policy Board which shall consist of a chairman appointed by the President, with the advice and consent of the Senate, and the Chairman of the Federal Reserve Board and the Secretary of the Treasury as members. The Board shall establish general policies (particularly with respect to the national or regional economic interest involved in the granting or denial of applications for guarantees under this section and with respect to the coordination of the functions of the Secretary under this section with other activities and policies of the Government) which shall govern the granting or denial of applications for guarantees under this section.

(i) Any Federal Reserve Bank is authorized to act as fiscal agent of the Secretary in the making of contracts of guarantee under this section and in otherwise carrying out the purposes of this section. All funds necessary to enable any such fiscal agent to carry out any guarantee made by it on behalf of the Secretary shall be supplied and disbursed by or under authority from the Secretary. No such fiscal agent shall have any responsibility or accountability except as agent in taking any action pursuant to or under authority of the provisions of this section. Each such fiscal agent shall be reimbursed by the Secretary for all expenses and losses incurred by it in acting as agent on behalf of the Secretary, including (without being limited to) the expenses of litigation.

(j) (1) Except as provided in paragraph (2) and (3) of this subsection, this section and all authority conferred thereunder shall terminate upon the expiration of one year after the date of enactment of this Act, or upon the establishment of an Emergency Loan Guarantee Corporation pursuant to section 3, whichever is the earlier.

(2) If, at the expiration of one year after the date of enactment of this Act action on the Emergency Loan Guarantee Corporation is still pending before the Congress, the authority conferred under this section shall continue until such action is completed or upon the establishment of the Corporation, whichever is the earlier.

(3) The termination of this section and the authority conferred thereunder shall not affect the disbursement of funds under, or the carrying out of, any contract, guarantee, commitment, or other obligation entered into pursuant to this section prior to such termination, or the taking of any action necessary to preserve or protect the interests of the United States in any amounts advanced or paid out pursuant to this section.

REPORT; ESTABLISHMENT OF EMERGENCY LOAN GUARANTEE CORPORATION

SEC 3. Not later than one year after the date of enactment of this Act, the Secretary shall submit to the Congress a full and complete report of his operations under section 2, together with his recommendations with respect to the need for the establishment of an Emergency Loan Guarantee to provide for the continuation of a loan guarantee assistance program comparable to that authorized under section 2. If the Secretary recommends the establishment of such corporation, he shall, at the time of submitting such report or at anytime thereafter but prior to the expiration of one year after the date of enactment of this Act, submit to the Congress a charter for the organization of such corporation. Such charter shall take effect, and the Emergency Loan Guarantee Corporation shall become a body corporate with the powers stated in such charter, upon the expiration of the first period of sixty calendar days of continuous session of the Congress following the date on which the charter is transmitted to the Congress, if between the date of transmittal and the expiration of such sixty-day period there has not been passed by either the Senate or the House of Representatives a resolution stating in substance that it does not approve the proposed charter or the establishment of the proposed corporation. For the purpose of the foregoing, there shall be excluded, in the computation of such sixty-day period, the days on which either the Senate or the House of Representatives is not in session because of adjournment of more than three days to a day certain or an adjournment of the Congress sine die.

PROCEDURE WITH RESPECT TO DISAPPROVAL RESOLUTIONS

SEC 4. The provisions of sections 910–913 of title 5, United States Code, shall be applicable with respect to the procedure to be followed in the Senate and House of Representatives in the exercise of their respective responsibilities under sections 2 (d) and (3) of this Act; except that references in such provisions to a "resolution with respect to a reorganization plan" shall be deemed for the purposes of this section to refer to a resolution of disapproval under sections 2 (d) and 3.

Mr. JAVITS. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial published in the New York Times of yesterday, similarly approving the concept with respect to the loan guarantee bill.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FAILING COMPANIES

The nation is facing a problem that it has not confronted to a comparable degree since the Great Depression: what should the Federal Government do about private enterprises that are failing?

This issue has emerged dramatically with the bankruptcy of the Penn Central Railroad, the threat to the financial solvency of the Lockheed Aircraft Corporation, and the liquidation or merger of a number of failing stockbrokerage firms.

These three cases have greater differences than similarities. Admittedly the threat to railroad companies, aircraft producers and stockbrokers—as well as to companies in other fields—was intensified by the prolonged economic slowdown and liquidity squeeze. Although that threat is not yet over, there is reason to believe that the greater flow of money and credit to the economy will in the months ahead prevent a widening wave of business failures. The country is almost certainly not on the brink of anything resembling the universal disaster of the Great Depression of the 1930's.

In the actual circumstances, it would be most unwise for the Government to launch a massive and indiscriminate policy of bailing out private companies that are in trouble. A genuine question arises when an industry is providing an essential public service, viz., the railroads; but even here, as in the specific case of the Penn Central, we do not feel the Government should be called on to provide the hundreds of millions of dollars that would have been needed to save it from bankruptcy. The railroad can continue to operate under its court-appointed trustees.

But the most able trustees in the world will not be able to solve the problem of the Penn Central if existing Government regulations or the structure of the transportation market bars the way to an effective managerial and technological solution. Regulations barring the company from setting competitive rates appropriate to the cost of the services provided or from the trying new approaches to combine rail with other modes of transportation have to be relaxed.

The Penn Central case can be used as a crucial experiment in determining whether a more viable solution to national transportation problems can be found. If the experiment fails, then there may have to be full nationalization of this railroad—and perhaps of others as well.

The Lockheed case is quite different. Lockheed has been involved in a risky business; its customers are not only the United States Government but many domestic and foreign airlines. Government has a job to do in easing the transition problems for the workers affected, but in the long run there is no basic public interest in preserving a competitive market.

The failure of stockbrokers is still another type of case. Here the problem is more analogous to that of commercial or savings banks, which are holding other people's money. The Federal Government should certainly help develop insurance schemes (like the Federal Deposit Insurance Corporation for the banks) to protect individual investors from mismanagement by stockbrokers, but this need not involve propping up the individual stockbrokers.

Thus, different cases of impending failure or actual bankruptcy need to be handled differently. Federal Reserve Chairman Arthur F. Burns and Senator Jacob Javits of New York have proposed a new Federal agency to guarantee loans to credit-worthy businesses that are having difficulty in borrowing money through normal banking channels. This proposed agency has been likened to the old Reconstruction Finance Corporation that was created during the Hoover Administration and heavily used by the New Deal to keep sinking corporations afloat in the Depression.

The loan guarantees of any such agency should be strictly limited to companies clearly essential to the national interest. Companies should not be bailed out just because they are big or because they produce a defense product—if other companies that are viable and better managed can produce it. The United States must not slide into a highly inefficient form of collectivism under the pretense of preserving a private enterprise economy.

FARM BILL SHENANIGANS

Mr. WILLIAMS of Delaware. Mr. President, in the July 23, 1970, issue of the Washington Daily News there appeared an excellent editorial entitled, "Farm Bill Shenanigans."

This article calls attention to the decision of the House Agriculture Committee and the Department of Agriculture to support a $55,000 ceiling per crop under the new program.

Recently the Senate passed a $20,000 ceiling per farm—on all crops—and this proposal is now in conference as a part of the Agriculture appropriation bill.

On previous occasions the House has likewise approved a $20,000 limitation, and its acceptance as a part of the new agriculture program would result in an annual savings of at least $250 million per year more than would be saved under the committee action.

There could be no possible justification for increasing this limit, particularly at a time when our Government can only pay these subsidies with borrowed money; and should this legislative proposal come before the Senate a determined effort will be made to reduce the ceiling to not exceeding the $20,000 limitation per individual or corporate type farmer.

I ask unanimous consent that the editorial referred to be printed at this point in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FARM BILL SHENANIGANS

Two weeks ago the Senate decided to clamp a $20,000-a-year lid on the amount any farmer could get from the government for taking part in the federal crop control problem. It was a good idea, calculated to save the taxpayers $300 million to $400 million a year.

But now the bill is in the House of Representatives—and some rather strange (if predictable) things are happening.

Instead of a $20,000 lid, the House Agriculture Committee has recommended a $55,000 lid of the next three years. And instead of $20,000 per farmer, the lid would be $55,000 per crop.

Thus, a farmer—theoretically at least—could get $55,000 for not raising wheat, $55,000 for not raising cotton and another $55,000 for not raising feed grains.

Save $300 million? The latest estimate is $58 million, and even that is doubtful if the big corporate farmers find ways to divide their land and collect separate subsidies for each parcel.

Already exempted from the proposed lid by the House committee are the farms owned by states and municipalities. This means, for example, that Montana could continue to get $640,000 a year from Uncle Sam for not planting crops on state-owned land.

There is always the chance, of course that the $20,000 subsidy limit approved by the Senate will be accepted by the House, as it should be. In fact, the House has accepted (and the Senate rejected) a $20,000 limit twice before.

But the chairman of the House Agriculture Committee, Rep. W. R. Poage, D-Tex., says the big guns of both parties favor the higher figure.

And Agriculture Secretary Clifford M. Hardin, who apparently speaks for the Administration, says he'll oppose any lid lower than $55,000 per crop.

Even a $55,000 ceiling is better than the present unlimited subsidy program, which permitted seven corporate farms to collect more than $1 million apiece (one collected more than $4 million) from the taxpayers last year.

But the shenanigans will continue as long as the federal government spends billions ($3.7 billion last year) to jack up farm prices by keeping crops out of production.

At some point, Congress is going to have to phase out the subsidy program and let the farm markets find its own level. Then there won't be any need to build loopholes into the law

MEDICARE AND MEDICAID ABUSES

Mr. WILLIAMS of Delaware. Mr. President, recently the Finance Committee has been holding extended hearings on abuses under the medicaid and medicare program. Recently, under date of July 23, the Comptroller General submitted to Congress a report on the operation of the medicaid program in the State of California. I shall ask that appropriate excerpts from this report be printed in the RECORD. It points out that in a series of nursing homes which were spot checked in that State they found there were many instances where the medicaid program was being charged for the care of patients after they had died and been buried, and in other cases charges were continued after the patients had been discharged and moved back to their homes.

There were other instances of duplicate payments under medicaid and medicare for the same services.

I ask unanimous consent that pages 16, 17, 18, and 19 of the report to the Congress on problems in approving and paying for nursing home care under the medicaid program in California by the Comptroller General of the United States be printed in the RECORD at this point.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

APPROVAL OF CARE AFTER PATIENTS' DEATH OR DISCHARGE

We noted that, in some cases, Medi-Cal Consultants (or other county representatives) approved requests for additional nursing home care even though the patient had died or had been discharged from the nursing home.

As noted earlier (see p. 10), nursing home operators are required to notify the Consultant within 48 hours of the death or dis-

charge of Medi-Cal recipients. Such notice was to be given through the use of form MC 171. Although information on the termination of care to patients was being provided to the Consultants within the specified 48 hours, we noted instances where the information relating to the death or discharge of patients was apparently not being used by Consultants in acting upon subsequent requests for the approval of nursing home care. Consequently, Medi-Cal Consultants approved some requests for nursing home care even though the patient had died or had been discharged from the nursing home. Following are several examples of nursing home care approved after the patient's death or discharge for future periods of time.

Medi-Cal patient	Date of death or discharge	Date additional nursing home care was approved	Number of days elapsed between date of death or discharge and date of approval [1]
A	Jan. 10, 1968	Apr. 23, 1968	104
B	Nov. 14, 1968	Mar. 24, 1969	130
C	Aug. 18, 1968	Sept. 17, 1968	30
D	Dec. 3, 1968	Jan. 8, 1969	33
E	Mar. 5, 1969	Mar. 26, 1969	21

[1] The nursing homes in these cases did not bill the Medi-Cal program for services beyond the date of death or discharge of the patient.

We recognize that it seems improbable to have a nursing home, on one hand, notify the Consultant of the death or discharge of a patient and to have that same nursing home, on the other hand, subsequently request and obtain the Consultant's approval for the continuation of nursing home care. Nevertheless, this situation occurred and further illustrates, in our opinion, the ineffectiveness of the present system of controls in approving nursing home care under the program.

PAYMENTS AFTER PATIENTS' DEATH OR DISCHARGE

Our review revealed that nursing homes claimed, and were paid under the Medi-Cal program for, nursing home care after the patients had died or had been discharged from the nursing home. This condition, in our opinion, was caused in part, by the failure of the Department of Health Care Services to adequately assure itself that the fiscal agent had established adequate controls to preclude such payments.

Of 260 Medi-Cal recipients who had received nursing home care, we found 22 cases in which nursing home operators were paid for periods of time after the recipients' death or discharge. Our selection of the cases reviewed was made of all recipients for whom services were recently terminated and for whom records were available in the 10 nursing homes at the time we made our visits. The number of days of care for which these nursing homes were paid after services had been terminated ranged from 1 to 21 days, and the amount of payments ranged from $11 to $289. In total, 123 excess days claimed resulted in excess payments of $1,577. The following schedule presents this information for each county.

County	Nursing homes visited	Number of patient cases examined	Number of cases in which payments were made for periods after death or discharge	Excess	
				Days claimed	Amount paid
Alameda	2	53	4	24	$330
Fresno	2	21	1	16	188
Los Angeles	4	128	9	30	354
Santa Clara	2	58	8	53	705
Total	10	260	22	123	1,577

In 20 of the above 22 cases, neither the nursing home nor the fiscal agent was aware of the overpayments, and in two cases, the nursing home—upon discovery of the error—had initiated action to offset the excess amounts paid against subsequent claims. Officials of the fiscal agent advised us that they would make the necessary adjustments for the excess amounts paid in the cases we identified. The following schedule shows the range of excess days.

Number of excess days paid:	Number of recipients
1	12
2 to 10	5
11 to 20	4
21	1
Total	22

HEW has not issued any specific guidance to the States on the payment policy to be followed in paying for care on the date of admission or the date of discharge. Department of Health Care Services officials advised us that, from the beginning of the Medi-Cal program, it had been their policy to pay nursing homes for the date of admittance but not for the date of death or discharge of the patient. Although this policy had not been included in the Medi-Cal regulations, these officials advised us that the fiscal agents had been informed of this policy on several occasions since the inception of the program in March 1966. In November 1966, Hospital Service in Southern California advised the nursing home operators located in its geographical area that payment would not be made for the last day of nursing home care. Hospital Service of California officials, on the other hand, advised us that they had not issued such a statement to the nursing homes operators in its area. Hospital Service of California officials stated, however, that their claims examiners were instructed to disallow claims for the last day of care. These officials added that they were aware that this policy had not been consistently applied by their claims examiners.

In discussing the cases of overpayment with the various nursing home officials, we were told that the excess claims were generally caused by errors made by their clerical staff and the fiscal agents' inconsistency in paying claims. Fiscal agent officials advised us that they had processed these claims because they had no way of knowing that a patient had died or had been discharged and that the claims were submitted on an approved form MC 170.

Under existing procedures, the fiscal agents must rely solely upon the nursing home operators to submit accurate information relating to the period of time for which nursing home care is provided to the program recipient. Such information is not submitted to the fiscal agent from any other source (such as the county social worker or Medi-Cal Consultant), nor are any periodic examinations performed by the fiscal agent for the purpose of ascertaining when service to a recipient was discontinued.

Mr. WILLIAMS of Delaware. In addition, Mr. President, I am referring this report to the Attorney General with the suggestion that this appears to be a clear indication of fraud and that appropriate steps be taken.

Also I call attention to the laxity of administration under both medicaid and medicare which did not detect these dual billings and the overcharges until after the General Accounting auditors called it to their attention.

There is no excuse for this loose management on the part of the Government agencies.

HOW TO WIN AND STILL LOSE

Mr. HANSEN. Mr. President, the business and finance section of yesterday's New York Times contained a lead article about this country's oil industry.

It proves to be highly interesting reading and serves as an excellent summary of where this vital industry finds itself today.

The article, by William D. Smith, deals with oil imports, tanker rates, and the tragic possibility of a natural gas shortage in this country.

Because the above subjects are ones on which I have spoken on the floor of the Senate, because of their importance to the State of Wyoming in particular and to the viability of the oil industry in general, the article has more than passing interest for a number of us.

All in all, Mr. President, the New York Times article is an important one and serves to point up the situation in which we find ourselves. It is vital, I believe, that more persons within the Congress and elsewhere fully understand the consequences of possible executive and legislative actions.

I ask unanimous consent that the article by Mr. Smith be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

U.S. OIL INDUSTRY REGRETS IT WAS RIGHT

(By William D. Smith)

If an industry could have a facial expression, the United States oil industry would be wearing a bitter-sweet smile.

The smile would be a result of having seen recent events prove some of its serious forecasts and urgent warnings correct.

The pleasure, however, is mitigated by the pain that the industry is nonetheless suffering from having seen its predictions come true.

Throughout the long and heated political controversy over oil imports, the industry has maintained that foreign sources of petroleum were relatively undependable and that their lower-than domestic price levels could be quite ephemeral. For this thesis oilmen were raked over the political coals. The price of Middle East crude oil is now at least 75 cents a barrel more than domestic.

For more than a decade oil and gas producers have warned that Federally set "low" natural gas prices would dampen the incentive to look for gas and thus produce a future shortage. Again this was treated as a totally self-serving ploy.—"There is a shortage of natural gas today," Secretary of the Interior Walter Hickel reportedly explained.

John Emerson, energy economist of the Chase Manhattan Bank recently went even further, "Never before in this century have

we faced such serious and widespread shortages of energy. These shortages are upon us now."

The industry warned that rushing into low-sulphur anti-pollution legislation and regulations might produce supply problems.—There appears a very good chance that there will be a shortage of low-sulphur residual fuel oil this winter, forcing cities and corporations to choose between lack of heat and power and the present practicality of recent anti-pollution laws.

Being correct, at least on the surface level, gives the industry no reason to gloat. In each instance it is costing the oil companies money. If they pass on the cost, as they probably will have to, it cuts into what little affection the public has left for the industry.

"No one will remember that Senator Kennedy or Senator Muskie and other so-called consumer representatives have advocated policies that have often ultimately resulted in higher costs. They will only blame us for raising the price of gasoline or heating oil," a vice president and counsel for a major company commented last week.

The executive's statement is probably too one-sided. The present situations are the result of many complex forces; some alterable, some not.

Nonetheless, some politicians and academicians, past and present, may have been guilty of thinking that a big desk and pet theories were a substitute for the hard facts of industrial life.

There is a very good chance that by fall the American consumer may be paying more for gasoline, natural gas and residual fuel. This means that the cost of running his car, his home and his factory will cost more.

These major impacts on the battle with inflation have not gone unnoticed in Washington although it appears that no major constructive actions have as yet occurred.

The leap in the price of overseas crude oil is a result of soaring tanker costs. Few analysts expect these costs to go down in the very near future.

But if tankers are the central reason, the Arab-Israeli war is the underlying cause.

On May 3 in Syria, the Trans Arabian Pipeline was knocked out of commission by an errant or deliberately aggressive bulldozer. The Syrian Government has not allowed its repair, preventing 500,000 barrels a day of Saudi Arabian crude from reaching the Mediterranean.

At the other end of the Mediterranean the Libyan Government cut back oil production by 15 per cent, or 500,000 barrels a day.

The loss of almost 1 million barrels a day of oil west of Suez and close to world markets has strained tanker capacity. Replacement of this oil with oil from the Persian Gulf around South Africa takes six to eight times the tanker capacity.

CHARTER RATES RISE

Spot charter rates have risen to their highest level since the 1956 Suez crisis and are more than 50 per cent higher than during the 1967 Arab-Israeli war.

Persian Gulf oil is now coming into the United States at about $4.50 a barrel compared with Louisiana crude delivered to East Coast refineries at $3.75.

There is no chance of a shortage, however, because Texas and Louisiana will increase their production to meet the need. There is a very real chance of consumer price increases.

The Oil and Gas Journal, a trade publication, reports that Professors Phillip Areeda and James McKie, two of the chief advocates of sharply increased oil imports, have now backed off considerably from that position.

F.P.C. REGULATION UPHELD

The natural gas supply and demand controversy is a far older argument. In 1954 the Supreme Court ruled that natural-gas producers were subject to Power Commission. In 1960 the regulatory agency began fixing well-head prices for all gas sold interstate. The Supreme Court upheld this right again in 1965 despite vigorous cries of outrage from producers, who said it would kill incentive to drill.

Time has proven the oilmen right. Wildcat drilling dropped 40 percent between 1956 and 1968. Geophysical activity fell 56 percent.

Some of the drop off may have been artificial; just to show the Government. Nonetheless the results are uncontestable. In 1969 the United States proved reserves of natural gas fell 12,241 trillion cubic feet, the largest in the nation's history.

The previous record drop was in 1968, when they fell 5,548 trillion cubic feet. These are the only declines in the history of the industry.

POSITIONS CHANGED

The F.P.C. is now trying to rectify the situation by raising prices. Some of the people who supported the lower prices several years ago are now in the forefront of those pushing higher prices.

The Interior Department is trying to speed up lease sales of suspected gas fields, but is running into opposition from Conservationists. But even if this opposition is overcome, it will take from three to seven years for these areas to begin producing.

In the meantime Canadian sources of gas can be tapped although Canadian-American relations on energy matters are at an all-time low. Liquefied natural gas quite possibly will reach this country from Algeria, Nigeria or Venezuela. Contracts have already been signed to import Algerian L.N.G., but the Algerian Government's recent nationalization of American oil company properties puts this source of L.N.G. in a very questionable position.

SUPPLY OUTLOOK TIGHT

The supply outlook for this winter is tight. Industry sources say that there will be enough to heat homes, but that the industrial market, which accounts for about 50 percent of total sales, may be in bad shape. Many distributors already have been forced to impose severe limitations on new industrial loads, and there is a real possibility that deliveries to existing customers may have to be curtailed, according to J. W. Heiney, president of the American Gas Association.

It would seem almost certain that consumer prices will have to go up, and possibly sharply.

The crude oil reserve situation is not much better, according to the American Petroleum Institute. Last year crude oil reserves dropped to 29.632 billion barrels, the lowest level in 15 years.

The A.P.I. explained the situation simply by saying that lack of incentives had led to a long and steady decline in exploratory drilling during a period of mushrooming production and consumption.

The oil industry in recent weeks seems to have won a lot of points, but through no fault of its own, it well may be losing the game.

MANY BACK TRADE BILL

Mr. HANSEN. Mr. President, yesterday in the business and finance section of the Washington Post, appeared a most illuminating article entitled, "Many Liberals Back Trade Bill."

The measure, H.R. 16920, introduced by Chairman WILBUR MILLS and 225 other Representatives is designed to provide for orderly trade and, as Stanley Ruttenberg points out, many of the bill's supporters believe that passage of this important legislation is not inconsistent with advocacy of a liberal trade policy.

As the article notes—

In short, supporters of the Mills bill who believe in liberalized trade perceive some very real and urgent problems that require attention. Opponents of the Mills bill simply refuse to recognize that the period of reconstruction following World War II has long since passed, that this is now 1970, and that the economies of our major trading partners have been rebuilt and are flourishing; and that, despite such changed circumstances, these nations retain a variety of barriers to trade which the critics of the Mills bill tend to brush aside as if they were inconsequential.

Mr. President, I commend to my colleagues this article which exposes many of the myths concerning world trade today, and I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post, July 26, 1970]

MANY LIBERALS BACK TRADE BILL

(The author of this article, former assistant secretary of Labor, is now a manpower consultant in Washington. One of his clients is the Amalgamated Clothing Workers of America, which supports textile quota legislation.)

(By Stanley Ruttenberg)

It is perhaps a sign of the times that many organizations and individuals normally aligned with advocates of liberal trade policies now find themselves charged with protectionism. They are the target of criticism by erstwhile allies because of their support for H.R. 16920, the bill introduced by Chairman Wilbur Mills of the Ways and Means Committee and 255 other congressmen designed to provide for orderly trade in textile, apparel and leather footwear.

Among analysts and observers who have, for any length of time, been close to the trade scene, none of this should have come as a surprise—not the Mills bill; not the support that it has evoked among those who are truly committed to expanding world trade and certainly not the attacks that have been leveled at both by those who regard themselves as the only true defenders of the faith.

This latter group may reject the idea, but the plain and simple fact is that many of those who have been supporting H.R. 16920 believe as I do that such a posture is not at all inconsistent with advocacy of a liberal trade policy.

The bill that was introduced by Chairman Mills—himself a long-time free trade advocate—is considered by its supporters to be the best way to assure continued expansion of trade between nations. Strangely enough—and to the dismay of the critics who have from the outset viewed the bill as the potential opening salvo of an all-out trade war—liberal trade advocates have lent support to H.R. 16920 in order to forestall the wave of protectionism and the resulting trade war that they feel would be certain to materialize if the ideological rigidity of the critics is permitted to prevail.

In short, supporters of the Mills bill who believe in liberalized trade perceive some very real and urgent problems that require attention.

Opponents of the Mills bill simply refuse to recognize that the period of reconstruction following World War II has long since passed, that this is now 1970, and that the economies of our major trading partners have been rebuilt and are flourishing; and that, despite such changed circumstances, these nations retain a variety of barriers to trade which the critics of the Mills bill tend to brush aside as if they were inconsequential.

For example, the value added tax prevalent in countries of the European Economic Community has the effect of raising prices on imports and reducing prices on exports; Japan

not only restricts the free flow of capital, but also maintains import quotas on scores of key commodities; the United Kingdom restricts coal imports; the variable levy and price-support arrangement employed by the EEC for agriculture is its adaptation of the American Selling Price principle; the EEC and the United Kingdom have agreements with textile-producing Asian countries effectively controlling the flow of textiles. And this does not even begin to exhaust the list of "exceptions" to the principles upon which free trade and reciprocity are based.

It is not enough to offer as the rationale for policy, as do the critics of the Mills bill, that the United States should do what is right regardless of the behavior of others. The possible adverse consequences of such a policy—on jobs and income, and in the almost-certain trade war that can ensue—are too great.

The upsurge in textile and apparel imports over the past decade has been tremendous, particularly with respect to products of manmade fiber and especially during the latter part of the decade. By the end of the decade of the 1960s, U.S. imports of textile and apparent products were in excess of $2.1 billion per year—more than double their level in the early part of the decade. So far as products of manmade fiber are concerned, import volume—measured in square yards—rose by more than 200 per cent between 1965 and 1969 alone, while the apparel portion of that import volume grew by 500 per cent.

If the critics of the Mills bill are accurate, this uncontrolled flood of textile and apparel imports should have rebounded to the benefit of American consumers by holding down prices. The available evidence points in the apparel direction.

Price increases of apparel items were responsible for more of the total increase in the Consumer Price Index during the latter part of the decade—when the volume of imports was ballooning—than during the first part of the decade.

It stands to reason that the domestic apparel industry, in which average hourly earnings in 1969 were $2.31, cannot be expected to compete successfully with imports produced by labor which is paid as little as the U.S. equivalent of 26 cents per hour (as in Hong Kong) or 39 cents per hour (as in Japan). American producers in this labor-intensive industry simply do not have a countervailing advantage in technology with which to overcome the advantage in labor costs that these kind of wage rates give to foreign competitors.

Critics of the Mills bill have been inclined to reject any suggestion of job losses due to the growth of textile and apparel imports, but they ignore the hundreds of thousands of jobs—more than 200,000 in apparel alone during the 1960s—which would have been created in the absence of the imports.

Without adequate safeguards, imports will continue to grow at an excessively rapid rate, undercutting both jobs and labor standards without necessarily benefitting the consumers. To delay recognition of this reality—and the development of a thoughtful remedy—will not eliminate the problem. Rather, it will assure that the eventual response and reaction—and there will be one—will be that much more explosive.

A GROWING DANGER

Mr. HANSEN. Mr. President, the Arizona Republic recently printed an editorial entitled "Will Young America Destroy Its Heritage?" which has a great deal of food for thought.

The editorial, dealing with America's youth and the way some of them have protested in recent months, carries an important statement.

I commend it to the attention of my colleagues and all of those who have an opportunity to read the RECORD, and I ask unanimous consent that the editorial be printed in the RECORD at this point.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WILL YOUNG AMERICA DESTROY ITS HERITAGE?

Although less than 10 per cent of American youth has been participating in the violent, senseless protests about their own colleges and universities, there is a growing danger that the noisy, militant leaders of America's young revolutionaries will lure more and more students to their cause.

The vast majority of students are serious-minded young people striving to get an education. They have, so far, refused to enter into the "gory glee" of hell-raising on the campuses. But no leadership among the silent majority of students has arisen to challenge the revolutionaries.

The president of the student body at a large university was elected by a vote of 1,000 to 300. Only 1,300 out of 23,000 students voted in that election. They simply weren't interested in the militant program of the radical leaders. However, the student who was elected president claims that he represents the entire student body, and demands a voice in the Board of Regents' meetings, in spite of the fact that 90 per cent of the students wanted no part of his program.

Unless the students who believe they go to college to get an education rather than to start a revolution begin very shortly to organize and challenge the revolutionaries on the campus, they may find they have sat silent while their precious heritage of freedom and opportunity goes down the drain in a blazing, destructive, senseless revolution led by leaders who don't know what they want or what they would do with it if all their demands were granted. They want a noisy voice in everything, but beyond that they know not what they are shouting about.

A sober observation about America's youth recently came from England, where the editor of the London Daily Telegraph declared that no generation of young people ever had so great a heritage of freedom and opportunity as today's American youth.

Under the caption "Revolt of the Pampered," the editor of the London Daily Telegraph wrote:

"America is the victim of its national myth. It entered history proclaiming the rights of man; its Constitution is aimed at fostering freedom at all costs. Its young have been brought up largely on an educational theory which attaches supreme importance to self-expression. Is it odd that it should lead the world in rebellion or that its volunteer forces should sometimes lack the virtue of unrelenting discipline? Yet one marvel does defy explanation. Why should America's pampered and idolized student youth, living in a country that enjoys freedom and prosperity in unprecedented degrees, turn all its righteous anger, not against the despotisms that rule most of the rest of the world, but against America itself?"

FAMILY PLANNING AND POPULATION RESEARCH ACT

Mr. JAVITS. Mr. President, I make reference to the passage of S. 2108, the family planning and population research bill, through the Senate, which was passed on July 14, on the Consent Calendar.

I invite attention to the problems which were inherent in the bill, which went through the Committee on Labor and Public Welfare, of which I am the ranking minority member, and to the resolution we made of a very difficult difference of opinion on a center for population and family planning as contrasted with a particular official in the Department of Health, Education, and Welfare who would be in charge of this activity.

I commend to my colleagues another significant provision of the bill which made it very clear that family planning services shall be provided only on a voluntary basis, shall not be a prerequisite or impediment to eligibility for or the receipt of other benefits or participation in any other programs of financial or medical assistance of the United States.

Mr. President, I feel that this is a model example of voluntarism to deal with any feeling of restraint or inhibition which any person might have because of religion or other belief.

AUTHORIZATION FOR CERTAIN ACTION TO BE TAKEN DURING ADJOURNMENT OF THE SENATE TODAY

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the Secretary of the Senate be authorized to receive messages and duly enrolled bills from the House of Representatives, and that the Vice President, the President pro tempore, and the Acting President pro tempore be authorized to sign duly enrolled bills during the adjournment of the Senate until midnight tonight.

The PRESIDING OFFICER. Without objection, it is so ordered.

CONCLUSION OF MORNING BUSINESS

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that morning business be closed and that the Senate proceed to the consideration of the unfinished business.

The PRESIDING OFFICER. Without objection, it is so ordered.

AUTHORIZATION OF APPROPRIATIONS FOR MILITARY PROCUREMENT AND OTHER PURPOSES

The Senate continued with the consideration of the bill (H.R. 17123) to authorize appropriations during the fiscal year 1971 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and other weapons, and research, development, test, and evaluation for the Armed Forces, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes.

PROGRAM

Mr. BYRD of West Virginia. Mr. President, the Senate will shortly adjourn until 10 o'clock tomorrow morning.

There is a special order under which the Senator from Missouri (Mr. SYMINGTON) will address the Senate tomorrow for a period not to exceed 30 minutes, immediately after the disposition of the reading of the Journal, following which there will be a period for the transaction of routine morning business, and after

which the Senate will proceed to the consideration of the conference report on the education appropriation bill. I have discussed the matter with the able Senator from Washington (Mr. MAGNUSON), and it is hoped that we may get started on the education appropriation conference report by or before 11 a.m.

ADJOURNMENT UNTIL 10 A.M. TOMORROW

Mr. BYRD of West Virginia. Mr. President, if there be no further business to come before the Senate, I move, in accordance with the previous order, that the Senate stand in adjournment until 10 o'clock tomorrow morning.

The motion was agreed to; and (at 4 o'clock and 55 minutes p.m.) the Senate adjourned until tomorrow, Tuesday, July 28, 1970, at 10 a.m.

NOMINATIONS

Executive nominations received by the Senate July 27, 1970:

DIPLOMATIC AND FOREIGN SERVICE

The following-named persons for appointment as Foreign Service Information officers of class 2, consular officers, and secretaries in the Diplomatic Service of the United States of America:

John P. Clyne, of the District of Columbia.
Horace G. Dawson, Jr., of Louisiana.
Isa K. Sabbagh, of Maryland.
Theodore A. Wertime, of Pennsylvania.

Now Foreign Service officers of class 3 and Secretaries in the Diplomatic Service, to be also consular officers of the United States of America:

Larry W. Roeder, of California.
Orme Wilson, Jr., of the District of Columbia.

For appointment as Foreign Service information officers of class 3, consular officers, and Secretaries in the Diplomatic Service of the United States of America:

Rober W. Barr, of Illinois.
Fred Becchetti, of Arizona.
Brian Bell, of Nevada.
Donn M. Chown, of Michigan.
Vytautas A. Dambrava, of the District of Columbia.
Stuart Halpine, of Connecticut.
J. Frederick Hartley, of Florida.
Peter H. Jacoby, of Washington.
Miss Marilyn Johnson, of Massachusetts.
Boulos A. Malik, of the District of Columbia.
Edward H. Mattos, of California.
Arthur J. McTaggart, of Indiana.
R. Ellsworth Miller, of California.
Robert W. Mount, of Nevada.
E. V. Niemeyer, Jr., of Texas.
Melvin L. Rizzie, of Massachusetts.
Joseph J. Sandel, of the District of Columbia.
Sterlyn B. Steele, of California.
Joe B. Vogel, of Texas.
Richard A. von Glatz, of Illinois.
Stanley A. Zuckerman, of Texas.

For appointment as Foreign Service officers of class 4, consular officers, and secretaries in the Diplomatic Service of the United States of America:

Ralph C. Meima, Jr., of Maryland.
Julian C. Nicholas, of the District of Columbia.

For appointment as Foreign Service information officers of class 4, consular officers, and secretaries in the Diplomatic Service of the United States of America:

Bruce Ian Bertram, of Wisconsin.
Hugh L. Burleson, of Maryland.
Frank A. Chiancone, of New York.
John H. Corr, of Virginia.
Leland W. Cross, of Michigan.
Samuel P. Dieli, of Michigan.
James H. Feldman, of Tennessee.
Forrest Fischer, of Illinois.
Frank P. Florey, of Colorado.
John P. Foster, of New Hampshire.
Jack W. Gallagher, of Pennsylvania.
Robert W. Garrity, of Massachusetts.
Philip F. Gould, of the District of Columbia.
David L. Gray, of Illinois.
Miss Elinor Green, of New York.
F. David James, of Virginia.
Thomas M. Martin, of New York.
William F. Miller, of Pennsylvania.
Herwald H. Morton, of Illinois.
Phelon D. Peters, of California.
Robert B. Sandin, of Massachusetts.
John C. Scafe, of Kansas.
Harrison L. Shaffer, Jr., of Colorado.
Earle W. Sherman, of California.
Conrad S. Spohnholz, of Indiana.
Miss Diane Stanley, of Vermont.
Phillip F. Thomas, of Tennessee.
John H. Trattner, of Virginia.
John J. Tuohey, of New Jersey.
David Wei-Tsi Wang, of New York.

For reappointment in the Foreign Service as a Foreign Service officer of class 5, a consular officer, and a secretary in the Diplomatic service of the United States of America:

Edmund T. DeJarnette, of Virginia.

For promotion from Foreign Service officers of class 6 to class 5:

John A. Barcas, of New Jersey.
Miss Sheila-Kaye O'Connell, of Massachusetts.
Stephen H. Whilden, of California.

For appointment as Foreign Service information officers of class 5, consular officers, and secretaries in the Diplomatic Service of the United States of America:

Bruce Albright, of California.
James F. Channing, of Virginia.
Vance C. Pace, of Utah.

For promotion from Foreign Service officers of class 7 to class 6:

Nicholas S. Baskey, Jr., of Ohio.
Taylor Edward Clear, of Louisiana.
William H. Dameron III, of Georgia.
James W. Eighmie, Jr., of the District of Columbia.
Thomas Howard Gewecke, of Illinois.
Edward W. Gnehm, Jr., of Georgia.
George A. Gowen III, of North Carolina.
Hugh G. Hamilton, Jr., of Kansas.
Daniel T. Hickey, of Pennsylvania.
Michael R. Jackson, of Washington.
John F. Keane, of New York.
Ira R. Kornbluth, of the District of Columbia.
Sherwin W. Liff, of Illinois.
Randolph I. Marcus, of New York.
Robert Bruce McMullen, of Illinois.
John P. Modderno, of Maryland.
Warren P. Nixon, of Iowa.
Michael P. Owens, of Texas.
David A. Ross, of New York.
Ints M. Silins, of the District of Columbia.
Harry L. Stein, of New Jersey.
Tain Pendleton Tompkins, of the District of Columbia.
Benjamin Tua, of the District of Columbia.
Daniel F. Waterman, of New York.
Thomas Gary Weston, of Michigan.

For promotion from Foreign Service information officers of class 7 to class 6:

John P. Harrod, of Ohio.
Edward W. Holland, Jr., of New Jersey.
David H. Lambert, of California.
Miss Susan E. Lowe, of Pennsylvania.
Robert Petersen, of Ohio.
Jonathan L. Silverman, of New Jersey.
Larry R. Taylor, of Washington.
Robert K. Thomas, of Oklahoma.
Miss Carol E. Wilder, of Georgia.

For appointment as Foreign Service information officers of class 6, consular officers, and secretaries in the Diplomatic Service of the United States of America:

Miss Caroline Dunlop Millett, of California.
Ernesto Uribe, of Texas.

For promotion from Foreign Service officers of class 8 to class 7:

Ralph M. Buck, of Florida.
Miss Susan Jo Crane, of New York.
John Seabury Ford, of Ohio.
Christopher G. L. Jones, of the District of Columbia.
William A. Krug, Jr., of California.
David Jordan Mangan, Jr., of Wisconsin.
Luciano Mangiafico, of Connecticut.
Bennett A. Marsh, of New Jersey.
Miss Mary Helen Maughan, of Utah.
David Norman Miller, of Nebraska.
David J. Peashock, of Pennsylvania.
William H. Siefken, of Texas.
Earl Douglas Weniger, of New York.
Lyn F. Wheeler, of the District of Columbia.
Franklin Miller Zuttermeister, Jr., of Florida.

For promotion from Foreign Service information officers of class 8 to class 7:

C. Roy Fleming, Jr., of Tennessee.
Miss M. Kathleen Schloeder, of Virginia.

For appointment as Foreign Service officers of class 7, consular officers, and secretaries in the Diplomatic Service of the United States of America:

Edward Gordon Abington, Jr., of Florida.
Robert Thomas Banqué, of California.
John S. Boardman, of Ohio.
John V. Brennan, of Oregon.
George A. Chester, Jr., of California.
Claude L. Clement, of New York.
Michael Congdon, of Virginia.
Roger L. Dankert, of Nebraska.
Miss Lynne Bray Foldessy, of Pennsylvania.
Edward F. Fugit, of Illinois.
John Michael Garner, of Texas.
Cameron R. Hume, of New York.
Gilbert Matthew Johnson, of Michigan.
Harvey Lampert, of California.
Paul V. Ray, Jr., of Wisconsin.
David E. Reuther, of Washington.
David Roger Telleen, of Michigan.
Arlen Ray Wilson, of Wyoming.
Richard H. Zorn II, of Illinois.

For appointment as Foreign Service information officers of class 7, consular officers, and secretaries in the Diplomatic Service of the United States of America:

Miss Janet E. Collins, of Virginia.
Joseph S. Fazekas, of Maryland.
James W. Findley, of Virginia.
Robert B. Geyer, of Pennsylvania.
Robert F. Le Blanc, of Montana.
Miss Rosalind E. Leonard, of New York.
Donald J. Planty, of New York.
Stephan Strain, of New York.
John A. Swenson, of Wisconsin.

For appointment as a Foreign Service officer of class 8, a consular officer, and a secretary in the Diplomatic Service of the United States of America:

Thedore Eugene Strickler, of Pennylvania.

For appointment as Foreign Service information officers of class 8, consular officers, and secretaries in the Diplomatic Service of the United States of America:

Miss Betsy A. Fitzgerald, of Connecticut.
Gerald E. Huchel, of Illinois.
John R. Mankowski, of Wisconsin.

Foreign Service reserve officers to be consular officers of the United States of America:

Daniel Alhimook, of Maryland.
Edwin F. Atkins, of the District of Columbia.
James A. Higham, of Massachusetts.
Edwin J. Pechous, of Illinois.

Foreign Service reserve officers to be consular officers and secretaries in the Diplomatic Service of the United States of America:

Archie M. Andrews, of Virginia.
David V. Bernal, of Texas.

V. Harwood Blocker III, of Virginia.
Oliver B. Bongard, of Minnesota.
Robert E. Brown, of California.
Paul M. Byerly, of Virginia.
Paul J. Byrnes, of the District of Columbia.
George W. Cave, of New Jersey.
John E. Chere, of Virginia.
Miss Margaret Clapp, of Massachusetts.
Stephen L. Conn, of Maryland.
Gustaf Coontz, of Massachusetts.
Friedrich R. Crupe, of Maryland.
George W. Ford II, of Maryland.
Fritz H. Giesecke, of Virginia.
Hugh G. Haight, of Maryland.
John F. Hasey, of Virginia.
George T. Kalaris, of Maryland.
Donald K. Kanes, of Maryland.
Walter J. Kaufman, of Virginia.
Arthur W. Lewis, of Vermont.
Robert W. Magee, of Maryland.
Miss Mary E. Marchany, of the District of Columbia.
Samuel L. Martin, of New Jersey.
William E. McCarthy, of Virginia.
John W. Mertz, of Virginia.
George A. Naifeh, of Texas.
Harry L. Orr, of Michigan.
Peter D. Orr, of Washington.
Robert E. Owen, of Wisconsin.
Lawrence A. Penn, of New York.
Richard K. Pyle, of Rhode Island.
Howard E. Shetterly, of Ohio.
Miss Joan V. Smith, of the District of Columbia.
Gordon R. Sterner, of the District of Columbia.
Robert F. Thompson, of Virginia.
Robert E. Tierney, of Virginia.
Norman H. Tolman, of Massachuestts.
Kenneth F. Wesolik, of Maryland.
Robert H. White, of Virginia.

Foreign Service officer to be a secretary in the Diplomatic Service of the United States of America:

Robert C. Ames, of Pennsylvania.

Foreign Service staff officers to be consular officers of the United States of America:

Miss Elizabeth Ann Bowen, of North Carolina.

Miss Margaret M. Cooney, of Rhode Island.
Miss Marilyn Crocker, of California.
William H. Deardorff, Jr., of Virginia.
Condit N. Eddy, Jr., of New York.
Joseph F. Fagan, of Pennsylvania.
Peter D. Guadagno, of Virginia.
Miss Ovsanna Harpootian, of Rhode Island.
Irvin Hicks, of Pennsylvania.
James S. Huffman, of California.
Richard B. Jackman, of Virginia.
Joseph A. Malpeli, of Pennsylvania.
Edsel B. McCowan, of Alaska.
Miss Luby H. Miles, of Tennessee.
James W. Mitchell, of Virginia.
Miss H. Elizabeth Nussbaum, of Illinois.
Walter John O'Grady, of New York.
John D. Parker, of California.
Duane A. Rames, of South Dakota.
Miss Margaret E. Rea, of California.
Miss Eleanor M. Ridge, of Massachusetts.
Louis P. Russell, of the District of Columbia.
Robert L. Scott, of Oklahoma.
Paul Solomon, of California.
John H. Stein, of Rhode Island.
Dan J. Thal, of Virginia.
Malcolm L. Trevor, of Florida.
Elias K. Zughaib, of Maryland.

IN THE ARMY

To the Senate of the United States:

The U.S. Army Reserve officers named herein for promotion as Reserve commissioned officers of the Army, under provisions of title 10, United States Code, section 593(a) and 3384:

To be major general

Brig. Gen. Herbert R. Hackbarth, SSAN [redacted].
Brig. Gen. James M. Roberts, Jr., SSAN [redacted].
Brig. Gen. Leonard S. Woody, SSAN [redacted].

To be brigadier general

Col. Richard C. Allgood, Jr., SSAN [redacted] Quartermaster Corps.
Col. James W. Dunham, SSAN [redacted] Field Artillery.
Col. Charles L. Easterday, SSAN [redacted] Medical Corps.
Col. Rogers B. Finch, SSAN [redacted], Quartermaster Corps.
Col. Orville K. Fletcher, SSAN [redacted] Infantry.
Col. Naiff H. Kelel, SSAN [redacted], Military Police Corps.
Col. Robert D. Upp, SSAN [redacted], Judge Advocate General Corps.

The Army National Guard of the U.S. officer named herein for promotion as a Reserve Commissioned officer of the Army, under the provisions of title 10, United States Code, section 593(a) and 3385:

Col. Ronald R. Woodin, SSAN [redacted], Signal Corps.

IN THE NAVY

Vice Adm. Ralph W. Cousins, U.S. Navy, for appointment as Vice Chief of Naval Operations in the Department of the Navy pursuant to Title 10, United States Code, section 5085.

EXTENSIONS OF REMARKS

SENATOR HUGH SCOTT'S RECORD ON EDUCATION LEGISLATION

HON. WINSTON L. PROUTY

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Monday, July 27, 1970

Mr. PROUTY. Mr. President, in the decade of the sixties, Federal aid to education expanded vastly. While most communities now spend up to 70 or 80 cents of each local tax dollar on education, the role of the U.S. Government in education is very significant. The U.S. Office of Education provides leadership by fostering innovation and giving added basic support in many areas.

The Senator from Pennsylvania (Mr. SCOTT) has consistently supported increased Federal aid to education. He recognized the need to supplement State and local funds in order to provide the best possible education for our Nation's citizens, young and old. He also works to insure that Federal programs are responsive to local needs.

As the Republican leader, Senator SCOTT continues to support increased Federal aid to education. Because of his efforts in the past, Pennsylvania now receives greater educational assistance than ever before. In the future, Senator SCOTT will continue his efforts to insure a quality education for all children.

As the ranking minority member of the Education Subcommittee, I have always been gratified by the leadership Senator SCOTT has demonstrated in the field of education. His record is a most impressive one.

I ask unanimous consent that Senator SCOTT's record on education be printed in the Extensions of Remarks.

There being no objection, the record on education was ordered to be printed in the RECORD, as follows:

SENATOR HUGH SCOTT'S RECORD ON EDUCATION LEGISLATION

86TH CONGRESS

Legislation

S. 924—To establish for educational purposes, priority in award of television channels.

S. 1016—To provide for a 5-year program of assistance to school districts in meeting debt service on loans for construction of urgently needed elementary or secondary public school facilities.

Votes

Voted to authorize funds to pay principal and interest annually coming due on *school* construction obligations in the aggregate principal of $4 billion and allocating for each of the next 4 years $1 billion for school purposes.

Voted to increase authorized appropriations to $15 per school-age child.

Voted to authorize allocation of up to $600 million for school construction in each of the next 5 fiscal years.

87TH CONGRESS

Legislation

S. 3477—To provide program to assist States in general university extension education.

S.J. Res. 205—To propose amendment to U.S. Constitution permitting offering of prayer in public schools.

Votes

Voted to expand the utilization of television transmission facilities in our public schools and colleges, and in adult training programs.

Voted to withhold authorized funds from any State or school because of segregation.

Voted for the Mutual Education and Cultural Exchange Act of 1961.

88TH CONGRESS

Legislation

S. 259—To allow income tax deduction for certain amounts spent in providing a higher education for self, wife, dependents.

S. 1316—To establish a National Council on the Arts and a National Arts Foundation.

Votes

Voted *not* to reduce vocational education authorizations and *not* to eliminate programs for residential vocational schools and work-study grants.

Voted for the National Defense Education Act.

Voted to allow church-owned, operated or controlled colleges and universities to be eligible for Federal loans and grants.

Voted for the Higher Education Facilities Act of 1963.

89TH CONGRESS

Legislation

S. 2067—To increase educational assistance allowances to war orphans.

S. 2778—To provide financial assistance for the education of orphans and other children lacking parental support.

S. 2921—To provide a special school milk program for children.

S. 3405—To provide for sharing of Federal tax receipts with States for purposes of education.

Votes

Voted to liberalize the formula providing financial assistance to local school agencies for children of low-income families.

Voted for the Elementary and Secondary Education Act of 1965.

Voted for the Higher Education Act of 1965.

Voted to provide $5.2 million for matching grants to the States for community development training programs.

Voted to propose a Constitutional amendment to allow voluntary prayer in public schools.

Voted for the Elementary and Secondary Education Amendments of 1966.

90TH CONGRESS

Legislation

S. 2871—To broaden and expand food service programs for children under the National School Lunch Act.

S. 1033—To provide assistance to States for development and construction of comprehensive community colleges.

Votes

Voted to extend for 2 years: (1) the school disaster program, (2) authorization for school construction in federally impacted areas, and (3) the coverage of the Elementary and Secondary Education Act of 1965 for children attending Department of Defense schools and Indian children.

Voted to increase by $14.9 million funds for the Teacher Corps.

Voted for the Higher Education amendments of 1968.

Voted to authorize $50 million for Fiscal Year 1969 and 1970 for school lunch programs.

Voted for the Vocational Educational Amendments of 1968.

Voted to increase by $10 million funds for the school dropout prevention program under the Elementary and Secondary Education Act.

91ST CONGRESS

Legislation

S. 1788—To asssit in removing financial barriers to the acquisition of a post-secondary education by all those capable of benefitting.

S. 2422—That the Secretary of HEW shall prescribe maximum rate of interest allowed for student loans.

S. 2579—To authorize Commissioner of Education to make Vocational Education Opportunity Grants.

S. 3850—To provide for emergency assistance to the Nation's medical and dental schools.

Votes

Voted for the Insured Student Loan Emergency Amendments of 1969.

Voted to increase school aid for federally impacted areas by $60 million.

CHANCELLOR ALEXANDER HEARD OF VANDERBILT UNIVERSITY REPORTS TO PRESIDENT ON CAMPUS UNREST

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, July 27, 1970

Mr. EVINS of Tennessee. Mr. Speaker, Miss Mary McGrory, the distinguished columnist of the Washington Star, recently assessed a report prepared by Chancellor Alexander Heard, of Vanderbilt University, for President Nixon concerning student unrest.

Miss McGrory's analysis is perceptive and penetrating and because of the great interest of my colleagues and the American people in this matter I place Miss McGrory's column in the RECORD.

The article follows:

YOUNG GRIPES IN NIXON'S LAP

(By Mary McGrory)

The 40 pages of the extraordinary document Chancellor Alexander Heard of Vanderbilt University left at the White House as he departed can be summarized in a sentence: The President is wrong, the students are right.

He has been obtuse and maladroit in dealing with them, says Heard. He has been willfully and woefully out of touch. He has failed to recognize a "national emergency" of his own making.

The students, on the other hand, have shown the qualities he should have—commitment and compassion. They may be egocentric and emotional, and sometimes intolerant, but they are, for the most part, idealists, and their opposition to the war is not based on their draft status.

No report in the annals of special adviser literature has been so unsparing. Heard and his colleague, Dr. James E. Cheek, president of Howard University, had the run of the administration and 11 hours with the President. They saw and heard little to make them hope that the President learned the lesson of Cambodia, although they list in a paragraph some positive actions, like the signing of the 18-year-old voting bill and the withdrawal of tax exemptions from "segregation academies," which may or may not have been of their prompting.

The trouble, as the pair from academe see it, begins and ends with the President. Only he can set it right.

DIFFERENT LANGUAGES

The President and the young are talking different languages. He addresses them in Cold War rhetoric which has no meaning for them.

Obviously, the President addressed to them a complaint familiar to White House staffers: Why did the youth not erupt in moral indignation over the Soviet invasion of Czechoslovakia as they did over the Cambodian incursion?

Heard explains: "They feel that by the wrongness of our own policies, such as the war in Vietnam, we have lost our moral standing to condemn other countries. Second, there is an obsession with our own problems, a feeling that our own crises should occupy all our attention. Third, the fear of communism is less than existed a decade ago."

They lay waste the President's contention that the war is not the overriding grievance of the students. In his famous morning-after-Cambodia outburst at the Pentagon, the President said that if it wasn't the war it would be something else, "you name it."

THE "SALIENT"

The war, says Heard firmly, may not be the only issue, but it is the "salient" issue. And if the President expands it, or takes action that looks that way, then forget any normal activity on the campuses next fall.

Nixon's dawn visit to the students who had come here to demonstrate against the Cambodia invasion is praised as "a splendid act." But the choice of his subject matter—surfing and football—was calamitous.

"That offended students who felt immersed in a national tragedy," says the inexorable Heard, "like telling a joke at a funeral."

At the White House, the fear of repression among students is put down as "paranoia." Not according to the visiting specialists. They tell the President that the arrests of students and faculty "after your speech in Knoxville for 'disrupting a religious service' is taken in evidence, as are the attacks by construction workers on students in New York and on the veteran and his family in St. Louis."

They tell him, in effect, to stop playing games. He has to do the right thing and admit it. This would seem to be a reproach for such things as presenting the Family Assistance Plan, which is aimed at helping poor blacks, as an exercise in welfare reform and managerial efficiency.

"Policies adopted and steps taken that respond to the concerns of the disillusioned must be recognized and understood by them as doing just that—if their confidence is to be restored."

REMARKABLE PASSAGE

And in one remarkable passage, Heard warns the President about the dangers of know-nothingism. "Intellectual power ought not to be forgotten," he writes, and the words are underlined.

The White House may be startled at the vehemence of the report. Heard's associates will not. They had promised that he would not tell the President what he wanted to hear, and recall he said he would be the White House emissary from the campuses, not to them.

The hawks and the hardhats will be enraged at this stiff lecture but students should hail it. They might have written it themselves.

There is no comfort for the President. Congress is not mentioned. Neither is the vice president. "Sledge-hammer statements by public official impugning the motives of dissent" are cited, but from the context, they could be the President's own.

Peace in the generational war is up to him, Heard says, and he better get right to the negotiating table.

WHAT AMERICA MEANS TO ME

HON. J. CALEB BOGGS

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Monday, July 27, 1970

Mr. BOGGS. Mr. President, recently the Wilmington Lodge of Elks No. 307 of Wilmington, Del., held a Flag Day ceremony.

Mr. Thomas Schranck, president of the Building Trade Council of Delaware, was the principal speaker at the occasion; and I believe his address is a most appropriate one.

Also, the Wilmington Lodge of Elks conducts an annual essay contest. This year's winners were: Miss Evelyn Ewing of Claymont, Del., and Mr. James H. Trask, Jr., of Wilmington, Del. Their

short essays on "What America Means to Me" are good evidence of our young people's faith in this country and their determination to solve its problems.

Mr. President, I ask unanimous consent that Mr. Schranck's address and the two essays be printed in the RECORD.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

ADDRESS BY J. THOMAS SCHRANCK

Exalted Ruler, Members and Guests of the Benevolent and Protective Order of Elks.

Today all across this great land of ours, many high sounding words of praise will be heaped on our flag and on those who individually or collectively performed great acts of Bravery on and off the Battlefield acting under this Banner. It is meet and right that this should be done. Let us today reaffirm allegiance to our Flag and to what it represents, Justice, Freedom and Democracy.

Let there be no question of our support of our Servicemen no matter where they may be, in Viet Nam, Cambodia, the Far East, Europe, or right here in our land. Let there be no question of our prayers for their safe return to their Loved Ones. Let there be no question of our abiding sympathy to the families of those who will not return and our everlasting gratitude to those who have served us in all our worldly troubles. Those who have served in armed conflict remember well the surge of pride and the tingle of the spine when our National Banner was unfurled on the Battlefield and the High Seas. Today let us examine how we as Americans can help to serve our Flag better and bring to all in this Land, Justice—Freedom and Democracy.

Our Nation is troubled as never before. Crime runs rampant in the streets—murder, arson, rape, muggings and holdups are commonplace. Let us support meaningful action on the part of National, State and Local Governments to attack the root causes of this problem, unemployment, inadequate housing, poor education, and by active participation help to eradicate this problem, how better to serve our flag.

Some of our Youth, and we seem to have lost the ability to communicate with them, burn schools, smash and destroy and yes, riot in the streets. Let us seek to listen to their problems and offer solutions to them rather than dismiss them with a wave of the hand and an admonition to grow up, they cry out to us in their frustration and despair. Let us actively participate in solving this problem and by so doing eradicate it. How better to serve our Flag. A Vocal minority of the Black Community join together to smash, burn, loot and riot in their frustration and anger over real or imagined problems their communities face. Let us actively participate in finding solutions to these problems and by so doing eradicate them. How better to serve our Flag.

Our Nation agonizes over our involvement in Asia, the impending conflict in the Middle East and elsewhere. Let us actively participate by communicating with our elected leaders and letting them know our thoughts on these foreign matters that divide and dismay us and by active participation find a lasting solution towards peace on this Earth for us, our children, our children's children for all time to come. How better to serve our Flag.

As I sat contemplating what to say here today, an old Patriotic Song came to mind and I jotted some thoughts of mine between the lines and with your permission would like to read them to you.

My County Tis of Thee—Tis of Thee I speak to friends and neighbors and all others who will listen, Tis to Thee I pledge my undying love and faith. Tis on Thee the hope of the World rests.

Sweet Land of Liberty—Liberty to go where I please, when I please, to speak what I please without transgressing the Rights of others, to pursue any goal that you have made attainable, Liberty to walk with kings or paupers or to walk alone with you.

Of Thee I Sing—I sing to the high heavens my praise of You, I sing of the opportunities granted me and all Americans, I Sing of the never ending quest for equality that You have charged us to deliver.

Land Of The Pilgrims Pride—Pilgrims of yesteryear as well as today—down through the years seeking freedom from oppression and tyranny and finding that freedom in the Arms of that Great Lady in the Harbor of New York.

Land Where My Fathers Died—Some in Peace and Happiness, some in the bitter anger of war here and elsewhere, but wherever and however with a desire I am sure to serve You.

From Every Mountain Side—From the Mountains, The Hilltops, the Plains, The Prairies, the Cities, The Towns, the Hamlets.

Let Freedom Ring—Let Freedom Ring for all the World to hear and as hope springs eternal, we pray that around this planet we inhabit let Freedom Ring.

How Better To Serve Our Flag.

WHAT AMERICA MEANS TO ME

(By Evelyn Ewing, Claymont High School, Claymont, Del.)

"I was born an American, I will live an American, I shall die an American."[1] America is certainly the greatest nation on earth. I do not mean to say that it is perfect. It has its share of ignorance, cruelty, bigotry and hatred. At times these evils seem to be overwhelming. But in spite of everything wrong with America today, there remains a certain vitality in the spirit of the people which triumphs over contempt. Unkind words and heartless deeds seem only to renew and strengthen the ideal of Americanism. Generosity, love of justice and faith in mankind are fundamental in America. With these ideals as guidelines and universal peace and harmony as goals, the "American Dream" must surely be realized.

WHAT AMERICA MEANS TO ME

(By James H. Trask, Jr., Salesianum School, Wilmington, Del.)

America is a land of dreams. The United States is the embodiment of a dream of our founding fathers. Their dream, a dream of equality, of opportunity, of brotherhood, of freedom, is the guiding light of the people of this nation. In reality, however, a dream becomes complex. No government or society could ever be expected to be perfect because of the imperfection inherent in man. As flaws in the system appear, therefore, they must be remedied—no flaw is so large that the system itself cannot correct it. Through our errors, through our moments of trial and tragedy, we as a nation have learned and progressed. And we must proceed, for certainly we must strive for that unattainable perfection. We must be careful, however, not to let our interests in the progress of technology overstep those of the progress of humanity. This is the America I see.

MAN'S INHUMANITY TO MAN—HOW LONG?

HON. WILLIAM J. SCHERLE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 27, 1970

Mr. SCHERLE. Mr. Speaker, a child asks: "Where is daddy?" A mother asks: "How is my son?" A wife asks: "Is my husband alive or dead?"

Communist North Vietnam is sadistically practicing spiritual and mental genocide on over 1,500 American prisoners of war and their families.

How long?

---

[1] Daniel Webster, Speech, July 17, 1850.

FELLOWSHIP OF RECONCILIATION REPORTS FINDINGS OF SPECIAL MISSION TO VIETNAM

HON. AUGUSTUS F. HAWKINS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 27, 1970

Mr. HAWKINS. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following: The report of a special factfinding mission composed of delegations from the United States, Australia, New Zealand, and the Netherlands, will be of particular interest to my colleagues who have been made aware during the past few weeks of the true situation in Vietnam.

The report follows:

STATEMENT OF FELLOWSHIP OF RECONCILIATION—VIETNAM FACTFINDING MISSION

We have just returned from Saigon where we completed an 8 day special factfinding mission inquiring into reports of growing expressions for peace in South Vietnam and intensified political repression.

We were joined in Saigon by delegations from Australia, New Zealand, and the Netherlands.

In Vietnam we met 18 hours a day with representatives of the religious communities, lawyers, labor leaders, writers, student groups, women's groups, intellectuals, and politicians. We talked with rice farmers in the field. We met with Vietnamese and American soldiers, and several members of the American press. We also met with U.S. Deputy Ambassador Samuel D. Berger.

The situation we discovered in Vietnam is both much worse and, at the same time, more hopeful than we had anticipated. Political repression is extreme. We discovered police and police agents are everywhere. We learned that when Vietnamese speak out for peace the government jails them on the pretext that anyone who opposes the government must be pro-Communist. It is common for Vietnamese who criticize the government to be arrested under the An Tri law, which allows people to be imprisoned on a renewable basis from 6 months to 2 years without trial. Many Vietnamese, especially students in the last 3 months, have been tortured at interrogation centers and prisons like Con Son and Thu Duc. We saw the bruises of the victims and we heard several of their direct accounts of the incredible torture by the U.S. supported Thieu/Ky regime from ex-prisoners and from mothers and wives of youths who are now in prison.

Newspapers which dare to carry news critical of the government frequently are confiscated by the police before they reach the stands. While we were in Vietnam, a daily issue of the English language newspaper, Saigon post, was confiscated because it carried excerpts from Secretary of State Rogers' speech in San Francisco in which he made reference to the possibility of coalition government in Saigon.

The hopeful side of our report is that we believe that a way to achieve peace exists short of military victory for either side. The strongest desires of the Vietnamese people are for peace and self-determination. Our meetings with many important groups in

South Vietnam have convinced us that they will continue to struggle for these twin goals in spite of the hardships of the war and the severe measures of repression by the Thieu/Ky regime. The military power of the United States cannot be underestimated, but neither can the determination and capacity of the "other side." Some form of interim government must be found which could be acceptable to both sides. Obviously, this cannot be the government of Thieu/Ky since it is so closely tied to the United States and continuation of the war. Again and again we were told by Vietnamese that the most important step the United States could take for peace is to withdraw support from the Thieu/Ky regime. This would allow for the formation of an interim government of reconciliation, acceptable to both sides which would be able to negotiate the withdrawal of U.S. forces, certainly an essential objective to Vietnamese, and at the same time develop the basis for a genuine and workable coalition government for South Vietnam.

We believe that is the only alternative to continuing the slaughter of the Vietnam war. The United States must withdraw its support from the present warlike and repressive regime or acknowledge its commitment to pursue the war, not merely against the "other side," but against the vast majority of Vietnamese, sometimes silenced, sometimes courageously speaking-out, who want their country free, free of war and free of foreign domination. There will not be peace in Vietnam until there is a government of peace in Saigon.

The special delegation from the United States included Dr. David Hunter, deputy general secretary, National Council of Churches; Charles Palmer, president, National Student Association; Sister Mary Luke Tobin, superior general, Sisters of Loretto, representing Catholic Peace Fellowship; Sam Brown, former coordinator, Vietnam Moratorium Committee; Dorothy Cotton, director, citizenship education program, Southern Christian Leadership Conference; Bishop Paul Moore, Jr., Episcopal Diocese of New York; Rabbi Balfour Brickner, director of Interfaith Activities, Union of American Hebrew Congregations; Bernard Lafayette, executive staff, SCLC; Timothy Butz, student at Kent State University and a Vietnam veteran; and Ron Young of the Fellowship of Reconciliation, coordinator of the U.S. delegation.

PORTRAIT OF AN INDIAN CHIEF: CHIEF FULTON BATTISE OF ALABAMA-COUSHATTA TRIBE

HON. RALPH YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, July 27, 1970

Mr. YARBOROUGH. Mr. President, the Alabama-Coushatta Indian Reservation is the only reservation in Texas. The reservation is located on U.S. Highway 190 between Livingston and Woodville. This is within the Big Thicket area of Texas. The reservation is on the northwestern corner of the proposed Big Thicket National Park. The reservation is home for a far-sighted group of Indians who are making a determined and successful effort to improve their economic situation through tourism.

The pleasure of visiting the reservation has been mine on several occasions. I am very proud to be an honorary member of the Alabama-Coushatta Tribe. My most recent visit was with the distinguished senior Senator from Nevada (Mr. BIBLE) and Mr. George B. Hartzog, Jr., Director of the National Park Service, on June 12, 1970. The people of the reservation honored us with ceremonial dances, a scenic tour of the reservation, and a view of their arts and crafts center. The visit to the reservation was a highlight of a helicopter and automobile tour of the Big Thicket which we took in connection with the field hearings on S. 4, my bill to establish a Big Thicket National Park of not less than 100,000 acres.

A newspaper article about Chief Fulton Battise, the leader of the Alabama-Coushatta Tribe, appeared in the July 26, 1970, issue of the Houston Chronicle, in section 1, page 25. The article is by Margie Kirkland and is entitled "Portrait of an Indian Chief."

Mr. President, I ask unanimous consent that the article be printed in the Extensions of Remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PORTRAIT OF AN INDIAN CHIEF, LEADER OF ALABAMA-COUSHATTA TRIBE

(By Margie Kirkland)

LIVINGSTON.—What's it like to be an Indian chief nowadays? Is a chief as important as his rank suggests? Does he portray the fierceness that little boys take on when they play cowboy and Indian games? Is there any power in the role of chief? Or does he carry the title like an honorary doctorate?

Getting to know a 20th century chief may be as difficult as it was in pioneer days—especially if it's to be a verbose acquaintance.

"Chief Kina," who in the workaday world is Fulton Battise, is leader of the Alabama-Coushatta tribes, which live on Texas' only Indian reservation, 17 miles southeast of Livingston.

He is 61, stocky, dark and a bit sad-eyed. His expression at times changes into that of a shrewd warrior of an innocent brave. More often, he looks stern and unyielding.

Battise was elected chief by his people. The position is not handed down through inheritance. Sylestine Cooper was "first chief" until January of this year, when Battise received the war bonnet in ceremonies at the main ground of the reservation.

The "main ground," or Indian Village, is a complex of tourist attractions. There is a museum, snack bar, barbecue stand and a war dance area. It's a small part of the more than 4000 acres that make up the reservation. The tourist center is a busy place and a good source of income for the tribes.

There are around 400 inhabitants on these 4000 acres.

The chief is Alabama, not Coushatta, although the tribes are considered cousins and have a long history of cohabitation. They are peaceful, friendly and independent. The two tribes differ slightly. History records that in the past, Coushatta people have been by nature more war-like and impetuous than the Alabamas.

Battise said that formerly the chief was responsible for knowing the forests and location of springs. He had to be skilled in hunting. And, of course, he presided over council meetings.

Today the role is much the same, with emphasis on council meetings. They meet twice monthly to discuss problems and make decisions. The duties of the council are similar to those of any small city council.

Chief Kina has an assistant, or second chief—his cousin, Emmitt Battise. Also of the Alabama tribe, Emmitt teaches in the Rusk public school system, where he also is baseball coach.

The chief is a day laborer at Camden Plywood Co., a sawmill 15 miles from the reservation. He has been employed at Camden for 23 years, off and on, as a log cutter. Numerous other members of the tribes are employed there.

Chief and Mrs. Battise live in a small house two miles from Indian Village. The house is surrounded by a split rail fence erected by Battise himself.

They have a daughter, Zatha, who teaches music in elementary schools at Tucumcari, N.M. She is a graduate of Southeastern Colleges, Durant, Okla., and spends summers with her parents.

Chief Kina looks most comfortable when he wears his war bonnet. Although not an original one from a century ago, it is a good reproduction of the chief's headgear worn at early-day powwows. His wife made his ceremonial costume.

The tribes have special occasions when he dons this regalia. At these times, Battise is every inch a chief. It is there, showing plainly, mirrored in his eyes and somber countenance.

Asked about his philosophy of life, Chief Kina replied: "All I know is what I began to know in 1918 'til now. We living in a better way. And, we looking forward to having better place. White people been good to us and we are proud of it."

Battise is a peculiar blend of pride and humility. Concerning his own education, he said: "I never finished high school. That is why I am nothing."

Not everyone shares this view. Fulton Battise is in a position to prove himself wrong. He's making new friends for his tribes. He's trying to move with the times.

The Alabama-Coushatta people are receiving more recognition than ever before. Other Americans are beginning to let them mean something—not only for the heritage of their past, but for their unique place in present-day Texas.

CAPTIVE NATIONS WEEK

HON. HENRY HELSTOSKI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, July 27, 1970

Mr. HELSTOSKI. Mr. Speaker, the people of the United States have lived in freedom for 194 years, and living in that freedom we often forget what a priceless possession freedom is, and while we enjoy it, much of the world only knows Communist domination and oppression.

The 86th Congress, in 1959, proclaimed Captive Nations Week to be observed during the third week of July of each year. This observance is used to show to our captive brethren in eastern and central Europe the American solidarity in expressing our concern for those who remain in subjugation throughout the world.

The initial reaction to this Captive Nations Resolution was an angry response from the Russian Government, denying that proven fact that there were enslaved countries dominated by Soviet Russia or Russian puppet governments.

For 11 years now, we have observed Captive Nations Week. We have been bringing the plight of these subjugated people to the attention of the world for too long a time. It is important that we continue to take such action which will bring an annual recollection of the realities of Russian denial of freedom and

liberty to over a billion individuals, whose God-given right is life, liberty, and the pursuit of happiness.

The Captive Nations Weeks manifesto of 1970, points out that this year's observance falls just two months after the 25th anniversary of the victorious close of World War II, yet a generation of people in eastern and central Europe do not know the full meaning of liberty and freedom.

Captive Nations Weeks will always serve an important purpose. It will stand as a reminder that there must be created an atmosphere for peace in the world in which the people of both Communist and free nations will have the right of self-determination in establishing their government and in choosing their way of life.

As long as there is a solitary nation under the domination of an oppressor, we must continue to seek every possible solution to obtain justice and freedom for all.

It is my hope that in the very near future we will see the observance of Captive Nations Week fall into disuse, to see a brighter day for those presently denied the rights and responsibilities of free citizenship and freedom of their own choice.

This Nation has publicly stated and continues to reaffirm its position that freedom of choice regarding the form of government should be available to all peoples. Free choice is the essential part of this sentiment in which 17 other nations joined to show their abhorrence for the existence of captive nations. In 1967, the World Anti-Communist League, comprising membership from more than 80 countries, adopted a resolution advocating an expansion of efforts to show solidarity with the aspiration of the captive nations to be free.

Oppressed people have traditionally turned to us for hope and inspiration. During Captive Nations Week we must reaffirm our promise to remain firm against further Communist usurpation in the world, and to do all within our power to work for the ultimate liberation of every captive nation.

The National Captive Nations Committee, the Assembly of Captive European Nations, and the individual nationality organizations of the countries under the dictatorial regimes of the Communist bloc merit our speaking out on this subject more than just once a year. What has happened and is happening to the less fortunate peoples must remind us that we have no perpetual immunity from aggression.

Mr. Speaker, at this point of my remarks, I would like to include Captive Nations Manifesto for 1970 as proclaimed by the Conference of Americans of Central and Eastern European Descent.

The manifesto follows:

CONFERENCE OF AMERICANS OF CENTRAL AND EASTERN EUROPEAN DESCENT MANIFESTO FOR CAPTIVE NATIONS WEEK 1970

Captive Nations Week, established by the U.S. Congress on July 17, 1959 (Public Law 86-90), will be observed this year during the week of July 12 to 18, for the eleventh consecutive year. Each year, observances marking this signal event are held throughout the country, serving as a powerful reminder to the American people not to forget the captive nations or to approve their permanent captivity under Communist enslavement.

The Conference of Americans of Central and Eastern European Descent (CACEED) is an organization of American citizens of Central and Eastern European background whose countries of origin—Bulgaria, Estonia, Hungary, Latvia, Lithuania, Poland, Romania and Ukraine—are presently under Communist domination and are denied fundamental human rights and national liberties.

CACEED supports all the captive nations, and calls on all Americans to manifest their public support for the captive nations in their unequal struggle for national self-determination and the restoration of their national independence. Public Law 86-90 defined the plight of the captive nations in the following words:

". . . The imperialistic policies of Communist Russia have led, through direct or indirect aggression, to the subjugation of the national independence of Poland, Hungary, Lithuania, Ukraine, Czechoslovakia, Latvia, Estonia, White Ruthenia, Romania, East Germany, Bulgaria, mainland China, Armenia, Azerbaijan, Georgia, North Korea, Albania, Idel-Ural, Tibet, Cossackia, Turkestan, North Vietnam, and others . . ."

Every year, since observances of Captive Nations Week have been held throughout the length and breadth of the United States, the official Soviet press and mass communication media in the Communist-controlled countries have untiringly attacked the Week as an instrument of the Cold War aimed at disturbing "peaceful coexistence" between the USSR and the United States.

This is a typical method of Communist propaganda by which Moscow and its satellites are trying to conceal their great concern over Western interest in the captive nations. Moreover, the captive nations movement has grown steadily, enlisting the staunch support of several countries of the free world, including the Republic of China, Korea, Turkey, West Germany, Argentina and Australia.

The worldwide captive nations movement received powerful and fresh impetus with the brutal and unprovoked invasion of Czechoslovakia by Soviet and satellite troops in August, 1968, and the subsequent enunciation of the "Brezhnev Doctrine," which claims that the Soviet Union has a "legitimate" right to intervene in the internal affairs of any "socialist" country.

There is no doubt that the "Brezhnev Doctrine" indicates Soviet determination to continue the oppression of the captive nations and to trample underfoot their fundamental human rights, although these rights to self-determination and national sovereignty are expressly set forth in the Universal Declaration of Human Rights, adopted unanimously by the U.N. General Assembly on December 10, 1948. The "Brezhnev Doctrine" further ascribes to the USSR a "mandate" to intervene at will in the internal affairs of neighboring states, in direct contravention to the principles enunciated in the Atlantic Charter and the Charter of the United Nations.

The contention of this spurious "doctrine" that Central and Eastern Europe is the exclusive domain of Moscow should be categorically rejected by the free world as immoral, imperialistic and dangerous to world peace.

Despite the Sino-Soviet conflict and the Russian fear of Red China, Moscow is doing everything to help Hanoi in its present war against South Vietnam and the United States. Only a few days ago the Kremlin announced that far-reaching agreements had been reached between Moscow and Hanoi, resulting in a large increase of material aid to North Vietnam by the USSR.

In the Middle East, the Soviet Union is continuing to push forward. The strategic meaning of these actions is that expansion of Communist Russia's military presence and political influence would become an unchallengeable fact. The USSR is attempting to undermine U.S. power there and become a "champion" of the Arab and Moslem worlds with the ultimate objective of subverting the entire area and subjecting it to eventual Communist domination from Moscow.

There has hardly been any change in the status of the captive nations since the last observance of Captive Nations Week in 1969. This year's observances will be held a few months after the 25th anniversary of the termination of the war in Europe—at which time the Nazi totalitarian domination over vast areas of that continent was eliminated. But for millions in Central and Eastern Europe, as well as the peoples of the USSR, Nazi domination has been replaced with brutal and ruthless Communist rule and Soviet Russian colonial hegemony.

Soviet leaders, in attacking U.S. foreign policy would have us believe that all is well and orderly in the USSR and its far-extending Communist empire. Yet developments occurring daily behind the Iron Curtain speak of something else. In Poland, the Communist regime stifles intellectual and economic life, and continues its violation of human rights on a large scale. In Czechoslovakia, the Soviet-backed new regime has re-imposed censorship, curtails travel, and has made the country a faceless puppet of Moscow. In Romania, which is often described as following an "independent" course, there exists police repression, total control over intellectual and artistic life, and economic strangulation. Attempts by the people of Hungary and Bulgaria to secure more freedom and the enjoyment of human rights have been stubbornly opposed by the Communist regimes. In Estonia, Latvia and Lithuania, Moscow continues to exercise its oppressive policies, and the official course of Russification becomes an ever-increasing threat to the ethnic structure of those nations. In the Ukraine, the largest non-Russian captive nation in the USSR, arrests and trials of hundreds of intellectuals continue, while the Communist regime openly persecutes members of the Catholic, Protestant and Jewish faiths. Even in Russia proper, youth and writers demanding more freedom are being arrested and confined to mental institutions.

In observing Captive Nations Week this year, we:

(1) Express our full support for U.S. policy in Southeast Asia and elsewhere in resisting Communist aggression and attempts at world domination; at the same time we ask that the U.S. Government adopt a firm policy with respect to the USSR and its subservient Communist regimes of Central and Eastern Europe by challenging and denouncing their persecution and oppression of the captive nations.

2) We accuse the USSR of crass violation of its solemn promises of freedom and independence for the nations made captive during and after World War II, such as Bulgaria, Czechoslovakia, Estonia, Hungary, Latvia, Lithuania, Poland and Romania.

3) We denounce the Soviet government for the destruction of the independence of the Ukraine and other non-Russian nations inside the USSR, and for depriving them of the right to national self-determination.

4) We condemn the Communist celebration of the 100th anniversary of Lenin's birth and its sponsorship by UNESCO and the U.N. Commission on Human Rights, which bestowed international honor upon the originator of Communst terror and genocide.

5) We denounce the Communist enslavement of Albania, China, North Korea, North Vietnam, Tibet and Cuba.

6) We appeal to the U.S. Government and all other governments of the free world to

undertake measures in the United Nations to insure that the "Declaration on the Right of Peoples and Nations to Self-Determination," adopted in 1952, the "Declaration on Granting of Independence to Colonial Countries," adopted by the U.N. on October 14, 1960, and the Universal Declaration of Human Rights, adopted on December 10, 1948, are applied to all the captive nations as enumerated in the U.S. Captive Nations Week Resolution of July 17, 1959.

7) Finally, we appeal to the American people to take an active part in the Captive Nations Week observances of July 12–18, 1970 and to manifest their unstinting support and sympathy for the just aspirations of all the captive nations of Europe and Asia, to express their full understanding and to pledge them moral support in their unequal struggle for freedom and national statehood.

The Rt. Rev. Msgr. JOHN BALKUNAS,
President, Conference of Americans of Central and Eastern European Descent (CACEED).

JUMBO JETS POSE PROBLEM FOR LIGHT AIRCRAFT

HON. WILLIAM B. SPONG, JR.

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, July 27, 1970

Mr. SPONG. Mr. President, for all the advantages they may bring, the new generation of jumbo jets poses a serious problem for light aircraft which venture into their wake.

According to a recent Federal Aviation Administration study, the air turbulence that streams off the wingtips of some of these giant jets is capable of "rolling over" smaller aircraft following as far behind as 2 or 3 miles.

Mr. President, this wake-turbulence hazard is produced by many of the commercial jet aircraft flying today, but it is most pronounced in the new generation of jets just coming into operation or off the assemby lines. The Boeing 747, for example, develop wingtip vortices about twice the strength of those coming from the Boeing 727. The new three-engine air buses will create a wake-turbulence more than twice that of the Boeing 737.

This phenomenon presents a significant safety hazard of the unwary private pilot, and it raises the question of whether our airport and air traffic systems are adequate to deal with it.

Mr. President, I ask unanimous consent to have printed in the Extension of Remarks of the RECORD an article entitled "Vortex Danger Underestimated," published in the AOPA Pilot of July 1970.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the AOPA Pilot, July 1970]

VORTEX DANGER UNDERESTIMATED

(By Lew Townsend)

Wake turbulence, one of the most unwelcome hazards for pilots, to say nothing of their passengers, has been vastly underrated in the past, according to details recently released on a Federal test program involving the B–747 and other "heavy generators." The detailed findings require an updated list of pilot recommendations for dealing with the phenomenon.

Emphasizing the importance are new assessments by FAA, based on the test program, that general aviation aircraft can encounter up to a 75° forced roll rate when penetrating, within three miles or less, the wingtip vortices created by the B–747 and other aircraft grossing over 500,000 pounds.

"This fact is very important to the lighter aircraft, from an engineering view," said FAA's William M. Flener, director, Air Traffic Service. It is important, he said, "because, with the structural capability of the aircraft to stand that type of aileron or roll rate, some aircraft just cannot stand up structurally.

"In other words, what we're saying is, under certain circumstances, a light aircraft would break up structurally."

The wingtip vortices, or wake turbulence, of the B–747s and other large jets are capable of throwing out of control practically all general aviation aircraft, and the bulk of aircraft in the current airline fleet, it was related. Concern over airline aircraft extends up to and includes at least the 90-passenger DC–9 jetliner.

Flener, along with James F. Rudolph, FAA director, Flight Standards Service, provided the FAA's new assessment of wake-turbulence dangers. They revealed that the testing program uncovered some major erroneous beliefs about wake-turbulence characteristics.

One of three major findings was that the wind velocities within the wingtip vortices created by the B–747 and certain other large jets are far greater than FAA officials had anticipated they would be, or had been given credence to that they could be.

They also surfaced the fact that, contrary to long-held beliefs, the wingtip vortices of the big jets *do not dissipate* when they are formed in the higher altitudes around 30,000 feet, where most airliners normally cruise during their en route stages between large airport terminals. The wingtip vortices in the higher altitudes remain intact, complete with their compact balls of high-velocity winds churning in circular fashion.

If they could be seen, which they cannot, unless the jets are giving off an inordinate amount of engine smoke or are kicking up dust near the ground, the wingtip vortices might be likened to huge replicas of ancient reading scrolls. The rolled up portions at either end of the scrolls are the two wingtip vortices.

The third major finding, and also completely opposite from what FAA engineers earlier believed, was that the wingtip vortices do not descend downward ad infinitum. After they take shape aft of the tail, they descend in their scroll-like formation at a rate of about 450–500 f.p.m., as previously thought, *but they then level off somewhere between 700 and 900 feet below the flightpath of the generating aircraft.*

Stating that the vortices are 50 to 65 feet in diameter, Rudolph reported, "It does start breaking up in *certain* atmospheric conditions . . . but, in essence, this vortex does not continue to descend on down ad infinitum as the earlier [research] papers indicated.

"And, in the lower altitudes, in the lower atmosphere below 5,000 feet a.g.l., it does in fact start to break up. The environmental conditions working on it break it up. In the higher altitudes, however, this breaking up does not necessarily take place. But in the higher altitudes where it does not break up at all, we're talking about 30,000 feet."

Though stating wingtip vortices do begin dissipating below 5,000 feet a.g.l., there was no specific information on how long it takes for the "breaking up" process at these altitudes, nor how complete the dissipation is. There also was no specific word on the breaking-up characteristics of wingtip vortices generated by the big jets between 5,000 and 30,000 feet. The testing program was in two parts, with the first phase completed in February [April PILOT, page 34]. It was indicated the missing information would be sought in the final phase of the testing program, with results made public possibly in August.

Results of the first-phase testing, according to FAA, confirmed that wingtip vortices begin taking shape off the wingtips. As the wings plow through the air, wakes of disrupted air spill off the wingtips and create progressively growing wakes, much like the wakes created by the bow of a boat in motion.

Air wakes, however, drift back and toward the aft of the tail, fall in-trail behind the generating aircraft, and join together to produce two large and separate air masses of high-velocity winds, the wingtip vortices. Completely the reverse of what was earlier believed, FAA said the two vortices remain linked together by air currents and do not spread farther and farther apart behind the generating aircraft, as do the wakes behind a boat. The distance between the two swirling air masses of the B–747 is about 200 feet, FAA said.

Though failing to provide any estimates of the wind velocities within the vortices at the higher altitudes, FAA did give estimates of those created by various types of large aircraft when they are flying as slow as 150 knots at sea level in a maximum takeoff configuration. It earlier had been determined that the intensity—wind velocities—of the big jets' wingtip vortices is greatest when the aircraft are flying comparatively slow and during the landing and takeoff phases.

The calculated "vortex strength" of various airline aircraft ranged from 2,355 feet per second, for the 98,000-pound British Aircraft Corporation 111 (BAC–111), to 7,700 feet per second for the 710,000-pound Boeing 747. A chart accompanies this article, listing the calculated vortex strengths for all major types of airline aircraft. It also includes the calculated vortex strength for the still-to-fly Boeing SST, a supersonic aircraft that has been under fire in Congress over FAA's role and that of the Government in financing its development and manufacture.

According to FAA, the Boeing SST will create wingtip vortices having wind velocities on the order of 11,200 feet per second, about 1½ times that of the B–747, and nearly three times that of the 302,000-pound Boeing 707–300, an aircraft now in wide use.

The potentially increased dangers to other aircraft operations from the SST wake turbulence can readily be seen by the fact that the B–707–300 itself, as well as some other existing aircraft, already unleashes vortices capable of literally knocking a large number of today's smaller aircraft right out of the skies.

The B–747 and the coming SST, however, are only two of an especially troublesome trio of Boeing aircraft, where wake turbulence is concerned, it was learned. The third aircraft drawing FAA's attention is the B–727. Like the B–707–300, the B–727 currently is used extensively by a host of airlines. The B–727 is unique in that it sports tail-mounted engines, as opposed to the more conventional wing-mounted engines.

FAA officials said the wake-turblence tests showed that the B–727's wingtip vortices are disproportionately greater in intensity than those spawned by comparably sized large jets. "For some unknown reason," said FAA, "that airplane develops a very high vortex. And we guess it's the tail-mounted engines, but we don't know why."

Flener reported the FAA was not considering the establishment of special restrictions on those aircraft creating the largest safety hazards to other aircraft operations. Rather than confine and limit such aircraft operations, the FAA indicated that if the big jets' wake turbulence caused problems, the agency

would restrict and/or eliminate operations of those aircraft the big jets endanger.

Such an approach was viewed as deviating from past governmental practices in almost all fields of endeavor, where curbs and restraints are placed on known dangerous persons and activities to guard the general public from unnecessary harm.

Flener strongly indicated that at some point in the future the FAA would attempt to publicly embark on a program of "splitting out" and prohibiting certain aircraft from using airports and airspace now used or planned for use by the big jets. The "splitting out" process probably would be based on a still undefined program of "aircraft compatibility," it was said.

In connection with such a program, and likely the yardstick for bringing about such a radical change within the air transportation system, is a new formula FAA said it developed from the tests for determining capability of aircraft to withstand wake turbulence. Without delving too deeply into the formula, it can be said that the formula has led FAA officials to believe that the larger the wingspan of an aircraft, the greater its ability to cope with the high-velocity winds with the vortices created by the "heavy generators." Currently, heavy generators are designated as those having a gross takeoff weight of 300,000 pounds or more.

Though the final portion of the wake-turbulence tests had not been completed at the time of FAA's recent reassessment, Flener and Rudolph left little doubt that previously established five-mile separation standards between "heavy generators" and general aviation aircraft would soon be increased to at least seven miles. Changes in flight rules to accommodate the B–747 were detailed in an April PILOT article entitled "B–747 Turbulence Represents Danger."

In presenting the reassessment, Flener said, "One of the things that we feel we honestly must do, and do as thoroughly as we can, is get the word to everybody, particularly the general aviation pilot . . . The 'name of the game,' as far as the pilot is concerned, is just 'use more caution than you have used in the past,' because this bird [B–747] develops something much stronger than anything we've encountered before—this bird and some others."

Rudolph, who described most of the details of the testing program, as well as provided new tips for pilots, said, "The en route is not the problem. The problem is in the final approach and in the whole traffic area." He, like Flener, contended that though the vortices are now known to remain completely intact and in scroll-like formation at high altitudes, the odds were minimal that another aircraft would hit them in the en route stages.

Regarding the airport terminal area, and specifically the final approach, Rudolph reported, "The vortex does descend from the airplane [and contact the ground] and it does roll out. In a no-wind condition, the vortex from the right wingtip rolls outward to the right, and the left vortex rolls outward to the left. It rolls out at about five knots.

"Now, what happens when you put a crosswind on it? Well, they [earlier researchers] predicted for us what would happen. And it happens just that way, so we still have problems with parallel runways that are close together, such as those at Los Angeles and San Francisco [LAX and SFO]. With a slight cross-wind, this vortex will actually move right out and across the parallel runway where another aircraft may be landing or taking off adjacent to and close to the heavy generating aircraft [on the main runway]. There is a point where this crosswind will get above 15 knots—and I wish we knew exactly what this is, but we have not been able to find out yet—where above 15 knots, and in that area, the vortex is destroyed and no longer becomes a concern to us.

"Visualize vortices 50 to 65 feet in diameter, very tight vortices that have velocities in them of 140 feet per second—*tangential* velocities, that is—and put a small airplane in it. If he gets into it, he'll get thrown out of it. And he won't stay in it at three miles. If he gets into it, he'll get thrown out the way he drifted into it."

Continuing, Rudolph related, "The final approach to the airport is a point of concern to us . . . If you were to fly in a no-wind condition, or if you were to fly with a slight headwind condition and you stayed right on this airplane's [big jet's] flightpath, or right on the glideslope if you're shooting the guideslope, you might in fact encounter no vortex.

"If you had a slight tailwind, or quartering tailwind, the vortex could be blown above the airplane's flightpath," he noted, then, emphasizing his first three words carefully, added, "Boeing tells us, from their limited testing program, that someplace around 70 feet [when jet is 70 feet a.g.], on approach or takeoff], we need not concern ourselves with it because the vortex is no longer wrapped up tight—it is very loose.

"We do not necessarily disagree or agree with them," Rudolph said of Boeing's evaluations. "The vortices do settle behind the airplane [unless blown above the flightpath by tailwind or quartering tailwind—Ed.], they do draw together to about a quarter to a half a span [wingspan], and they do sit there on the ground. And, in a still-wind condition, they have been measured to sit in there for 160 seconds."

Flener said that VFR pilots are on their own in assuring avoidance of the invisible wingtip vortices, and that FAA's air traffic controllers would play only a minimal role in aiding pilots in the terminal area. In many of our big airports today," he said, "the tower is way to hell and gone at the far end. We have to place the dependence upon the pilot, particularly the general aviation pilot, to be aware and understand what this [wake turbulence] is. The controller is not in a position to make a determination, hour after hour, aircraft after aircraft, as to what he [the pilot] should or should not do."

Controllers have been instructed to provide position reports on the "heavy generators" to VFR pilots in radio contact, Flener said. Limited frequencies and controller personnel, of course, preclude the possibility that every aircraft can be in radio contact with controllers at all times and thereby be constantly advised as to the location of the big jets and their dangerous wake turbulence.

Asked whether controller assistance was worded in FAA instructions as they "shall" provide position reports on the big jets, or whether they "can" provide it on a workload-permitting basis. Flener said, "They *shall*."

"Remember," he added, "we're talking VFR. When we're talking instrument conditions and radar separation, the responsibility is the controller's. But, you see, under VFR the pilot is on his own as far as his separation. He makes his own determination as to how far back he should be. We're still placing the responsibility on the pilot, as far as that VFR pilot is concerned. We can't do anything else. There are too many of them, and there's such a volume of traffic at some of these locations. We spoonfeed a great deal of the system as it is today, and were trying to place the responsibility where it belongs."

In the way of a quickie recommendation on wake turbulence, Flener offered, "Land high and long. Take off quick and climb high." The main thing for VFR pilots to learn, it was pointed out, is that they now should maintain a greater distance between themselves and the "heavy generators" than they have in the past.

Following are comments offered by Rudolph that were interpreted as updated recommendations for pilots, general aviation pilots in particular, for coping with airborne wake turbulence:

FLIGHT AT LOWER ALTITUDES

"As far as the general aviation man is concerned, if he's in the lower altitudes and he encounters one of these heavy generators, I would not want him to fly underneath it at a couple of hundred feet, or even two, three, four, or five hundred feet. I want hom to evade it. I don't want him to be flying under the flightpath of the big generator."

SINGLE RUNWAY OPERATIONS

"The worst condition will be with a quartering crosswind of about five knots from either side. These vortices come down and [in a no-wind condition] spread outward at about a five-knot progression. You put a five-knot wind on either of them [wingtip vortices]—it almost cancels its movement out and it will blow right upon that runway and will lie up there. It takes someplace up to 160 seconds for it to clear out."

INTERSECTION TAKEOFFS

"If the heavy generator is taking off and it goes through the intersection without rotation—the nosewheel is still on the ground—there is no vortex, because vortex is only generated when you put lift on the wings. If he goes through the intersection and rotates further down the runway, the only thing you have to concern yourself with is the jet blast of the engines [see chart on these pages]. If he [big jet] rotates *before* reaching that intersection, it will take at least 160 seconds to clear out of there."

STANDARD TAKEOFFS AND LANDINGS

"On landing, as long as the pilot stays above, or at least on, the generating aircraft's flightpath—in a no-wind condition—he can follow the same flightpath. He shouldn't land below it, because if he does, he's going to have one whale of a ride, if he doesn't have an accident. In the takeoff phase, the best procedures here have been printed in the AIM, and if these disciplines are not maintained, we're in trouble."

The FAA officials reiterated that the big jets' heaviest wakes are generated when they are in a clean, or near-clean, configuration, such as with maximum takeoff weight, takeoff flaps, and full power. Flener stressed that the direction of the wind should now mean more to the average pilot, based on the new wake-turbulence information revealed by the recent tests.

"That wind means more to him now than it did before, because it means that vortices are moving one way or the other," Flener said, referring primarily to takeoff and landing operations. He said good takeoff procedures behind heavy wake generators include a wheels-up position prior to the point where the preceding heavy jet rotated. "Plus, if he's got a good strong wind, move over to the side of the runway that's pertinent [upwind] and take off that way. The same on landing. If he knows that he's got a crosswind and this aircraft lands ahead of him, then move over the edge of the runway in lining up. Get over to that side of the centerline where the vortices are going the other way.

Asked about the crosswind effect aloft, Rudolph replied, "The crosswind aloft moves the vortex if it's in the higher elevations where the environmental conditions—the temperatures of the ground—are not affecting it. [Earlier FAA statements indicated the "higher altitudes" referred to here are those above 5,000 feet a.g.l.—Ed.] The velocity of the wind at 30,000 feet takes the whole

system and just moves it out. It literally stays information behind the generator until the wind floats it out of the way. And the farther it floats, the better we like it."

On possible FAA recommendations to manufacturers to beef up aircraft structures to withstand the intense winds in the vortices and the resulting excessive roll rates, Rudolph said, "Structural strength doesn't have anything to do with it, basically, because you're talking about wingspan [as being the key factor in being able to withstand the vortices]. You're going to lose control of the airplane if you get tied into one of these things real close-in," he warned general aviation pilots.

Rudolph also provided a description of what happens when two separate sets of wingtip vortices are created by jets making successive takeoffs or landings. "The two vortices don't combine to produce one vortex system of greater intensity," he said. "In fact, if one is stacked on top of the other, the more the better, because the heat and tension from the second one destroys the original one.

"They are humping this thing, remember [full throttle on takeoff], and the vortex starts descending immediately upon leaving the wings, at its rate of about 450 f.p.m. [descent rate varies slightly, based on aircraft weight], and this vortex system will never be found on the generating aircraft's flightpath. So, you can clear lightplanes one right out on top of the other, and those vortices from the heavy generators, lying on top of each other, are just fine with us. They tear each other up."

Flener said the FAA planned to update wake-turbulence information in the AIM to reflect the new knowledge about wingtip-vortex behavior and other details learned from the recent tests involving the B-747 and other aircraft. He helped stress the new importance that should be given this aspect of safe flight operations by announcing that FAA also planned to add specific questions relating to wake turbulence in future tests for receiving pilot certificates.

VORTEX STRENGTHS [1] (150 KNOTS IAS AT SEA LEVEL)

Aircraft	Gross takeoff weght	Wingspan	Vortex strength (in feet per second)
BAC 111	98,000	88 feet	2,355
B-737	107,000	93 feet	2,433
DC-9-30	108,000	93 feet 3 inches	2,500
Trident	143,000	98 feet	3,086
CV-880	184,000	120 feet	3,243

[2] Despite calculated figure for B-727, FAA officials said "for some unknown reason" this aircraft develops wingtip vortices having higher wind velocities than comparably sized jetliners. No estimates other than that shown here were provided.

A YOUNG BOY COMBATS POLLUTION

HON. JACK H. McDONALD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 27, 1970

Mr. McDONALD of Michigan. Mr. Speaker, I have just forwarded to the Treasury of the United States the sum of 48 cents in the form of a quarter, two dimes, and three pennies. The money, Mr. Speaker, came from Clayton Edmonds, a young Walled Lake, Mich., boy who wanted me to spend it to combat pollution. He collected the money in a door-to-door campaign in which he claimed he was unsuccessful. He wrote:

I didn't do so good. I got 48 cents from three houses out of five and am sending it to you to help stop pollution.

But Clayton's interest did not stop at collecting money for a cause in which he had faith. He said he went around, and I quote:

Picking up garbage and other stuff.

It is this sort of personal commitment, and only this sort of commitment which will make any attempts against pollution meaningful. The Congress can legislate against pollution by major industry; the Congress can legislate against pollution by municipalities; the Congress can even legislate against individual pollution. But until each of us accepts the responsibility for his own actions, pollution will not end. Clayton, at his young age, has already shown his willingness to shoulder this responsibility. But how many other Claytons are there in this Nation? Millions? Thousands? Or only hundreds? Who among us has not witnessed the effects of litter and garbage on our city's streets? Our Nation's highways? Who is it that litters the landscape thusly? Everyone denies guilt, yet everyone must share in the blame. Water is in critical supply in many areas of this country. Yet those who most vigorously tout the cause of pollution will not part with the many creature comforts which use copious amounts of that precious liquid.

Electricity is another item which is in short supply. And again many save-our-environment elocutionists list their grievances against the pollutors in air-conditioned comfort, refusing to yield a modicum of comfort to reduce the demand for electric power.

I present this young boy's letter to be reprinted in today's RECORD. There are other Clayton Edmonds, I know. But by inserting his poignant letter in the RECORD, my colleague and many others will have the opportunity to see for themselves this eloquent plea for our environment.

In addition to this action, I have forwarded a letter to the President asking that he establish and help promote a national environmental campaign giving the same emphasis to it that is given to the Easter Seal, March of Dimes, and other national campaigns. Each year a poster child is selected who most typifies the problem identified with each particular drive. I propose that the environmental campaign use Clayton Edmonds as its poster child the first year.

Clayton Edmonds is not just a Walled Lake boy. He is the Johnny Appleseed of environment. I would hope that Clayton's 48 cents be considered seed, and grow into a nationwide, personal commitment against pollution.

Clayton's letter follows:

JULY 7, 1970.

DEAR MR. McDONALD: My name is Clayton Edmonds. I live in Walled Lake.

On Earth Day, 1970 we went around picking up garbage and other stuff.

And after that I went around collecting money, I didn't do so good. I got forty 8 cents from three houses out of five and I am sending it you to help stop pollution.

LOSS OF HOWARD HEIMBACH

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 27, 1970

Mr. FULTON of Pennsylvania. Mr. Speaker, in the loss of Howard Heimbach, we in Pittsburgh have lost a warmhearted leader with a friendly and human approach toward everybody. Howard Heimbach made friends easily and had the fine characteristic of being a top level Pittsburgh executive with many loyal friends and the ability to give much in time and energy on outside projects and the welfare of our people.

Howard Heimbach was vice president and executive assistant to the president of Rockwell Manufacturing Co. He previously held positions with the company as vice president, headquarters personnel, and administrative vice president. Howard and his wife, Dorothea, lived at 926½ South Aiken Avenue, Shadyside.

He is survived by his wife, Dorothea; and a daughter, Mrs. Norman C. Logan (Ada) of Wilmington, Del.; three grandchildren; and two brothers, Dr. Alvin Heimbach of Altoona, Pa., and William Heimbach of Washington, D.C.

Howard was president and director of the Chamber of Commerce of Greater Pittsburgh in 1969, a director of the Pennsylvania State Chamber of Commerce and a director of the Better Business Bureau of Greater Pittsburgh, Inc., the Hospital Planning Association of Allegheny County, a director of the Pittsburgh Urban Transit Council, and a director and vice chairman of the Allegheny Housing Rehabilitation Corp. He served on the Antitrust and Trade Regulation Committee and was recently appointed to the Government Operations and Expenditures Committee of the National Chamber of Commerce.

Mr. Heimbach was a member of the Pennsylvania Governor's Commission on Charitable Organization, the State Advisory Board for the Neighborhood Assistance Program, the Advisory Committee of Pittsburgh Labor and Industry, and the Advisory Committee of Pittsburgh Home Rule Charter.

He also was a member of the World Affairs Council of Pittsburgh, the American Management Association, the Na-

tional Industrial Conference Board, the American Ordnance Association, the Harvard Business School Association, the Dartmouth Alumni Association, the Masonic Order and the Pennsylvania Society.

Prior to joining Rockwell in 1960, he headed his own industrial relations consulting service. He was formerly vice president of industrial relations at the National Electric Products Corp. in Pittsburgh and personnel relations manager of Kaufmann's Department Store, Pittsburgh.

From 1946 to 1948 Heimbach was assistant director of personnel relations for the General Cable Corporation, New York. As a commissioned officer of the U.S. Navy he headed the employee relations branch of the Office of Industrial Relations, Navy Department, Washington, D.C., from 1944 to 1946. He was also employed as labor relations manager for the Dravo Corp., in Wilmington, Del.

After graduating from Dartmouth College in 1930, he attended the Harvard Business School. He acquired specialized training at Columbia University, Bureau of Personnel Administration and the American Management Association.

He was a member of the Duquesne Club and the Longue Vue Club, both in Pittsburgh; and the Capitol Hill Club in Washington, D.C.

I am enclosing for the CONGRESSIONAL RECORD the excellent statement on Howard Heimbach from the Dartmouth College 40th year report:

DARTMOUTH COLLEGE

HOWARD ANDERS HEIMBACH

Vice President and Executive Assistant to the President, Rockwell Manufacturing Co., 400 North Lexington Ave., Pittsburgh, Pa. Residence: 926½ South Aiken Ave., Pittsburgh, Pa. 15232.

Heimie has been with the above firm since 1960, and is involved with personnel, public relations, and long-range planning. He left his job as Director of Personnel with Kaufmann's Department Store in 1956 to become Vice President for Industrial Relations of National Electric Products Co. From 1959 to 1960 he was self-employed as an industrial relations consultant.

Heimie has been a director, vice president, and president (1969) of the Chamber of Commerce of Greater Pittsburgh, as well as a director of the Pennsylvania Chamber of Commerce, the Allegheny Rehabilitation Corporation, the Better Business Bureau of Greater Pittsburgh, the Hospital Planning Association of Allegheny County, A Modern Constitution for Pennsylvania, Inc., and the Southern States Industrial Council. He is also a member of the Pennsylvania Governor's Commission on Charitable Organizations, the Advisory Board of the Neighborhood Assistance Program (under the Community Affairs Department), and the Advisory Committees for Pittsburgh Home Rule Charter and for Allegheny County, Pennsylvania Department of Labor and Industry. He serves on the Antitrust and Trade Regulation Committee of the National Chamber of Commerce.

Heimie published "Responsibility for Change" in *The Iron Age* in 1963 and "Central Staff Coordination in a Decentralized Company" in *Atlanta Economic Review in* 1964.

On August 27, 1934 he married Dorothea Guja (Pratt Institute) of Brooklyn. They have a daughter, Ada (Connecticut College), who is Mrs. Norman Logan, and three grandchildren.

THE 18-YEAR-OLD VOTE

HON. ED FOREMAN

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Monday, July 27, 1970

Mr. FOREMAN. Mr. Speaker, during my campaign for election to Congress, I pledged to reflect the views of the citizens of New Mexico—and further, when I took the oath of office, I swore to support and defend the Constitution. Now from this base, let us take a look at the issue of the 18-year-old vote.

I have always said that I would vote to submit to the several States a constitutional amendment fixing the voting age at 18. Recent campus riots have not changed my mind because I would not penalize the vast majority for the transgressions of a small minority. However, I am opposed to a simple Federal statute. I am opposed for two reasons. First, I consider such a statute unconstitutional. Second, even if constitutional, such a statute, as distinguished from a constitutional amendment, is unwise.

Article 1, section 2, provides that those voting for Federal officers—representatives—"shall have the qualifications requisite" for those who are eligible to vote for members of "the most numerous branch of the state legislature."

The 17th amendment contains the same language as it applies to those voting for U.S. Senators.

Implicit in that language is the acknowledgment that States are authorized to fix voter qualifications in both State and Federal elections. There is no language in the Constitution or the amendments to the Constitution which says otherwise. Indeed, three of those amendments (the 15th, 19th, and 24th) which deal with voter qualification in all elections (race, sex, and the poll tax) acknowledge that the power to fix voter qualifications cannot be taken from the States except by constitutional change.

Notwithstanding what appears to have been the clear intent of the authors of the Constitution, some argue that Congress can fix voter qualifications by simple statute. Here is the substance of that argument:

The equal protection clause of the 14th amendment prohibits any State law whose purpose is discrimination. Under the 1966 Supreme Court decision in Katzenback V. Morgan, the 14th amendment prohibits any State law whose effect Congress finds discriminatory, even when the purpose was nondiscriminatory. And under section 5 of the 14th amendment, Congress has the power, when it makes a finding that the effect of State laws is discriminatory, to adopt "appropriate legislation" to cure the effect.

Thus, it is argued that if Congress makes a finding that 21-year-old voter laws passed by the States have the effect of discriminating against 18-year-old citizens, Congress has the power to adopt a statute fixing the voting age at 18 in all elections, Federal and State.

So the argument goes with respect to literacy tests, such an argument may be plausible. Congress can reasonably make a finding that the effect—if not the purpose—of such testing is discrimination. Unequal educational facilities may deny some citizens an equal opportunity to become literate and therefore voter tests based on literacy could be said to have the effect of offending the equal protection clause of the 14th amendment.

The same is true with respect to residency requirements in presidential elections. Congress can reasonably make a finding that the effect of State residency laws is discrimination against new residents who, because they have moved from one State to another in the months preceding a presidential election, have lost their vote under the laws of the State from which they moved.

Although I am conversant with the arguments to the contrary, it is difficult to see how Congress can reasonably make a finding that 21-year-old voter laws have either the purpose or effect of discrimination. An arbitrary age line must be drawn somewhere, and how can it be argued that whatever age a State chooses is more discriminatory than any other? Everyone has an equal opportunity to attain the age of 21. Indeed, to make a finding that denial of the franchise to those under 21 has the effect of discrimination would be to violate the norm set by the 14th amendment itself. In section 2, the 14th amendment mandates a loss of representation in the U.S. House of Representatives in the same ratio as the State denies the right to vote to persons over the age of 21.

Even if Congress has the constitutional power to lower the voting age by simple statute—which I dispute—this does not mean that it is wise for Congress to exercise that power. It is, I believe, unwise for three reasons:

First, it is unwise because it would cast a cloud of uncertainty over the 1971 elections. Even if the Court tests could be concluded and a judgment of constitutionality rendered before January, it might come too late for voter applicants in voter registration periods preceding elections scheduled early in 1971. All elections, primary and general, legislative and municipal and even popular referendums are covered by the proposed statute. Even if the new age requirement could be timely applied to all elections, if it should be ignored, either willfully or innocently by some voting registrar in some remote precinct, and if the result of the election might have been thereby affected, there could be chaos. If the election were a bond referendum, no lawyer could safely certify the bond issue.

Second, a Federal statute is unwise because it would tend to erode the federal system. In the last 5 years, 20 States have rejected propositions to lower the voting age, one of them twice. Last year, the citizens of New Mexico voted down a new constitution that would have permitted lowering the voting age. On my 1969 annual legislative questionnaire poll on this matter, the citizens voted 2 to 1 against this provision. This year 15 States have the proposition on their ballots. For the sake of the federal system, is it wise for the Congress, even if it has the raw power to do so, to veto the will of half of the States?

Third, a Federal statute with a built-in constitutionality court test is unwise because it confronts the Supreme Court

with an impossible dilemma. If it sustains the statute, the Court will be accused of amending the Constitution by judicial fiat. If it declares the statute unconstitutional, the Court will be blamed for frustrating the expectations of 11 million young Americans between the ages of 18 and 21.

It is, I repeat, unwise to expose the Court to such needless abuse. It is unwise to encourage and then perhaps disappoint the young men and women of our country at a time when they are already concerned about the broader gap between promise and performance.

The wise course, the safe course, the unchallengeable course, the tried-and-true course, is to amend the Constitution in the manner which the charter itself provides.

SUNSHINE IS THE BEST DISINFECTANT

HON. FRANK J. BRASCO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 27, 1970

Mr. BRASCO. Mr. Speaker, ours is an open society. It is a pluralistic society. Its strength lies in its institutions. Those institutions remain viable only as long as the majority of our citizens retain a meaningful belief in them. As long as Americans feel that their institutions are responsive to the wishes of the people, we shall endure and prevail.

Everyone will admit freely that today there is a crisis in our institutions and the faith people have in them. No institution is more basic than the Congress—in this case the House of Representatives, which we have the privilege of being a part of.

Over the past year or so, the Nation has been awakened to the fact that in more than one way the House—this House—our institution—has been less than responsive to the requirements of modern times.

The Nation has read one article after the other on how this institution is lacking. One of the most pertinent and irrefutable accusations has to do with the fact that the House operates with too great an emphasis on secrecy, with too great an imbalance of power and too little attention paid to the wishes of the majority of its Members. In effect, this House of the people has been operating all too often in an undemocratic manner.

We cannot pretend to stand for pluralistic democracy for the Nation if we daily deny the democratic process in our deliberations and procedures. This is what is going on each day, nonetheless. It is folly to deny the need for reform. We only add fuel to the fires already being set by reactionaries of every stripe who have a vested interest in the failure of democracy. They anticipate reaction, claiming our lack of response as reason enough for seeking the overthrow of the society we are all a part of. Reform on our part in response to a proven need is to cut short the fuse of rebellion, to cut short those who seek the defeat of democracy.

Such reform can only be accomplished through existing institutions; it can only be accomplished through reform of them, beginning with the rules and procedures of the House of Representatives. We must let the people and their news media see what is transpiring here in their name, rather than shut them out in the name of fear of breach of security. This is their House, and they have a right to know what is happening here.

I believe that every vote that is meaningful must be recorded so the people will know how their elected representatives voted. Recorded teller votes are an essential reform. There is no excuse in the world why any Member of this body should be afraid of allowing his constituents to know how he voted. I favor the recorded teller vote.

The 3-day conference report layover is another essential reform. Often the conference between House and Senate results in a measure that is considerably different from the version we pass. Often the conferees disregard their instructions, even refusing by their makeup or decisions to reflect the wishes of the majority of this body. It is imperative that this body have a chance to study conference reports rather than be required to vote on them immediately.

Open committee sessions are not even negotiable as far as I am concerned. More than 40 percent of all committee sessions of the House are now closed to the public. It is also true that this trend is accelerating . . . fewer sessions of committees, where the really meaningful business of the Congress is transacted, are open to the public. This is, in effect, a denial of the democratic process, rather than an affirmation.

Disclosure of record votes in committees is another laudable effort to let the people know what is going on in their name within the committee structure. Often the people at large have no knowledge of what is happening. When other Members of this body return home, they are asked how such a thing could have occurred . . . how such a bill passed. We are often at a loss as to a reply. It is imperative that other Members of this body be informed of what committees decide and how they arrive at these decisions. For these reasons alone, disclosure of record votes within the confines of committees is essential.

This House is often a cumbersome thing. Its size does not allow for too many lengthy debates. It is often necessary for us to pass legislation swiftly in the interests of time. Nevertheless, there must be greater time for debate on motions to recommit. Too many times the wishes of the majority of Members and the people they represent have been closed off because of the limit on debate in such cases.

The last reform is elementary participatory democracy . . . guaranteed debate time on amendments. To close off debate is to negate the entire democratic process. To close off bills from amendment and discussion, as has often been the case in this body, is to deliberately enrage significant segments of the public. There is often good reason for the cries of outrage vented by many American citizens. When we do not reflect their wishes . . . even in the discussion and amending process . . . we are courting destructive dissent rather than constructive amendment and compromise.

Mr. Speaker, this House really should have little to hide from the people. The national security argument has been worked to death. Recently, an article in the Wall Street Journal by Dr. Edward Teller, no raving liberal, attacks secrecy for its own sake. We defeat our own purposes by being overly secretive.

By closing the House of the people to those very same people, we only alienate growing segments of society, stifle the democratic process and undermine the foundations of the institution and Nation we all love so deeply. If we do not take the initiative in instituting reform, we merely reaffirm the worst that has been stated about the lack of progressivism in the Congress. We add strength to the arguments of the radical revolutionaries among us. We contribute to the erosion of this House and its role.

History's pendulum swings in inexorable, wide arcs. Power swings away from the legislative branch to the executive, and then back again. Strong Presidents take power to themselves at the expense of the Congress. Weak ones lose it back to assertive Congresses.

In recent years, the legislative branch, particularly the House, has been watching helplessly as its power has drained away to the executive branch. However, by concentrating power in the House, we take it away from the broad number of Members. In effect, the mass of the House becomes less responsive because of the inner concentration of ability to act and respond.

We end up by becoming weaker as a body—as a branch of Government. We become less able to counterbalance the executive branch because we make ourselves weaker. Only by willing, internal reform can we reverse the trend—make the House stronger through greater diffusion of power to individual Members. If we make each Member stronger through fairer distribution of initiatives, we allow Members to reflect the wishes of their constituents. There is a great spread of pressure upon the House, and a broader expression of the wishes of the people of this country.

If we do not reflect the will of the people, which calls out for reform, we condemn ourselves and this institution to worse than failure—we pronounce it—and ourselves by inference—irrelevant.

REPEATING McCARTHYISM

HON. JOHN J. RHODES

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 27, 1970

Mr. RHODES. Mr. Speaker, the Washington Star on Saturday night carried a letter to the editor that defined the term "McCarthyism." I believe it needs repeating in the light of some of the smears being leveled against President Nixon these days:

McCarthyism: a tired cliche of the radical left; Pavlovian in its origin; evil in its purpose; slanderous in its implications and intentions, but meaningless except as an instrument of deliberate smaer and vilification as accepted by the empty minds for whom it is intended.

Mr. Speaker, in recent weeks we have seen a resurgence of this kind of McCarthyism in the area of racism that does full justice to that definition. I refer to attempts by a few Democrats to tar President Nixon with the brush of prejudice, of racism, and of indifference in the matter of equal rights and equal opportunities for all Americans.

Mr. Speaker, a check of the record easily proves the falseness of those charges, leveled by some, both inside and outside of the Congress. But then those who indulge in McCarthyism of either the left or the right have little regard for the truth or for the reputations and sensitivities of those they malign or for the damage they can do.

DICKEY-LINCOLN NEEDED

HON. WILLIAM D. HATHAWAY

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Monday, July 27, 1970

Mr. HATHAWAY. Mr. Speaker, I suspect that officials of New York's Consolidated Edison Co. would welcome at this time the presence of the Dickey-Lincoln hydroelectric power project.

The recent failure and shutdown of New York's largest power generator, the million-kilowatt "Big Allis," coupled with other recent large-scale electric utility failures, has proven once again the need for the kind of reserve power that Federal hydroelectric facilities such as Dickey can provide.

Consumers of electricity in New York and the Northeast again face the threat of power shortages, inconveniences, and the danger to property and life which would accompany a massive blackout.

The Ravenswood failure all but eliminates Con-Ed's reserve capacity, and another breakdown or a heat wave could place New York and several neighboring States in an emergency situation.

What will it take in the way of such emergencies before Congress begins a needed all-out effort starting with construction of the Dickey project, to fill the obvious power gap in the Northeast? The need for doing so is so great and its emergency nature so obvious that the major private power producers and other former detractors of hydroelectric plants must be beginning to see the light.

The current crisis demands swift and immediate congressional attention and action. Many rely on nuclear power as a solution. In numerous statements to the RECORD, I have revealed the dubious character of this solution. In its stead I have advocated hydroelectric plants as a more viable solution.

I was greatly disappointed by the House's refusal to include the $807,000 for the Dickey-Lincoln hydroelectric project preconstruction funds in the public works bill for fiscal 1971. I am confident, however, that the Senate Appropriations Committee will reinsert these funds and that this action will receive full Senate approval. After conference, the matter will come back to the House for another vote.

In a recent statement to the RECORD, I included a July 13 Newsweek article warning of Consolidated Edison's inadequate power facilities as well as the ever-increasing possibility of mechanical breakdown. A July 23 article in the Washington Post demonstrates the veracity of the Newsweek predictions. In the hope that my colleagues find it both interesting and informative, I am submitting a Washington Post article on the same subject for the RECORD:

FAILURE SHUTS BIGGEST N.Y. GENERATOR

(By Robert K. Warner)

New York's City's largest generator has failed, dealing a second major blow to the city's already overburdened electric power system.

The million-kilowatt "Big Allis" generator at Ravenswood, Queens, was shut down Tuesday night because of an electrical fault in a high-pressure turbine. A smaller 275,000-kilowatt nuclear plant at Indians Point failed in late June, and neither is expected to be working again until September.

A Consolidated Edison Co. spokesman said the Ravenswood failure "all but eliminates" the utility's reserve capacity, which stood at about 13 per cent before the breakdown. The Federal Power Commission recommends a reserve capacity of 20 per cent.

An FPC engineer said New York's power situation "is not yet in an emergency," but he warned, "It doesn't take much at this point to upset the applecart. A heat wave, for instance, could cause serious problems."

Con Ed said that if such an emergency arose it could buy enough electricity from neighboring power pools to meet peak demands.

Last March, however, before the current breakdowns, Con Ed had warned that "A prolonged hot spell and unusual mechanical difficulties this year could require power conservation methods," such as small decreases in voltage or short blackouts in different areas of the city.

The failure of the Ravenswood generator, which accounts by itself for more than 10 per cent of Con Ed's capacity—cuts the utility's remaining installed capacity to about 7.5 million kilowatts, 225,000 kilowatts short of estimated peak demand.

Yesterday, New York City's electric demands were about 6,400,000 kilowatts, well within Con Ed's generating capacity. The highest demand so far this summer has been about 7 million kilowatts, the company said.

The utility has buying agreements with a number of electric power pools, in New York State, New England, Canada and the Middle Atlantic States. The Con Ed spokesman said the company has "firm commitments" to buy up to 520,000 kilowatts to supplement its own power.

In a crisis, Con Ed might also buy electricity from adjoining power pools such as Pennsylvania-New Jersey-Maryland Interconnections (PJM), the pool that includes Potomac Electric Power Co.

An official at PJM said the pool could provide as much as 400,000 kilowatts for Con Ed "in an emergency situation, as long as the 12 companies in PJM had adequate reserves."

PJM's reserve capacity now stands at about 8 per cent, after the failure of an 820,000-kilowatt plant in Keystone, Pa., on July 12.

"We would not weaken PEPCO or any of our other utilities to get power to New York," the PJM official said. "But I don't know how far we might cut our reserve capacity if there was a serious emergency."

IN THE NATION: NO SALE ON PREVENTIVE DETENTION

HON. CHARLES C. DIGGS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 27, 1970

Mr. DIGGS. Mr. Speaker, under unanimous consent, I include the following article from the New York Times of July 19:

IN THE NATION: NO SALE ON PREVENTIVE DETENTION

(By Tom Wicker)

WASHINGTON, July 18.—Rarely if ever does a member of Congress or any other politician have to face a clear-cut choice between going down in flames for virtue or going to bed with the devil. Few choices are ever that simple for anyone, and one of the classic examples of recent times is the District of Columbia crime bill now before the Senate.

Not, of course, that anyone elsewhere in the nation cares what happens to the 800,000 voteless, helpless, hapless residents of the District; and the nation's history is replete with instances of the callous indifference of the rest of the country to the plight of those who live in its capital—a large majority of whom are black. The D.C. crime bill is nevertheless important as a sort of blueprint—a dress rehearsal or a pilot program for what the jingoes of law enforcement hope to do to the rest of the nation.

What they hope to do is chilling—preventive detention of those who *might* commit a crime if released on bail; "no-knock" searches and seizures; expanded police wiretapping; a lowering from eighteen to sixteen of the age at which juveniles must be tried as adults; stiff mandatory sentencing provisions. Anyway you look at it, these sections make the D.C. crime bill punitive and raise grave constitutional and libertarian questions.

On the other hand, this massive document—about 400 pages long, leading Senator Edward Kennedy to say that the courts would be "clogged for years unraveling the bill's mysteries and undoing its mischief"—does provide a desperately needed court reform for the District, as well as a public defender system.

THE LINKAGE

The trouble is that the House is attempting to force the acceptance of such measures as preventive detention by coupling them to the generally approved court reform; and Senator Joseph Tydings of Maryland, the bill's Senate sponsor, has warned his colleagues that those who are under the "dangerous illusion" that the House will agree to a simple court-reform measure are "only kidding themselves."

No doubt they are; but Senators can play that game, too. If the House will not accept a court-reform bill devoid of preventive detention and other evils, the Senate has the power to let the whole D.C. crime bill die a well-deserved death. That would be preferable to passing it as it is.

The case of preventive detention alone is enought to justify this contention. If a suspension of the presumption of innocence is allowed to imbed itself in the processes of law enforcement in the District, we are going to be stuck with this dubious doctrine for years to come—because, as Senator Charles Goodell pointed out, "This legislation may well be setting a precedent for the rest of the country." That is precisely what it is doing and the best reason why it ought to be opposed.

In the first place, preventive detention is class legislation, particularly in the District, where its burden will fall with precision on the black people. As the foremost victims of a discriminatory social system the blacks pro-

vide the heft of the street criminals who are most likely to be jailed "preventively."

DIFFICULT TO JUDGE

In the second place, no judge can determine accurately, even in the adversary hearings set up by the D.C. crime bill, who may go out and commit a crime, and who may not. In one limited survey conducted here, of 2,776 persons who came before Federal District Court, 207 or 7.5 percent were charged with committing a new crime while on bail; but only 124 or 4.5 percent were charged with a crime of actual or potential violence. By what means could these 207 or 124 persons have been certainly identified in advance?

In the third place, the courts are already so overcrowded that trials are delayed for years, which is the basic cause of the high rate of recidivism here and elsewhere; and the D.C. crime bill would over-burden courts further with the hearings necessary to impose preventive detention.

In the fourth place, prisons and correctional institutions are physically too jammed to accommodate easily the preventively detained; and so, far from reducing crime, further incarceration of defendants in these squalid institutions, with their inadequate rehabilitation programs and their populations of hardened criminals, homosexual aggressors, and mentally deficient persons, makes new criminals rather than correcting old ones.

In the fifth place, those preventively detained in prison, all of whom will already have been charged with one crime, will be materially damaged in the preparation of a defense against that charge; and in the sixth place, they will thus become pushovers for "plea bargaining"—an arrangement in which defendants plead guilty in return for a shorter prison term. Such bargaining circumvents rather than insures due process, and justice itself.

In the seventh place—although one hesitates to mention it in the current climate of fear and hysteria—preventive detention in all too many cases will wrongfully deny liberty to innocent persons. That fact alone should cause the Senate to tell the House that if preventive detention is the price of a D.C. court reform, it's no sale.

YOUR COUNTY—A NEW TOWN DEVELOPER

HON. THOMAS L. ASHLEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, July 27, 1970

Mr. ASHLEY. Mr. Speaker, Mr. Bernard F. Hillenbrand, executive director of the National Association of Counties, recently testified before the Housing Subcommittee on my bill, H.R. 16647, the proposed Urban Growth and New Community Development Act of 1970.

In his testimony, Mr. Hillenbrand discussed the important role that counties would play as developers of new towns if the bill is enacted. He has incorporated much of his noteworthy testimony in a recent editorial for the National Association of Counties newsletter and I commend it to the attention of my colleagues.

The editorial follows:

YOUR COUNTY—A NEW TOWN DEVELOPER

(By Bernard F. Hillenbrand, NACO Executive Director)

Your county can join the wave of the future and become a "New Town" developer. That is, it can if the New Community Development Act of 1970, drafted by a House subcommittee under Congressman Thomas L. Ashley, becomes law.

The legislation is the outgrowth of a two-year Ford Foundation financed study, conducted by the National Association of Counties and our sister organizations, the National League of Cities, the U.S. Conference of Mayors, and several other key groups. NACO Past President James Aldredge represented NACO. In our final report entitled, "New City," we assembled a list of major recommendations for a national urban growth policy and new towns legislation. Most of the proposals have been incorporated in the Ashley legislation (H.R. 16647).

From our point of view, the most important aspect of the legislation is that it would make it possible for the county, as a public body, to sponsor a new town.

COUNTY AS SPONSOR

The idea of counties being a sponsor of new towns was suggested to NACO by James Rouse, the private developer of a new town in Columbia, Maryland, and one of the most knowledgeable individuals of the new towns concept.

Rouse points out that most counties already have the machinery necessary to be an effective new towns sponsor. Among the county's most important facilities is the power of planning and zoning, which were never available to private developers. Control of vital public works and services such as water and sewers, recreational areas, airports and roads, hospitals and schools, etc., are the responsibility of many counties, and are essential ingredients in the development of a new community.

However, the most significant asset of the county is the power of eminent domain which allows for the orderly development of large tracts of land including public utilities. The experience of private developers is that there can be a single individual who refuses to sell his land at more than adequate compensation, and thus endangers the entire plan. Eminent domain, used responsibly by the county, would correct this hold-out situation.

Financial controls are already a part of the county's administrative function; and, as a municipality, it has the power to receive grants and developmental funds and the right to enter into legal contract.

Within the county are policemen, firemen, prosecutors, judges and administrative personnel, all charged with the responsibility of protecting, regulating and controling functions and services of the county.

The property tax is also a major problem that private developers agree may continue to diminish the possibility of private new town development. It's simply beyond the financial capability of even giant industries to pay property taxes of non-productive land, as it awaits revenue-producing development. This situation would not occur if a public body were the new town sponsor.

COMMUNITY DEVELOPMENT CORPORATION

We believe the heart of this legislation is the creation of a National Community Development Corporation (NCDC), within the Department of Housing and Urban Development patterned after a similar mechanism now in operation in New York State. The NCDC would be the triggering mechanism to approve a county as a sponsoring agency. It would work with the county, giving technical assistance and planning grants to develop the overall plan. It would then be a coordinating mechanism to channel public and private loans, grants and community facilities into the area.

KEY PROVISIONS

Of special interest are:

1. payments-in-lieu of taxes to local government during the development period;
2. 75% federal funds for planning;
3. technical assistance resources;
4. New Towns-in-town on vacant public and private land and in "air rights" over public facilities;
5. development of fringe areas suffering from economic depression;
6. public-private cooperation;
7. a national body, the Council on Urban Growth, to develop suggested national urban growth policies;
8. truly balanced communities: at the outset economic, racial and social integration, which if maintained, would never result in racial confrontation;
9. an economic base as the only true base for a new town and an employment potential for every kind of worker; and finally,
10. the maximum participation by small home builders.

NIXON HITS DEMOCRATS' SPENDING AS DIVERSION IN SLOW UPTURN

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 27, 1970

Mr. BOGGS. Mr. Speaker, in recent weeks we have enjoyed a continuing and lively dialog in this Chamber on the subject of the Nation's economy.

It is right that we should discuss this subject, for the plight of our economy is a subject of concern to every American citizen. Growing unemployment, skyrocketing interest rates, galloping inflation, combined with increasing signs of economic recession permit few of our people the luxuries of contentment or apathy.

In the interest of enlightening our dialog, I am inserting in the RECORD a column by Joseph Kraft which appeared in last Thursday's Washington Post. Mr. Kraft makes a thoughtful analysis of the interplay between contemporary economics and politics, and I wish to call it to the attention of my colleagues on both sides of the aisle. The article follows:

[From the Washington Post, July 23, 1970]

NIXON HITS DEMOCRATS' SPENDING AS DIVERSION IN SLOW UPTURN

(By Joseph Kraft)

Hardly anybody disputes President Nixon's recent claim that the economic recession has "bottomed out." So why, instead of pointing with pride at its own record, is the White House viewing with such alarm the "big spending" habits of the Democrats?

The answer is that the coming economic upturn recovery is going to be slow and painful to the point of looking like a continuing recession. And the reason has been presented with exceptional clarity by Professor Otto Eckstein of Harvard in testimony to the Joint Economic Committee of the Congress.

Professor Eckstein's thesis is that the steps taken to slow the recent decline leave few actions available to hasten recovery. The upshot is a "stretched recession" apt to last from 1969 through 1971.

In the Eckstein view, the downturn which began last year was caused by four main factors. First, as usual in periods of economic softness, there was a falling off in consumer spending. On top of that came unusually slow growth in state and local spending, a drop in defense spending, and a fall in housing starts.

Left to themselves, these factors could have precipitated a truly sharp recession—with employment falling off dramatically and

profits declining by as much as a third. But the Nixon administration, true to its philosophy of "gradualism," took deliberate measures to ease the pinch.

Under Arthur Burns, the Federal Reserve which had previously tended to hold money supply in check during periods of economic decline, raised the amount available at a rate of 4 per cent between February and May. At the same time, federal taxes were decreased. And in that atmosphere, business continued to plan large outlays for new plant and equipment.

The result was an exceedingly mild recession. Profits fell only 10 per cent. The number of jobless rose slowly to a point only slightly above what economists in the early Kennedy years set as a target for recovery. And the statistical evidence of decline in Gross National Product was so ambiguous that the turn-around occurred before it was absolutely certain there had been a recession.

But all the medicine used to ease the patient's pain has left the cabinet bare of drugs to stimulate a brisk recovery. A tax cut, for instance, would probably foster increased spending in the private sector. And the new Deputy Director of the Budget, Caspar Weinberger, seemed to point in that direction in a press conference on July 16.

But yet another tax cut would leave the federal government short of funds for essential domestic and foreign services. So President Nixon, in his press conference Monday, and Budget Director George Shultz, in congressional testimony Tuesday, knocked down any tax cut speculation.

Another shot in the arm could come from further easing of the money supply. That could lower interest rates, thus pushing housing and outlays by local and state governments.

But any big rise above the 4 per cent level would have severe inflationary impact. Indeed, for technical reasons the Federal Reserve Board curtailed the growth of the money supply in June; and now the administration is huffing and puffing just to get Dr. Burns to bring the rate of increase back to 4 per cent.

What this means is that the upturn will be feeble. Unemployment will probably hang at about 5 per cent for the next year or so. Profits are due to stay flat. And the growth in Gross National Product will not be impressive.

That kind of recovery, whatever its economic justification, is not exactly political magic. So when election day comes round, the voters will probably be more in a mood to distribute blame than cheers. And that is why the White House, rather than getting in position to gather bouquets, is doing what it can to set up Democratic spending as a target for the rotten eggs.

ROCKWELL EXECUTIVE LAUDS SPACE PROGRAM

HON. ROBERT PRICE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 27, 1970

Mr. PRICE of Texas. Mr. Speaker, on July 15 Mr. James L. Daniell, vice president, marketing services, North American Rockwell Corp., gave a most interesting talk on the U.S. space program to the Washington Rotary Club here in the Nation's Capital.

Mr. Daniell took what I think is a quite novel approach to evaluating the space program; he discussed it in light of the Rotary Club's four-way test, a procedure by which the club evaluates various issues and programs of interest to its membership. The four-way test involves posing and answering certain quesions with regard to a subject under consideration; three of which apply to the space program—First, is it fair to all concerned? Second, will it build good will and better friendships? And third, will it be beneficial to all concerned?

Mr. Speaker, in his remarks Mr. Daniell made it abundantly clear that this Nation's space program more than meets the four-way test. I think his thoughts are of particular interest because Mr. Daniell represents North American Rockwell Corp., the corporation that has contributed so much to man's efforts to conquer space. I commend his remarks to the attention of my colleagues.

The speech follows:

AMERICA'S SPACE PROGRAM TAKES THE ROTARY TEST

Thank you President Glenn for having me here to talk to the Washington Rotary Club. It is a sincere pleasure for me to have an opportunity to speak to a group of your stature. My subject for today deals with a topic that is very much in the public consciousness these days. It is getting a great deal of media coverage, it is a major political question, and it is a subject that will influence the course of your lives.

Rather than talk about the space program in some of the more customary terms, I thought I could turn the tables a bit and discuss it in terms of the Rotary Club Four-Way Test. In the Rotary Four-Way Test, there are three questions that could apply: First, is it fair to all concerned? Second, will it build good will and better friendships? And third, will it be beneficial to all concerned? So, for the next few moments, I am going to talk to you about America's space efforts and examine them in the light of those three questions from the Rotary Four-Way Test.

Leading off with, is the space program fair to all concerned? . . . let's talk about fairness to the taxpayer. After all is said and done, it is the taxpayer that is supplying the money that has put our space vehicles on the moon, and it is the taxpayer who must pay the bill for our future efforts, whatever they turn out to be. It's only fair then, that it is to the taxpayer that the first accounting for the program must be made.

The space budget request for 1971 is for 3.3 billion dollars, for a stretched-out, decelerating program. This is 12% under the 1970 budget, which in turn, was less than the 1969 budget. It is worth pointing out that the space program in general, and the Apollo series in particular, have been among the best managed, major government efforts ever undertaken in the history of this country, and as a matter of fact, in the history of the world.

Think back for a minute to 1961 when President Kennedy first established the landing of men on the moon as a major national goal. Shortly after that, in 1962, and seven years before the actual landing, a National Aeronautics and Space Administration official predicted the cost of achieving a manned landing on the moon at 20 billion dollars. As you all know, the landing took place on July 20, 1969, and when the figures on the cost of achieving the objective were totaled, they came to 21.3 billion dollars, only a 5% variation over a period of seven years. That, gentlemen, I think you will agree, is very good estimating and very excellent management of a major program over a pretty long term.

In addition to judging the fairness of the space program in terms of what is accomplished for the taxpayers' dollars, there is another kind of accountability that is worth considering. That is, is the space program fair to *all the nation* and *all the people* of the world?

One good measure of the fairness of the space program in relation to the people of the world is the fact that it has been carried out openly and with complete disclosure, not only with our own media people, but with foreign media representatives as well. America's approach to her space program has been, that, this is an effort of world significance to be shared with all of the people that populate the earth. There is not a nation of the world that has not had the opportunity to observe and examine the different elements of this country's efforts in space.

The obvious and very significant contrast to the way the Russian space program has been conducted is an important lesson that has largely been lost on many people in this country and particularly many of the younger people who are so concerned with the system of government that we have.

Another test of the fairness of the program is how widely its economic impact is felt. On this score, over 90% of the NASA procurement dollars goes to private industry and over 163 million dollars went to small business firms. During 1969, 48 states as well as your own District of Columbia participated in NASA work. All told, 1,289 different companies, 203 universities and 69 non-profit organizations were involved one way or another in the contracting.

The next question in the Four-Way Test is, will it build good will and better friendships? In answering that question, I believe we must give special credit to the men who have manned the vehicles that the United States has sent into space and the teams that have successfully been on the moon and returned. The incredible ability that these men have demonstrated represent the best qualities of this nation. Above all, with all the skill and concentration that has been required by these astronauts, they have achieved their marvelous accomplishments with great humility, humanity, and in many instances, with a beautiful sense of humor.

Despite all of the pressures on the crews of our space vehicles, they have been willing to take the time to bring the message home to all of the peoples of the world that efforts in space are important to them as well as to the United States. Perhaps the number of miles that these men have traveled outside of the United States talking about our space program and representing our country have been just as important as the miles that they have traveled in space exploration and in traveling to the moon and back. A check with NASA reveals that over the past years our astronauts have traveled over a million miles to spread the message of good will inherent in our space efforts. I suggest to you gentlemen, that the good will and friendships that they have developed internationally are a most significant fringe benefit from which future generations in this country will continue to benefit. This aspect alone of the space program is a positive, affirmative answer to the test, will it build good will and friendships?

But, beyond the good will and international friendship generated by the astronauts, there are other reasons why the space program is building good will for us throughout the world. Already, scientists from 73 nations are involved in our space programs and these joint ventures have resulted in international agreements for further cooperative programs. Sixteen international satellites have been agreed upon and ten of these have already been placed in orbit with Britain, Canada, Italy, and France taking part. We have agreements with 19 countries for a variety of sounding rocket projects. Additionally, many countries have built their own ground receiving stations so that they

can benefit from data transmitted from our weather satellites.

The final item in the Four-way Test is, is it beneficial to all concerned? Let me outline a number of the beneficial by-products of space development which have great implications for all Americans as well as other people in the world. First, consider the laser beam, which is a direct result of materials and technology associated with the space program and which is proving itself quite valuable in the treatment of eyes, particularly detached retinas. The laser beam will also soon be part of a major non-wiring communications system which will be used more and more in the field of communications technology.

New mineral locations are being uncovered as a direct result of space activity. Recently, for example, one of North American Rockwell's geologists used Gemini 2 photos to locate a mineral deposit in the middle of the Egyptian desert that had been unknown previously. The geologist's study of the photos revealed that most of the oil fields in the Middle East lie on previously undetected earth faults. This is a fact that is of considerable interest not only to geologists, but to the oil producers of the world as well.

From space, we can detect the beginnings of huge insect infestations which have plagued man's crops since the beginning of civilization. From outer space, we can trace the movement of marine life, which is essential if we are to harvest the ocean for badly needed supplies of nutrition, particularly protein, in the future. This type of information and use of space technology will be a great boon to developing nations in the future.

The transfer of aerospace technology to present-day commercial applications is also astounding. To date, more than 12,000 technology items with commercial applications have been uncovered and put to work. Many of these applications are being used now in the rehabilitation of crippled children, manufacture of automobiles, ships and airplanes, as well as in hospital work.

Systems management techniques which evolved from management of the complex space program are now being used in crime prevention, in urban affairs, and in transportation planning.

These preceding benefits from America's space program are by no means all, but they are representative of the ways the space program has benefited all of us and they also demonstrate that, the space program is providing important means for solving many of the most serious problems of the human race today. How these capabilities are used in the future, and to what degree, remains to be seen but the fact that I want to drive home with you is that the technological and scientific means of solving many of the world's most pressing problems are now in our hands and they are in our hands because of the exploration, development, sweat, and investment that have gone into America's space efforts.

If America's space program measures up as well as I think it does to the Rotary Four-Way Test, I hope you will also agree with me that it is worth pursuing and it is worth pursuing vigorously. However, we are now hearing prominent people in high places calling for the end of manned space flights. The risk is too great, we are told. Where would America be today if she turned back in the face of great risk in the past? There would probably be no civilization west of the Allegheny Mountains, for example. I'm sure on every wagon train there were men urging that the train turn back, that the risk was too great. But they did go forward and history proves that their efforts and sacrifices were well worthwhile.

For just a few more minutes, I would like to give you a quick view of what we might anticipate in the future for the space program, because there are some very exciting and important future achievements that we are currently working toward in space.

Topping the list of goals which have been approved by the President are two unmanned "grand tours" of the solar system to begin in the late 1970's. The special vehicles involved in these voyages of scientific discovery will be commanded by a computer which will be capable of making repairs, alterations, and modifications of the space craft as they move into space, according to Dr. Payne, head of NASA.

One tour will begin in 1977 with Neptune as its ultimate objective. It will take four years for this part of the tour to be completed. The craft will orbit Jupiter, and then head out to Uranus, another four year journey. After orbiting Uranus, it will set out for Neptune arriving in 1988.

The second tour will be launched in 1979, with Pluto, our most distant planet, the objective at the end of a 3.7 billion mile flight. On the way, it will swing by Jupiter in that same year, and Saturn in 1980, reaching Pluto in 1985.

About 1978, we can look for the first launch of a nuclear propulsion rocket, an essential program if man himself is ever to journey to the distant planets.

For the short term there are four additional manned Apollo moon flights on order. Apollo 14 is scheduled to fly next year. In 1971 Apollo 15 and Apollo 16 will fly with 16 carrying the first lunar rover vehicle which will allow the astronauts to roam up to 25 miles outward from their lunar landing craft. In 1972, Apollo 17 will be launched.

Apollo flights will be suspended then while emphasis is put on Skylab, an experimental space workshop where astronauts will be able to work up to 56 days at a time. Skylab is a forerunner of the space station which will be bigger. We have the hardware for Skylab and the space station is now in the design stage. In describing this program in a front page feature on the 2nd of July, The New York Times referred to it this way: ". . . the future the National Aeronautics and Space Administration sees flowing from this project involves massive space stations to orbit the earth for ten years and manned mission to Mars taking two or three years."

The final, tiny paragraph of the Times feature makes a point that I will not belabour: "The Soviet Union has indicated that it may be orbiting large space stations in the next five years. The recent Soyuz flights are presumably forerunners to such missions."

Interspersed throughout the major United States projects I have described will be flights to Mercury, Mars, Venus, and Jupiter.

This is indeed an ambitious program, but if the program measures up as well as I believe it does, particularly in terms of the Rotary Four-Way Test, then you and your children are going to reap rich rewards in scientific and human progress, rewards that will provide for a quality of life that may seem like a distant dream today. But if the realization of this dream seems somewhat remote as we sit in this room this minute, remember how remote the idea of landing a man on the moon was in 1960 . . . Just ten years ago. And now, stretch your minds and imagine where American space program can take us by 1980. Gentlemen, I hope I'll meet you there.

FLOOD INSURANCE FOR TOPEKA—GOOD PROTECTION AT REASONABLE COST

HON. CHESTER L. MIZE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 27, 1970

Mr. MIZE. Mr. Speaker, our colleagues with long and distinguished service in the Congress know there is no occasion more gratifying than the implementation and efficient administration of laws to protect the public interest, promote private enterprise and protect private property—especially when those laws originate in the committee on which they serve.

My service on the Banking and Currency Committe has been relatively short—only 6 years—but I am deeply pleased that our National Flood Insurance Act of 1968 is well on the way to full operation.

The past 2 years have been devoted to comprehensive studies of flood-loss statistics in an effort to determine appropriate premium rates for high-risk areas. Following the guidelines of our committee, the Department of Housing and Urban Development is now prepared to underwrite premiums for flood insurance in metropolitan areas where high water has historically ravaged the community, thus making private insurance an unacceptable risk without Federal assistance.

Now, beginning in August, the citizens of Topeka will be able to purchase flood insurance at very reasonable rates. This insurance will protect private homes and businesses. It will promote commercial development and provide the people of Topeka in flood-prone areas with the sort of protection from natural disaster that each American deserves.

Under leave to extend my remarks at this point in the RECORD, I will include for interested readers an analysis of the National Flood Insurance Act of 1968, and an article by Sue Webster that appeared in the Topeka State Journal, on page 1, July 22, 1970. These items follow:

NATIONAL FLOOD INSURANCE ACT OF 1968

Under this act, the Secretary of HUD is authorized to establish and carry out a national flood insurance program to enable persons to purchase insurance against losses resulting from physical damage to or loss of real property or personal property arising from any flood occurring in the United States. He is directed to encourage and arrange for maximum participation in the program by insurance companies and other insurers, and by related agents, brokers, and organizations.

The act provides for the operation of the flood insurance program as a joint venture between the Federal Government and the private insurance industry (with the industry participating on a risk-sharing basis). However, as an alternative, the Secretary may, if necessary, operate the program without the companies participating on other than a fiscal agency basis.

The Secretary is authorized to borrow up to $250 million from the Treasury to carry out the insurance program. A National Flood Insurance Fund is established for making payments authorized by the bill, including premium equalization payments and reinsurance for losses in excess of losses assumed by insurance company pools formed to provide flood insurance.

Coverage will be available initially for one- to four-family dwellings and small business establishments but it is to be extended to additional types and classes of property as found feasible by the Secretary. In the case of dwellings, the insurance limit, where the rate is less than the full risk rate, will be $17,500 for any single dwelling and $30,000 for a two- to four-family structure plus $5,000 per dwelling for contents. Small business properties can be insured for up to a total of $30,000 for the structure and $5,000 for the

contents of each individual business. These limits may be doubled upon the payment of full premium rates for the coverage in excess of such limits by the insured property owner.

After June 30, 1970, no new flood insurance coverage can be provided in any area unless an appropriate public body has adopted permanent land use and control measures which the Secretary finds are consistent with the criteria he has prescribed for land management and use in flood-prone areas.

The face amount of flood insurance coverage outstanding and in force at any one time is limited to $2.5 billion.

The Secretary of HUD is authorized to undertake studies for the purpose of determining the extent to which insurance protection against earthquakes, or other natural disaster perils, other than flood, is not available, and the feasibility of such insurance protection being made available.

FLOOD INSURANCE HELP OFFERED

(By Sue Webster)

Topekans will be able to buy federally subsidized flood insurance beginning in August, James Schlegel, city-county planning director, announced today.

"It is our understanding that anyone living in the city limits can purchase this insurance from their local broker," he said.

Topeka is only the second city in Kansas to participate in the federal program. The other city is Fairway in Johnson County.

To enable residents to buy the insurance, the city commission passed a resolution May 25 stating its intention to initiate flood plain zoning. The zoning must be in effect by Dec. 31, 1971. The zoning will insure that only flood-proof buildings are built in areas which are continually flooded.

Keith Krause, head of the State Water Resources Board, said the Department of Housing and Urban Development, which is handling the program, has set regulations on rates and the amount of insurance which can be purchased.

Insurance at the federally subsidized premium rate may be purchased in amounts up to $17,500 for single family homes and up to $30,000 for two- to four-family homes on structured rates from 40 to 50 cents per $100 of insurance, depending on the value of the structure.

The premium for a $17,500 home probably would be about $70 annually.

Contents may be insured up to $5,000 with rates ranging from 50 to 60 cents per $100 of insurance.

For small business coverage, federal subsidized premium rates also will be graduated at 50 cents per $100 for properties valued up to $30,000 and increasing to 70 cents per $100 for properties valued at $60,000 or more. Contents would be insured at the rate of $1 per $100 up to $5,000 maximum.

Krause explained that if the damage caused by the flood is greater than the amount the premium will cover, the government pays the difference.

Krause added it was his understanding that if a home or business was damaged to a great extent in one year, the property would have to be vacated or made flood-proof.

In other words, a homeowner whose property was wiped out would not be paid again if he rebuilt in the same area and was flooded the next year.

The program is planned to encourage individuals who live in flood-prone areas to pay at least part of the cost of insurance against flood damage in order to reduce the need for special disaster relief measures.

By requiring the city to set up flood plain zoning, the government also is interested in advising prospective developers of the perils incident to building in the flood plain area.

According to a HUD bulletin on the flood insurance, homes which are in flood plain areas when the areas are identified, will be eligible for a lower-than-normal rate made possible by the government subsidy.

The bulletin adds, however, "structures which are erected in an area after it has been identified as a flood plain area . . . will be insurable only at the full risk premium rate."

Therefore, when the city finalizes its flood plain areas, if a developer goes ahead and builds in that area, he will have to pay the full risk premium.

Planning staff and city engineers are working on drawing up the flood plain areas in Topeka and determining what types of buildings could be erected without being damaged by flooding.

It is possible one of the plains would be the Ward-Martin drainage area in the western section of the city.

Another area could be along Shunganunga Creek, whose drainage area takes in almost all of Topeka on the south side of the Kansas River with the exception of the Ward Martin drainage area.

In flood plain zoning, the most restrictions on construction would be in the areas closest to the creeks.

ALL MEDIA PLEASE COPY: LOWER RATES FOR CANDIDATES

HON. MORRIS K. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 27, 1970

Mr. UDALL. Mr. Speaker, I am sure most of my colleagues share my annoyance with newspapers, radio, and television stations which see political campaigns as opportunities for extra profits at the expense of those involved in the political process. And therefore I am sure they will be interested in an important precedent that has been established by one newspaper in Arizona.

Through the years I have noted that the rate charged political candidates by many papers and stations is the highest rate on the rate card. In many cases, there is a special political rate which is higher than any other class of advertising.

Since political advertising invariably requires cash in advance—something not required of other advertisers—the justification for these higher rates is hard to find.

Mr. Speaker, the thing that is most disturbing about this is that the money spent in political campaigns represents the contributions of ordinary citizens having an interest in their government. They cannot even take a tax deduction for the money they contribute. Yet a great many newspapers and broadcasting stations in this country see these contributions as some kind of gravy train to be exploited for profit.

Having observed these practices for many years, I was most pleased recently to come across an editorial in the Scottsdale Daily Progress, of Scottsdale, Ariz. Its publisher, Jonathan Marshall, hopes the idea will catch on around the country. So do I.

Without objection I will include the editorial at this point in the RECORD:

[From the Scottsdale Daily Progress, Scottsdale, Ariz., June 20, 1970]

LOW RATES FOR CANDIDATES

Over the years it has become traditional for the media to charge political candidates maximum rates for advertising. We think the tradition is wrong. The cost of campaigning is high enough as is.

Political ads are frequently a little more trouble than others, but the difference is not enough to justify higher charges.

Most candidates make a financial sacrifice to run for office. They are performing a public service, and they are essential to the success of our democratic system. For these reasons we believe that candidates deserve to be helped and not penalized.

From now on the Progress will have a new political advertising rate. Instead of charging our one-time open rate of $2.10 per inch, as in the past, candidates will be charged only $1.35 per inch, which is our special rate for churches, civic groups and non-profit organizations.

HOW LONG, MR. PRESIDENT, BEFORE YOU REPLY?

HON. WILLIAM (BILL) CLAY

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, July 27, 1970

Mr. CLAY. Mr. Speaker, on July 23, Congressmen STOKES, HAWKINS, and I wrote to President Nixon indicating our concern for the President's failure to give audience to black representatives or consideration to the problems of black Americans.

It is important to point out, I believe, that a memorandum from the President's own special advisory counsel on student unrest was made public July 24 which indicates similar concerns. Chancellor Alexander Heard of Vanderbilt University, leads off the June 19 memorandum to the President by saying:

We do not believe that our national government really understands that a national crisis confronts us.

Chancellor Heard leaned heavily on the necessity and urgency for President Nixon to listen to blacks, to gain exposure to blacks, and to respond and use his office to develop a climate of racial understanding.

I believe, Mr. Speaker, that the President could show good faith with his advisory counsel by inviting audience with black elected officials and representatives—for a start. We anxiously await a reply from the President indicating his view of the need to invite or to accommodate black views and concerns.

For the interest of my colleagues, I submit a copy of our letter to the President.

I also submit for their attention an article from the Washington Post of July 24 wherein the memorandum of the advisory counsel is discussed. The material follows:

JULY 23, 1970.

DEAR MR. PRESIDENT: The patience of many black Americans is exhausted. The Constitution gave us our rights. The Civil War confirmed those rights. Court decisions have documented them. Acts of Congress over the last decade elaborated upon them. Unfortunately, the policies of your Administra-

tion have tended towards limiting those rights.

In your inaugural address you stated, "To go forward at all is to go forward together This means black and white together, as one nation, not two." But your course of the past 18 months, in our opinion, is destined to destroy all possibilities of unity and brotherhood. The dream of complete racial equality cannot become a reality in the absence of a firm commitment from you, our Nation's leader, to attain that goal.

Since you assumed office, you have traveled to all corners of the earth emphasizing your concern for many problems and pledging American efforts towards solutions. But you have not come to black America. Race relations have not improved since the request of black Members of Congress to bring their concerns to you, but have advanced to a more critical state. If this country is to enjoy internal domestic tranquility, it is imperative that you have an audience with the legitimate and representative leaders of black America to discuss the grievances of 25 million black citizens. The request and invitation should come from you.

Of equal importance, you have not gone to white America with the case for racial equality or for civil rights.

White Americans look to their President for what is right. You can inspire white America to embrace and work for changes in society which will appropriately accommodate the full rights of black Americans. To date, you have not responded to this fundamental obligation. You have not used your powers of leadership to move this country forward to "one Nation."

Mr. President, when nine black members of Congress indicated five months ago our desire and willingness to bring black American concerns to you, we were turned away in a manner which showed disrespect for our offices and callous disregard for our views.

When questioned about your April response to the black House Members, Presidential Assistant John Erlichman was reported by Time Magazine to have replied,

"We try not to permit opportunists to use the Presidency as a grandstand. That group has been going around, with Adam Clayton Powell, holding hearings and taking extremist positions. This looked to me like a set up."

We are disturbed and distressed that you would permit that kind of allegation to be made with reference to men who have been elected within the legitimate processes of this system to represent American citizens in the United States Congress.

Since April 18, when we were advised your schedule would not permit your meeting with us, you have issued nineteen comprehensive policy statements without touching upon a policy for the improvement of race relations. You have taken your concerns to the American public via the television media during prime broadcasting time, but you have not acknowledged that the problem of separate and "unequal" societies moving steadily and dangerously apart deserves equal time.

Mr. President, the national dialogue on black/white relations has consisted of charges and countercharges which produce further confusion and serve only to solidify the prejudices and frustrations of racial conflict.

It is appropriate, we believe, that you be reminded of your words as well as of your deeds. On February 14, 1969, shortly after assuming office, you stated.

"I hope that by what we do in terms of dealing with the problems of all Americans, it will be made clear that the President of the United States is an elected official, has no state constituency, he has no Congressional constituency, he does not represent any special group, he represents all the people. He is a friend of all the people."

Black Americans have waited and have observed. We have learned that there is no virtue in endless patience. We have observed that it contributes to injustice and is construed as "political impotency."

The important question is not whether an individual black person or black group believes the policies of your Administration are "anti-black" or not. It is a question of whether you, Mr. President, can justify economic, social and political policies which are clearly detrimental to the welfare and survival of 25 million black Americans.

We note that you have had a record 30,600 personal guests at the White House. Mr. President, the time has come for you to invite discussion with the black elected officials and try to come up with answers to the number one problem confronting this country.

WILLIAM L. "BILL" CLAY.
AUGUSTUS F. HAWKINS.
LOUIS STOKES.

[From the Washington Post, July 24, 1970]

CAMPUS ADVISERS ASK NIXON TO HEED STUDENTS, NEGROES

(By Eric Wentworth)

President Nixon's special advisers on campus unrest have recommended that he and his White House staff develop a better grasp of the intense political and social concerns among university communities and racial minorities.

"We do not believe that our national government really understands that a national crisis confronts us," one adviser, Chancellor Alexander Heard of Vanderbilt University, told the President in a June 19 memorandum on student attitudes.

"The condition," Heard told the President on that occasion, "cannot be conceived as a temporary, aberrational outburst by the young, or simply as a 'campus crisis' or a 'student crisis'."

Heard said last night in a telephone interview "I believe the President and his associates are much more fully aware of the scope and the depth of concerns on the campuses and in the black community than they were two months ago." He declined to take any special credit for this fuller awareness.

In a summary statement which the White House released yesterday with several memoranda by Heard and President James E. Cheek of Howard University during their two-month tenure as presidential advisers, the Vanderbilt chancellor also said that Mr. Nixon had shown "serious concern . . . openness and a searching interest in what we had to say."

Heard's summary statement outlined a number of recommendations which he and Cheek had made. Some of these advised the President to:

"Increase his exposure" to campus spokesmen, "so that he can better take into account their views, and the intensity of those views in formulating domestic and foreign policy";

Gain more exposure also to blacks and other racial minorities, and "use the moral influence of his office in new ways" to reduce tensions and develop a climate of racial understanding;

Provide more aid for needy students and primarily black colleges in the coming academic year, and make a long-term commitment to help the growth and quality of those colleges;

Take steps to include young people in politics and government, and increase blacks' involvement in developing domestic policy;

Seek to understand the fears of "repression" among some groups, and "the realities underlying those fears".

Robert H. Finch, White House counselor, told reporters that Mr. Nixon has already acted on one recommendation for high-level staff liaison with the academic world. Finch said that he would play that role.

Finch also said that aid to 116 black colleges through the Health, Education and Welfare Department would be boosted to $100 million from $80 million through reprogramming funds in the new fiscal year.

Finch said other recommendations would be studied.

The chancellor wrote that on numerous occasions the President acted in accord with his and Cheek's recommenadtions—though he declined to assess what influence their recommendations had. He mentioned Mr. Nixon's signing the voting rights bill, and the Internal Revenue Service abolition of tax exemptions for segregated private academies, among others.

On other occasions, Heard continued, proposals "for one reason or another" were not followed. He cited his own suggestion at the outset that Mr. Nixon meet with members of the American Council on Education's Special Campus Tensions Committee. The panel, chaired by Sol M. Linowitz, published a detailed report in April.

Heard made it clear that his statement did not include all the recommendations that he and Creek had made to the President. "Implementation of some of the proposals," he stated, "might be handicapped by making them public."

But the fact that a number of recommendations were made clashed with remarks Tuesday by unidentifiable "White House sources" that Heard's and Cheek's role was primarily to provide the President and his staff with information and to educate them about campus problems.

4–H IN THE GHETTO

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, July 27, 1970

Mr. THOMPSON of New Jersey. Mr. Speaker, as you know, the 4–H clubs have provided over the years a magnificent opportunity for youth to practice those qualities of good citizenship and to learn those skills which would make them useful and productive members of our rural community. Quite recently, the scope of our 4–H clubs has taken on a wider view. These youngsters are now applying their energies to the problems of our cities and urban areas realizing that the well-being of rural America depends in great measure upon the health of our cities. For that reason, it gives me great pleasure to place before the House a statement by Miss Dianna R. Dennis entitled "4–H in the Ghetto." I commend it to my colleagues, and I congratulate Miss Dennis for her insight and dedication to the problems of her fellow man. Her statement follows:

4–H IN THE GHETTO

(By Dianna Dennis)

In the special report, the Urban 4–H Staff Institute states, "If 4–H is to have a viable, growing, on-the-move kind of program, it is necessary to look beyond rural America, to the towns and cities, where a growing majority of youth, especially unreached youth, live."

4–H is one of the few organizations that can possibly reach and help the estimated 15 million young people living in poverty today. This is because the main goal is youth development and the only rule is that a

person goes out and does the things that will help youths develop to their full potential.

There are tremendous unmet needs in our cities. Lower income families need something that can teach them—something that will bridge the communications gap between one person and his neighbor, rich and poor, educated and not-so-educated. 4–H can do this and more.

What the 4–H program must do, is try to reach those who have the lack of proper food and medical care; whose recreational and personal needs are not always met; and who lack the benefit of a good education. It must relate to young people who have known more failures than successes in school and community. They are those who have been subjected to prolonged economic or social deprivation and may have learned a repertoire of responses that protect their integrity as persons—thus their behavior is characterized by hostility to authority, generally termed insolence; by caution in relating to or being uncommunicative with strangers; and by having difficulty in concentrating on tasks that seem irrelevant, useless and without immediate tangible rewards. 4–H must show that it is truly concerned, and this can only be done through working and communicating directly with the people.

The overall purpose of the current Inner Cities programs is, and I quote, "To develop, implement, conduct, and evaluate a meaningful educative program to help disadvantaged youth in central cities lead more enjoyable and productive lives." In trying to achieve this goal, the program is also trying to help young people appreciate the fact that someone cares. Through reading projects, the young people are broadening their education without the hassles of a formal classroom. They are also learning to communicate more effectively with others, and learning the need for a formal education.

Practical learning experiences are emphasized, so to help the young people develop individual responsibility, and to prepare them for employment. Work-study programs have been set up as experience for employment, and also to acquaint the youths with, not only the resources available in their community, but the people responsible for them—the elected representatives.

4–H creates an atmosphere to provide experience in the democratic procedures, in contrast to the autocratic or authoritarian climate so prevalent in most low-income families. It gives an opportunity for young people to share their experiences with others. It develops the leadership qualities in young people, that would otherwise be lost, by involving them in planning and conducting their own meetings and projects. Older youths have even more opportunity through the "teen" or "jr" leaders programs.

Through Conservation, Home Beautification, Flower and Garden projects, youths can learn to improve their surroundings by learning lawn care, landscaping, and even "ornamental horticulture". These can stimulate youths to try and clean up their surroundings, and rejuvenate their neighborhood. Exploratory experiences, such as indoor gardening, are offered in plant and soil science projects, and can open new horizons for the underprivileged youth. Trips to farms and rural communities may prove to be firsts for many, and will show them another side of life.

Health and Physical Fitness can be stressed through Foods-Nutrition, Bicycle Safety, and organized active sports programs. In cooperation with Health Departments, Social Welfare, and other groups, programs in Child Care and Sex Education may be worked out. Young people and their families can learn how to make effective use of surplus foods products. Recreational activities can be organized by 4–H'ers for reaching other people in their communities. Art and Music Projects offer new outlets for young peoples' creative abilities.

4–H can prepare youths for improved family and home life. Clothing and cooking projects are directed at making the girls better homemakers. Youths can improve their own food supply through vegetable projects. Programs can be centered around the home, and give the youths a chance at their own Home Improvement. 4–H can be used as a vehicle to build communications between parent and child.

In order to start in a community, news of a 4–H program should be physically introduced. Telephoning alone will help one's efforts for a beginning. Meeting the community personally will give its members the feeling of being wanted. The leader of a 4–H club in an underprivileged area must have an understanding of the child in order to develop an understanding by the child of this world and his place in it.

"Inner City" 4–H programs have been started in many major cities across the United States. In New Jersey, successful programs are working in Trenton, and New Brunswick.

The main thing to remember is that if we don't work with the less advantaged, we are depriving ourselves of understanding a segment of our own democracy. Let's live up to our motto and let's "Make the best better"!

FUEL INDUSTRY WARNINGS ARE COMING TRUE

HON. ED EDMONDSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 27, 1970

Mr. EDMONDSON. Mr. Speaker, a very timely article by Mr. William D. Smith appeared last Sunday on the front page of the New York Times' business and finance section.

The Times' article accurately points out that many of the warnings voiced by the oil and gas industries in recent years against our increasing reliance upon foreign fuel sources, and against Government policies which destroy industry incentive for exploration and development, are today coming true. In 1969, U.S. natural gas reserves suffered the greatest reduction—12.2 trillion cubic feet—in the Nation's history. Mr. Smith warns consumers that a significant increase in gasoline and natural gas prices will come this fall.

Mr. Speaker, several witnesses before the House Mines and Mining Subcommittee's recent oil import hearings testified as to the tremendous savings available to the American consumer if only we would increase our dependence upon Middle Eastern oil. The Times' article tells a different story—that the current average price per barrel from the Mid-East is 75 cents greater than the same domestic barrel of crude; that at this time it is cheaper to supply the east coast of the United States with a barrel of crude shipped from Louisiana ($3.75) than it is to import Persian Gulf Oil, at $4.50 per barrel.

I commend Mr. Smith on his very perceptive analysis of the causes behind many of our most severe energy problems, and I include his article in the RECORD for the benefit of my colleagues:

U.S. OIL INDUSTRY REGRETS IT WAS RIGHT

(By William D. Smith)

If an industry could have a facial expression, the United States oil industry would be wearing a bittersweet smile.

The smile would be a result of having seen recent events prove some of its serious forecasts and urgent warnings correct.

The pleasure, however, is mitigated by the pain that the industry is nonetheless suffering from having seen its predictions come true.

Throughout the long and heated political controversy over oil imports, the industry has maintained that foreign sources of petroleum were relatively undependable and that their lower-than-domestic price levels could be quite ephemeral. For this thesis oilmen were raked over the political coals. The price of Middle East crude oil is now at least 75 cents a barrel more than domestic.

For more than a decade oil and gas producers have warned that Federally set "low" natural gas prices would dampen the incentive to look for gas and thus produce a future shortage. Again this was treated as a totally self-serving ploy.—"There is a shortage of natural gas today," Secretary of the Interior Walter Hickel reportedly explained.

John Emerson, energy economist of the Chase Manhattan Bank recently went even farther, "Never before in this century have we faced such serious and wide-spread shortages of energy. These shortages are upon us now."

The industry warned that rushing into low-sulphur, anti-pollution legislation and regulations might produce supply problems.—There appears a very good chance that there will be a shortage of low-sulphur residual fuel oil this winter, forcing cities and corporations to choose between lack of heat and power and the present practicality of recent anti-pollution laws.

Being correct, at least on the surface level, gives the industry no reason to gloat. In each instance it is costing the oil companies money. If they pass on the cost, as they probably will have to, it cuts into what little affection the public has left for the industry.

"No one will remember that Senator Kennedy or Senator Muskie and other so-called consumer representatives have advocated policies that have often ultimately resulted in higher costs. They will only blame us for rising the price of gasoline or heating oil," a vice president and counsel for a major company commented last week.

The executive's statement is probably too one-sided. The present situations are the result of many complex forces; some alterable, some not.

Nonetheless, some politicians and academicians, past and present, may have been guilty of thinking that a big desk and pet theories were a substitute for the hard facts of industrial life.

There is a very good chance that by fall the American consumer may be paying more for gasoline, natural gas and residual fuel. This means that the cost of running his car, his home and his factory will cost more.

These major impacts on the battle with inflation have not gone unnoticed in Washington although it appears that no major constructive actions have as yet occurred.

The leap in the price of overseas crude oil is a result of soaring tanker costs. Few analysts expect these costs to go down in the very near future.

But if tankers are the central reason, the Arab-Israeli war is the underlying cause.

On May 3 in Syria, the Trans Arabian Pipeline was knocked out of commission by an errant or deliberately aggressive bulldozer. The Syrian Government has not allowed its repair, preventing 500,000 barrels a day of Saudi Arabian crude from reaching the Mediterranean.

At the other end of the Mediterranean the Libyan Government cut back oil production by 15 per cent, or 500,000 barrels a day.

The loss of almost 1 million barrels a day of oil west of Suez and close to world markets has strained tanker capacity. Replacement of this oil with oil from the Persian Gulf around South Africa takes six to eight times the tanker capacity.

CHARTER RATES RISE

Spot charter rates have risen to their highest level since the 1956 Suez crisis and are more than 50 per cent higher than during the 1967 Arab-Israeli war.

Persian Gulf oil is now coming into the United States at about $4.50 a barrel compared with Louisiana crude delivered to East Coast refineries at $3.75.

There is no chance of a shortage, however, because Texas and Louisiana will increase their production to meet the need. There is a very real chance of consumer price increases.

The Oil and Gas Journal, a trade publication, reports that Professors Phillip Areeda and James McKie, two of the chief advocates of sharply increased oil imports, have now backed off considerably from that position.

F.P.C. REGULATION UPHELD

The natural gas supply and demand controversy is a far older argument. In 1954 the Supreme Court ruled that natural-gas producers were subject to Power Commission. In 1960 the regulatory agency began fixing wellhead prices for all gas sold interstate. The Supreme Court upheld this right again in 1965 despite vigorous crys of outrage from producers, who said it would kill incentive to drill.

Time has proven the oilmen right. Wildcat drilling dropped 40 per cent between 1956 and 1968. Geophysical activity fell 56 per cent.

Some of the drop off may have been artificial; just to show the Government. Nonetheless the results are uncontestable. In 1969 the United States proved reserves of natural gas fell 12,241 trillion cubic feet, the largest in the nation's history.

The previous record drop was in 1968, when they fell 5,548 trillion cubic feet. These are the only declines in the history of the industry.

POSITIONS CHANGED

The F.P.C. is now trying to rectify the situation by raising prices. Some of the people who supported the lower prices several years ago are now in the forefront of those pushing higher prices.

The Interior Department is trying to speed up lease sales of suspected gas fields, but is running into opposition from Conservationists. But even if this opposition is overcome, it will take from three to seven years for these areas to begin producing.

In the meantime Canadian sources of gas can be tapped although Canadian-American relations on energy matters are at an all-time low. Liquefied natural gas quite possibly will reach this country from Algeria, Nigeria or Venezuela. Contracts have already been signed to import Algerian L.N.G., but the Algerian Government's recent nationalization of American oil company properties puts this source of L.N.G. in a very questionable position.

SUPPLY OUTLOOK TIGHT

The supply outlook for this winter is tight. Industry sources say that there will be enough to heat homes, but that the industrial market, which accounts for about 50 per cent of total sales, may be in bad shape. Many distributors already have been forced to impose severe limitations on new industrial loads, and there is a real possibility that deliveries to existing customers may have to be curtailed, according to J. W. Heiney, president of the American Gas Association.

It would seem almost certain that consumer prices will have to go up, and possibly sharply.

The crude oil reserve situation is not much better, according to the American Petroleum Institute. Last year crude oil reserves dropped to 29,632 billion barrels the lowest level in 15 years.

The A.P.I. explained the situation simply by saying that lack of incentives had led to a long and steady decline in exploratory drilling during a period of mushrooming production and consumption.

The oil industry in recent weeks seems to have won a lot of points, but through no fault of its own, it well may be losing the game.

S. 30

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 27, 1970

Mr. CELLER. Mr. Speaker, a subcommittee of the House Committee on the Judiciary has been conducting searching and extensive public hearings on the proposed Organized Crime Control Act (S. 30). This legislation has prompted marked reaction and concern in the legal community, and has been analyzed and reported upon by a number of outstanding and respectable bar associations as well as individual attorneys and Federal judges. In the 7 days of hearings held on this proposal to date, the judiciary subcommittee has received testimony or statements recommending amendments or indicating opposition in whole or in part from the Judicial Conference of the United States, the Board of Governors of the American Bar Association, the Association of the Bar of the City of New York, the New York County Lawyers Association, the National League of Cities-United States Conference of Mayors, professors of law, and others. The charges of vague and unworkable draftsmanship and constitutional unsoundness fully warrant the patient scrutiny which the subcommittee is devoting to this complex and far-reaching proposal.

There has been substantial confusion, I believe, in what the Organized Crime Control Act really does provide and what it may, as presently written, actually accomplish. Several amendments have in fact even been proposed by the Senate sponsor of the measure and the Department of Justice, both of whom recommend passage of the legislation. An article appearing in the July 27, 1970, issue of Time magazine provides some insight into the complexities of this legislation. In view of the importance of informed opinion on the part of the Members on this vitally important proposal, I believe it may be helpful to reprint the Time magazine article in the CONGRESSIONAL RECORD:

PUBLIC SAFETY AND PRIVATE RIGHTS

"If we get the tools from Congress," Richard Nixon promised the country just one month ago, "we will use them and we will reduce this rate of crime." The President was addressing himself to a major national concern, but not one of the Administration's 20 major anticrime bills has yet become law. The main reason: bipartisan fear that many of their provisions would jeopardize the rights of the innocent without really giving much practical aid to the forces of law and order.

Last week a House-Senate conference committee agreed on a crime bill for the District of Columbia with its most controversial provisions intact, and the House promptly passed it. Just as promptly, the Senate reopened a vigorous debate. One of the most vociferous opponents is a Democrat who is frequently sympathetic to Administration causes. But North Carolina's Sam J. Ervin Jr. has long been convinced that much of the measure is "as full of unconstitutional, unjust and unwise provisions as a mangy hound dog is full of fleas." Meanwhile the governing board of the American Bar Association, after a special meeting in Chicago, expressed reservations about parts of a separate bill aimed at subduing the organized underworld. Originally devised by another Democrat, Arkansas's John McClellan, the mobster measure was expanded with the help of Justice Department staffers and whisked through the Senate in January. Legal experts have now detected a startling number of sleeper clauses. Their objections have provoked close scrutiny from the House Judiciary Committee.

No-Knock. The D.C. crime bill puts heavy emphasis on strengthening police power to gather evidence. The Fourth Amendment guarantees a person's right to be "secure" against "unreasonable searches and seizures." But what is reasonable? The measure would expand police authority to use bugs and wiretaps against suspected drug pushers, violence-prone radicals, bribers and blackmailers. Critics insist the measure's inclusive language might permit scrutiny of the traditionally privileged conversations between lawyers and clients, doctors and patients, or priests and penitents. Under another provision, policemen could enter private homes without knocking if they had reason to believe that a warning would allow suspects to destroy evidence or prepare for a shootout.

The most violent opposition to the D.C. bill stems from its acceptance of preventive detention—a procedure that another Administration bill would apply to all federal courts. Some alleged offenders released on bail are rearrested for fresh crimes during long waits for trial in the clogged D.C. courts; preventive detention would permit judges to hold potentially dangerous suspects for up to 60 days. The effort to check recidivist crime, critics charge, would surely result in denial of bail to some innocent suspects, and to others who would not commit further crimes. Moreover, detention hearings might jam the courts still further. Repeater crimes could be cut more fairly, the opposition argues, by surveillance of bailed suspects and speedier trials. In fact, some of the bill's best sections take just that approach. Bail supervision would be expanded and $5,000,000 allocated to add 17 trial judges and merge three separate court systems.

McClellan's anti-mobster bill is advertised as an attempt to deal with the frustrations that police and prosecutors meet in dealing with organized racketeers. Recent Supreme Court decisions have knocked down such heavyhanded police practices as raids without search warrants, third-degree interrogations and indiscriminate wiretaps. Even evidence developed as a result of leads from illegal techniques is not admissable in a trial. If a defendant thinks the Government has used forbidden tactics in developing its case against him, he can ask to see all the raw material in order to establish his right to have it thrown out—which occasionally has made prosecutors turn over to mob lawyers years of tap-recorded phone conversations.

The bill would weaken the legal deterrence to unconstitutional police work. A judge

could not disclose any illegally obtained material unless the defendant convinced him that the revelation would be "in the interest of justice." Indeed, if the specific crime for which a defendant was being tried took place five years after any general evidence was improperly obtained, leads derived from that evidence could not be challenged at all.

Official Lawlessness. Such a time limit on rights is clearly unconstitutional, argues the Association of the Bar of the City of New York. With the proliferation of electronic data banks, an association report charges, prosecutors would be encouraged to maintain illegal files on suspects and use the leads after a five-year wait had "cleansed" them. Legal authorities claim that the proposed law is not really needed by prosecutors anyway; when they have justification for thinking that crime is going on, they can make most searches and tapes by obtaining warrants first. Says Herman Schwartz, a wiretap-law expert at the State University of New York at Buffalo: "The provision blows a hole in the entire fabric that the Supreme Court has woven to deter official lawlessness."

Though the measure increases the authority of prosecutors to make witnesses talk by granting them immunity from subsequent prosecution, those who remain silent could be given up to three years in jail for contempt, with no trial and with virtually no chance of bail if they appeal. More might be accomplished by another provision of the bill that authorizes money for protecting witnesses too fearful of revenge to testify. Nor is there much controversy over a section authorizing injunctions against entire gangster-run enterprises which could confiscate their property or require them to sell it off.

Bonus Sentences. Both bills proposed stiff sentences for offenders. In the District of Columbia, judges would be prohibited from giving less than five years to anyone convicted of a second armed crime. The organized crime act would let federal judges anywhere give up to 30 years to criminals who had two previous felony convictions or whose crime was part of a vague "pattern of criminal conduct." This would permit not only long terms for mobsters convicted of penny-ante crimes, but it would also let judges impose bonus sentences for alleged conduct that was never proved in a trial. It also gives judges immense discretion in cases not involving organized crime. The New York City bar association contends that a youth who got a suspended sentence on a marijuana conviction and served a few days in jail for unlawful assembly during a demonstration could get a 30-year stretch long afterward for an income tax violation—even if the tax charge normally carried a penalty of only three years.

Some opponents say they would accept many of the Administration's proposals if they were redrawn in such a way that they could not be turned against those whose offenses are trivial—or merely unpopular. Others go further. In a democracy, they say, mobsters have rights too. The most trenchant criticism against both bills is that they tinker with the tools of law enforcement instead of attacking more basic problems: crime-breeding courts and prisons, social inequities and public complacency about vice and corruption.

APPROPRIATIONS HEARINGS VOLUMES RELEASED

HON. GEORGE H. MAHON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 27, 1970

Mr. MAHON. Mr. Speaker, the Committee on Appropriations has released the following committee hearings volumes in recent weeks:

One additional volume—Defense, part 7 (testimony of Admiral Rickover)—is yet to be released.

Copies are available to Members and others at the committee room, H–218, Capitol Building, extension 2771, as long as the supply lasts.

Bill and volume	Released
Labor-HEW:	
Pt. 6—Related agencies (includes Office of Economic Opportunity).	Tuesday, July 7.
Pt. 7—Testimony of Members of Congress and other individuals and organizations.	Saturday, July 11.
Defense:	
Pt. 6—Research, development test, and evaluation; and various other items, including the Secretary of Defense and testimony of Members of Congress and other individuals and organizations.	Monday, July 27.

THE CIVIL AERONAUTICS BOARD AND AIR FARES

HON. JOHN E. MOSS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 27, 1970

Mr. MOSS. Mr. Speaker, I am inserting in the RECORD today two letters I have directed to the Honorable Secor D. Browne, Chairman of the Civil Aeronautics Board, concerning domestic passenger air fares. The letters follow:

JULY 14, 1970.

Hon. SECOR D. BROWNE,
Chairman, Civil Aeronautics Board, Washington, D.C.

DEAR MR. CHAIRMAN: In view of the decision of the United States Court of Appeals for the District Court of Columbia Circuit rendered on July 9, 1970, relating to domestic passenger air fares, I am writing to make the following requests:

1. That there be no *ex parte* communications of any kind between the Board and any of the carriers regarding rates. In particular, should there be any meetings scheduled between the carriers and any members or employees of the Board, I would like to be informed promptly in order that I may make my views known. I should also like you to send promptly to me and my attorneys, Stanford G. Ross, H. David Rosenbloom, and Ronald B. Lewis, of Caplin & Drysdale, 1101 Seventeenth Street, N.W., Washington, D.C. 20036, copies of any communications with respect to rates directed by any of the carriers to any member or employee of the Board, and vice versa.

2. That the Board notify me and my attorneys of any and all actions taken by the Board in connection with this case; in particular, I ask that we be informed promptly of any and all proposals for remedying the present unlawful fares, whether instituted by carrier filings or by the Board's own actions.

I have asked Mr. Ross to send a copy of this letter to the attorneys for all domestic air carriers subject to the Board's jurisdiction.

Sincerely,

JOHN E. MOSS,
Member of Congress.

JULY 22, 1970.

Honorable SECOR D. BROWNE,
Chairman, Civil Aeronautics Board, Washington, D.C.

DEAR MR. CHAIRMAN: I wanted to let you know that I appreciate your having called upon me on Monday, on your own initiative, to acquaint me with some of the thinking that is going on at the Board regarding possible changes in Board procedures for the future. As to those proposals you are considering which would require legislative change, we of course stand ready to give them thorough consideration when they are presented in concrete form.

You understand, however, that in our capacity as litigants in the case currently pending before the U.S. Court of Appeals for the District of Columbia Circuit we intend to pursue fully the rights we believe inure to the public under the Federal Aviation Act. Until the issues involved in that case are fully determined, we shall continue to act as litigants representing the interests of the traveling public as a class and to pursue the case vigorously. We have instructed our attorneys to advise us as to appropriate methods of following up on the Court's decision to gain the relief for the public which we believe the decision requires.

I am sure you understand the difference in my roles as a Congressman and as a litigant in the case and appreciate the fact that I intend to discharge both my responsibilities to the best of my ability. I want you to know that I understand your roles both as a litigant in this case and as a Government agency's principal official who is charged with the continuing conduct of the affairs of the agency. Naturally, any communications between us dealing with the issues raised in the litigation in which we are engaged, as opposed to the possible changes in the Board's future procedures which we discussed Monday, are to be made only in proceedings conducted on the record.

Again, I thank you for coming by and will be pleased to consider further any legislative proposals that may come out of your thinking.

Sincerely,

JOHN E. MOSS,
Member of Congress.

WARNING TO AMERICANS

HON. LOUIS C. WYMAN

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Monday, July 27, 1970

Mr. WYMAN. Mr. Speaker, Adolph Hitler told the world what his objectives were in "Mein Kampf." Either the world did not believe him or they considered him incapable of becoming the danger to world peace that history eventually recorded. Stopping Hitler's legions cost millions of lives, billions of dollars, and untold human suffering.

Today, right here in the United States, the Black Panther organization publicly declares its intention of revolution by violence. Not only does this group distribute pamphlets describing how to make bombs and explosives at home, but in not so thinly veiled language it advocates using them on whitey the pig.

In an introduction to a publication of March 1, 1968, entitled "Essays from the Minister of Defense (of the Panthers) George Murray" the so-called minister of education of the Panthers states flatly:

> What we believe in is armed revolution, a permanent revolution, the creation of as many Viet Nams as are necessary to defeat U.S. racism and imperialism throughout the world.

Freedom does not and cannot include the right to destroy freedom itself in this

country. There is no constitutional right of free speech that gives any individual or any organization the right to inflame, incite, advocate, and teach subversion of our Government and our way of life. This must be applicable to all in America regardless of race, color, or religion, or we are plain darned fools.

The same applies to Messrs. Rubin and Cleaver and all who deliberately tell inflammatory lies about the United States of America with intention to pit brother against brother, black against white, have against have-not in a life and death struggle marked by violence. No Supreme Court worthy of the name would stand quiescently by while the last great free nation on earth goes up in flames from this abuse of freedom of speech. These individuals should be indicted and convicted for sedition and subversion of both State and Federal Governments. And they should not be admitted to bail if when once permitted bail they do as the Chicago 7 have, and violate the conditions of that bail.

In this connection the following column by William Buckley, Jr., and writings of the Black Panther organization suggest a 1970 model Mein Kampf, paperback edition. They are a caution to all Americans and a signal to the Justice Department to prosecute.

The material mentioned above follows:

JERRY RUBIN'S SPONSORS

(By William F. Buckley, Jr.)

I do not care about the depravities of Jerry Rubin, who is one of the lost souls sentenced at the Chicago conspiracy trial, except that he is a fellow human being, bent on destroying himself, preferably in cinemascope. But I do care very much that Jerry Rubin should have found a panderer this side of the underground.

Mr. Rubin's book is called "Do It!" Do what? Well, whatever you like, provided it involves enormous amounts of drugs, sex, protests, obstructionism, obscenity, and the killing of non-members of the sect, hereinafter called pigs, Mr. Rubin went all the way to Algeria to get an introduction for his book from Eldridge Cleaver. He could not have gone to a more appropriate person to open the gates to Mr. Rubin's lower intestine for the long long passage ahead.

Mr. Cleaver, the spiritual leader of the Black Panthers, urges that "the people" "rise up and kill pigs and destroy their power." From his asylum in Algeria (he is wanted by the courts in California to resume his sentence for rape), he recalls as the sweetest moment of his politically active life, the shoot-out at Oakland when "the shadow of death was created by the blaze leaping from the barrel of a gun. A pig white lay dead, deep fried in the fat of his own b———." The hyphens are mine.

Rubin's book has only the single virtue that it confirms the hypocrisy of many of the activists. He reveals quite unabashedly that their campaigns are often based on consciously invented lies. "Our tactic was exaggeration. Everything was 'the biggest,' the most massive.'" His use of obscenity is so witless as really to all but drive it out of fashion. One thinks of Norman Mailer's "Why Are We in Vietnam," and is tempted to advocate legislation that will forbid printed obscenity by those who, if one may say so, debase it. The book is filled with drawings and photographs of porcine nudes who could not have qualified to pose for Sunshine and Health. They all look like Jerry Rubin, and one begins to suspect that in those circles the love is free because they couldn't possibly sell it.

So much for Rubin. What about the distinguished firm of Simon and Schuster? Listen to what is printed on the back jacket—by the publishers. "This book will become a Molotov cocktail in your very hands." (Who wants a Molotov cocktail in his very hands?) "Jerry Rubin has written the Communist Manifesto of our era." (If that's the case, Hair! is the Paradise Lost of our era, and our era may as well give up.) "This book is the most important political statement made by a white revolutionary in America today. Do It! is to be danced to. Read aloud. Studied. Memorized. Debated. Burned. Swallowed. Eaten. But most important, after living through the experience of this book, take its final advice: Do it!" the promotion editor who wrote that, you see, tries to swing by using the words, "swallowed, eaten."

It is not to come out for censorship to wonder at the sponsorship of this book. Though arguments—very sound arguments—could certainly be mustered for suppressing a book which incites to sedition, and arson, and killing, and which is guilty of criminally libelous charges against named individuals, my own disposition would have been against suppressing these pages of human and political ordure. But I want my dirty pictures sold to me by dirty little men and hidden in Russian easter eggs. Not passed out ceremoniously by men and women who pride themselves on their contributions to thought and literature and who regularly publish great tracts of prose devoted to the maintenance of humane standards.

So, Simon and Schuster will make themselves a hundred grand or so from the publication of this book, forever reminding us of Lenin's wry dictum that when the last of the bourgeois is hanged, a capitalist will sell the rope. I shall think of Simon and Schuster when I think of Jerry Rubin, as no doubt will the estates of Bertrand Russell and Winston Churchill, and Charles de Gaulle and Malcolm Muggeridge and Joseph Alsop, who no doubt will wonder at the company they keep.

STATEMENTS OF BLACK PANTHERS

Political power grows out of the barrel of a gun.

Everyone must be a guerrilla.

Hot town—pigs in the streets . . . but the streets belong to the people! Dig it?

1. No Horse Playing in the office.

2. No one is authorized to be in the office unless on business.

3. Security measures must be maintained at all times.

4. The office must be kept clean, neat and orderly at all times.

5. No unauthorized calls will be made on the office phone.

6. Only persons working in the office will be allowed to eat in the office.

7. Office hours 10 A.M.—10 P.M.

8. No one is to tamper with office equipment unless authorized.

9. All visitors and members on official business must report to the receptionist.

10. No unauthorized person is allowed behind the counter.

11. No one is to stay in the office overnight unless authorized by the O.D.

"We are advocates of the abolition of war . . . we do not want war; but war can only be abolished through war and in order to get rid of the gun it is necessary to take up the gun." (Chairman Mao.)

[From the Black Panther, Mar. 28, 1970]

ORGANIZING SELF DEFENSE GROUPS—I

In organizing self-defense groups at this stage of the struggle the most important consideration is whether or not the person to be incorporated into the group understands fully that what he or she is doing is the right thing to do. At this stage of the struggle if any members of a self-defense group are weak minded or do not understand that the only way to put an end to brutality & murder by this racist power structure is to organize self-defense groups & counter-attack, practice has shown that if this weak minded person is ever captured he or she will certainly not be able to withstand the methods of persuasion used by the fascist pigs and they will talk, give up information. So the first priority for any self-defense group is to be armed ideologically.

Because of the consequences, if anything goes wrong during an operation, members within the group must mantain a face to face relationship, get to know each other's strengths and weaknesses thoroughly, and participate fully in the planning of operations. Liberalism at this level can cost the lives of comrades and/or jeopardize the success of an operation.

At this time self-defense groups should have no more than four to six members. The struggle at this time requires no operation that can't be handled by four to six people. Also security is sacrificed the larger the group. At this time self-defense groups should be formed all across Babylon, North, South, East and West. However, at this time groups must work autonomously. Under no circumstances should any group seek out and try to make contact with another group. Due to the fact that this level of struggle is in its embryonic stages and fools, agents and provacatures are scattered all across Babylon if autonomy is maintained when a member of a group is captured he or she will only be able to give up information on one group, their own.

Know the enemy. At this time the pigs have three things going for them:

1. Communication
2. Mobility
3. Information

C.M.I.

When planning any operation the pigs' C.M.I. must be taken into consideration when planning tactics.

Part No. 2 will appear at a later date and will deal with self-defense weapons and training.

Counter-Attack D.C.

[From the Black Panther, Apr. 6, 1970]

ORGANIZING SELF DEFENSE GROUPS—II

B.P.P.

Know the enemy. At this time the pigs have three things going for them:

1. Communication—C
2. Mobility—M
3. Information—I

When planning any operation, the pigs' CMI must be taken into consideration in planning tactics.

Due to the brainwashing done by TV, movies, comics, etc., there are a lot of incorrect ideas about firearms that must be cleared up. The first thing to understand is, there is no one piece (gun) that covers any and all situations. Although they show pigs on TV and in the movies killing people a block away with a snub-nose .38 revolver, in reality this is not very practical and shouldn't even be attempted unless you are an expert's expert. From seeing too much Wyatt Earp and Mat Dillon too many people think that if they have a hand gun either pistol or revolver that they are ready for anything. All that is necessary to give you a different perspective is to examine the armament of the pigs that occupy our Black communities anywhere in Babylon. When you do that you will discover that most pig cars have at least one .12 gauge pump or automatic shotgun, one or two semiautomatic or automatic assault rifles, one or two bolt-action rifles with a scope mounted for sniping purposes, and, of

course, the pigs have strapped on at least one handgun either an automatic pistol or a revolver. In San Francisco, the S.F. Tactical Squad members carry two handguns, their standard service revolve plus a second handgun which is their personal preference, in many cases an automatic pistol. So at this time let's examine these three types of weapons—the shotgun, the rifle, and the handgun.

.12 GAUGE SHOTGUN: the pigs use the shotgun, either pump or semi-automatic, loaded with 00 buckshot generally in crowd situations such as rebellions. The standard load is nine (9) buckshot pellets per shell, however there is the magnum load of 12 pellets per shell. These magnum loads are to be used only in magnum shotguns. If you use magnum loads in a regular shotgun, you might not live to tell it.

The pigs also use slugs, 1 giant lead ball. In the plans the Berkeley pig dept. had drawn up to attack National Headquarters of the Black Panther Party, they intended to use slugs to knock the armor plate off of our windows and to knock out the doors. This photograph shows what slugs used by Chicago pigs did to the steel plate on the door of our office there.

There is also a tear gas shell now designed to be fired from a .12 gauge shotgun.

Every Black home should have at least one .12 gauge shotgun to be used to protect the door. Use 00 buckshot and it will deal with any criminals trying to enter uninvited. Cuban guerrilas used shotguns very successfully in the revolutionary war led by Fidel Castro. They would set up ambushes close to roads usually only a few feet away and shotguns loaded with 00 buck would have a devastating effect upon the occupants of cars and/or trucks.

There is one thing about shotguns that possibly can be viewed as in our favor at this time that is that the barrel is smooth inside so it doesn't put any marks on the pellets; therefore, the pigs can't make an investigation based on ballistic marks.

Handguns: There are two types, semi-automatic pistols and revolvers. There are so many different brands and calibers, I will only deal with what I consider to be the best choices.

.357 Magnum revolver made by either Colt or Smith & Wesson. It holds six shots and with armor piercing ammo is supposed to crack an engine block. Many pig departments have switched or are switching from .38 special to .357 magnum. The less powerful .38 special just can't match the .357. There was an incident where a brother was defending himself against a pig and fired at the pig with a .38 special. The bullet hit the pigs badge and was deflected. Had the brother been using a .357 magnum that would have been one bar-b-cued pig.

9MM automatic pistol. Although pistols are called "automatic", they really are semi-automatic. The trigger has to be pressed for every shot. I recommend the Browning 9MM automatic. It comes with a 13 shot magazine. If you put one in the chamber that means 14 shots available. If you're up against someone with a 6 shot revolver, they will have to reload 2 times and you've still got two shots left. You can also purchase a 21 shot magazine. That's a lot of fire power for a handgun.

.45 Automatic pistol. This is still the sidearm issued to the U.S. fascist military troops. They also can be purchased in stores. There also seems to be a lot of these available in the streets. Check with your local street merchants.

Even if you have the finest self-defense weapons they are no better than clubs if you don't know how to use them. By the same token if you practice, it is possible to get good enough to kill elephants with a .22. However with enough practice with the above mentioned weapons and being armed ideologically with the invincible thought of the Black Panther Party, it is possible like the Panthers who were attacked in Los Angeles in December to be a match for one hundred.

Counter Attack D.C.

Part #3 at a later date will deal with training.

[From the Black Panther, Apr. 18, 1970]

TRAINING—III

Know the enemy. At this point the pigs have three things going for them.

Communication—C

Mobility—M

Information—I

When planning any operation, the pigs' C.M.I. must be taken into consideration in planning tactics.

Practice—Practice—Practice—Practice—Practice—Practice—

In order to perform well in your work on all levels it is necessary to practice, the more you practice the better you perform. Don't think just because you read something you can do it. You can memorize a book on how to drive a car but until you get behind a wheel and practice you still can't drive.

The first things to understand before you ever put a round of ammo in a chamber are basic safety rules. 99% of all accidental shootings happen with guns that aren't "loaded" and/or by people that say "I'm sorry, I didn't know it was loaded." Therefore, rule #1 is: the first thing you do when you pick up a weapon is check to see if it is loaded, keep your finger off the trigger and follow the following procedure. Point gun away from area where someone could possibly be shot. If it is a revolver swing out the cylinder; if it is a pistol remove the magazine and pull back the slide. Even after you have unloaded the gun or see that it is unloaded treat the gun in the manner as if it were still loaded. Never touch the trigger unless you are practicing trigger squeeze (explanation later), firing on training ground or dealing with the enemy. Never point a gun at anyone you don't intend to shoot. I can't stress these points enough, they seem simple enough; however, people that generally haven't had any experience with pieces violate these rules constantly. If I am ever shot accidentally by some idiot it will be very difficult to suppress the desire to blow his or her head off, providing I'm only wounded.

The next step is to learn to disassemble and assemble your pieces, also care and maintenance. Due to the fact that self-defense activity will not be limited to daylight hours you should learn to break your piece down and assemble it even in the dark. Your life depends on it. So do it.

The RIFLE: The bolt-action rifle in .30-06 or .308 (7.62 MM Nato) with a four (4) power scope (or better) mounted is a sniping weapon. A specialist piece. This virulent (deadly) combination is for one purpose, and one purpose only—to fire ONE well placed shot. So each self-defense unit needs only one such weapon at this time. There is nothing else to say about that.

The assault rifle is either semi-automatic or preferable one that can be fired either semi-automatic or fully automatic. The limit here is that posed by the limit of the enemy's arsenal. Here we will discuss the most common seen in our communities carried by the gestapo pig forces. The AR-15 caliber .223 is the semi-automatic civilian model called "sporting" model of the M-16 used in Vietnam. The M-16 fires either semi-auto or fully auto. After the lives of many brothers were lost in Vietnam because the weapon was new and untested, it has now been de-bugged and is fairly reliable. It can be found on all military bases and some gestapo police arsenals. The AR-15 was taken off the public market and has been replaced by the AR-180 caliber .223. The AR-180 does not appear to be as good as the AR-15. However, many pig departments are stocking up on them.

Another very good assault rifle is the M-14 caliber 7.62 MM Nato (.308 in English). This is a very good weapon although it has been replaced by the lighter M-16 in the fascist military. Most national guard units, at least here in California, are equipped with the M-14. Check your local National Guard availability.

The Thompson Sub-Machine gun if in good working order is very reliable in .45ACP caliber. It fires either semi or fully auto. One rewarding feature is it uses the same ammunition as the .45 automatic pistol cutting down on the variety of ammunition necessary for your stash. Check your local police/mafia arsenal.

Finally the age-old M1-Garand caliber .30-06. Very good, plenty of them around, heavy and accurate way out, easy to get and plenty of ammo around. Check your pawn shops and gun shops also some national guard units and college ROTC units have them readily available.

The M1-30 caliber carbine? Use it for target practice and training.

Assault rifles are to be used in fire fights, more commonly known as shoot-outs. People waging wars of liberation around the world also use assault rifles to annihilate (wipe out) their enemy's in ambushes and in counter attacks against fascist military outpost.

After you've gotten this down, the next step is to learn how to aim and fire your weapons properly. All of this is to be done before you ever put your first round of ammo in the chamber, the first thing to deal with is proper sight alignment. Sight alignment is lining up your front sight with your rear sight correctly. Your front sight lined up with your rear sight and both lined up on the target is calld the "sight picture." The correct sight picture basically is having the front not too high or too low, not to the right or to the left, but having the target resting on top of the front sight. The sight picture will not always appear perfect, but if the correct sight picture is understood practice will bring improvement.

The next thing to get down with is trigger squeeze. That's right you squeeze the trigger, you don't pull it or jerk it, contrary to what ever you saw on t.v., trigger squeeze is a process of putting slow steady pressure on the trigger until a shot goes off. If you try to anticipate the shot, you will jerk and mess up your aim.

One other thing to watch for is movement of your piece which comes from breathing, which also messes up your aim. One method of breath control is to take a deep breath, let out half of it, hold the rest of it then begin your trigger squeeze.

It would be ideal if you could incorporate into your group a veteran of the pigs' military service. Veterans are of great value and assistance in helping with the above training also when you are ready to begin practice with live ammunition. When practicing with live ammo make sure your location is where you won't be hassled by pigs. Actual combat conditions can be deadly as a training ground. When practicing with live ammo, remember it is valuable. Don't just start popping caps for the heck of it; the whole purpose it to prepare yourself to be "a Match for One Hundred" which will only come about as a result of correct practice.

One thing to guard against is flinching. Flinching is caused by being intimidated by the sound and kick of your weapon. With proper trigger squeeze and breath control, you won't have any problems with flinching. If you have problems keeping all your shots in a fairly small group or if you have a problem just getting your shots on the target anywhere you are probably flinching. Have someone watch you as you fire and they will

be able to tell you whether or not you are flinching.

The basic thing in the training of members of a self defense group is to know how to handle fire arms of all types, hand guns, rifles, shotguns, machine guns, etc.

The use of different types of ammunition and explosives should be considered also. Part #4 of this series will deal with some recipes.

All Power to the People D.C.

[From the Black Panther, Apr. 18, 1970]

RECIPES—IV

ORGANIZING SELF-DEFENSE GROUPS

I will begin by pointing out that we must not allow the racist power structure to define our struggle. What I mean is the language that we use like everything else in this society is in the service of the racist capitalist bandits. They control the educational institutions, the news media and the means of production to turn out all the educational material. We sometimes are trapped by the rhetoric (words) of the slavemaster. In our 400 year struggle for survival it has been the guns and force manifested in the racist pig cops that occupy our communities that directly oppress, repress, brutalize and murder us. So for us to talk about survival we must talk about self-defense against this brutality and murder that is defined by the racist power structure as justifiable homicide. So when a self-defense group moves against this oppressive system, by executing a pig by any means, sniping, stabbing, bombing, etc., in defense against the 400 years of racist brutality and murder this can only be defined correctly as self defense. The slavemaster, however, through his lackeys and puppets calls it 'terrorism', the work of crazed men, criminals, insane killers, etc. We must define our struggle not the pigs. Carlos Marighella, an urban guerrilla in Brazil who was assassinated Nov. 4th 1969 just one month before Fred Hampton and Mark Clark, says, "the accusation of assault or terrorism no longer has the pejorative (negative) meaning it used to have. It has acquired new clothing, a new coloration. It does not factionalize, it does not discredit; on the contrary it represents a focal point of attraction."

"Today to be an assailant or terrorist is a quality that ennobles any honorable man because it is an act worthy of a revolutionary engaged in armed struggle against the shameful military dictatorship and its monstrosities.

So with that, I say this, all self-defense groups must strike blows against the slavemaster until we have secured our survival as a people and if this takes shooting every pig and blowing up every pig sty then let's get on up.

Below are some recipes that might help some of you get started.

SELF-IGNITING MOLOTOV COCKTAIL

Caution: Potassium chlorate is very volatile, it can ignite almost spontaneously in this mixture. It can be ignited or detonated by a single spark, or excessive heat or merely by the friction of stirring the ingredients together. So use plastic or wooden utensils for mixing. Do not use metal. Use extreme caution.

Mix 3 parts of potassium chlorate with 2 parts of sugar. Add water to make a solution. Take a large sock, soak in the mixture then dry. Keep dry sock away from heat.

Away from the area or after you have thoroughly cleaned the area where you handled the above mixture take a fifth wine bottle and fill ⅓ to ¼ full of sulphuric acid. Fill the rest of the way up with gasoline. Pour the gas slowly, it could bubble and heat up. Cap the bottle tightly. To make sure it doesn't leak you should test it first with water. To cap the bottle it is preferable to use a stopper with a rubber plunger because acid eats plastic and metal. Don't shake the bottle hold it upright. When ready to use, put the bottle in the sock soaked in the chlorate sugar mix and knot the sock at the top. Throw at target. When it hits and the glass breaks it will explode as the sulphuric acid contacts the potassium chlorate and sugar mixture on the sock. The gasoline will spread the flame. The principal behind this fire bomb is when sulphuric acid comes into contact with a mixture of potassium chlorate and sugar there is an explosion that gives off a lot of heat. The more potassium chlorate the more expolsive, the more sugar the more heat. For your information, this fire bomb will work even if the mixture on the sock is wet. However, it is more volatile when dry.

One more warning. Before placing bottle with gas and acid into sock make sure outside of bottle is clean and is not contaminated with acid.

PEOPLE'S HAND GRENADE

Take a used empty aerosol (spray) can, pull off the little plastic spray device, and with a hammer and nail pound the little plastic nipple down into the can. Widen the hole large enough so that large shot can be inserted through the hole. Fill with ¾ black powder and ¼ shot, small headed nails or anything to use for shrapnel. Insert fuse well into can and leave about 1½ inches outside. If fuse is too short, you will blow yourself up. If the fuse is too long, when you throw it, it could be thrown back at you. If thrown in the open, it will kill within a 25 foot radius and maim within 100 feet. I suggest that you familiarize yourself with this weapon by practicing with a sand filled dummy. Try this and see how long the fuse that you use takes. For a strictly anti-property grenade fill can with black powder and don't use any shrapnel. The greatest advantage in this type of grenade is that you can legally buy all the ingredients needed. Buy black powder from your local gun store reloading counter. You've probably got some spray cans around the house.

Reproduced here is a list of books available with many more recipes and technical information.

Use what you got to get what you need. D.C.

Books can be purchased at Normount Armament, Box 211 Gas, Forest Grove, Oregon 97116 U.S.A.:

Japanese Infantry Weapons.
German Infantry Weapons.
U.S. .30 Carbines, M1, M1A1, M2 and M3.
U.S. Garand Rifles M1, M1C, M1D.

Evasion and Escape.
Hand to Hand Combat.
Explosives and Demolitions.

ESSAYS FROM THE MINISTER OF DEFENSE

INTRODUCTION

"Essays From the Minister of Defense" is a collection of truths, principles and beliefs practiced by the Black Panther Party. The writings come from the pen of Huey Newton, the Minister of Defense of the Black Panther Party but the spirit of the writings, the faith expressed and the undying love for black people exhibited therein comes from the souls of colonized black people. The people are the heroes.

The Black Panther Party is a vanguard party for we Africans in U.S. What we believe in is armed revolution, a permanent revolution, the creation of as many Viet Nams as are necessary to defeat U.S. racism and imperialism throughout the world. As you read "Essays From the Minister of Defense" you will begin to understand the principles for the armed revolution that is beginning in the U.S. If you carry out the principles, you will be a people's warrior, and will be bringing black people and the oppressed people everywhere closer to freedom, justice, and equality throughout the world. The Minister of Defense is currently held in Alameda County jail.

Our slogan is Huey will be set free by any means necessary and if he is not set free the sky is the limit. (George Murray, Minister of Education, Black Panther Party.)

IN DEFENSE OF SELF DEFENSE

(By Huey P. Newton)

Introduction: Huey P. Newton's column in the Black Panther newspaper was entitled "In Defense of Self Defense." The following articles by the Minister of Defense were taken from those columns.

"In Defense of Self Defense," June 20, 1967

Laws and rules have always been made to serve people. Rules of society are set up by people so that they will be able to function in a harmonious way. In other words, in order to promote the general welfare of society, rules and laws are established by men. Rules should serve men, and not men serve rules. Much of the time, the laws and rules which officials attempt to inflict upon poor people are non-functional in relation to the status of the poor in society.

These officials are blind to the fact that people should not respect rules that are not serving them. It is the duty of the poor to write and construct rules and laws that are in their better interests. This is one of the basic human rights of all men.

Before 1776, white people were colonized by the English. The English government had certain laws and rules that the colonized Americans viewed as not in their best interests but as a colonized people. At that time the English government felt that the colonized Americans had no right to establish laws to promote the general welfare of the people living here in America. The colonized American felt he had no choice but to raise the gun in defense of the welfare of the colonized people. At this time, he made certain laws insuring his protection from external and internal aggressions from governments and agencies. One such form of protection was the Declaration of Independence, which states: ". . . whenever any government becomes destructive to these ends, it is the right of the people to alter or to abolish it, and to institute a new government, laying its foundations on such principles and organizing its powers in such forms as to them shall seem most likely to effect their safety and happiness."

Now these same colonized white people, these ex-slaves, robbers, and thieves, have denied the colonized black man the right to even speak of abolishing this oppressive system which the white colonized American created. They have carried their madness to the four corners of the earth, and now there

is universal rebellion against their continued rule and power. The Black people in America are the only people who can free the world, loosen the yoke of colonialism and destroy the war machine. As long as the wheels of the imperialistic war machine are turning there is no country that can defeat this monster of the West. But Black people can make a malfunction of this machine from within. Black people can destroy the machinery that's enslaving the world. America cannot stand to fight every Black country in the world and fight a civil war at the same time. It is militarily impossible to do both of these things at once.

The slavery of Blacks in this country provides the oil for the machinery of war that America uses to enslave the peoples of the world. Without this oil the machinery cannot function. We are the driving shaft; we are in such a strategic position in this machinery that, once we become dislocated, the functioning of the remainder of the machinery breaks down.

Penned up in the ghettos of America, surrounded by his factories and all the physical components of his economic system, we have been made into "the wretched of the earth," who are relegated to the position of spectators while the white racists run their international con game on the suffering peoples. We have been brainwashed to believe that we are powerless and that there is nothing we can do for ourselves to bring about a speedy liberation for our people. We have been taught that we must please our oppressors, that we are only ten per cent of the population, and therefore, we must confine our tactics to categories calculated not to disturb the sleep of our tormentors.

The power structure inflicts pain and brutality upon the peoples and then provides controlled outlets for the pain in ways least likely to upset them or interfere with the process of exploitation. The people must repudiate the channels established as tricks and deceitful snares by the exploiting oppressors. The people must oppose everything the oppressor supports and support everything that he opposes. If Black people go about their struggle for liberation in the way that the oppressor dictates and sponsors, then we will have degenerated to the level of grovelling flunkies for the oppressor himself. When the oppressor makes a vicious attack against freedom fighters because of the way that such freedom fighters choose to go about their liberation, then we know we are moving in the direction of our liberation. The racist dog oppressors have no rights which oppressed Black people are bound to respect. As long as the racist dogs pollute the earth with the evil of their actions, they do not deserve any respect at all, and the rules of their game, written in the people's blood, are beneath contempt.

The oppressor must be harassed until his doom. He must have no peace by day or by night. The slaves have always outnumbered the slavemasters. The power of the oppressor rests upon the submission of the people. When Black people really unite and rise up in all their splendid millions, they will have the strength to smash injustice. We do not understand the power in our numbers. We are millions and millions of Black people scattered across the continent and throughout the Western hemisphere. There are more Black people in America than the total population of many countries that now enjoy full membership in the United Nations. They have power and their power is based primarily on the fact that they are organized and united with each other. They are recognized by the powers of the world.

We, with all our numbers, are recognized by no one. In fact, we do not even recognize our own selves. We are unaware of the potential power latent in our numbers. In 1967, in the midst of a hostile racist nation whose hidden racism is rising to the surface at a phenomenal speed, we are still so blind to our critical fight for our very survival that we are continuing to function in petty, futile ways. Divided, confused, fighting among ourselves, we are still in the elementary stage of throwing rocks, sticks, empty wine bottles and beer cans at racist cops who lie in wait for a chance to murder unarmed Black people. The racist cops have worked out a system for suppressing these spontaneous rebellions that flare up from the anger, frustration, and desperation of the masses of Black people. We can no longer afford the dubious luxury of the terrible casualties wantonly inflicted upon us by the cops during these spontaneous rebellions.

Black people must now move, from the grassroots up through the perfumed circles of the Black bourgeoisie, to seize by any means necessary a proportionate share of the power vested and collected in the structure of America. We must organize and unite to combat by long resistance the brutal force used against us daily. The power structure depends upon the use of force within retaliation. This is why they have made it a felony to teach guerrilla warfare. This is why they want the people unarmed.

The racist dog oppressor fears the armed people; they fear most of all Black people armed with weapons and the ideology of the Black Panther Party For Self Defense. An unarmed people are slaves or are subject to slavery at any given moment. If a government is not afraid of the people it will arm the people from foreign aggression. Black people are held captive in the midst of their oppressors. There is a world of difference between thirty million unarmed, submissive Black people and thirty million Black people armed with freedom and defense guns and the strategic methods of liberation.

When a mechanic wants to fix a broken-down car engine, he must have the necessary tools to do the job. When the people move for liberation, they must have the basic tool of liberation: the gun. Only with the power of the gun can the Black masses halt the terror and brutality perpetuated against them by the armed racist power structure; and in one sense only by the power of the gun can the whole world be transformed into the earthly paradise dreamed of by the people from time immemorial. One successful practitioner of the art and science of national liberation and self-defense, Brother Mao Tse-tung, put it this way: "We are advocates of the abolition of war, we do not want war; but war can only be abolished through war, and in order to get rid of the gun it is necessary to take up the gun."

The blood, sweat, tears and suffering of Black people are the foundations of the wealth and power of the United States of America. We were forced to build America, and if forced to, we will tear it down. The immediate result of this destruction will be suffering and bloodshed. But the end result will be the perpetual peace for all mankind.

"In Defense of Self-Defense," July 3, 1967

Historically, the power structure has demanded that Black leaders cater to their desires and to the ends of the imperialistic racism of the oppressor. The power structure has endorsed those Black leaders who have reduced themselves to nothing more than apologizing parrots. They have divided the so-called black leaders within the political arena. The oppressors sponsor radio programs, give space in their racist newspapers, and have shown them the luxury enjoyed only by the oppressor. The Black leaders serve the oppressor by purposely keeping the people submissive and passive—non-violent. At any moment that these so-called Black leaders respond to the cries of the suffering and downtrodden, unemployed and welfare recipients who hunger for liberation by any means necessary.

Historically, there have been a few Black men who have rejected the handouts of the oppressor and who have refused to spread the oppressor's treacherous principles of deceit, gradual indoctrination and brainwashing, and who have refused to indulge in the criminal activity of teaching submission, fear, and love for an enemy who hates the very color black and is determined to commit genocide on an international scale.

There has always existed in the Black colony of Afro-America a fundamental difference over which tactics from the broad spectrum of alternatives Black people should employ in their struggle for national liberation.

One side of this difference contends that Black people are in the peculiar position where, in order to gain acceptance into the "mainstream" of American life, they must employ no tactic that will anger the oppressor whites. This view holds that Black people constitute a hopeless minority and that salvation for Black people lies in developing brotherly relations. There are certain tactics that are taboo. Violence against the oppressor must be avoided at all costs, because the oppressor will retaliate with superior violence. So Black people may protest, but not protect. They can complain, but not cut and shoot. In short, Black people must at all costs remain non-violent.

On the other side of the difference, we find that the point of departure is the principle that the oppressor has no rights that the oppressed is bound to respect. Kill the slavemaster, destroy him utterly, move against him with implacable fortitude. Break his oppressive power by any means necessary. Men who have stood before the Black masses and recommended this response to the oppression have been held in fear by the oppressor. The Blacks in the colony who were wed to the non-violent alternative could not relate to the advocates of implacable opposition to the oppressor. Because the oppressor always prefers to deal with the less radical, i.e., less dangerous, spokesmen for his subjects. He would prefer that his subjects had no spokesmen at all, or better yet, he wishes to speak for them himself. Unable to do this practically, he does the next best thing, and endorses spokesmen who will allow him to speak through them to the masses. Paramount amongst his imperatives is to see to it that implacable spokesmen are never allowed to communicate their message to the masses. They are never allowed to communicate their message to the masses. Their oppressor will resort to any means necessary to silence the implacables.

The oppressor, the endorsed spokesmen, and the implacables form the three points of a triangle of death. The oppressor looks upon the endorsed spokesmen as a tool to use against the implacables to keep the masses passive within the acceptable limits of the tactics he is capable of containing. The endorsed spokesmen look upon the oppressor as a guardian angel who can always be depended upon to protect them from the wrath of the implacables, while he looks upon the implacables as dangerous and irresponsible madmen who, by angering the oppressor, will certainly provoke a blood bath in which they themselves might get washed away. The implacables view both the oppressors and the endorsed leaders as his deadly enemies. If anything, he has a more profound hatred for the endorsed leaders than he has for the oppressor himself, because the implacables know that they can deal with the oppressor only after they have driven the endorsed spokesmen off the scene

Historically, the endorsed spokesmen have

always held the upper hand on the implacables. In Afro-American history, there are shining brief moments when the implacables have outmaneuvered the oppressor and the endorsed spokesmen and gained the attention of the Black masses. The Black masses, recognizing the implacables in the depths of their despair, respond magnetically to the implacables and bestow a devotion and loyalty to them that frightens the oppressor and endorsed spokesmen into a panic-stricken frenzy, and they leap into a rash act—murder, imprisonment, or exile—to silence the implacables and to get their show back on the road.

The masses of Black people have always been deeply entrenched and involved in the basic necessities of life. They have not had time to abstract their situation. Abstractions come only with leisure. The people have not had the luxury of leisure. Therefore, the people have been very aware of the true definition of politics: politics are merely the desire of individuals and groups to satisfy first, their basic needs—food, shelter and clothing, and security for themselves and their loved ones. The Black leaders endorsed by the power structure have attempted to sell the people the simple-minded theory that politics is holding a political office; being able to move into a $40,000 home; being able to sit near white people in a restaurant (while in fact the Black masses have not been able to pay the rent of a $40.00 rat-infested hovel.)

The Black leaders have led the community to believe that brutality and force could be ended by subjecting the people to this very force of self-sacrificing demonstrations. The Black people realize brutality and force can only be inflicted if there is submission. The community has not responded in the past or in the present to the absurd and erroneous, deceitful tactics of so-called legitimate Black leaders. The community realizes that force and brutality can only be eliminated by counter force through self defense. Leaders who have recommended these tactics have never had the support and following of the downtrodden black masses who comprise the bulk of the community. Grassroots—the downtrodden of the Black community, even though they rejected the handpicked handkerchief heads endorsed by the power structure, the people have not had the academic or administrative knowledge to form themselves in long resistance to the brutality.

Marcus Garvey and Malcolm X were the two Black men of the twentieth century who posed an implacable challenge to both the oppressor and the endorsed spokesmen that could be dealt with in any other way than precisely the foul manner recorded by history. Malcolm in our time, stood on the threshold with the oppressor and the endorsed spokesmen in a bag that they couldn't get out of. Malcolm, implacable to the ultimate degree, held out to the Black masses the historical, stupendous victory of Black collective salvation and liberation from the chains of the oppressor and the treacherous embrace of the endorsed spokesmen. Only with the gun were the black masses denied this victory. But they learned from Malcolm that with the gun, they can recapture their dreams and bring them into reality.

The heirs of Malcolm now stand millions strong on their corner of the triangle, facing the racist dog oppressor and the soulless endorsed spokesmen. The heirs of Malcolm have picked up the gun and, taking first things first, are moving to expose the endorsed spokesmen for the Black masses to see them for what they are and always have been. The choice offered by the heirs of Malcolm to the endorsed spokesmen is to repudiate the oppressor and to crawl back to their people and earn a speedy reprieve or face a merciless, speedy and most timely execution for treason and being too wrong for too long.

"In Defense of Self Defense: The Correct Handling of a Revolution," July 20, 1967

Most human behavior is learned behavior. Most things the human being learns are gained through an indirect relationship to the object. Humans do not act from instinct as lower animals do. Those things learned indirectly many times stimulate very effective responses to what might be later a direct experience. At this time the black masses are handling the resistance incorrectly. The brothers in East Oakland learned from Watts a means of resistance fighting by amassing the people in the streets, throwing bricks and molotov cocktails to destroy property and create disruption. The brothers and sisters in the streets were herded into a small area by the gestapo police and immediately contained by the brutal violence of the oppressor's storm troops. This manner of resistance is sporadic, short-lived, and costly in violence against the people. This method has been transmitted to all the ghettos of the black nation across the country. The first man who threw a molotov cocktail is not personally known by the masses, but yet the action was respected and followed by the people.

The Vanguard Party must provide leadership for the people. It must teach the correct strategic methods of prolonged resistance through literature and activities. If the activities of the party are respected by the people, the people will follow the example. This is the primary job of the party. This knowledge will probably be gained second-hand by the masses just as the above mentioned was gained indirectly. When the people learn that it is no longer advantageous for them to resist by going into the streets in large numbers, and when they see the advantage in the activities of the guerrilla warfare method, they will quickly follow this example.

But first, they must respect the party which is transmitting this message. When the Vanguard group destroys the machinery of the oppressor by dealing with him in small groups of three and four, and then escapes the might of the oppressor, the masses will be overjoyed and will adhere to this correct strategy. When the masses hear that a gestapo policeman has been executed while sipping coffee at a counter, and the revolutionary executioners fled without being traced, the masses will see the validity of this type of approach to resistance. It is not necessary to organize thirty million Black people in primary groups of two's and three's but it is important for the party to show the people how to go about revolution. During slavery, in which no vanguard party existed and forms of communications were severely restricted and insufficient, many slave revolts occurred.

There are basically three ways one can learn: through study, through observation, and through actual experience. The black community is basically composed of activists. The community learns through activity, either through observation of or participation in the activity. To study and learn is good but the actual experience is the best means of learning. The party must engage in activities that will teach the people. The black community is basically not a reading community. Therefore it is very significant that the vanguard group first be activists. Without this knowledge of the black community, one could not gain the fundamental knowledge of the black revolution in racist America.

The main function of the party is to awaken the people and to teach them the strategic method of resisting the power structure, which is prepared not only to combat the resistance of the people with massive brutality, but to totally annihilate the black community, the black population.

If it is learned by the power structures that black people have "x" amount of guns in their possession, this will not stimulate the power structure to prepare itself with guns, because it is already more than prepared.

The end result of this education will be positive for Black people in their resistance and negative for the power structure in its oppression, because the party always exemplifies revolutionary defiance. If the party is not going to make the people aware of the tools of liberation and the strategic method that is to be used, there will be no means by which the people will be mobilized properly.

The relationship between the vanguard party and the masses is a secondary relationship. The relationship between the members of the vanguard party is a primary relationship It is important that the members of the vanguard group maintain a face-to-face relationship with each other. This is important if the party machinery is to be effective. It is impossible to put togther functional party machinery or programs without this direct relationship. The members of the vanguard group should be tested revolutionaries. This will minimize the danger of Uncle Tom informers and opportunists.

The main purpose of vanguard group should be to raise the consciousness of the masses through educational programs and certain physical activities the party will participate in. The sleeping masses must be bombarded with the correct approach to struggle through the activities of the vanguard party. Therefore, the masses must know that the party exists. The party must use all means available to get this information across to the masses. If the masses do not have knowledge of the party, it will be impossible for the masses to follow the program of the party.

The vanguard party is never underground in the beginning of its existence, because this would limit its effectivness and educational processes. How can you teach people if the people do not know and respect you? The party must exist above ground as long as the dog power structure will allow, and hopefully when the party is forced to go underground the message of the party will already have been put across to the people. The vanguard party's activities on the surface will necessarily be short-lived.

This is why it is so important that the party make a tremendous impact upon the people before it is driven into secrecy.

At this time, the people know the party exists, and they will seek out further information on the activities of this underground party.

Many would-be revolutionaries work under the fallacious illusion that the vanguard party is to be a secret organization that the power structure knows nothing about, and the masses know nothing about, except for occasional letters that come to their homes by night. Underground parties cannot distribute leaflets announcing an underground meeting. These are contradictions and inconsistencies of the so-called revolutionaries. The so-called revolutionaries are in fact afraid of the very danger that they are advocating for the people. These so-called revolutionaries want the people to say what they themselves are afraid to say, and the people to do what they themselves are afraid to do. This makes the so-called revolutionary a coward and a hypocrite.

If these imposters would investigate the history of revolution, they would see that the vanguard group always starts out above ground and is later driven underground by the aggressor. The Cuban Revolution exemplifies this fact; when Fidel Castro started to resist the butcher Batista and the American running dogs, he started by speaking on the campus of the University of Havana in public. He was later driven to the hills. His impact upon the dispossessed people of Cuba was very great and received with much re-

spect. When he went into secrecy, Cuban people searched him out. People went to the hills to find him and his band of twelve. Castro handled the revolutionary struggle correctly. If the Chinese Revolution is investigated, it will be seen that the Communist Party was quite on the surface so that they would be able to muster support from the masses. There are many areas one can read about to learn the correct approach, such as the revolution in Kenya, the Algerian Revolution, Fanon's The Wretched of the Earth, the Russian Revolution, the works of Chairman Mao Tse-tung, and a host of others.

A revolutionary must realize that if he is sincere, death is imminent due to the fact that the things he is saying and doing are extremely dangerous. Without this realization, it is impossible to proceed as a revolutionary. The masses are constantly looking for a guide, a Messiah, to liberate them from the hands of the oppressor. The vanguard party must exemplify the characteristics of worthy leadership. Millions and millions of oppressed people might not know members of the vanguard party personally or directly, but they will gain through an indirect acquaintance the proper strategy for liberation via the mass media and the physical activities of the party. It is of prime importance that the vanguard party develop a political organ, such as a newspaper produced by the party, as well as employ strategically revolutionary art and destruction of the oppressor's machinery. For example, Watts. The economy and property of the oppressor was destroyed to such an extent that no matter how the oppressor tried to whitewash the activities of the black brothers, the real nature and the real cause of the activity was communicated to every black community. For further example, no matter how the oppressor tries to distort and confuse the message of Brother Stokely Carmichael, Black people all over the country understand it perfectly and welcome it.

The Black Panther Party for Self Defense teaches that in the final analysis, the amount of guns and defense weapons, such as hand grenades, bazookas, and other necessary equipment, will be supplied by taking these weapons from the power structure, as exemplified by the Viet Cong. Therefore, the greater the military preparation on the part of the oppressor, the greater is the availability of weapons for the black community. It is believed by some hypocrites that when the people are taught by the vanguard group to prepare for resistance, this only brings the man down on them with increasing violence and brutality; but the fact of the matter is that when the man becomes more oppressive, this only heightens the revolutionary fervor. The people never make revolution. The oppressors by their brutal actions cause the resistance by the people. The vanguard party only teaches the correct methods of resistance. So, if things can get worse for oppressed people, then they will feel no need for revolution or resistance. The complaint of the hypocrites that the Black Panther Part for Self Defense is exposing the people to deeper suffering is an incorrect observation. People have proved that they will not tolerate any more oppression by the racist dog police through their rebellions in the balck communities across the country. The people are looking now for guidance to extend and strengthen their resistance struggle.

FEAR AND DOUBT

(By Huey P. Newton, May 15, 1967)

The lower socio-economic Black male is a man of confusion. He faces a hostile environment and is not sure that it is not his own sins that have attracted the hostilities of society. All his life he has been taught (explicitly and implicitly) that he is an inferior approximation of humanity. As a man, he finds himself void of those things that bring respect and a feeling of worthiness. He looks around for something to blame for his situation, but because he is not sophisticated regarding the socio-economic milieu and because of negativistic parental and institutional teachings, he ultimately blames himself.

When he was a child, his parents told him that they were not affluent because "we didn't have the opportunity to become educated," or "we did not take advantage of the educational opportunities that were offered to us." They tell their children that things will be different for them if they are educated and skilled, but that there is absolutely nothing other than this occasional warning (and often not even this) to stimulate education. Black people are great worshippers of education, even the lower socio-economic Black person, but at the same time, they are afraid of exposing themselves to it. They are afraid because they are vulnerable to having their fears verified; perhaps they will find that they can't compete with white students. The Black person tells himself that he could have done much more if he had really wanted to. The fact is, of course, that the assumed educational opportunities were never available to the lower socio-economic Black person due to the unique position assigned him in life.

It is a two-headed monster that haunts this man. First, his attitude is that he lacks innate ability to cope with the socio-economic problems confronting him, and second, he tells himself that he has the ability but he simply has not felt strongly enough to try to acquire the skills needed to manipulate his environment. In a desperate effort to assume self-respect, he rationalizes that he is lethargic; in this way, he denies a possible lack of innate ability. If he openly attempts to discover his abilities, he and others may see him for what he is—or is not, and this is the real fear. He then withdraws into the world of the invisible, but not without a struggle. He may attempt to make himself visible by processing his hair, acquiring a "boss mop", or driving a long car, even though he can't afford it. He may father several illegitimate children by several different women in order to display his masculinity. But in the end, he realizes that he is ineffectual in his efforts.

Society responds to him as a thing, a beast, a non-entity, something to be ignored or stepped on. He is asked to respect laws that do not respect him. He is asked to digest a code of ethics that acts upon him but not for him. He is confused and in a constant state of rage, of shame and doubt. This psychological set permeates all his interpersonal relationships. It determines his view of the social system. His psychological development has been prematurely arrested. This doubt begins at a very early age and continues through his life. The parents pass it on to the child and the social system reinforces the fear, the shame, and the doubt. In the third or fourth grade, he may find that he shares the classroom with white students, but when the class is engaged in reading exercises, all the Black students find themselves in a group at a table reserved for slow readers. This may be quite an innocent effort on the part of the school system. The teacher may not realize that the Black students feared (in fact, feel certain) that Black means dumb and white means smart. The children do not realize that the head start the children got at home is what accounts for the situation. It is generally accepted that the child is the father of the man; this holds true for the lower socio-economic Black people.

With whom, with what can he, a man, identify? As a child he had no permanent male figure with whom to identify; as a man, he sees nothing in society with which he can identify as an extension of himself. His life is built on mistrust, shame, doubt, guilt, inferiority, role confusion, isolation and despair. He feels that he is something less than a man, and it is evident in his conversation: "the white man is 'The Man', he got everything, and he knows everything, and a nigger ain't nothing." In a society where a man is valued according to occupation and material possessions, he is without possessions. He is unskilled and more often than not, either marginally employed or unemployed. Often his wife (who is able to secure a job as a maid cleaning for white people) is the breadwinner. He is, therefore, viewed as quite worthless by his wife and children. He is ineffectual both in and out of the home. He cannot provide for or protect his family. He is invisible, a non-entity Society will not acknowledge him as a man. He is a consumer and not a producer. He is dependent upon the white man ('The Man') to feed his family, to give him a job, educate his children, serve as the model that he tries to emulate. He is dependent and he hates 'The Man' and he hates himself. Who is he? Is he a very old adolescent or is he the slave he used to be?

What did he do to be so Black and blue?

EXECUTIVE MANDATE NO. 1: STATEMENT BY THE MINISTER OF DEFENSE

(Delivered May 2, 1967, at Sacramento, California, State Capitol Building.)

The Black Panther Party for Self Defense calls upon the American people in general and the Black people in particular to take careful note of the racist California Legislature which is now considering legislation aimed at keeping the Black people disarmed and powerless at the very same time that racist police agencies throughout the country are intensifying the terror, brutality, murder and repression of Black people.

At the same time that the American government is waging a racist war of genocide in Vietnam, the concentration camps (see "Concentration Camps U.S.A." by Charles R. Allen, Jr., and "American Concentration Camps" by Boswell) in which Japanese Americans were interned during World War II are being renovated and expanded. Since America has historically reserved the most barbaric treatment for non-white people, we are forced to conclude that these concentration camps are being prepared for Black people who are determined to gain their freedom by any means necessary. The enslavement of Black people from the very beginning of this country, the genocide practiced on the American Indians and the confining of the survivors on reservations, the savage lynching of thousands of Black men and women, the dropping of atomic bombs on Hiroshima and Nagasaki, and now the cowardly massacre in Vietnam, all testify to the fact that towards people of color the racist power structure of America has but one policy: repression, genocide, terror, and the big stick.

Black people have begged, prayed, petitioned, demonstrated and everything else to get the racist power structure of America to right the wrongs which have historically been perpetrated against Black people. All of these efforts have been answered by more repression, deceit, and hypocrisy. As the aggression of the racist American government escalates in Vietnam, the police agencies of America escalate the repression of Black people throughout the ghettos of America. Vicious police dogs, cattle prods and increased patrols have become familiar sights in black communities. City Hall turns a deaf ear to the pleas of Black people for relief from this increasing terror.

The Black Panther Party for Self Defense believes that the time has come for Black people to arm themselves against this terror before it is too late. The pending Mulford Act brings the hour of doom one step nearer. A people who have suffered so much for so long at the hands of a racist society, must draw the line somewhere. We believe that the

Black communities of America must rise up as one man to halt the progression of a trend that leds inevitably to their total destruction. (Huey P. Newton, Minister of Defense.)

EXECUTIVE MANDATE NO. 2: STATEMENT OF THE MINISTER OF DEFENSE

(Delivered June 29, 1967.)

So Let This Be Heard. . . Brother Stokely Carmichael:

Because you have distinguished yourself in the struggle for the total liberation of Black people from oppression in racist white America;

Because you have acted courageously and shown great fortitude under the most adverse circumstances;

Because you have proven yourself as a true revolutionary guided by a great feeling of love for our people;

Because you have set such a fine example, in the tradition of Brother Malcolm for dedicating your entire life to the struggle of Black Liberation, inspiring our youth and providing a model for others to emulate;

Because you have refused to serve in the oppressor's racist mercenary, aggressive war machine, showing that you know who your true friends and enemies are;

Because of your new endeavor to organize and liberate the Crown Colony of Washington, D.C., you will inevitably be forced to confront, deal with, and conquer the racist Washington Police Department which functions as the protector of the racist dog power structure, occupying the Black Community in the same manner and for the same reasons that the racist U.S. Armed Forces occupy South Vietnam;

You are hereby drafted into the Black Panther Party for Self Defense, invested with the rank of Field Marshal, delegated the following authority, power, and responsibility: To establish revolutionary law, order and justice in the territory lying between the Continental Divide East to the Atlantic Ocean; North of the Mason-Dixon Line to the Canadian Border; South of the Mason-Dixon Line to the Gulf of Mexico. . . . So Let It Be Done. (Huey P. Newton, Minister of Defense, June 29, 1967.)

EXECUTIVE MANDATE NO. 3: STATEMENT OF THE MINISTER OF DEFENSE

(Delivered on March 1, 1968.)

So Let This Be Heard: Because of the St. Valentine Day massacre of February 14, 1929, in which outlaws donned the uniforms of Policemen, posed as such, and thereby gained entrance to locked doors controlled by rival outlaws with whom they were contending for control of the bootlegging industry in Chicago; and because these gangsters, gaining entry through their disguise as Policemen, proceeded to exterminate their rivals with machinegun fire, we believe that prudence would dictate that one should be alert when opening one's door to strangers, late at night, in the wee hours of the morning—even when these strangers wear the uniform of policemen. History teaches us that the man in the uniform may or may not be a policeman authorized to enter the homes of the people, and

Taking notice of the fact that (1) on January 16, 1968, at 3:30 A.M., members of the San Francisco Police Department kicked down the door and made an illegal entry, and search of the home of Eldridge Cleaver, Minister of Information. These Pigs had no search warrant, no arrest warrant, and were therefore not authorized to enter. They were not invited in. Permission for them to enter was explicitly denied by the Minister of Information. Present were Sister Kathleen Cleaver, our Communications Secretary and wife to our Minister of Information, and Brother Emory Douglas, our Revolutionary Artist.

Taking further notice of the fact that (2) on February 25, 1968, several uniformed gestapos of the Berkeley Pig Department, accompanied by several other white men in plainclothes, bearing an assortment of shotguns, rifles, and service revolvers, made a forceful, unlawful entry and search of the home of Bobby Seale, Chairman of our Party, and his wife, Sister Artie Seale. These Pigs had no warrant either to search or to arrest. When asked by Chairman Bobby to produce a warrant, they arrogantly stated that they did not need one. They had no authority to enter—what they did have was the power of the gun. Thus we are confronted with a critical situation. Our organization has received serious threats from certain racist elements of White America, including the Oakland, Berkeley, and San Francisco Pig Departments. Threats to take our lives, to exterminate us. We cannot determine when any of these elements, or a combination of them, may move to implement these threats. We must be alert to the danger at all times. We will not fall victim to a St. Valentine's Massacre. Therefore, those who approach our doors in the manner of outlaws, who seek to enter our homes illegally, unlawfully and in a rowdy fashion, those who kick our doors down with no authority and seek to ransack our homes in violation of our HUMAN RIGHTS, will henceforth be treated as outlaws, as gangsters, as evildoers. We have no way of determining that a man in a uniform involved in a forced outlaw entry into our home is in fact a Guardian of the Law. He is acting like a lawbreaker and we must make an appropriate response.

We draw the line at the threshold of our doors. It is therefore mandated as a general order to all members of the Black Panther Party for Self Defense that all members must acquire the technical equipment to defend their homes and their dependents and shall do so. Any member of the Party having such technical equipment who fails to defend his threshold shall be expelled from the Party for Life. . . . So Let This Be Done.—Huey P. Newton, Minister of Defense, March 1, 1968.

Black Panther Party Nat'l Headquarters, 3106 Shattuck Avenue, Berkeley, Ca. 94705.

FOR CONTINUOUS ACTION TOWARDS WORLD PEACE

Black people should strongly support the demand for immediate withdrawal of all United States troops from Vietnam and should support the Moratorium actions, but Black people should understand that there is no unity of will between Black people and the leadership of the New Mobilization because the New Mobilization has either failed to see or does not want to see the importance of Black Peoples' just struggle or its direct relationship with the struggles of the Vietnamese people. We Black people clearly understand that the best "care package" that we can send to the Vietnamese people is our continued and intensified resistance to fascist repression from the same enemy here in America.

We demand: That the peace movement, and in particular the New Mobilization Committee select one or two of it's responsible representatives to take the place of Rene Davis and Dave Dellinger, who are prohibited by the fascist U.S. Power Structure from taking an active part in the exchange of Political Prisoners, Huey Newton and Bobby Seale for American prisoners of war now being held in Vietnam. The Vietnamese people are ready to deal. All we need are trustworthy people. The selected representatives will proceed to Hanoi where negotiations would be carried out under the supervision of our Minister of Information, Eldridge Cleaver, to insure that the proceedings would be agreeable to the progressive factors, both Black and White of the American Society.

That a massive international action be held to protest the Sato-Nixon meeting to soldify Japan's role as a springboard for further imperialistic aggression on the Continent of Asia and in particular in Vietnam, Laos, and Korea. CP USA and the New Mobilization Committee and other progressive forces contact the CP and other fraternal anti-war organizations in Japan to plan a series of simultaneous international demonstrations for this purpose.

That the CP USA address themselves to enlisting massive active support from the Soviet Union for the Vietnamese People in particular and the National Liberation struggles of the World in general. This must also include active and meaningful support for the liberation struggle of Black people in America.

For further information contact National Headquarters or: Black Panther Party, 113 W. 30th. St., Indianapolis, Ind.

THE COOPER-CHURCH AMENDMENT AGAINST AID TO CAMBODIA

HON. JOHN G. SCHMITZ

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 27, 1970

Mr. SCHMITZ. Mr. Speaker, on June 30, after 7 long weeks of debate, the U.S. Senate passed the Cooper-Church amendment to the Foreign Military Sales Act, barring further action by our Government, under present law, to aid in the defense of Cambodia directly or indirectly.

This measure then came to the floor of the House of Representatives on July 9 where it was rejected, after considerable parliamentary maneuvering, by a vote of 237 to 153. My vote was cast against it.

The Cooper-Church amendment has been widely publicized as a means of getting American ground troops out of Cambodia. But President Nixon, keeping his promise to the American people, had already withdrawn all American ground forces from Cambodia before either the Senate or the House voted on this measure. Its really significant provision went comparatively unnoticed:

a prohibition on spending any U.S. funds for the purpose of entering into or carrying out any contract or agreement to provide military instruction in Cambodia, or to provide persons to engage in any combat activity in support of Cambodian forces.

This would apply not only to American troops or military instructors—covered by a preceding section of the amendment—but to any country, receiving American military aid, which might use any part of such aid to help defend Cambodia. Countries such as Thailand and South Vietnam itself, whose security is intimately involved with the defense of Cambodia, would jeopardize all their military aid from the United States if they made any move to help Cambodia, should this measure become law. This is directly contrary to the fundamental objective of President Nixon's program of disengaging American forces from Southeast Asia while encouraging the threatened nations there to defend themselves.

Since it seems clear that Cambodia is unable to defend herself now without some outside assistance, adoption of the Cooper-Church amendment would virtually assure the immediate handing over of Cambodia to the Communists or, at the very least, the prompt return of the procommunist Sihanouk government. This would reopen the port of Sihanoukville, which for the past 3 years has been a major source of resupply for North Vietnamese troops.

The strategic importance of Sihanoukville is tremendous. Over a year ago it assumed the primary position as port of entry for war materials in support of North Vietnamese forces in South Vietnam. A report presented July 6 to the House Select Committee on United States Involvement in Southeast Asia, supported by reliable evidence from the combat zone, shows that about 85 percent of all the military supplies the Communist enemy was receiving in the southern part of South Vietnam came through Sihanoukville, until its use against us was ended by the new Lonnol government in Cambodia.

It is true that we should not permanently commit American ground troops in Cambodia. But there is no justification for congressional action to ban all military aid to Cambodia from any source, leaving its people to become helpless victims of the massacres which have accompanied every Communist conquest. All aside from the necessity of protecting our own troops by preventing the resupply of their combat foes through Cambodia, such abandonment of a whole people would be profoundly immoral.

The words of Douglas Pike, in his recent study entitled "The Viet Cong Strategy of Terror" and circulated by the U.S. Information Agency, on the fate South Vietnam would suffer in a Communist conquest apply equally well to Cambodia:

The meaning of the Hue Massacre seems clear. If the communists win decisively in South Vietnam (and the key word is decisively), what is the prospect? First, all foreigners would be cleared out of the South, especially the hundreds of foreign newsmen who are in and out of Saigon. A curtain of ignorance would descend. Then would begin the night of long knives. There would be a new order to build. The war was long and so are memories of old scores to be settled. All political opposition, actual or potential, would be systematically eliminated . . .

But little of this would be known abroad. The communists in Vietnam would create a silence.

The world would call it peace.

1970 CONGRESSIONAL QUESTIONNAIRE TABULATED

HON. WENDELL WYATT

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, July 27, 1970

Mr. WYATT. Mr. Speaker, my 1970 congressional questionnaire has been tabulated and I would like to share the findings with my colleagues in the Congress.

I mailed out over 200,000 questionnaires to residents of my First Congressional District, and received back some 36,000 for a 17.8-percent response—the best I have ever had.

Mr. Speaker, the views that my constituents express are of vital importance to me. I am grateful to all those who took the time to return their questionnaire, and I am particularly pleased that so many wrote additional comments and letters:

[In percent]

	Yes	No	No opinion
1. Do you approve of the way the Nixon administration is handling the conduct of the Vietnam war?	60.1	34.0	3.1
2. Should the President order an immediate and unconditional withdrawal of U.S. forces from Southeast Asia?	24.3	70.1	3.0
3. The United States has never established diplomatic relations with Red China. Do you favor softening of the U.S. position and talks leading to possible diplomatic recognition of mainland China?	49.0	39.4	8.3
4. Do you favor the limited ABM system recommended by President Nixon?	44.0	31.5	18.8
5. Foreign aid:			
(a) Should the United States continue to extend military aid to other nations?	34.0	54.9	4.7
(b) Should the United States continue to extend economic aid to other nations?	56.8	31.6	4.3
6. When the Vietnam conflict is resolved, would you favor abolishing the present draft system for an all-volunteer Army?	55.8	36.1	5.1
7. Do you support President Nixon's action in closing the U.S. Consulate in Rhodesia?	33.3	24.6	38.1
8. To get families off welfare, President Nixon has proposed a work incentive and job training program while guaranteeing a basic level of financial assistance. Do you favor this alternative to the present welfare system?	79.6	11.1	5.6

9. What, in your opinion, are the top domestic issues confronting the United States today?

1. Inflation	36.7	5. Drug abuse	4.8
2. Law and order	28.4	6. Civil rights	4.3
3. Environment	9.0	7. Housing	1.6
4. Campus disorders	8.6	8. Other	4.2

	Yes	No	No opinion
10. Should Congress place a ceiling on the total amount any 1 person may receive under the Federal farm subsidy program?	83.8	5.1	8.8
11. Do you favor the President's proposal for automatic cost-of-living adjustments in social security benefit payments?	79.0	12.5	5.6
12. Would you favor passage of a constitutional amendment by the Congress to permit voluntary nondenominational prayer in public schools?	77.2	14.9	6.3
13. Do you favor the proposal before Congress amending the Constitution to lower the voting age to 18?	27.6	69.0	1.8

14. President Nixon and Vice President Agnew—How would you rate their performance in office:

President Nixon:		Vice-President Agnew:	
Excellent	25.4	Excellent	27.5
Good	36.3	Good	29.2
Fair	22.1	Fair	17.8
Poor	13.7	Poor	20.7

MOTORBOAT SAFETY

HON. CHARLES E. CHAMBERLAIN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 27, 1970

Mr. CHAMBERLAIN. Mr. Speaker, the outgoing Chief of the Office of Boating Safety, U.S. Coast Guard, Rear Adm. Joseph J. McClelland, has written an informative and timely report about the current status of recreational boating and particularly the Coast Guard's efforts to promote safety on the Nation's waterways. With more than 40 million people participating in this activity each year, I know there are many who are deeply concerned over the problems that accompany our growing boating population. I commend the article "Problems and Programs," appearing in the June 1970 issue of Coast Guard: Proceedings of the Merchant Marine Council, to the attention of my colleagues:

(By Rear Adm. Joseph J. McClelland)

PROBLEMS AND PROGRAMS

Recreational boating has been experiencing a tremendous rate of growth and has been demanding increasing time and attention from the Coast Guard. The problems of recreational boating safety are becoming of increasing importance to us, and we have given new emphasis to the development of an effective boating safety program.

It may appear that these problems have very little relationship to the shipping industry. I suggest that there are several areas of common concern. The environment is the same, and the hazards are similar; many items of marine equipment, such as lifesaving devices, are common on all types of vessels. Aids to navigation are of concern as much to the recreational boatman as they are to the ship master. The rules of the road affect all users on our waterways, and provisions affecting such items as navigation lights are of common concern.

Environmental pollution problems are very much in the forefront these days. Pollution of the oceans and inland waters from oil and vessel wastes, and from sewage disposal, is a common problem.

The Coast Guard's Merchant Marine inspection program is an intensive, extensive safety program well known to the shipping industry. It could readily be considered as a pattern for insuring the safety and reliability of recreational boats, but the standards required are of an entirely different nature, and a suitable inspection program must have a different approach. We do not intend to adopt similar procedures, and this approach may have a marked effect upon the vessel inspection program. I will cover this more specifically later.

There are other areas of common concern, but these which I have mentioned will, I hope, be sufficient to illustrate for you that this tremendously expanding recreational boating activity does relate directly to the shipping community. In addition, I am sure there are many boat owners reading this who are interested in what the Coast Guard is doing about boating safety.

STATISTICS

We estimate that there are over 8½ million recreational boats now in use, and we know that more than 300,000 new boats are being manufactured every year. More than 40 million people are estimated to go boating

every year. That amounts to one boat for approximately every 25 people in our country, and about one out of every five persons goes boating. The boating business is a $3.2 billion industry. Looking into the future, it seems certain that with increasing leisure time, with our society becoming ever more affluent, and with the areas and facilities for other types of recreation becoming more and more crowded, boating is going to continue to increase at an extravagant rate.

Inevitably, with this many boats and so many millions of people engaged in boating sports, there are going to be accidents. In 1969, 1,350 people lost their lives in boating accidents. These deaths, along with thousands of injuries and many millions of dollars' worth of damage to property, have brought the boating safety problem into the limelight and identified it as an important element of the public safety and consumer protection program.

There are a number of lesser boating problems, such as lack of uniformity in laws of States concerning numbering of boats and requirements for safety equipment. This is important for boatmen who move back and forth between jurisdictions, and the boating population is very mobile these days. This affects the manufacturers too, because it is difficult for any manufacture with extensive distribution to know precisely how he must equip a boat or design associated equipment in order to comply with the laws.

There are problems with law enforcement also. As you know, present Federal boating laws apply only upon navigable waters of the United States. We know that approximately one-third of all boating accidents occur on waters that are solely under State jurisdiction and that almost one-half of all deaths from boating accidents occur on these waters. Thus, effective State boating safety programs are essential, and unfortunately not all States do have such effective programs.

THE FOUR "E'S"

In response to these problems, the Coast Guard has developed a program which basically includes four areas of activity. These are: Education, engineering standards, law enforcement, and a sort of catch-all which I call environmental concerns. Let me briefly consider each of these in turn.

Education

Education is, in my opinion, our greatest concern and yet our greatest opportunity. It is generally concluded from accident records that human error is the principal cause of boating accidents, since the specific cause is usually difficult to identify, and after all, the boatman is the last safety check in the chain of events which culminates in an accident. This error may result from lack of knowledge, lack of competence or judgment, or perhaps lack of information. There is, of course, an extensive educational effort in being. Several States have boating safety education programs, including courses given in the schools. The Coast Guard Auxiliary, the U.S. Power Squadrons, the American Red Cross, and other organizations offer free education courses all over the country. Hundreds of thousands of boatmen take advantage of these courses every year.

The Coast Guard and several of the States carry out modest public education programs through the public information media, through training films, and through displays at boat shows. Our boating safety detachments, which are mobile safety crews with a trailerable boat, do an outstanding job of public education. The combination of all these activities makes an educational program of considerable extent. We hope to improve this effort in the future by expansion and better coordination. We rely heavily upon the Coast Guard Auxiliary, and I anticipate significant increases in the Auxiliary's education program.

Engineering standards

The purpose of a Federal boat safety standards program for recreational boats is to insure that the boat and associated equipment which reaches the consumer is reliable. Last year the Coast Guard responded to more than 31,000 calls for assistance from recreational boats. More than 48 percent of the search and rescue cases resulted from engine breakdown or boat systems failure of some nature. This would indicate that there is some room for improvement in the reliability of boats and their equipment.

The Motorboat Act of 1940 currently prescribes the Federal requirements for motorboats and equipment. The items regulated are limited to six specific items such as fire extinguishers, lifesaving devices, and navigation lights. No doubt the scope of these requirements was felt to be adequate in 1940, but the tremendous increase in recreational boating, technological changes such as the development of the inboard-outboard drive, and the use of new materials such as fiberglass in boat construction, have long ago created requirements far beyond these limited regulations. In addition, the development of factual information through collection of data in accordance with the 1958 Boating Act has helped to identify items for which regulations are needed.

Many States have developed their own safety requirements for State waters, and the boating industry has developed quite extensive voluntary standards for their own use. However, such voluntary standards do not provide the minimums needed, they are not universally accepted and followed, and there is no requirement for compliance. The Coast Guard is, therefore, now seeking new legislation which would update and expand Federal authority. It is intended to promulgate minimum safety standards required for boating safety which will be established only where there is a demonstrated need. Such standards will be reasonable, and will be expressed in terms of performance insofar as practicable.

The 1940 act places responsibility for compliance with the law solely upon the boat owner/operator. This is true even for such things as backfire flame control equipment, which is almost always sold as an integral part of the boat. Responsibility for the design and construction of a boat, and for providing the boatman with a boat and equipment which meet Federal safety standards should properly lie with the manufacturer. A single set of standards, therefore, becomes mandatory. We intend to preempt the boating standards field in order that the manufacturer may more readily comply with the regulations, and the boatman will not have to be concerned when he moves between jurisdictions.

Enforcement

The Coast Guard's law enforcement activity with respect to boating involves enforcement of the requirements for equipment and numbering, and of the rules against reckless or negligent operation of boats. We work closely with the States, and in fact have cooperative agreements with the great majority of them. These agreements generally provide for joint enforcement of the law on waters which lie within the State and yet are navigable waters of the United States. We feel that local enforcement of the law with respect to individuals is most effective, and through our proposal for a program of financial assistance we hope to encourage local law enforcement activity.

Environment

Those concerns of the boating safety program which relate directly to the environment include aids to navigation, the collection and dissemination of weather and marine information, and the efficient utilization of water areas by means of controls such as zoning. The Coast Guard is currently engaged in an extensive study of our Aids to Navigation System, and the needs of the Recreational Boatman are being kept very much in mind.

Presently the amount of weather information being disseminated to the boatman is quite considerable. Those of you who go boating in many areas know that you can tune in to current weather broadcasts many times during the day. However, some boatmen simply neglect to tune in the weather, and many small craft aren't even equipped with radios. So we face a difficult problem in attempting to warn boatmen of impending squalls or heavy weather. Inability to reach the boatman while he is boating has resulted in a number of tragedies in recent years, such as the *Coho Salmon* disaster on Lake Michigan in 1967. We are hoping that a research and development effort will develop an inexpensive device for this purpose.

I am sure that zoning is going to come into greater use as our water areas become more crowded. Of course, we already have zoning of certain types, such as for anchorage and swimming, and we have speed limits in many places. No doubt areas will be set aside for water skiing and fishing, as well as for other purposes, as demand develops.

MEETING THE CASUALTY PROBLEM

It scarcely needs to be mentioned that the accident problem in boating is entirely different in nature from that with motor vehicles. A motor vehicle accident is almost always a collision with another vehicle, or at least an impact with some object which results in death and injury. Only a small minority of boating accidents are of this nature. The greatest single cause of deaths in boating accidents is drowning from capsizings or falls overboard. Thus the hazard of boating results largely from the environment.

This emphasizes what is perhaps our number one concern, the problem of lifesaving devices. The majority of drownings occur as a result of a sudden type of casualty in which there is no opportunity or time to get or put on a lifesaving device. Possibly as many as 1,000 of the 1,260 victims that drowned in 1969 did not have time to don a lifesaving device before going overboard. It appears that the only solution is to have the lifesaving device on or in hand at all times. At the very least, devices should be worn by all occupants when boating conditions are hazardous, and by children and nonswimmers at all times.

But how can we get people to wear life jackets? Much can be done through education, and regulations can have some effect. However, we hope to make the job easier by providing the boatman with a device which he will want to wear. Research and development assistance has been available recently in our efforts to determine how changes in design will affect the performance of flotation devices. We hope to use data from this study in conjunction with wear acceptability research to help us to develop improved specifications. This could significantly reduce the number of drownings.

Another project which has been in progress for some time is the updating and unification of the inland, western rivers, and Great Lakes rules of the road into a single set of U.S. rules, patterned generally after the international rules. A bill has been introduced before the House Committee on Merchant Marine and Fisheries to accomplish this.

Each of the sets of rules we are seeking to unify are, with some changes, still quite close to their original form. There are problems involved in asking three different groups of sailors to break with 100 years of tradition. But we believe the unified package to be a much improved version of all three sets of rules.

I hope that this brief article has indicated to you the balanced nature of our Coast Guard boating safety program. We hope that it will meet the needs of boating safety within the practical limitations of funds and resources. There are, however, two points which I would like to emphasize. First, although I have been talking about the Coast Guard program of boating safety, this Federal program can by no means operate successfully on its own. Full cooperation and coordination with the States is essential, and the extensive contributions of industry and of the many fine boating organizations are of paramount importance. The cooperation of all and the dedication of our legions of boatmen to boating safety are of the greatest value.

Secondly, I want to say that foremost in every element of this program is the interest of the boating citizen. It is the Coast Guard's mission to make his boating recreation as safe as reasonably possible, and yet insure that it will always continue to be recreation.

As part of the maritime community, I hope you will give whatever support you can to this challenging program.

URBAN PROBLEMS

HON. JOHN C. CULVER

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 27, 1970

Mr. CULVER. Mr. Speaker, in spite of the attention which has been focused upon them in the past several years, the cities of our Nation continue to face ever-growing difficulties.

The main problem is one of insufficient money.

Cities are caught in a vicious circle. As families and businesses move out to the suburbs, they reduce the cities' financial resources, decreasing the ability of the city government to maintain its services, and stimulating additional outward flight.

Abandoned by the affluent middle class, the cities are left with a host of problems. Decent housing is desperately needed, and the need is increasing despite the fact that many dwellings lie vacant. Without exception, however, these buildings are old and decaying, as are the streets and sewers which service them. No one wants to live in them in this condition, and those with the resources to rehabilitate them prefer to live elsewhere.

Inflation causes additional problems. The cost of providing services at last year's levels increases, but revenues fail to keep pace. Shrinking tax bases and cutbacks in State and Federal funds make it extremely difficult to meet the growing needs of the remaining population.

One of the most perceptive statements to be made recently about the condition of our cities appeared recently in the New York Times under the authorship of Jack Rosenthal. I recommend it to my colleagues and insert it in the RECORD at this time:

[From the New York Times, May 22, 1970]

URBANISTS FIND SUBURBS HOSTILE TO CITIES, PINCHED FOR MONEY

(By Jack Rosenthal)

ST. LOUIS.—A patrolman gestures at the dark, three-block corridor of small stores, cafes, and row houses. "Not even a rat," he says drily. "Abandoned."

A few minutes later, the car passes Gaslight Square, renowned not long ago for chic restaurants, cabarets, night life. One restaurant is open. But the gaslights—and everything else—are dark. Abandoned.

"You think this is bad," says a resident urbanist. "Across the river, they're saying the most booming business in East St. Louis is Bob's Board-Up Service."

Abandonment, evident in St. Louis, is increasing in older cities across the country. In New York, Philadelphia, Detroit and elsewhere, not just houses, not just blocks but even whole neighborhoods are being evacuated.

A Federal official says: "There are parts of these cities so empty they look like someone dropped nerve gas." A suburban official in St. Louis asserts: "It's not urban blight any more. It's urban leprosy."

Whatever the label, abandonment furnishes a striking illustration of two dominant urban themes evident from visits to cities across the country:

What was once a financial pinch for cities now approaches financial strangulation. Funds from almost all sources are slowing down or drying up, while increased needs and inflation are pushing costs steadily higher.

The middle class, once the strength of the city, has largely fled to the suburbs and becomes an enemy. Officials of both cities and suburbs acknowledge that suburban residents are apathetic or hostile to the problems of the working class, the old, the black, and the poor left behind.

Like abandonment, these are not new themes. What is striking about them is their increasing impact. Some authorities already foresee payless municipal paydays. Others fear an even more decisive impact: the death not merely of neighborhoods but of the city as well.

There is hyperbole in such fears, but not much, close students of the urban field say. The city will not literally die. What is dying is the general conception of the city—radiat-outward from a downtown employment and shopping hub.

KEY PROBLEM IS AGE

Shining, rebuilt downtown core areas will remain. Suburban rings, increasingly distant, will continue to flower. But the area in between is, in the eyes of the suburban middle-class, becoming a no-man's land.

It is, however, a no-man's land in which large numbers of poor and discriminated-against people must continue to live. And, increasingly, city governments are becoming financially powerless to help.

The constriction of funds available to city governments coincides with spiraling increases in two kinds of need.

Mayor Roman S. Gribbs of Detroit identifies one: "The problem with cities is that they're old." And age means costly repair and replacement of rotting sewers, deteriorating schools, and other municipal facilities.

Urban officials say age applies with equal force to private investment in the city, and is one of the reasons for abandonment.

For private owners, too, age means rising maintenance costs. Add declining rent and increasing taxes, officials say, mix in fear of crime and riot and loss of insurance, and it is no wonder that landlords and businesses decide to jump to placid suburbs.

Mayor A. J. Cervantes of St. Louis asks in frustration: "Do you know how many houses were started in the city last year? Fourteen." Fourteen hundred? "No, fourteen."

The second underlying city need is caused by the influx of rural poor. "In the last 10 years, 200,000 middle-class whites have moved out of St. Louis," Mayor Cervantes says, "and 100,000 blacks, many of them poor, have moved in. It costs us *eight times as much* to provide city services to the poor as to the middle class."

Meanwhile, where is the money to come from? Interviews with scores of city officials, civic leaders, and urban experts elicit a discouraging scorecard.

Federal aid: Sources unanimously and despairingly agree that Federal assistance is tailing off. Spending for urban renewal, summer jobs and other programs has been cut or slowed.

One Mayor has gone from despair to bitterness. "At this rate," he says, "we're all going to be like people in the Nazi concentration camps, scrambling against each other for the Federal crumbs necessary even to stay alive." He insists on anonymity in order to protect his capacity to scramble.

State aid: Mayors declare that state legislatures are unfeeling and unyielding on funds for city problems. "Reapportionment was meant to correct the rural overbalance in state legislatures," Mayor Cervantes says. "So what happened? The legislatures are now dominated by suburbia—and that's just as bad for us."

In Michigan, according to Lynn Townsend, Chrysler Corporation's president, Gov. William Milliken is alert to Detroit's problems, "but there just isn't any state money. It's not very encouraging."

City revenues: In city after city, taxes have risen to what some officials describe as near-suicidal levels. "Even if we had the authority to tax ourselves to death," Mayor Gribbs of Detroit says, "all it would do is drive more business out and further reduce our tax base."

Mayors are ironic about suburban free-loading by commuters who use city services but pay no city taxes. In St. Louis, the energetic Mayor Cervantes succeeded in establishing a 1 per cent earnings tax. "It is one salvation," he says. The tax brings in some $12-million in commuter dollars, about 10 per cent of the city's annual budget.

Foundations: "They now have pressures on their social action work because of the inhibitions in the new tax law," says Jerome Page, director of the Seattle Urban League, reflecting views expressed elsewhere. "All this at a time when organizations like the Urban League need to increase their work."

Even this fiscal scorecard understates the problem, authorities believe. Continuing inflation—for which many now blame the Nixon Administration—has eaten up available funds in increased construction and municipal borrowing costs.

"For all the talk about Government spending, what about the incredible amount of Government stealing?" asks James Ellis, a Seattle lawyer and central force in city campaigns to raise hundreds of millions for pollution control, health, and mass transit.

"Why, if we had built our mass transit system 20 years ago, we could have done it cheaper all by ourselves than we could now with 30 per cent Federal grants."

What answers are available to cities?

Some cities are seeking increased convention and tourist revenues by rebuilding downtown and creating attractions like Hemisfair in San Antonio, Century 21 in Seattle, and the St. Louis Gateway Arch Development. St. Louis officials claim a near-doubling of tourist and convention revenues.

Washington has proposed several other solutions. The most notable is the President's program for revenue-sharing—returning some Federally collected tax money to states and cities. But urban officials doubt that Congress and state legislatures will pass on meaningful amounts.

"And as for things like the Administration's voluntarism plan, or the black entrepreneurship program, they're all a cop-out for no money," says Jerome Cavanagh, former Mayor of Detroit and an outspoken Democrat. "I know it's trite to say money is the answer. I know that some academics now find it's stylish to deny that there is an urban crisis at all, let alone one that money

can solve. But once—just once—I'd like to try money."

But new public money is not coming in fast enough, and, as illustrated by abandonment, private investment is going out. St. Louis County, a separate entity girdling the city, now has nearly twice the city's population (1.1 million to 668,000), more jobs, greater retail sales, more construction.

These changes exemplify what has happened nationally. The Census Bureau estimates that since 1965 an average of 900,000 whites have moved each year from central cities to suburbs.

That white population of central cities in 1969 was estimated at 45.3 million—the same as it was in 1950. In the same period, the white population of suburban areas almost doubled, from 35 million to some 67 million.

Various urban scholars, recognizing the increasing suburban imbalance, argue that consolidated metropolitan government is the answer. It would spread out the burden of providing essential services to the poor. And would improve responsiveness and efficiency, they contend.

But there are few major metropolitan areas in which such consolidation appears even imaginable. A common suburban view is expressed by Gerald Rimmel, a St. Louis County councilman: "The people are here. The wealth is here. St. Louis has become just another neighborhood in the whole community. They're the poor cousin and we're the rich cousin and they have to accept that."

Mr. Rimmel acknowledges that relations between the city and the county "are sometimes like two hostile countries."

Suburban hositilities are mirrored in a downtown merchant's account of a telephone conversation with a suburban woman seeking air-conditioner repairs. The company could not send a man out immediately, she was told. "Well, no wonder," she responded. "All you got left down there is niggers and hippies."

A suburban lawyer says: "Yes I go downtown to see the Cardinals play, especially now that they have the freeway bypassing the, you know, bad areas."

Some in the suburbs take a longer view, recognizing that urban torments cannot be contained by the city limits. They note that decay is infectious, citing Wellston, a small municipality adjacent to St. Louis. There, 20 per cent of the homes are abandoned—and not even boarded-up.

"For years, many of our residents took the attitude that they came to escape center city problems," says Charles T. Henry, City Manager of University City, a suburb of 53,000 adjoining St. Louis. "But that's changing. A lot of people here now are asking, 'How long can we run?'"

TO MIKE BARTLEY

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 27, 1970

Mr. MILLER of California. Mr. Speaker, the city of Alameda, Calif., has lost a great citizen in the passing of William M. "Mike" Bartley, who died recently after a long illness.

Mike Bartley was a retired commander in the Navy who had seen very fine service and, turning to civilian life, served our city well as a member of its city council and as a public-spirited citizen. Under leave to extend my remarks, I wish to include with them an editorial which appeared in the Alameda Times-Star and pays tribute to this extraordinary person:

[From the Alameda (Calif.) Times-Star, July 18, 1970]

TO MIKE BARTLEY

Occasionally when a person is taken from a community through death, it leaves a "gap," a "hole."

This is because the decreased was imaginative, aggressive, and gave of himself-(herself) to the community, contributing as well as taking.

Such a person was William M. "Mike" Bartley whose death the Times-Star regretfully reported last week.

Those who knew him from close association, either businesswise or civically, knew him as a person of warm personality, with weaknesses as well as strengths—which after all, made him a human being.

It is for his strengths he will be remembered. And rightly.

The tributes paid him by Mayor Terry La Croix and Planning Director Don Johnson were earned. Mike Bartley was a pragmatist, he also was able to dream—or visualize, whichever you prefer.

He saw Alameda with a tremendous potential as a community for pleasant living. He realized that here as in every community a certain amount of planning is essential if the community is to maintain a balance between past, present and future. He realized that apathy, inertia, slavery to habit or self could be destructive of the common good. He knew that a collection of people (city) needs guidelines (plan) for orderly development just as individuals need a code (self-discipline, ethics) for the good life.

And so he was instrumental in bringing to Alameda a professionally-conceived general plan which was duly adopted by city government after public discussion and debate.

Mike Bartley knew, too, that that plan or any plan is useful only to the degree it is implemented. It can serve the community well, or it can be allowed to gather dust in the confines of City Hall, used only when convenient, ignored the rest of the time.

Perhaps the best tribute Alameda can pay to a man whose leadership and vision—and his courage and integrity to the ideal of "communityness"—a principle to which he was faithful though it was not popular with many of his colleagues in real estate—would be to keep the general plan viable, to make it an instrument of community betterment, to let it work for us instead of choking it out of existence by disuse.

Mike would have liked it that way.

THE CASE OF THE MISSING CHILD SUPPORT PAYMENTS

HON. GEORGE E. BROWN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 27, 1970

Mr. BROWN of California. Mr. Speaker, in any discussion of welfare reforms we cannot overlook the factor of the individual's responsibility to care for himself and his family to the best of his ability.

Mrs. Jean Temple, of Northridge, Calif., has founded an organization titled the Association for Children Deprived of Support—CDS. The goal of CDS includes finding ways to aid divorced women in being assured of receiving court ordered child support payments from the children's fathers. Mrs. Temple claims that too often a welfare check has to substitute for child support that is not forthcoming, and that available enforcement procedures are extremely inadequate.

The conclusion would be, then that a large amount of welfare funds could be saved through adequate laws and enforcement on behalf of the children of the divorced.

I feel that the article below, from the Van Nuys News, July 12, 1970, contains an extremely interesting discussion of this problem.

The article follows:

GROUP FORMED TO TAP ERRANT FATHERS FOR CHILD SUPPORT

(By Ruth Croft)

A kept woman with no strings attached who jets about with the country club set and vamps other women's husbands—that's the image divorcees claim they have been given in novels, television and motion pictures and they don't like it one bit.

Despite new divorce—or dissolution of marriage—laws, Jean Temple of Northridge says that divorced women "really clean up in California."

The mother of three children suggests that these fairy tales prejudice the general public and consequently thwart efforts of a divorced woman to establish herself as a responsible individual in the community.

She also maintains the biased picture affects the attitude of attorneys and courts when a divorcee seeks their aid in obtaining enforcement of court orders and state laws regarding child support payments.

In an effort to dispel these attitudes, as well as aid women who have been unsuccessful in geting their ex-husbands to live up to financial commitments, Mrs. Temple has founded the Association for Children Deprived of Support (CDS).

Goals of the group are threefold:

To focus public attention on the failure-to-provide problem, stressing its effect on dependent children and the resulting costs forced on the taxpayer.

To demand more aggressive enforcement of current laws and court orders connected with child support payments.

To lobby for better child support legislation.

"For too many years the stock answer to our problems has been—'oh quit bothering your old man, just apply to welfare,'" Mrs. Temple told The News, adding that resorting to government handouts is degrading to mothers and children involved as well as an unnecessary added burden to the taxpayer.

It is Mrs. Temple's contention that a father first must be compelled to pay a fair share toward the support of his children, even if they are in the custody of his ex-wife.

Then if the man is unable to live on the remaining amount of his salary, it should be he who seeks public assistance.

"Once a man and his new spouse face the possibility of shopping with food stamps and having their life style inspected by social workers, it is my bet that all kinds of hidden income would come to the fore," she said suggesting that men, especially those in business for themselves, have a multitude of accounting means at their disposal to create the impression they earn minimal wages and consequently can make only token payments.

"If a man is made to realize that the children continue to be his financial responsibility, whether or not he remains married to their mother, perhaps he will not be so quick to start family after family after family," she said.

"If the current trend continues, this country has but two ways to go on the issue. We either will have our doorways cluttered with children abandoned by both parents as is the situation in many South American countries, or we will find ourselves practicing socialism where the state takes care of the kids," she said.

DENY CHARGES

Mrs. Temple maintains that the district attorney's office encourages this creeping socialism by advising women to seek welfare aid and by being lax in prosecuting errant fathers.

These charges are vigorously denied by the DA's office.

Dep. Dist. Atty. Earl Osadchey, who heads the Child Support Division, told The News it is strictly against policy to recommend the welfare route and he would welcome the name of any investigator who breaks this rule.

"One of our principal functions is to bring to court errant fathers who are not complying with court child support orders—either to recover for the county funds which have been paid to a welfare family or to have allowances remitted so a family will not be forced to resort to welfare," he said.

FILES COMPLAINT

"Admittedly one of the first questions we ask a woman seeking enforcement of court-ordered child support is whether or not she receives public assistance," Osadchey said. "But this should not be construed as a recommendation she do so.

"What we actually are trying to do is avoid duplication of work. The Dept. of Public Social Services automatically files a complaint with us 45 days after one of its recipients fails to receive a support payment," he said, adding that many women are not aware of this arrangement and proceed on their own.

If a woman and her children do receive welfare benefits, then child support payments are made through the court trustee and the funds are used to offset taxpayer's costs for welfare.

Consequently, the DA's office is obligated to press for payments in this situation and during the past three years has reimbursed the welfare fund with more than $12,000,000 it has collected, Osadchey said.

In answer to charges that his staff is disinterested in prosecuting cases, Osadchey explained that many women misunderstand the exact functions of his division.

AGREES ON POINT

"Principally, we only cite for contempt of court orders in these domestic relations cases . . . we are not authorized by Superior Court to garnishee a man's wages or seek to collect arrearages . . . we cannot represent a mother who wants the payments increased," he said.

Osadchey agrees with Mrs. Temple on the point that society in general must change its attitude toward fathers who fail to provide for their children, although each has a different approach to the problem.

"Courts treat the men as bad little boys and let them off with a hand slap and gentle tongue-lashing," Mrs. Temple said. "They are criminals and should be dealt with accordingly."

EXPRESSES VIEW

She maintains if maximum penalties were given first-time offenders, it would serve as a deterrent to those men who contemplate reneging on their responsibilities.

"But in reality, judges place the men on probation, accept partial payment of amounts due or continue cases week after week. It's discouraging and frustrating and only encourages the men to ignore their obligation," she said.

While claiming that his staff always presses for the maximum penalty, Osadchey believes the court's seemingly more lenient attitude is justified.

MAY LOSE JOB

"The maximum penalty for contempt is five days in jail on each count," he said. "If this sentence were handed down in every case, it is feasible the whole situation would worsen.

"Understandably, the man might lose his job or most certainly a week's pay and as a result there could be two families dependent on welfare, thus doubling the taxpayers' burden."

The basic problem in most child support cases is that both parties involved are sensitive and highly emotional, according to Osadchey, who says the man envisions his ex-wife squandering his contributions on herself while the woman pictures her former spouse living a swinging life at the expense of their children.

MAKES SUGGESTION

A certain amount of counseling should accompany each dissolution of marriage when children are involved, he said. These couples must be helped to rise above their bitterness and recognize their respective responsibilities.

And the woman should make every effort to be self-supporting and contribute her fair share toward the children's financial well being, he suggested.

Mrs. Temple maintains that most divorced women want to work.

TELLS EXPENSE

But after five to 10 years of being unemployed, a woman naturally reenters the job market as low man on the salary totem pole. She may be able to sustain herself, but definitely needs support money to clothe and feed her children and, most important, to pay for child care.

One CDS member told The News she had been forced to give up a clerical position with the Los Angeles Police Dept. because her former husband stopped making child support payments when he learned she was working.

"He just wouldn't believe that it took the entire $100 a month he sent me plus part of my wages to pay a sitter for our two girls while I worked," she said.

Jobs are hard to come by, according to another CDS member who spent the major part of her adult life as a homemaker.

"Employers seem to think divorced mothers always will be taking time off to care for their kids—or they anticipate we're out to find a new husband and will concentrate our energy and talents in that direction," she said.

CHAPTERS INCREASE

Others contend that property managers are prejudiced against divorcees and refuse to rent houses and apartments to them, while another woman maintains it has been impossible to get credit cards and department store charge privileges since she was divorced.

Whether CDS will be able to right all these purported wrongs remains to be seen, but the organization which started with one group here in the Valley is building steam and has grown to 10 chapters including units in Florida and Indiana.

Surprisingly, there are several intrepid men on its rosters.

For the most part these male members are carrying the financial burden of two families—their own and the children of a second wife who is receiving no child payments from her ex-husband.

GAINS ATTENTION

Others are men who claim to have experienced an unhappy childhood due to their fathers' failure to provide, while a few have joined as taxpayers interested in stopping unnecessary drains on the welfare budget.

In recent weeks the CDS group's major concern—the child support issue—has gained statewide attention.

Three bills (AB 1360, AB 2446 and SB 735), designed to strengthen procedures by which the state can more effectively locate absent fathers and collect child support money, have been introduced in the California Legislature.

VOICES CONCERN

The State Social Welfare Board also has announced it is forming a task force to initiate a major drive against the failure of absent fathers to pay child support.

Chairman Robert E. Mitchell who announced the plan said, "Although the high percentage of nonsupport cases among publicly dependent families is a matter of great concern in California, we are equally concerned about the family degeneration throughout society that finds children being victimized by irresponsibility on the part of absent fathers who simply walk away from their financial as well as moral obligations."

CDS members will be following the task force investigation with great interest.

EQUAL PAY FOR WOMEN

HON. JOSEPH M. GAYDOS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 27, 1970

Mr. GAYDOS. Mr. Speaker, recently Mrs. Lucile H. Shriver, director of the National Federation of Business and Professional Women's Clubs Inc., appear before the General Subcommittee on Labor of the House Education and Labor Committee.

Mrs. Shriver testified in support of H.R. 15971 and urged equal pay for women doing the same work as men. Her testimony included a number of facts and figures which I feel would be of interest to other Members of the House.

I am inserting Mrs. Shriver's complete testimony in the RECORD and I invite the attention of my colleagues to this informative document:

TESTIMONY PRESENTED ON THE PART OF THE NATIONAL FEDERATION OF BUSINESS AND PROFESSIONAL WOMEN'S CLUBS, INC., BY MRS. LUCILLE H. SHRIVER, FEDERATION DIRECTOR, BEFORE THE GENERAL SUBCOMMITTEE ON LABOR OF THE HOUSE EDUCATION AND LABOR COMMITTEE, THE HONORABLE JOHN H. DENT, CHAIRMAN, JULY 9, 1970

Mr. Chairman, we are honored to be here today to testify in support of H.R. 15971.

Seven years ago one of the BPW clubs wrote the Special Subcommittee on Labor of the House Committee on Education and Labor urging passage of the Equal Pay Bill which H.R. 15971 would amend. They offered the following resolution:

A double standard of pay for men and women has long existed in industry. The Women's Bureau of the U.S. Department of Labor has recently released a new publication entitled "Economic Indicators Relating to Equal Pay," prepared in response to numerous requests for factual information about wages paid to men and women performing similiar work. This pamphlet provides an overall view of the differences in pay levels of men and women. According to the Bureau of the Census the median wage or salary income in 1960 was $3,293 for women and $5,417 for men.

They went on to say that "The members of our national, state, and local federations of Business and Professional Women's clubs feel strongly that this differential should not prevail. . . ."[1]

Today, Mr. Chairman, we find many similarities to that time and situation. Inequity in pay between the sexes continues. Again, the U.S. Department of Labor Women's Bu-

---

Footnotes at end of article.

reau has released a report, this one on the earnings gap between men and women, revealing that in 1968 the median salary for women was $4,457; for men, $7,664. In other words, in 1960 women made 60.8% of what men made; in 1968, the percentage was down to 58.2%.[2]

We are here once more to petition you regarding equal pay for equal work, this time to extend the guarantee of equal pay for equal work law passed in 1963 to cover administrative, executive, and professional positions. The Equal Pay Act of 1963 was recently described in a Federal court as a "broad charter of women's rights in the economic field."[3] We are here to petition the Congress to broaden that charter. For that purpose we appear before you today, somewhat repeating history from seven years ago.

As we look at the labor picture today we find that 43% of all women are in the labor force; that women have accounted for the largest growth percentage in that labor force since 1947. In fact the number of women in the civilian labor force increased by 75% between 1947 and 1968, while the number of men rose only 16%.[4]

Today the average woman is 11 years older (39 years of age) than she was when women got the suffrage and she is married instead of single. Women today work for the same reasons as men, whether married, single, widowed, divorced, namely to support themselves, their families and other dependents.[5]

In proportion to their increasing participation in the growth of the economy, American women are certainly not receiving a fair share of the profits thereof, quite the contrary, as the earnings gap so clearly reveals.

A comparison of the median wage or salary incomes of women and men who worked full time year round between 1955 and 1968 reveals not only that incomes of women are considerably less than those of men but also that the gap has widened in recent years. In 1955 for example, women's median wage or salary income of $2,719 was 64% of the $4,252 received by men. In 1968 women's median earnings of $4,457 was only 58% of the $7,664 received by men.

The type of occupation does not make too much difference. In 1968, this same report shows that women professional and technical workers had a median wage of $6,691 compared to $10,151 for men. Women clerical workers, sales workers, operatives, and service workers all had an income of between 55 and 65.9% of what men received in the same categories.

This is happening now, today, when more women than ever work; when women clearly work to provide an adequate standard of living for themselves, their families and their other dependents.

The radical difference in wages for men and women today is revealed also by the fact that only 8% of men full time year round workers in 1968 earned less then $3,000 while there were 20% of the women at that pay level; and that 60% of the women but only 20% of the men earned less than $5,000. At the other end of the scale, only 3% of the women but 28% of the men had earnings of $10,000 or more.[6]

Basically there are two types of discrimination in employment against women. Women are often consigned to low-paying, low-skilled jobs, different from those of men. I refer you to the Earnings Gap report for verification of this fact as well as the 1970 survey on the *Employment of Women* conducted by the American Society for Personnel Administration and The Bureau of National Affairs. Both indicate that women are placed in less challenging, less responsible and less remunerative positions on the basis of their sex. The legislation at hand today does not deal with this matter directly. However, it does deal with the other kind of discrimination in employment that women experience, namely the many examples of women doing equal work to that of men but not receiving the same pay.

Extension of the Equal Pay Act to administrative, executive, and professional positions would encompass those individuals who have the same background, experience, and education, but who make different wages. Here it is not so much a problem of different jobs, or being secretaries rather than managers, but of receiving different, i.e. less pay for equivalent work, based on sex as the determinant of that difference.

Our organization was founded in 1919 to serve the best interests of working women. We now represent 180,000 working women throughout the fifty states, the District of Columbia, Puerto Rico and the Virgin Islands.

While our membership has increased, so has the percentage of American women who now work. Working women constituted 20.4% of all workers when our organization began. Today that representation has almost doubled, it is presently 37% of the labor force.[7]

BPW began as an organization for working women urging equal pay for equal work in all jobs. One of our earliest endeavors was to secure the extension of civil service classification to more jobs with the hope that this would not only elevate the calibre of government employment but insure that employees would be chosen on the basis of qualification without consideration of sex.

During World War II American women showed their dedication, ability, versatility, and endurance as workers. The first major Equal Pay Bill was introduced at the end of that war with BPW support and we remained on the legislative front until victory in 1963. We helped form and work with the National Committee for Equal Pay and enthusiastically cooperated with other women's organizations to secure passage of that bill. I am sure that the records of the House of Representatives reflect our concern.

Thus our interest in this legislation is well established. But, when the Equal Pay Bill was finally passed, something was left out of grave importance to our members and to thousands of working women, namely coverage of administrative, executive, and professional positions.

The history of the Equal Pay Act shows that attachment of this bill to the Fair Labor Standards Act was indeed the "catalyst" that made victory possible, as Congressman Frelinghuysen of New Jersey pointed out during debate on the House floor. But, this same tactic also made equal pay coverage coextensive with minimum wage coverage. If a job is not covered under the minimum wage provision, the law then does not require equal pay standards for such a job. As a result equal pay is required for only about half of the jobs in America today, according to Mr. Robert Moran, Administrator, Wage and Hour Division of the U.S. Department of Labor.[8] This is the situation that we deplore and that we would change.

Actually the Administration-supported equal pay bills, as introduced in both Houses of the Congress in 1961 and 1963 (after the 1961 proposal failed of passage) contained no provision which would have resulted in the bills becoming a part of the Fair Labor Standards Act. There was nothing in the original Administration-supported proposals, therefore, which would have exempted executive, administrative, or professional employees from equal pay protection.

It was on the original bills that BPW and others presented their testimony in Congressional hearings in support of the 1961 bill and the 1963 measure.

Only *after* the completion of committee hearings in 1963, did the Chairmen of the Labor Subcommittees (who had held the hearings in the House and Senate) find that they did not have the votes to report out the Administration's original proposal and that the bills would die in committee.

Since there was basically little choice, i.e. the original Administration's proposals stood no chance of further consideration on the Hill, telephone calls were made to legislative representatives of the major women's groups whose members would be affected by the move to make the equal pay bill a part of the Fair Labor Standards Act (including BPW) and the situation was carefully explained to all of us. It was decided that we should take what we could get for the time being, hoping that action would later be taken on the Hill to restore the protections of the equal pay provisions of the Fair Labor Standards Act to, for example, executive, administrative, and professional employees, at the earliest possible date. It was a question of half a loaf or none. We took that half a loaf. We are now asking for the rest of that loaf.

H.R. 15971 would bring the protections of the Equal Pay Act to the executive, administrative, and professional employees who had every right to feel "betrayed" by the action taken by the Congress when the equal pay bill was made a part of the Fair Labor Standards Act in 1963.

At present Title VII, Section 703(a)(1), of the Civil Rights Act of 1964 prohibits employment discrimination in hiring, discharging, terms, conditions, or privileges of employment, including that of compensation. However, the EEOC which is burdened with administering Title VII has an overload of case work. Moreover, the EEOC has very little power, a situation we have sought to remedy by testifying in support of legislative efforts to grant the EEOC the right to issue judicially enforceable cease and desist powers, to back up its findings of discrimination based on race, color, religion, sex or national origin, which currently it does not have. The EEOC's authority is limited to conciliation efforts. If a state or local Fair Employment Practices law exists a waiting period is required. If conciliation fails, the aggrieved party must initiate and finance his/her own suit.

On the other hand, the Equal Pay Act is administered by the Wage and Hour Division of the U.S. Department of Labor. This agency is generally able to obtain compliance. If there is a refusal to comply, or deliberate violation of the law, the Secretary of Labor may obtain a court injunction to restrain continued violation or withholding of back wages legally due. The Secretary of Labor may also bring suit for the back wages upon written request of an aggrieved employee. Also important is the fact that complaints are treated in strict confidence and, unless court action is necessary, the name of the aggrieved party is not revealed, whereas under the protection of Title VII such anonymity is impossible. Indeed, the strength and effectiveness of enforcement proceedings under the Fair Labor Standards Act was one of the compelling reasons for BPW's support for attaching the Equal Pay Bill to the Fair Labor Standards Act.

Mr. Chairman, The National Federation believes that there is no more justification or reason for discrimination at the professional or administrative levels than at any other. By Executive Order and by Congressional mandate our nation is committed to equal employment opportunity for all Americans. We urgently request passage of this legislation before us to move us a step closer to that goal.

ENVIRONMENTAL PROTECTION ACT OF 1970

HON. WILLIAM D. FORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 27, 1970

Mr. WILLIAM D. FORD. Mr. Speaker, in March of this year, the Environmental Protection Act, that would finally recognize the direct concern of each citizen with the environment in which he lives, was introduced by Senator HART, of Michigan, who has long been recognized as an outstanding conservationist and fighter for the protection and improvement of our environment. This bill, S. 3575, would give our citizens the right to bring suit in a court of law to protect themselves and their children from pollution. I am introducing a similar bill in the House, today, because I believe that this legislation could be the most effective weapon to date in our fight against pollution.

The past decade has seen increasing concern over the problems relating to the destruction of our environment. Congress has repeatedly responded to this problem with the enactment of such legislation as the Wild and Scenic Rivers Act, the Land and Water Conservation Act, the Water Quality Act of 1965, the Air Quality Act of 1967, and others. Yet, in spite of congressional attention to environmental problems, pollution remains a monumental threat to the health and well-being of our entire society.

The American public has repeatedly and conscientiously voiced concern over the effects of pollution in our air and waters, but the people have been denied the means to directly challenge those whose actions are most responsible for the destruction of our environment.

The Environmental Protection Act of 1970, would enable responsible citizens to become directly involved by opening up the Federal and State court system to antipollution suits by ordinary citizens against other citizens or against Government agencies. It would guarantee all citizens the right to a pollution-free environment, and would enable citizens to challenge the organization and implementation of administrative policies when they appear inadequate.

The American people have proven their concern and should be granted a direct role in the solving of our environmental problems. Our Government agencies have not done enough to deal with the threat of pollution and should be spurred to more effective action. The Environmental Protection Act of 1970 will serve both these ends and hasten the day when we can once again take pride in the natural beauty of America.

A SECOND LOOK AT CAMPUS UNREST

HON. HAROLD R. COLLIER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 27, 1970

Mr. COLLIER. Mr. Speaker, today certain radicals seem to use violence as the catalystic cry of change. This cry has meant the burning of buildings and senseless destruction of property on or near the campuses of American universities and colleges.

Hundreds of thousands of words have been written about campus violence. It has been analyzed and scrutinized and investigated, but many people still wonder why it has occurred or where it will happen next. In fact, most students cannot tell me how their campuses are disrupted by a small minority of the student body. None have told me how violence has accomplished anything useful.

The sole purpose of a university is one of service to society through education. Universities are not designed to be an arena in which opposing groups do battle while carrying the standards of their political causes.

Mr. Speaker, I would like to reaffirm my conviction that universities can find their own solutions to problems existing within their faculties and student bodies. I have evidence of responsible student groups working within the university system of Illinois through letters to my office.

In the July 24 edition of the Chicago Tribune, I found an article that has reestablished my faith in the faculty and administrations of several Illinois institutions of higher learning. I would like to commend them and share this article with my colleagues:

GETTING THE CAMPUS BACK ON COURSE

There are a few encouraging signs that the nation's universities, badly shaken by the violence of recent years, may be returning to their true function—the cultivation of the mind and the advancement of knowledge. Student disruption has sought to subvert the universities by committing them to political causes thru militant and violent methods.

Robert H. Strotz, the new president of Northwestern University, has perceived this purpose in saying, "I will resist any attempts by anyone to make the institution itself an instrument for political action."

University of Illinois trustees, in reprimanding 13 faculty members who issued a manifesto last May couched in revolutionary language, warned that "any infractions . . . in the performance of university duties will receive prompt and appropriate attention by responsible administrative offices and faculty committees."

Of 15 signers of the statement, 12 were assistant professors, instructors, or graduate teaching assistants in the political science department. Banding together in what they called a Faculty for Resistance, they announced they would indoctrinate a student "resistance force" and would "orient" all their courses to "the problem of political repression and resistance to the abuses of official authority."

The trustees condemned the use of such epithets as "societal madness", "official racism" and the implication that we live under a "criminal regime" responsible for slaughter, murder, and "systematic elimination of black militants."

While the trustees have taken a form of action, the university has been more reticent. The issue of tenure and retention is certainly pertinent in cases like this, as the presence at the board meeting of a representative of the American Association of University Professors attests. This organization always closes in for the protection of its own.

It would appear that it is imperative for Illinois as well as other institutions of higher learning to adopt rational criteria in faculty appointments before they get stuck with sour apples. This is not a job for newspapers or even for university trustees. It is a job for department heads, for faculty selection committees, and for the university administration; and the renewal of contracts and the granting of tenture are part of it.

Meanwhile, a show of firmness by Delyte Morris, president of Southern Illinois University, has provoked howls of protest from two liberal state representatives and the American Civil Liberties Union. Morris held up the registration of 61 returning students because of their political activity during the recent academic term and the part played by some of them in campus disorders last May.

The university was compelled to close down for the remainder of the term after 10 days of violence, during which an R. O. T. C. building was invaded; windows were smashed and looting took place in the Carbondale business district; highways and railroad tracks were blocked; and the home of President Morris was sacked. Three students were injured in an explosion in a house where they were assembling bombs.

S. I. U. can justifiably feet that students engaged in such activities are hardly persona grata, and if there is a question of individual rights involved most taxpayers won't see it.

TRIBUTE TO IGOR I. SIKORSKY

HON. LOWELL P. WEICKER, JR.

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, July 27, 1970

Mr. WEICKER. Mr. Speaker, I would like to take the opportunity to pay tribute to a recent book written about a great American, Igor I. Sikorsky, who also happens to be a constitutent of mine. The book, "Igor Sikorsky, His Three Careers in Aviation," is an interesting and inspiring account of the life of the man who Senator Prescott Bush once called "a scientific genius and a man of deep spiritual qualities."

The author, Frank J. Delear, is a man of great literary talent who is well acquainted with his subject. Mr. Delear has served as public relations manager of the Sikorsky Aircraft Division of the United Aircraft Corp. and has been closely associated with Mr. Sikorsky since 1940. He

is a graduate of Boston College and a member of the Aviation/Space Writers Association and the American Helicopter Society. He is also the author of "The New World of Helicopters" and presently lives in Stratford, Conn., with his wife and five children.

The biography is centered around Sikorsky's three greatest achievements: the first multiengined airplane, the ocean spanning Flying Clippers of the 1930's, and the first practical helicopter. Igor Sikorsky was born in Kiev, Russia, on May 25, 1889, the youngest of five children. His father was a university professor of psychology at St. Vladimir University in Kiev. At 14 he entered the Imperial Naval College in St. Petersburg and later attended the Mechanical College of the Polytechnic Institute in Kiev. He was always fascinated with flight, and throughout his life, dreamed of bringing da Vinci's idea of a wingless aircraft to realization. He went to work on this idea directly after graduation, but after many early failures, abandoned the idea for the time being.

In 1911, after returning to fixed winged aircraft, he built the S–5, and set a new world record by carrying three men for 30 miles at seventy miles an hour. This success brought about a contract with the Russo-Baltic Railroad Car Works, which enabled Sikorsky to build the first four-motored plane in history, the Grand.

After fleeing Russia during the Revolution, Sikorsky was faced with the situation of having to start from scratch and and begin anew as an immigrant in the United States.

Beginning on Long Island, he shortly afterward moved to Bridgeport, Conn., and established the Sikorsky Aviation Corp. This led to the development of the S–29, S–38, and later the S–40, which became known as the American Clipper. This plane, with later developments became one of the first planes of commercial transoceanic aviation.

In 1937, Sikorsky started work on his original dream and life-long ambition, to build the first helicopter. On September 14, 1938, Sikorsky realized his dream and piloted the first successful wingless aircraft flight in his first helicopter, the VS–300. From this first attempt of welded pipes and other jerry-rigged parts, the helicopter became a functional machine and was used quite extensively during World War II.

However, the most stirring part of the biography is the insight into Igor Sikorsky's personality. He is portrayed as a combination of scientist and mystic who has the ability to combine the two and result in great creativity. He is a man of great religious belief and is concerned with the future of humanity.

I enthusiastically suggest this book to anyone who is interested in people who have a dream and who have the perseverance to see it through. As attested by the countless awards and tributes paid to this man, he is a credit to our community and to the Nation as a whole.

My thanks to Frank J. Delear for making this valuable literary and historical contribution.

BUS ACCIDENT WAS MANMADE TRAGEDY

HON. ALLARD K. LOWENSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 27, 1970

Mr. LOWENSTEIN. Mr. Speaker, seven children are dead and 52 others were injured as a result of the tragic bus accident July 15 in Allentown, Pa., a tragedy that cannot be blamed on the caprice of fate.

The bus in which they were riding skidded off a curve where more than a dozen vehicles have crashed in the last 2 years; it had two treadless rear tires; its steering mechanism was apparently defective; and it was driven by a man whose driver's license had been suspended five times and whose traffic record constitutes a three-page dossier of nine accidents and six convictions, two for careless driving.

The last fact is simply beyond belief. What turned out to be a horrible reality would make bad fiction because nobody would believe that a man with such a driving record could plausibly find himself behind any steering wheel, much less the wheel of a bus load of children on a summer outing. The driver's heart attack and the death of his wife as he was being arraigned on Tuesday adds to the sadness and anger about this needless tragedy.

How is it that a man whose driver's license had been suspended five times and who had been in nine accidents had a license of any kind? How is it that a bus carrying 49 young day campers and their 10 adult supervisors could have two rear tires so worn that no tread was left on them as well as a faulty steering mechanism? How is it that nothing was done about a curve so deceptive that more than a dozen wrecks have occurred there in the last 2 years? And how is it that buses, particularly school buses, continue to have the most lethal interiors of any vehicles on the road today?

Some or all of those children might have been saved had they been wearing safety belts or had the interior of the bus been designed for passenger safety instead of to achieve the scrimping economies that make buses unpadded death chambers in the event of a collision. And the wreck would probably never have occurred if the bus and driver had been kept off the highway as they should have been.

Various degrees of human negligence account for each of these factors that came together in such a tragic equation.

We cannot begin to share the anguish of the parents and relatives of the dead children; but we can share the concern to see that such an absurd conjunction of human errors do not cost any more lives on the highways. And we can make sure that a thorough investigation reveals who was responsible for the administrative laxity that permitted a driver's license to be issued under the circumstances and how a bus with bald tires and defective steering was permitted to operate.

We in Congress have to look into the whole question of bus safety, about which the Federal Government has done virtually nothing. A measure of the seriousness of the bus safety problem is seen in statistics compiled by Interstate Commerce Commission inspectors showing that of the 397 buses inspected last year more than 300 had mechanical defects and 47 of these were so seriously defective that they were immediately ordered out of service.

There are over 5,000 commercial buses sanctioned by the ICC for interstate travel, and the Commission's inspection staff is so shorthanded that only 397 of these buses were inspected last year. We have to remedy that dangerous situation by providing adequate staffing for these inspection teams.

We have to come up with stiff licensing procedures and safety regulations for charter bus companies like the one involved in the Allentown crash. Millions of children are participating each summer in charter tours run by these companies. When they cross State lines they come under the jurisdiction of the ICC, but according to ICC officials most of these companies, which tend to be marginal one or two bus operations, are running charter trips without OCC authorization. A preliminary investigation of the Allentown accident showed that the bus did not even have an ICC certificate.

Besides the lack of personnel to regulate these companies and carry out inspections, there are loopholes and jurisdictional problems in the law regulating bus tours that have to be eliminated. One of these loopholes, cited in a story in Wednesday's New York Times, involves school buses, which are exempt from Bureau of Motor Carrier Safety regulations that govern bus travel on major highways even when they are being used on highways for touring purposes.

We are reminded of the overall question of school buses by the startling realization that the death toll in last week's accident would have been higher had the children been riding in a school bus, whose stripped down interior leaves steel tubing exposed on the seat frames, instead of a better cushioned touring bus. And thanks to an investigation by the Washington Post's fine reporter, Colman McCarthy, earlier this year we know something about the general shoddiness of school bus construction. Mr. McCarthy's articles prompted a General Motors recall of 4,269 school buses for possible brake defects. I am inserting these articles in the RECORD to call attention to the kind of measures we must take to insure that the buses on which we send our children to school are not death traps.

It is within our power to do these things. We cannot blame blind fate for tragedies that we ourselves could have averted. And if we do not act on the range of bus safety problems forced upon us by the needless loss of seven young lives last week, we will have squandered the chance to do the one thing that might bring some slight glimmer of light into the appalling tragedy of Allentown.

The articles follow:

BITTER TALES FROM THE GM LEMON GROVES

(By Colman McCarthy)

Last week, General Motors issued a recall of 4,269 school buses for possible brake defects. The recall followed a six-week nationwide survey by GM which was originally prompted by two articles on this page in December detailing the endless safety and mechanical breakdowns of three new GM school buses. These were owned by John Donovan, a local school teacher with an immense frustration capacity.

By taking a survey, GM wanted to know whether Donovan's problems were a local fluke or a national epidemic. If the latter, a recall would be made. Martin Caserio, a GM vice president and a Detroit veteran who had been through the recall ritual many times, said that GM was deeply concerned about safety. However, he told a Washington press conference in December he did not think John Donovan's repeated brake failures, rattling transmissions, hanging exhaust pipes, faulty tires, etc., were "safety-related" problems.

After some confusion and delay, GM supplied the press with a partial list of GM bus owners. Entitled "School Bus Owners operating five or more 1969 GMC conventional model school buses," it contained 44 names. These owners were from only 16 states and possessed a total of only 504 buses. This meant that some 3,500 other 1969 model buses could not readily be checked.

On receiving the list from General Motors, The Washington Post began contacting by phone the 44 owners. Apart from the one owner who couldn't be reached because he had been dead four years and the four others who were listed by GM as owning a total of 35 vehicles but in reality owned none, the majority of respondents were unhappy or frustrated over the performance of their new buses. Repeatedly, they told of the time and money wasted hauling the buses to garages for repairs; often they were repairs of repairs. It soon became clear that the safety and mechanical problems of the '69 GM school bus were not isolated in Washington. They were nationwide, all the way from the enraged owners of the Beirns Bus Service, Kenilworth, N.J., whose six new buses failed the New Jersey State inspection because of faulty brake equalization to the stoic in Roslyn, N.Y., who said, "I was a GM man at heart, but no more. I don't know what they've done to these buses, but I've bought my last one."

It was quickly discovered that GM's list was incomplete. Regularly, an owner on the list would supply the names of the other multiple-owners in his area who were not on the list. Often it was obvious why they were omitted. Raymond Wilson—a pseudonym—is a GM dealer who owns 15 of the 1969 buses. He saw the stories about Donovan in his local paper in December and was "delighted that the truth was finally being told about GM." He has had massive safety and mechanical problems also. "The power steering cannot be fixed, no matter what;" one new bus being driven back from the factory nearly killed his driver because the gas tank had a hole in it that dropped the fuel onto a heated exhaust line; "the brakes aren't worth a damn and won't stay adjusted. Over all, things have gotten to the point that I hate to face customers."

Other people that Wilson hates to face are reporters. The same morning he read the story about Donovan, he was called by the local GM representative and told "to keep my mouth shut if any newsman called. The rep. told me this kind of publicity could hurt us all." Wilson agreed to talk to the Post only if strict anonymity was given his name and location of business. Even though he is a GM dealer, he is convinced that if the company finds out he has spoken to anyone they will "get even."

Another GM dealer—also not on the list—was so fed up with his seven 69s that this year he bought Fords. Asked if he thought it odd that a GM dealer would buy a competitor's product, he answered: "What should I do—keep on buying buses that I know are nothing but trouble?"

Not all the GM owners on the list were unhappy. A spokesman for the Long Island Bus Co., East Farmingdale, N.Y., said that his mechanics "have been big on preventive maintenance, so we have little trouble." Another owner, the Pace School Bus Service, Independence, Mo., said that aside from frequent clutch adjustments everything was fine. Asked about his exhaust pipe hangers, he replied: "Oh, them. They were so weak when the buses were sold to us that we just tied them up with baling wire. And that was that." The mechanic for the five buses owned by the Lake Orion, Mich., schools said he had no serious complaints. "The brakes are hard to push and get sluggish. But they're safe enough; the driver just has to get used to them."
